Food Consumption, Prices, and Expenditures

FOOD CONSUMPTION, PRICES, AND EXPENDITURES. National Economics Division, Economics and Statistics Service, U.S. Department of Agriculture. Statistical Bulletin No. 656.

ABSTRACT

Food prices rose 10.9 percent in 1979. Consumer food expenditures rose 11.3 percent, but the percentage of U.S. disposable income spent on food dropped slightly to 16.4 percent. U.S. per capita consumption of all foods totaled 1,643 pounds in 1979. Per capita meat consumption rose slightly as strong gains for pork and poultry offset continued declines for beef and veal. Egg use gained in 1978 and 1979, after prolonged slippage. Lower dairy product consumption featured a sharp drop for fluid whole milk but further rises for lowfat milk. A sharp gain in corn sweetener use offset lower use of refined sugar.

Keywords: Food consumption, Nutrients, Retail food prices, Farm prices, Expenditures

ACKNOWLEDGMENTS

Per capita consumption data for agricultural products are developed by commodity specialists in the National Economics Division of the Economics and Statistics Service. Similar data for fishery products are provided by the National Marine Fisheries Service, U.S. Department of Commerce. Nutritive value data were developed by the Community Nutrition Center, Science and Education Administration, U.S. Department of Agriculture (USDA). This bulletin was initially prepared by James Scharer and was completed by Richard Prescott, with assistance from David Harvey. Margaret Ashton prepared the text.

INTRODUCTION

This statistical bulletin revises and updates through 1979 the data published in the supplement for 1977 to Agricultural Economic Report 138, Food Consumption, Prices, and Expenditures, issued in September 1979.

The tables here are the same as in the 1977 supplement except for minor changes in format, the omission of two tables associated with the Consumer Price Index prior to its revision in 1978 and of the quarterly per capita consumption indexes, and the revision of individual table entries. Revisions which affect the comparability of the data with earlier USDA per capita consumption estimates are noted. Unless otherwise noted, all consumption figures are for the civilian population and all figures for 1979 are preliminary.

Data prior to 1960 and detailed source notes for the tables are in the June 1965 issue of U.S. Food Consumption, Sources of Data and Trends, 1909-63, Statistical Bulletin 364. However, the table numbers in SB-364 do not match those in the current bulletin. An in-depth discussion of the methodology and history of USDA consumption figures is in Consumption of Food in the United States, 1909-52, published in September 1953. These publications are out of print, but most users will find an adequate discussion in Major Statistical Series of the U.S. Department of Agriculture, Volume 5, Consumption and Utilization of Agricultural Products, Agricultural Handbook 365, published in April 1972.

HIGHLIGHTS

The food component of the Consumer Price Index (CPI) rose 10.9 percent from 1978 to 1979, less than the CPI index for all items, which increased by 11.3 percent. Prices for food consumed away from home rose 11.2 percent, while prices for foods eaten at home cost 10.7 percent more. The retail value of the USDA market basket of food products originating on U.S. farms rose 12 percent over 1978. The farm-to-retail price spread, an indicator of the assembly, processing, and distribution costs of foods in the market basket was up by 11.8 percent. Total consumer expenditures for food rose 11.3 percent in 1979. Since personal disposable income rose by 11.4 percent, the percentage of U.S. disposable income spent on food dropped 0.1 percent to 16.4 percent.

Per capita food consumption in terms of weight has changed only moderately since 1960, rising 33 pounds, or 2.3 percent, to an estimated 1,463 pounds in 1979. However, the total food consumption index, weighted with 1967-69 prices, rose 8.5 percent over this period, to 105.7 in 1979, as Americans increased the proportion of higher valued foods in their diet.

Per capita consumption of meat, poultry, and fish, excluding eggs, dropped from 239.4 pounds in 1977 to 237.1 pounds in 1978, then rose to 239.2 pounds in 1979. Per capita consumption of beef and veal, which has fallen since 1976, was 81.2 pounds in 1979, the lowest since 1966. Pork consumption, level or rising since 1975, increased 8.1 pounds from 1978, to 64.6 pounds in 1979. While consumption of lamb and mutton and fishery products has remained relatively steady in recent years, per capita consumption of poultry products has risen, on average, 3.1 pounds per year since 1975, and reached 62 pounds per person in 1979.

Egg consumption increased in 1978 and 1979, ending a decline which started in 1971. However, 1979 consumption of 35.8 pounds (about 283 eggs) was still well below the 1960-64 average of 41.2 pounds (325 eggs).

Per capita dairy product consumption has declined over the last two decades, although use of some types of dairy products has increased. Dairy product consumption of 58.8 pounds per capita in 1979, measured on a milk solids equivalent basis, was down from 67.7 pounds in 1960-64. On a milk equivalent, fat content basis, consumption dropped from 640 pounds in 1960-64 to 561 pounds in 1979. On a retail product weight basis, consumption dropped from 377 pounds in 1960-64 to 346 pounds in 1978 and 342 pounds in 1979.

Among individual dairy products, consumption of fluid whole milk has declined steadily since 1960 while that of lowfat milk has increased. In 1979, per capita consumption of whole milk dropped 7 pounds to 173 pounds; lowfat milk use rose 3.6 pounds to 103.6 pounds. Cheese consumption, excluding cottage cheese, in 1979 of 17.6 pounds was well up from 8.9 pounds in 1960-64. Butter consumption of 4.6 pounds was up slightly from 1978 but down 7.2 pounds from 1960-64.

Total food fats and oils consumption increased 1.5 pounds in 1979 to 57.7 pounds per person, up from the 1960-64 average of 46.0 pounds. Vegetable fat consumption increased 1.3 pounds in 1979 while slightly greater use of margarine and a strong increase in lard pushed total animal fat use up by 0.2 pounds to 10.9 pounds. Despite this upturn, animal fat consumption remained sharply below the 1960-64 average of 18.4 pounds.

Total consumption of fresh fruit increased 1 pound in 1979 to 81.3 pounds. Various small increases for some non-citrus fruits outweighed a 2.2-pound decrease for the citrus group. Aggregate consumption of processed fruits and fruit juices changed little in 1979.

Total consumption of fresh commercial vegetables (excluding potatoes) increased 2.0 pounds in 1979 to 94.2 pounds, the highest level since 1962, and consumption of frozen and canned vegetables (excluding potatoes) increased slightly.

Fresh potato consumption increased 4.9 pounds in 1979 to 50.7 pounds per person, but was down 34 percent from the 1960-64 average. However, consumption of frozen potato products has increased almost fourfold, to 18.1 pounds per capita. These changes resulted in total 1979 per capita potato consumption of 75.9 pounds, up 5.3 pounds over 1978 and down only 12 percent from the 1960-64 average. Total consumption of flour and other cereal products increased 6 pounds per person in 1979 to 153 pounds. Consumption of cane and beet sugar dropped 2 pounds in 1979 to 91.1 pounds, but this was more than offset by a 2.9-pound increase in corn sweeteners (dry basis). Total consumption of caloric sweeteners was 129.8 pounds in 1979, a 0.9-pound increase over 1978.

Nutrients available for daily per capita consumption increased in 1979 from 1978 in every category except for vitamin B12. Compared with 1960, available nutrients were lower in only three areas: calcium, vitamin A, and vitamin B12.

^{1/} Quantities of individual foods on a retail weight basis are combined into indexes using 1967-69 average prices.^{2/} Includes edible offals.^{3/} Data for melons, fresh vegetables, potatoes and sweetpotatoes, and dry beans and peas include consumption from home garden products.^{4/} Corn sugar and syrup are with sugars and other sweeteners.^{5/} Excludes sugar used in production of canned and frozen fruit, canned fruit juices, canned vegetables, and unskimmed sweetened condensed milk.

Table 2—All food: Per capita consumption in pounds, retail weight equivalent, 1960-79 1/

^{1/} Retail weight data are taken from tables A-26. Final consumer products from a combination of primary food groups, such as bakery products, are measured and reported in the form of their primary ingredients, such as flour, shortening, and eggs. ^{2/} Includes game and edible offal. ^{3/} Includes game fish. ^{4/} Includes product weight of butter and margarine; other items in terms of fat content. ^{5/} Includes consumption of home garden produce. ^{6/} Data not comparable to pre-1960 figures. Data have been revised to reflect conversion from processed weight to fresh weight equivalent for dehydrated potatoes, frozen potatoes and chips and shoestrings. ^{7/} Soya products are approximated. ^{8/} Corn sugar and sirups are with sugars and other sweeteners. ^{9/} Excludes sugar used in production of canned and frozen fruits, canned fruit juices, canned vegetables, and unskimmed sweetened condensed milk. ^{10/} Includes spices and herbs and estimates of fruits and vegetables used in soups and baby foods.

1/ These factors were based on information from various sources. These factors were first assembled during World War II. Later, they were published in *Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products*.

Current revisions were based on special industry surveys and appraisals by commodity specialists.

2/ Points in the marketing system at which primary data are obtained.

3/ Unless otherwise noted, a straight-line interpolation was made for the 9-year intervening period.

4/ Early factor used through 1953; later factor used in 1963 and thereafter; interpolation made for 1954-62.

5/ Beginning in 1960 factor for both lean and fat cuts combined was revised to 0.78 and increased by a straight line interpolation to 0.92 in 1976 and beyond.

6/ Ready-to-cook derived from live weight using a factor of 0.68 prior to 1947; thereafter it was increased gradually to 0.72 in 1958 and beyond.

7/ Ready-to-cook derived from live weight using a factor of 0.75 prior to 1956 and 0.76 for 1956 and 1957; thereafter it was increased 1 percentage point per year until 0.80 was reached in 1961.

8/ Factor of 0.96 used in 1942-46 to cover additional loss resulting from shortage of wooden cases during the war period.

9/ Includes fats and oils in cooking and salad oils, in salad dressings, mayonnaise, in bakery products, and for minor uses such as fish canning. To avoid duplication with other foods, no attempt was made to put data on actual weight basis.

10/ Roasted.

11/ Factor of 0.278 used through 1961, 0.333 used for 1963 to 1973, and .40 used for 1974 and beyond.

12/ Chocolate liquor equivalent of cocoa and chocolate (53 percent fat content). Prior to 1925 a factor of 0.737 was used.

13/ Factor raised 0.01 point per year beginning with 1961 and reaching 1.00 in 1965 to allow for change of imports from box basis.

1/ Based primarily on information from Government-regulated State and Federal fluid milk markets.

2/ Includes buttermilk and all low-fat fluid items, including quantities used in flavored drinks.

3/ Includes quantities used in other dairy products.

4/ Excludes pot and baker's cheese.

5/ Includes evaporated and condensed buttermilk.

6/ Includes only the dairy component of frozen d

7/ Excludes butter. The inclusion of butter would add 1.0 to 3.0 pounds.

- = Not available.

1/ Excludes use in margarine, shortening, and nonfood products.

2/ Estimated from data on production of item.

3/ Computed as a residual. Includes small quantities used for miscellaneous commercial food products.

4. Table spreads and cooking fats plus oil content of other edible fats and oils

1/ Excludes soups, baby foods, canned dry beans and pea products.

2/ Beginning 1968, catsup and chili sauce and pastes and sauce not reported separately.

3/ Tomato juice content is about 94 percent of the total.

4/ Discontinued in 1979. See 5/.

5/ Revised in 1979 to correspond to other published USDA series. Consists of pimentos, other greens, miscellaneous vegetables and a "not elsewhere classified" component which may be negative.

6/ Series revised in 1971 to include potatoes canned in soups and stews.

1/ Series discontinued in 1979. See 2/.

2/ Revised in 1979, to correspond to other published USDA series. Series is currently composed of southern greens, okra, blackeyed peas, and miscellaneous vegetables.

3/ Included in other vegetables.

^{1/} Calendar year basis except for dry field peas for which the year begins in September of the year indicated. Data exclude home-garden products. Factors used to convert from farm weight to retail weight are indicated in table 3.

^{2/} Includes processed sweetpotatoes other than canned.

^{3/} Cleaned basis.

^{4/} Approximations.

1/ Consumption of most items is measured at the processing level. Excludes quantities used in alcoholic beverages. All civilian consumption except wheat flour per capita consumption which is based on total population. 2/ Semolina and durum flour in products such as macaroni, spaghetti, and noodles.

3/ Estimated on basis of data in Census of Manufacturers plus allowance for grind for farm home use.

4/ Milled basis. Rice consumption for year beginning August previous to year stated. 5/ Less than 0.05 pounds. 6/ Data no longer available. 7/ See table 28 for data on corn sugar and corn syrup.

8/ Based on census data. In recent years, approximately 50 percent of cornmeal was degermed.

9/ Principally oatmeal but includes an allowance for ready-to-eat oat cereals and infant foods.

10/ Barley food products expressed in terms of malt equivalent. Includes malt and pearl barley.

1/ Estimates are for the total population. Data in parentheses are approximations. Cane and beet sugar on dry basis. All else on wet or commercial basis.

2/ Refined, measured at approximately wholesale level of distribution.

3/ Includes syrup equivalent of maple sugar.

4/ Included in product weight of processed fruits and vegetables and sweetened condensed milk. Duplication with frozen dairy desserts avoided in the dairy statistics.

1/ Dry basis. Recent corn sweetener consumption may be understated due to incomplete data. Exclude high-fructose. 2/ Sugar sweetened equivalent assumes saccharin is 300 times as sweet as sugar, and cyclamate is 30 times as sweet as sugar. 3/ Cyclamate food use was banned by the Food and Drug Administration in 1970.

Table 22--Confectionery: Sales, value, and supply and utilization; with quantity, per capita consumption, and value, of sugar use, 1960-79

Calendar year	Manufacturers 1/			Supply and utilization						Sugar use 6/		
	Sales	Average value	Shipments	Imports 2/	Total supply and utilization	Exports 3/	Net change in stocks 4/	Domestic disappearance 5/	Quantity	Per capita	Total consumption 7/	Unit value 8/

1979 10/												

1/ Data on U.S. confectionery shipments, compiled from "Products and Product Classes-Quantity and Value of Shipments by all Producers" (including confectionery and chocolate-type confectionery for retail sale by chocolate manufacturers) reported in the 1958, 1963, 1967, and 1972 Census of Manufacturers, "Sugar and Confectionery Products." SIC Industry Groups 2065 and 2066, MC-20F series, published infrequently by U.S. Dept. of Commerce, Bureau of the Census, Washington, D.C. Data for noncensus years keyed to trend of confectionery shipments reported in "Confectionery Shipments, Sales Average Value and Per Capita Consumption, 1927-76," Confectionery Manufacturers' (Annual) Sales and Distribution (Surveys) 1977, U.S. Dept. of Commerce, Domestic and International Business Administration, Washington, D.C., June 1978. 2/ Data from U.S. Dept. of Commerce, U.S. Imports, FT-246, Statistical Classes, 156.3020, 157.1020, and 157.1040. 3/ Data from U.S. Dept. of Commerce, U.S. Exports, FT-410, Statistical Classes, 062.0015 and 073.0020. 4/ Calculated as a residual. Negatives indicate increases in stock level during year, positives signify net withdrawals. 5/ Domestic disappearance for food use. 6/ Quantity estimated by ESS, based on data from Fruit and Vegetables Division, AMS, U.S. Dept. of Agriculture. 7/ Unit value times total use. 8/ Calculated from "Total Consumption of Selected Ingredients by the U.S. Confectionery Industry," reported annually in Confectionery Manufacturers' (Annual) Sales and Distribution (Survey), U.S. Dept. of Commerce, Domestic and International Business Administration, Washington, D.C. 9/ Preliminary. 10/ Not available due to unavailability of Commerce data.

1/ Based upon imports for consumption, adjusted for exports of foreign unground pepper, minus domestic exports and shipments to territories of unground pepper, when reported.

2/ Based upon imports for consumption plus the production of the preceding year, adjusted for seed for planting. Data estimated beginning 1964.

3/ Based upon imports for consumption and production of dried chili peppers (*capsicum*) in California.

1/ Quantities of nutrients computed by Science and Education Administration, Consumer and Food Economics Institute, on the basis of estimates of per capita food consumption (retail weight), including estimates of produce of home gardens, prepared by the Economics and Statistics Service. No deduction made in nutrient estimates for loss or waste of food in the home, use for pet food, or for destruction or loss of nutrients during the preparation of food. Civilian per capita only, 1941 to date. Data include iron, thiamin, riboflavin, and niacin added to flour and cereal products; other nutrients added primarily as follows: vitamin A value to margarine, milk of all types, flavored milk extenders; vitamin B6 to cereals, meal replacements, infant formulas; vitamin B12 to cereals, ascorbic acid to fruit juices and drinks, flavored beverages and dessert powders, flavored milk extenders, and cereals. Nutrient data reflect for the first time poultry values from "Composition of foods—poultry products...raw, processed, prepared," AH-8-5 (1979).

1/ INCLUDES MERCHANTABLE STOCKS IN HANDS OF GROWERS AND LOCAL DEALERS IN AREAS WHERE PRODUCED PLUS ESTIMATED FARM USE AND SHRINKAGE AFTER JANUARY 1. 2/ INCLUDES THE FARM-WEIGHT EQUIVALENT OF DEHYDRATED POTATOES. 3/ FARM-WEIGHT EQUIVALENT. INCLUDES POTATOES IN SOUPS AND STEWS BEGINNING 1971. 4/ INCLUDES QUANTITIES USED FOR STARCH, GLUCOSE AND ALCOHOL. 5/ DATA INCLUDE THE FARM-WEIGHT EQUIVALENT OF DEHYDRATED POTATOES AND POTATO FLOUR. 6/ INCLUDES FARM-WEIGHT EQUIVALENT OF POTATOES USED IN MIXTURES, FLOUR, DEHYDRATION, CHIPS AND SHOESTRING POTATOES. IN RECENT YEARS THESE USES HAVE AMOUNTED TO ABOUT 21 PERCENT OF THE TOTALS SHOWN.

1/ ESTIMATED. INCLUDES COMMERCIAL STOCKS FOR SALE AS OF JANUARY 1, QUANTITY FOR SEED FROM PREVIOUS CROP AND 40 PERCENT OF THE FARM HOME CONSUMPTION OF THE PREVIOUS CROP YEAR AS FARM HELD SUPPLIES FOR FOLLOWING MONTHS. 2/ FARM WEIGHT EQUIVALENT OF CANNED SWEETPOTATOES. 3/ ESTIMATES BASED ON REPORTED FEED AND WASTE FOR CROP YEAR. ASSUMED 65 PERCENT OCCURRED BEFORE JANUARY 1. 4/ EXCLUDES CANNED POTATOES WHICH ARE INCLUDED WITH PROCESSED VEGETABLE DATA.

1/ Commercial production of wheat flour, whole wheat, industrial and durum flour and farina reported by the Bureau of Census. Production prior to 1970 includes estimate for noncommercial wheat milled. 2/ Imports and exports of macaroni products (flour equivalent). 3/ Preliminary. This table revises "Wheat Flour: Supply and utilization 1960-77" data last published in the Wheat Situation, WS-243, Feb. 1978, p. 27.

1/ PRODUCTION IN PRECEDING YEAR MINUS ESTIMATED QUANTITY USED FOR SEEDS. BEGINNING 1964.
 ESTIMATES BASED ON LIMITED INFORMATION. 2/ CALIFORNIA ONLY. 3/ IMPORTS FOR CONSUMPTION OF
 SPECIFIED GROUND AND UNGROUND CONDIMENTS AS REPORTED BY THE DEPARTMENT OF COMMERCE MINUS EXPORTS
 OF DUTY-FREE FOREIGN SPICES. "OTHER SPICES" INCLUDES IMPORTS OF GROUND CINNAMON, CLOVES, GINGER
 ROOT, NUTMEG AND PEPPER WHERE NOT INDIVIDUALLY REPORTED. SINCE 1963 EXCLUDES EXPORTS OF FOREIGN
 SPICES, SINCE THESE ITEMS ARE NOT INDIVIDUALLY REPORTED. 4/ CASSIA, CASSIA BUDS, AND CASSIA
 VERA. 5/ INCLUDES STEMS. 6/ EXCLUDES SESAME SEED CRUSHED FOR OIL. 7/ INCLUDES CARDAMON SEEDS,
 CURRY AND CURRY POWDER PRODUCTS, FENUGREEK SEEDS, LAUREL (BAY) LEAVES, MARJORAM, ORIGANUM, THYME,
 MIXED SPICES, OTHER SPICES AND SPICE SEEDS, AND CERTAIN GROUND SPICES (SEE FOOTNOTE 3). BEGINNING
 1964, ALSO INCLUDES BASIL, CAPERS, DILL, MINT LEAVES, PARSLEY, ROSEMARY, AND SAVORY. SINCE 1963
 EXPORTS OF FOREIGN SPICES ARE NOT INDIVIDUALLY REPORTED; THESE ARE DEDUCTED FROM "OTHER SPICES".
 INCLUDES SHIPMENTS FROM TERRITORIES BEGINNING 1965.

:				

1/ The market basket contains the average quantities of U.S. farm-originated food products purchased annually per household in 1972-1974 by all urban consumers. The farm value is the return to farmer for the farm products equivalent to foods in the market basket. The farm-retail spread is the difference between the retail cost and farm value.

1/ Expenditures represent the market value to consumers of all domestic farm foods bought by civilian consumers in this country. Farm value is adjusted to eliminate imputed value of nonfood byproducts. The marketing bill is the difference between the farm value and expenditures. Commodity groups may not add to totals due to rounding.

2/ Farm value of bakery products groups includes farm values of flour, milk, eggs, fruit, lard, vegetable shortening, and sugar used in bakery products. Farm values of these ingredients are not included in farm values of other product groups.
