VEGETABLES: ESTIMATES BY SEASONAL GROUPS AND STATES, 1974-78, ACREAGE, YIELD, PRODUCTION, AND VALUE. Crop Reporting Board, Economics and Statistics Service, U.S. Department of Agriculture. Statistical Bulletin No. 665.

#### ABSTRACT

This publication presents final estimates of acreage, production, and value by States for 1974-78 for the major fresh market and processing vegetable crops.

Washington, D.C. 20250

May 1981

SECTION I  
VEGETABLES FOR FRESH MARKET,  
ESTIMATES BY SEASONAL GROUPS AND STATES, 1974-78,  
ACREAGE, PRODUCTION, AND VALUE

INTRODUCTION

This section presents the final official estimates of acreage, production, and value of the principal fresh market vegetables, melons, and strawberries by seasonal groups from the major producing States for 1974 through 1978. These estimates cover 85 percent of the national commercial production of all fresh market vegetables and melons.

These estimates continue the series which started with Statistical Bulletin No. 126, "Commercial Vegetables for Fresh Market, 1939-50." Subsequent data have been carried in "Vegetables for Fresh Market," Statistical Bulletins No. 212 for 1949-55, No. 300 for 1954-59, No. 412 for 1959-65, No. 495 for 1964-70, and No. 586 for 1969-74.

Estimates are included for acreage, yield, production, price, and value for snap beans, cabbage, sweet corn, cucumbers, spinach, and tomatoes going for fresh market use. For asparagus, broccoli, carrots, cauliflower, and strawberries, estimates of acreage, yield, production, price, and value cover the total crop while only production, price, and value estimates are shown separately for fresh market and processing uses.

Estimates of the total crop are made for artichokes, brussels sprouts, celery, garlic, onions, and green peppers, although a small portion of the production is for processing.

The harvesting periods in this publication are defined as follows: Winter--January, February, March; spring--April, May, June; summer--July, August, September; and fall--October, November, December. However, the seasonal patterns for harvest may deviate from these periods because of fluctuations in marketing seasons and changes in the weather.

In this publication, the value of vegetables sold for fresh market use is "f.o.b. shipping point," except garlic, for which value per unit is reported annually on a field-run basis at the packinghouse door. Vegetables sold for processing are valued at the processing plant door, also referred to as packinghouse door. For vegetables sold both for fresh consumption and processing, total value is the sum of the value for both uses. Per unit value is derived by dividing total value by total quantity and is not really the "price" received by growers nor is it used for parity purposes.

Except for summer storage onions and New York cabbage, production estimates relate to production of value. For these crops, production and sales are different due to shrinkage and loss during storage.

Acres harvested include all acreage completely or partially harvested, including mature acreage abandoned because of low prices, farm labor shortages, and other economic factors. Planted acreage in this report includes acreage harvested and acreage lost or abandoned due to all causes. Acreage lost but replanted to the same crop early enough to be harvested in the season for which it was originally intended is counted only once. Acreage lost and replanted to the same crop for harvest in a later season is considered to have been planted in both seasonal classifications but is included as harvested acreage in the second season only. Acreage lost and replanted to another crop is included as planted acreage for both crops but as acreage harvested for only the second crop. Estimates of both planted and harvested acreages published for asparagus and strawberries include only bearing acreage and exclude nonbearing acreage planted for harvest in future marketing seasons.

Estimates in this publication are based primarily on data secured from growers and others associated with the production and marketing of vegetables, melons, and strawberries. Information is obtained by mail, field counts and measurements, and interviews. Data on acreage, movement, and sales provided by organizations, associations, and public agencies are also used.

SECTION II  
VEGETABLES FOR PROCESSING,  
ESTIMATES BY STATES, 1974-78,  
AREA, YIELD, PRODUCTION, AND VALUE

INTRODUCTION

This section contains the final estimates of area planted and harvested, yield, production, price, value, and utilization of vegetable crops grown for commercial processing in the United States during 1974-78. The estimating program for vegetables grown for commercial processing is confined to nine principal crops: Green lima beans, snap beans, beets, cabbage for kraut, sweet corn, cucumbers for pickles, green peas, spinach, and tomatoes. Also included in the summary tables are the processing production and value for the dual-purpose crops (asparagus, broccoli, carrots, and cauliflower).

Commercial processing, as related to estimates published in this bulletin, includes canning, freezing, pickling, and the manufacturing of kraut. Home canning and freezing and institutional processing are excluded, as is commercial dehydration. Production utilized for dehydration is included in estimates of commercial vegetables for fresh market.

Estimates for processing vegetable crops are based primarily on reports supplied each season by commercial processors throughout the country. Supplemental data from industry groups and cooperating State and Federal agencies are also utilized as much as possible.

Planted and harvested area includes (1) all acreage owned by processors and used in production of the crop, (2) acreage utilized by growers in producing a crop grown under contract to a processor, and (3) an equivalent acreage allowance for production purchased by processors on the open market. The term "production" refers to the quantity of raw products received and paid for at the rate(s) specified in contracts or purchase agreements. Open-market purchases are included but culls and rejects in excess of any established tolerance are excluded. The "Value per unit" and "Value of production" for processing vegetable crops are equivalent returns at processing plant door and for fresh market crops, f.o.b. shipping point.

Data on processing vegetable crops for earlier years are in the following publications: "Vegetables for Commercial Processing, 1918-50," Statistical Bulletin No. 132, published June 1953; "Vegetables for Processing, 1949-55," Statistical Bulletin No. 210, published May 1957; "Vegetables for Processing, 1954-59," Statistical Bulletin No. 299, published December 1961; "Vegetables for Processing, 1959-65," Statistical Bulletin No. 411, published August 1967; "Vegetables for Processing, 1964-70," Statistical Bulletin No. 494, published September 1972, and 1969-74, Statistical Bulletin No. 585, published December 1977.
