FIELD CROPS
PRODUCTION, FARM USE, SALES, AND VALUE
BY STATES, 1969-74

This bulletin presents revised estimates of farm use, sales, and value of field crops for 1969-74 comparable with revisions of estimated production for this period as published in Statistical Bulletin No. 582, December 1977. Preliminary estimates were published annually in "Field and Seed Crops--Production, Farm Use, Sales, and Value." Revised estimates of seed crops for 1969-74 were published in Statistical Bulletin No. 580, November 1977.

Estimates of farm use and sales relate to the disposition of a given year's production within the marketing season shown, regardless of time of actual disposition. Quantities going into Government resale programs at the end of a current marketing year are included in sales. Therefore, resale grains stored on farms are included in the disposition during the marketing season for the year of production.

Estimates of quantities fed to livestock and poultry represent the portion of production fed on farms where produced, not the total quantities used for feed. Some of the amounts shown as "sold" are used for feed and seed on other farms.

Total seed requirements are shown for certain crops, and a further breakdown made to show the amount of homegrown seed. The difference between total seed and homegrown seed represents purchased seed, which is included in the total quantity sold.

Monthly price estimates are used in computing season average prices for most crops included in this report. These prices are weighted by the estimated percent sold each month in computing State season average prices.

Tobacco season average prices for types 11-37 are based on monthly prices that are an average for sales during the entire month; all other types of tobacco are on a season average basis for all sales. Monthly prices are not available for broomcorn, hops, peas, popcorn, and sugar crops. For these crops, special survey data are used as the basis for season average prices. The State and U S season average prices for barley, dry beans, corn, cotton, flaxseed, oats, rice, rye, sorghum grain, soybeans, and wheat include an allowance for unredeemed loans and purchases by the Government valued at the average loan and purchase rate, by States. The U S season average price shown for each crop is computed by dividing the U S value of sales by quantity sold. A U S season average price weighted by production can be derived by dividing the U S value of production by quantity produced.

The season average prices for quantities sold are also used to place values on total quantities produced. Value of sales is computed by applying the unit price to quantity sold during the marketing year. In like manner, value of production and home consumption are computed by applying the season average price to the quantities produced or used.

Season average prices and value of production including price support payments are also shown for barley, corn, cotton, wheat, and sorghum grain. The U S season average price plus price support payments is computed by dividing the U S value of production plus price support payments by production. Payments under the Sugar Act are shown for sugarbeets and sugarcane but are not included in value of production.

This bulletin is a continuation of similar data on farm use, sales, and value of field and seed crops contained in Statistical Bulletin No. 513, March 1973, and earlier bulletins.
