Statistical Bulletin No. 653

SHEEP, LAMBS, AND GOATS: FINAL ESTIMATES FOR 1976-79. Crop Reporting Board, Economics and Statistics Service, U.S. Department of Agriculture, Statistical Bulletin No. 653.

#### ABSTRACT

This publication presents final sheep, lamb, and goat estimates, including some revisions, for 1976-79. Data cover estimates for the inventory of sheep, lambs, and goats as of January 1, as well as annual wool and mohair production and sheep and lambs on feed. This report continues the official series published in Statistical Bulletin No. 587, issued December 1977.

Washington, D.C. 20250

## INTRODUCTION

Sheep, lamb, and goat estimates were published on a current basis during 1976-79. Primary data used in establishing estimates were obtained from producer surveys including all known large producers and a sample of smaller producers. Producers lists are updated annually from various sources, including Agricultural Stabilization and Conservation Service (ASCS) wool incentive payment filings.

The Crop Reporting Board (CRB) also constructs a U.S. balance sheet for an additional check on inventory estimates. The balance sheet uses the prior inventory estimate adjusted for survey estimates of births and deaths, and reliable check data from other sources on slaughter, imports, and exports.

Revisions were made only after a thorough review of the original data, with consideration given to all additional data now available, including the 1978 Census of Agriculture. The 1978 Census totals published for all sheep and lambs included "new crop lambs" born between October 1 and December 31, 1978. Because the CRB inventory estimates exclude "new crop lambs", it was necessary to adjust for these lambs in order to make valid comparisons with Census data. When revisions were made for the inventory numbers, corresponding adjustments were usually necessary for lamb crop, wool, or mohair estimates.

The estimates were rounded to the nearest 100 head for States with less than 10,000 sheep and lambs. States with estimates of at least 10,000 were rounded to the nearest 1,000 head.

Average value per head estimates were based on CRB crop and livestock reporters' estimates of average price per head in their localities, about January 1 of each year. These farm and ranch operators reported the value per head by age and sex. Values per head, by classes for each State, were weighted together by the estimated number in each class. This weighted average was the basis for the estimated value per head. The total value for the United States was the sum of the State estimates; and value per head was derived by dividing the total U.S. value by the number of head.

Estimates by States of the number of sheep and lambs on feed for the slaughter market on January 1, 1976-79, are presented here. Data showing number on feed on November 1, 1975-78, and March 1, 1976-79, are shown for seven States. Also, included for these seven States are data for number on feed by weight groups, placements, and marketings. Estimates of sheep and lambs on feed pertain to the animals being fattened for the slaughter market on grain, other concentrates, or succulent pastures, and which are expected to produce a carcass that will grade good or better.

The lamb crop is defined as the number of lambs docked or branded in the 13 western sheep States (11 Western States, South Dakota, and Texas) for October 1 through September 30. In other States, the lamb crop is the number born. The estimated lamb crop percentage is the number of lambs saved per 100 ewes 1 year old and older on farms and ranches at the beginning of the year.

Wool and mohair production estimates were based on survey returns from sheep and goat producers and check data from ASCS incentive payment programs. These estimates include shearing at commercial feeding yards. Mohair State estimates were made only for Texas.

The following changes in the data series took place during 1976-79:

1. All sheep estimates in Alabama, Arkansas, Delaware, Florida, Georgia, Mississippi, Rhode Island, and South Carolina were discontinued beginning January 1, 1979.
2. Beginning November 1, 1977, Arizona and Wyoming were added to the seven selected feeding States program, replacing Kansas and South Dakota.
3. Sheep and lambs on feed estimates were discontinued in New York and Washington beginning January 1, 1979.
