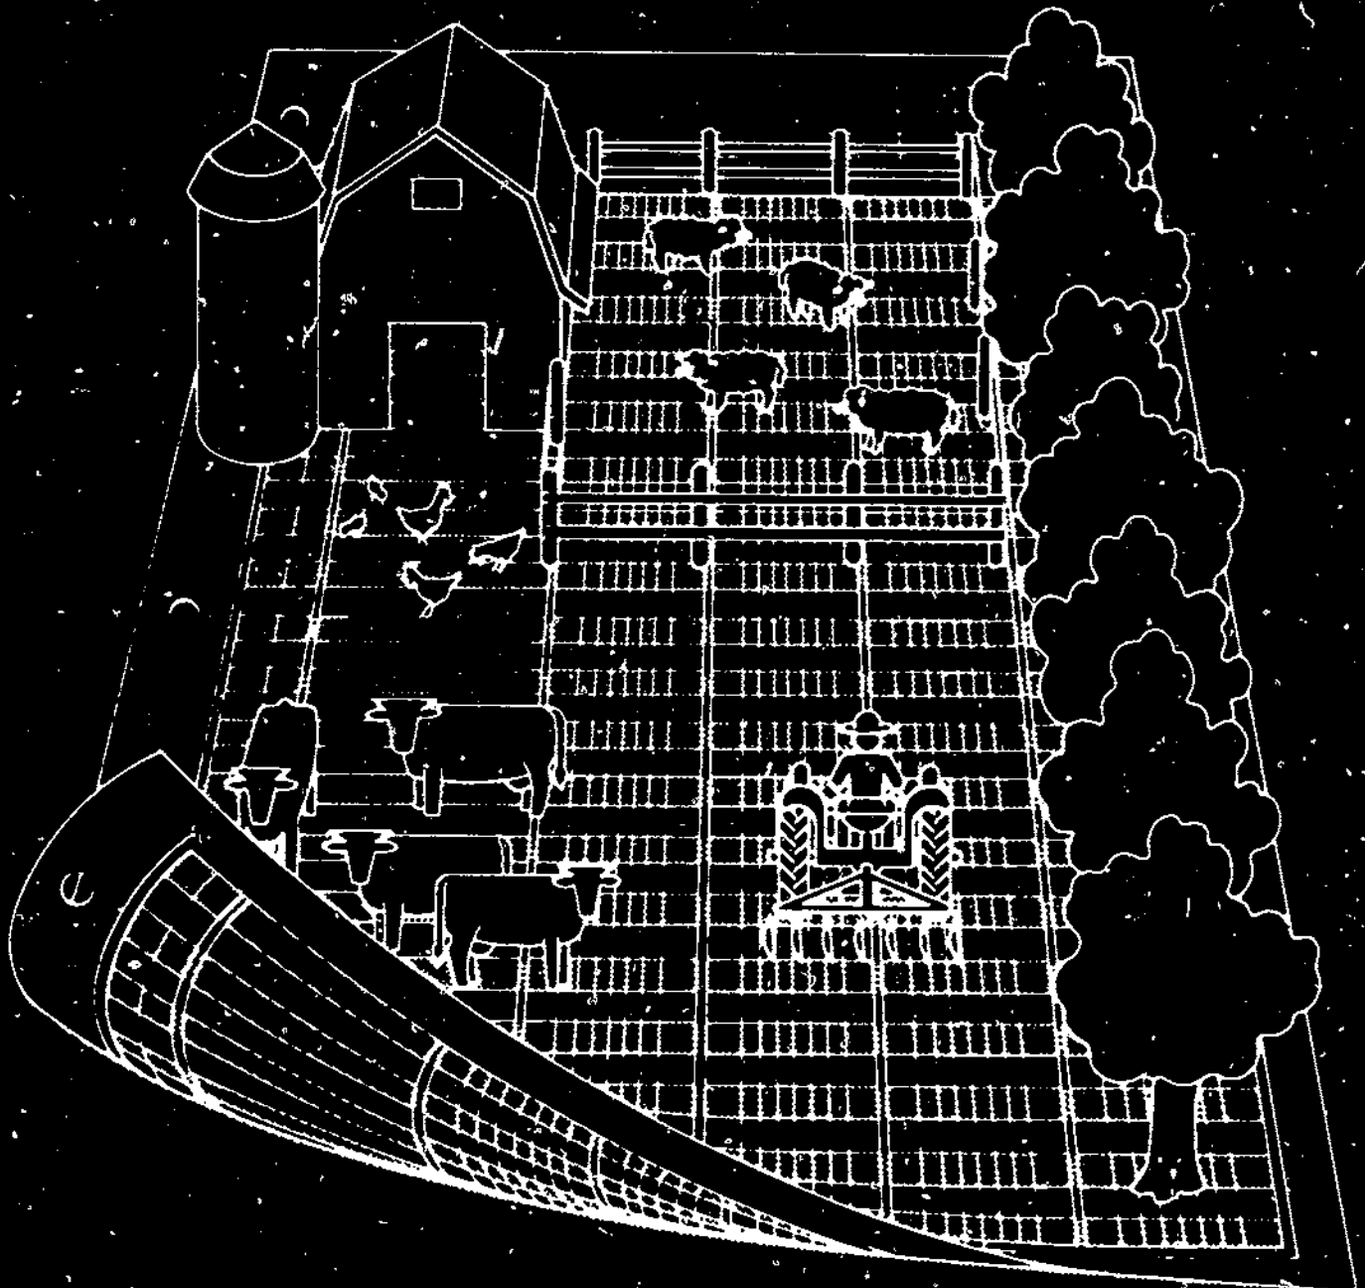
Economic Indicators of the Farm Sector

Income and Balance Sheet Statistics, 1980



ECONOMIC INDICATORS OF THE FARM SECTOR: INCOME AND BALANCE SHEET STATISTICS, 1980. National Economics Division, Economic Research Service, U.S. Department of Agriculture, Statistical Bulletin No. 674.

ABSTRACT

Net farm income in 1980 declined 39 percent to $19.9 billion from $32.7 billion in 1979. Returns to operators also declined about 50 percent. Cash income from farming declined from $38.4 billion to $32.6 billion. Total farm assets (including farm households) passed $1 trillion for the first time as the value of farm real estate increased from $756 billion on January 1, 1980, to $829 billion on January 1, 1981. Farm debt increased 11 percent from $158 billion to $175 billion. Total farm assets (excluding farm households) increased from $902 billion to $980 billion.

Keywords: Farm assets, farm debts, net farm income, returns to operators.

Washington, D.C. 20250 September 1981

PREFACE

The Economic Research Service (ERS) developed new procedures in 1980 to measure statistically the economic status of the Nation's farms and farm operator income. Using the new procedures, long-standing data series such as farm income and the balance sheet of the farming sector were brought up to date to better reflect the nature of today's farm sector.

One major feature of the new series is the separation of the operator's household and dwelling from farm production transactions, assets, and debt. This new format is more appropriate for expanding the aggregate accounts into subsector groups, which is planned for the years ahead.

This report is one of four in the Economic Indicators of the Farm Sector series. Other reports are State Income and Balance Sheet Statistics, Production and Efficiency Statistics, and Costs of Production. These publications replace four familiar annual reports: Balance Sheet of the Farming Sector, Farm Income Statistics, State Farm Income Statistics, and Changes in Farm Production and Efficiency.

All of the income estimates in this report are on a calendar year basis. Many are used as basic data for the State and regional personal income estimates and the national income and product accounts of the U.S. Department of Commerce.

The data, while mainly based on information from the Statistical Reporting Service and the Census of Agriculture, also use information from other Government agencies and in some cases from private sources. Revisions are normally made for recent years, as additional information becomes available.

This publication was prepared by the staff of the Farm Sector Analysis Section, Economic Indicators and Statistics Branch, National Economics Division, ERS.

The principal contributors to this report are:

Coordinators--George Hoffman	(202)447-2317

HIGHLIGHTS

Total farm assets (including farm households) exceeded $1 trillion for the first time on January 1, 1981, as farm real estate values increased from $756 billion to $829 billion. Total farm assets (excluding farm households) increased from $902 billion to $980 billion. Farm household assets excluded furnishings and equipment of the household, farm operator dwellings, the motor vehicles associated with the household, and household financial assets, such as savings bonds and savings accounts.

Total liabilities (including farm households) increased from $158 billion to $175 billion on January 1, 1981. Total liabilities (excluding farm households) increased from $147 to $163 billion during this period.

Net farm income declined from $32.7 billion in 1979 to $19.9 billion in 1980, a decrease of 39 percent, as prices dropped sharply in the first part of the year and drought reduced crop production for most crops in the last half of the year. Returns to operators decreased from $26.6 billion in 1979 to $13.2 billion in 1980. Cash income from farming also decreased, from $38.4 billion to $32.6 billion in 1980. Factor payments (returns to the factors employed in farm production--land, labor, and capital) dropped from $53.2 billion in 1979 to $44.3 billion in 1980.

Total production expenses in the net farm income account were up 10 percent, from $119.2 billion in 1979 to $130.7 billion in 1980. Fuel, fertilizer, and interest charges increased the most. Total expenses in the returns to operators account increased from $115 billion to $125.9 billion.

The Economic Research Service developed new procedures in 1980 to measure statistically the economic status of U.S. farms and farm operator income. These series are continued and expanded in this publication. The traditional measures of farm income, assets, and debt are also included in this publication.

The new measures permit the earnings and financial dimensions of the farm business to be distinguished from farm family income and finances. Development of farm income series for all crop and all livestock farms are underway and will be published in later editions.

Economic Indicators of the Farm Sector

Income and Balance Sheet Statistics, 1980

BACKGROUND

The U.S. Department of Agriculture has published a comprehensive set of income estimates relating to agriculture since the mid-twenties. The series have been revised and expanded through time, incorporating individual State estimates in 1949 and sales class distributions in 1960. In 1980, new accounts were added which permitted the earnings and financial dimensions of the farm business to be distinguished from farm family income and finances. These accounts, along with the former accounts, are included in this publication.

These accounts were developed to separate the aggregate accounts in a manner that would permit the earnings of the farm business unit to be distinguished from farm family income and to permit a better analysis of the wealth and income status of the production units and the operators of those units by type of farm, value of sales class, and type of ownership.

The production sector accounts are based on the concept of separating the measurement of the economic viability of the production units (establishments) of the farm sector (a part of the business sector of the national economy) from the well-being of the farm operator families (a part of the household sector of the national economy). Information on the nonfarm assets and debts of farm operators is limited and is not reported in this publication.

In this 1981 report, the new income accounts include data for calendar years 1977, 1978, 1979, and 1980. The balance sheet accounts (excluding farm households) include data for January 1, 1977, 1978, 1979, 1980, and 1981, but some of the tables have been compiled back to 1940. This year, and for the next few years, all the traditional measures of farm income and balance sheet items will be published in addition to the new accounts.

The format of this publication differs slightly from the 1980 publication. Instead of three sections with the new accounts separated from the traditional accounts, the income and balance sheet statistics are separated into sections. Within the income section, the tables are identified in the title as to whether or not they are new accounts. The new accounts are designated by the term "(excluding net Commodity Credit Corporation loans)." The traditional accounts are designated by "(including net Commodity Credit Corporation loans)." The balance sheet accounts are differentiated by "(excluding farm households)" for the new accounts and "(including farm households)" for the traditional accounts.

The agricultural production sector includes farm establishments involved in agricultural production regardless of the sources of labor. The production sector is separated from the marketing, processing, and distribution sectors within agriculture and can be subdivided according to geographic location, type of ownership, and type of farm (cash grain, livestock, and tobacco, for example). Disaggregation of the production sector according to business organization would include sole proprietors, partnerships, and corporations, although additional data are needed to provide a complete breakdown by this classification. Data by State and value of sales class are presently available and are separated in this and subsequent issues of Economic Indicators. Development of a farm income series by type of farm for all crop farms and all livestock farms is underway and will be published in subsequent issues of Economic Indicators.

The terms "farm" and "establishment" represent the places on, or in, which the production process occurred. The establishment concept used for 1977-80 in this report is the official Census farm definition adopted in 1974 which includes places with annual sales, or potential sales, of $1,000 or more.

Households include all families or individuals receiving income from the agricultural production sector. The main category of households emphasized in this report is farm operators, although some of the tables include landlord and employee categories as well. The operator category includes owners and tenants, as well as managers associated with corporate or institutional establishments.

In addition to households, income of the farm population is reported. The farm population includes all persons living on places with agricultural sales of $1,000 or more who do not pay cash rent for the dwelling they occupy. This category does not include farm operators, landlords, or employees who do not live on farms.

INCOME ACCOUNTS

The first section of tables presents farm income statistics. Table 1 is an overall summary of several measures of the farm sector's financial status. Subsequent tables present various measures of farm income including farm production transactions, farm sector cash flow, and net farm income. Total farm operators' income is shown in table 1.

Farm Production Transactions

The objective of the transactions accounts is to measure the income from agricultural production establishments so the value added by the farm production sector can be distributed to the institutions or classes of individuals, such as sole proprietors, partnerships, or corporations, controlling the

sector's resources. The account depicts the income-producing process as a series of transactions including various sources of receipts and allocations of expenses.

In the transactions summary, the residual is returns to operators, and total receipts are designated gross farm receipts. Gross farm receipts in 1980 were $139.1 billion, about $2 billion less than 1979. Gross receipts differ from gross farm income in the farm income accounts because the rental value of farm operator dwellings is removed and Commodity Credit Corporation (CCC) loans are treated as loans, not sales, at the time they are made. Gross receipts for 1980 consisted of farm marketings at $136 billion, net inventory change at minus $1.8 billion, Government payments at $1.3 billion, other farm income at $2.4 billion, and home consumption at $1.2 billion for the total of $139.1 billion. Returns to operators dropped from $26.6 billion to $13.2 billion as production expenses increased more rapidly than gross receipts.

Production expenses under the production transactions accounts are divided into nonfactor and factor payments. Under nonfactor payments, intermediate production expenses are purchased inputs. These inputs increased to $72.8 billion in 1980, 7 percent above 1979. Intermediate products are of farm origin such as feed, seed, and livestock purchased, amounting to $32.9 billion, or 45 percent of the total. Other inputs of nonfarm origin under this category are fuel, fertilizer, repairs, pesticides, and other miscellaneous inputs.

Farm production expenses reported in table 61 are all reported in one table; the user can secure the same totals as formerly reported by adding the applicable columns. The "miscellaneous" total from previous publications may be calculated by adding machine hire and custom work (excluding contract labor), pesticides, electricity, other operating expenses (including operator dwellings), and interest on nonreal estate debt. Most column totals are reported both with households and without.

Other nonfactor payments include capital consumption and business taxes. Capital consumption includes depreciation and accidental damage. Depreciation is measured on a replacement-value basis rather than purchase price in order to reflect decreases in current market value of the capital stock. Depreciation is lower in the production transactions accounts than the net farm income accounts because the operators' dwellings are not included. Capital consumption in the transactions account increased 10 percent in 1980 from 1979 to $18.2 billion.

Factor payments is the income available to provide returns to the factors--land, labor, and capital. These returns are in-

terest, wages to hired labor, net rent to all landlords, and returns to operators. Returns to operators is the portion of income left to the operator for returns supplied from labor, management, and capital.

Farm Sector Cash Flow

Cash flow status is an indicator which helps provide some perspective on the shortrun financial situation of farmers. Even though the wealth and income situation of the average farm operator may be adequate in terms of the farmer's resources, the cash flow may be inadequate to meet current obligations, thus causing financial difficulties. This may not be unusual, for example, for many beginning farmers and for those who may recently have purchased land financed at interest rates which, in periods of unfavorable price relationships, could cause severe financial stress.

Farm sector cash flow lists only cash transactions (table 3). Net inventory change, perquisite rent, and home consumption are not cash items and are removed from the production transactions accounts for this table. Cash uses include only those expenses that are cash transactions. Capital consumption is a noncash expense and is not included. The perquisites for hired labor are also excluded. Cash income from farming measures the cash available for capital asset purchases, loan retirement, and operator household cash income.

Cash income from farming in 1980 was down about $6 billion from the $38 billion of 1979, but the drop was much smaller than the decrease in returns to operators or net farm income.

The cash flow summary is an accounting for the agricultural production sector and not for farm operators. Thus, net rent to all farm landlords is included, and off-farm income of farm operators is excluded. Capital expenditures are subtracted as a use of cash. Sources of cash for the sector are net changes in loans, including CCC loans, net changes in farmers' currency and demand deposits, and net rent to all landlords. Net cash flow measures the change in cash available for household consumption, further business operations, or purchases of real estate from discontinuing proprietors. Net cash flow decreased from $44 billion in 1979 to $36 billion in 1980 although capital expenditures decreased.

Net Farm Income

Net farm income accounts differ from production transaction accounts in that the farm household income is included in net farm income and CCC loans are considered sales when the loans are made.

The farm household accounts affect both the income and expenses in net farm income. The imputed rental value of farm operator

dwellings is included as income. The expenses for these dwellings are included in expenses, which affect repair and operation, interest, taxes, capital consumption, and other miscellaneous expenses.

Net farm income in 1980 was down about 39 percent to $19.9 billion from the $32.7 billion of 1979. Cash receipts increased 7 percent to $136.4 billion and farm production expenses increased 10 percent to $130.7 billion. The value of the change in inventory for 1980 was minus $2 billion, further reducing net farm income.

Cash Receipts

Cash receipts differ between the farm production transactions accounts and net farm income accounts by the amount of change in CCC loans adjusted from the loan value to the current market value. Loans liquidated are added into the transactions accounts. Cash receipts were higher in 1979 for the production transactions as net CCC loans were negative. Cash receipts in 1980 were lower under the net farm income accounts as net CCC loans were positive. Cash receipts for net farm income increased as crop receipts rose 9 percent while livestock decreased about 2 percent. Most crop receipts increased; cattle receipts declined; hogs were about the same; and poultry was up slightly. Dairy products receipts rose about 13 percent.

Commodity Credit Corporation Loans

CCC loans are treated differently between the production transactions accounts and the net farm income accounts, much as CCC loans are considered loans under the transactions accounts but sales under the net farm income accounts. When CCC loans are treated as loans, and if the loans are liquidated (commodities are physically delivered to CCC and the loan canceled) or sold on the open market, then they are considered sales at that time. The net effect is the same for both accounts, but the year in which the sales are counted can shift. Since the CCC loans are counted as loans, the quantities under loan are recorded as inventories. In the net farm income accounts, CCC loans are counted as sales at the time the loan is made and the quantities under loan are not counted in inventory calculations.

Change in Inventory

Changes in inventories in the income accounts are calculated to reflect the change in quantity between January 1 and December 31, multiplied by the yearly average price. The result is compared with the normal tax valuation process of the quantity on January 1, multiplied by the price on January 1, minus the quantity on December 31, and multiplied by the price on December 31 of any given year. This concept may cause wide fluctuations in value of inventory changes. If inventories decrease, then generally the price will be higher during the year, and if inventories increase, the price will

tend to be lower during the year. Under a change in total value concept, the value will remain more constant than under the change in quantity concept. As noted above, when CCC loans are treated as loans, the quantity under loan becomes a part of the inventory, but when they are treated as sales, they do not enter the inventory calculations.

Inventories under both accounts were negative in 1980, at about minus $2 billion for net farm income and minus $1.8 billion in the transactions accounts.

Production Expenses

Production expenses between transactions accounts and net farm income accounts differ in several ways. The expenses of operators' dwellings are included under the net farm income accounts but are excluded under the transactions accounts. Repair and operation, interest, business taxes, capital consumption, and some miscellaneous accounts are lower in the transactions accounts. Feed, livestock, seed, fertilizer, fuel, electricity, marketing charges, and nonreal estate interest are the same for both accounts. Contract labor has been moved to the service accounts--machine hire, custom work, and contract labor--while it is included as a part of wages to hired labor in the net farm income accounts. In the production transactions, net rent to all landlords is an expense, but in the net farm income accounts, only net rent to nonoperating landlords is an expense. Production expenses in the net farm income accounts increased 10 percent in 1980 over 1979 as fertilizer, fuel, and interest expenses jumped.

Total Farm Operator Income

Most of the tables contain data on the farm production sector and returns to the farm operator. Table 1 has data for total operator income and measures the well-being of farm operators in total. Income from both farm sources and nonfarm sources is shown. Total farm operator income is about the same under both the transactions accounts and the net farm income accounts as the imputed net rental value of operator dwellings and net rent to operator landlords are added into the total in the transactions accounts. Off-farm sources are the same for both accounts.

Total operator income dropped in 1980 as off-farm income increased but farm-related income decreased. Total operator income dropped from $65.3 billion in 1979 to $55.6 billion in 1980.

BALANCE SHEET ACCOUNTS

The second section of the tables contains balance sheet data, which on some tables, have been revised beginning with 1975. The two accounts are differentiated by one set which includes farm households and another set which excludes farm households. The tables are identified by including in the titles either

(including farm households) or (excluding farm households). The accounts "including farm households" are the same accounts formerly published in the Balance Sheet of the Farming Sector.

Assets

Total farm assets including farm households exceeded $1 trillion as value of farm real estate increased from $756 billion on January 1, 1980, to $829 billion January 1, 1981. Total farm assets excluding farm households increased from $902 billion to $980 billion.

In the balance sheet accounts, when household assets are excluded, so too are the operators' dwellings, household portion of automobiles and trucks, household equipment, time deposits, household portion of investment in cooperatives, and U.S. savings bonds. Operators' dwellings removed about $70 billion from the real estate assets, automobiles and trucks $6 billion, time deposits and savings bonds about $13 billion, and household equipment about $22 billion as of January 1, 1981.

Real estate assets make up over 75 percent of total assets, and thus the movement of real estate values strongly affects total farm assets.

Debt and Equity

In the accounts where farm household assets are excluded, the household portion of the debt is also excluded. The portion of the debt attributed to the operators' dwellings, household portion of automobiles and trucks, and household equipment is removed.

Even though farm real estate makes up 75 percent of total assets, real estate debt only consists of slightly over 50 percent of total debt. The equity in the farm sector then consists mostly of equity in real estate.

While the debt/asset ratio is still quite low, the ratio has been rising over time. In tables B31 through B40, the debt/asset ratio varies greatly by value of sales class. As of January 1, 1980, the ratio varied from 5.6 percent in the smallest class to 22.3 percent in the largest class. Most of the total value of proprietors' equity, however, is concentrated in the upper sales classes.

Returns to Equity 1/

The estimates of returns to equity in farm assets shown in table B23 is an attempt to measure the profitability, or

1/ For a discussion of the procedures, see Bruce Hottel, "Returns to Equity Capital in the U.S. Farm Production Sector," Balance Sheet of the Farming Sector, AIB-430, ESCS, USDA, Feb. 1980.

loss, to equity capital used in farm production. Equity capital is the market value of farm production assets less debt. The income returns to this equity are obtained as a residual flow by taking income from farm resources and subtracting an estimated value for management, operator's labor, and interest paid on the indebted proportion of total farm assets used in production. An imputed charge for operator and family labor is based on total annual work hours contributed to production, times the average hourly wage rates actually paid for hired workers. The imputed charge for managerial functions covers the operational aspects of management, assumed at 5 percent of the value of: farm cash receipts minus livestock and feed purchases, plus or minus changes in farm inventories.

Returns to equity from changes in the value of farm assets are measured in terms of both nominal and real value. Nominal capital gains are measures of the change in the value of farm physical assets each year minus the value of net investment in farm production assets (capital expenditures less capital consumption allowances). Real capital gains are the amount by which nominal gains exceed the loss in purchasing power from increases due to inflation as measured by the Consumer Price Index, all items (1967=100). For instance, if the nominal value of farm assets valued at $100 billion increased during the year by $10 billion, and the general level of price inflation was 8 percent, then the real capital gain on farm assets is $2 billion (10 - (0.08x100) = 2). The $2 billion represents a gain in real wealth.

Real capital gains or losses thus reflect both the change in the nominal value of farm production assets during the year and the change in purchasing power of the funds tied up in assets and debts. For example, during periods when farm physical assets increase in value faster than the rate of inflation, a gain in real wealth is attained on farm assets. But if asset values do not increase as fast as the inflation rate, a loss in real wealth occurs. For monetary assets such as demand deposits and currency, if purchasing power is eroded by inflation, a real capital loss is experienced. For farm debt, the effects are opposite of those for monetary assets. For debtors, inflation results in real capital gains while deflation results in real capital loss.

The rates of returns from income and real capital gains to equity in assets are derived by dividing the respective amount by the equity value of farm assets. Residual farm income, farm equity, and real capital gains can be added together as can their rates of return; however, the user is cautioned that it may not be entirely appropriate in an economic sense to add

farm income and nominal capital gains to measure the well-being of farm operators. Increasing capital gains benefiting some farmers may hurt smaller and younger farmers trying to expand their farm size and income.

SECTION I TABLES:
FARM INCOME STATISTICS

Table 1--Summary of the farm sector's financial status, production transactions, and operator income (excluding net Commodity Credit Corporation loans and farm households), 1977-80

Item	1977	1978	1979	1980

1/ Includes major commodity income estimates for which the USDA published State value of production in 1980, plus minor States for which value of production was not published. Adjustments are also made in "Other" categories for other commodities. 2/ Cash receipts include value of home consumption. 3/ Includes poultry and other livestock commodities for which USDA does not estimate individual values of production. 4/ Home consumption not available for individual commodities. 5/ Includes only processing. 6/ Includes vegetable commodities for which USDA does not estimate individual values of production. 7/ Includes all berries for which USDA does not estimate individual values of production. 8/ Includes fruits and nut crops for which USDA does not estimate individual values of production. 9/ Hawaii sugarcane is included. 10/ Includes items previously listed in greenhouse and nursery.

1/ Includes major commodity income estimates for which the USDA published State value of production in 1980, plus minor States for which value of production was not published. Adjustments are also made in "Other" categories for other commodities. 2/ Cash receipts include value of home consumption. 3/ Includes poultry and other livestock commodities for which USDA does not estimate individual values of production. 4/ Home consumption not available for individual commodities. 5/ Includes only processing. 6/ Includes vegetable commodities for which USDA does not estimate individual values of production. 7/ Includes all berries for which USDA does not estimate individual values of production. 8/ Includes fruits and nut crops for which USDA does not estimate individual values of production. 9/ Hawaii sugarcane is included. 10/ Includes items previously listed in greenhouse and nursery.

NA=not available. 1/ Components may not add due to rounding. 2/ Includes bulbs, plants, and trees. 3/ See table 62 for components. 4/ For farm business use only. 5/ Includes social security taxes paid by employers under the old-age survivors' insurance provision of the Social Security Act from 1951 to date. 6/ Contract labor data was not collected until 1959. The 1950-58 data include machine hire and custom work only. 7/ Add machine hire and custom work (excluding contract labor), pesticides, electricity, other operating expenses, and interest on nonreal estate debt to calculate "miscellaneous" in previous publications. 8/ See table 64 for components. 9/ Nonfarm landlord series 1910-58. 10/ Includes net rent to all landlords. For the years 1940-1958, includes total farm wages including contract labor, and for the years 1950-1958, also includes machine hire and custom work excluding contract labor. 11/ Includes net rent to nonoperating landlords only.

1/ Includes other farm income beginning 1950. 2/ From table 61. Current operating expenses consist of feed, livestock, seed, fertilizer and lime purchases, repairs and operation of capital items (including fuel and operators dwelling), machine hire and custom work (excluding contract labor), pesticides, electricity, other operating expenses (including operators dwellings), and interest on nonreal estate debt. 3/ Total cash wages from table 61 plus social security taxes paid by employers. 4/ From table 63. 5/ From table 61. 6/ This series includes share rent as well as cash rent paid to nonfarm or nonoperator landlords because their share is included in cash receipts shown in the first column. However, the series differs slightly from that on total rent to nonoperator landlords shown in table 61, because the landlords' share of total expenditures on farm buildings--instead of their share of depreciation has been deducted from gross rent to arrive at the net rent series shown here. This series represents nonfarm landlords for 1910-58 and nonoperator landlords for 1959 to date.

Table 66--Number of farms, by value of sales class, 1960-80 1/

Year	Farms with sales of--

NA=not available. 1/ Based on the 1974 Census of Agriculture definition of a farm, which is sales of $1,000 or more, and applies to 1977 and all following years.

Data in Tables 66 through 79 are estimated using information from several sources. They include the Census of Agriculture, periodic surveys, special studies and other related information. The published distributions are believed to be reasonable approximations. However, basic information is limited and usually dated. As a result, a number of assumptions and rough approximations of some variables are involved in the estimating process. Also, much of the basic data is available only every five years. This means that the estimates for years subsequent to the latest benchmarks are in effect projections which may be subject to substantial revisions as fresh data become available. Since there is not any available information to prorate net inventory change by sales class, gross receipts in Tables 67 to 70 included net inventory change prorated on the basis of farm marketings.

NA=not available. 1/ See table 55 for components. 2/ See table 61 for components. 3/ Information not available prior to 1960. 4/ See table 77 for estimated distributions of net farm income and off-farm income by value of sales classes. For 1980, it is estimated that farms with less than $20,000 in gross farm sales received 74 percent of the off-farm income and that on average this accounted for 88 percent of their family income. 5/ Based on the 1974 Census of Agriculture definition of a farm, which is sales of $1,000 or more, and applies to 1977 and all following years.

Table 81--Number of farms and per farm gross income, production expenses (including farm households), and income of farm operator families, 5-year averages 1910-39, annual 1940-80 1/

1/ The averages in this table are derived by dividing appropriate totals appearing in tables 83 and 84 by the population estimates in table 84. 2/ Includes returns from farming operations to resident farm operators for their capital, labor, and management, after deduction of farm production expenses (there is no allowance in the item farm production expenses for a return on investment in farm capital). Also includes farm wages and other labor income received by hired farm resident workers. 3/ Includes all income received by farm residents from nonfarm sources such as wages and salaries from nonfarm employment, nonfarm business and professional income, rents from nonfarm real estate, dividends, interest, royalties, unemployment compensation, and social security payments. 4/ Revised data, 1934-79. 5/ Department of Commerce revised data, 1934-79

		Percent		
Return as a percentage of equity value:				
Residual income	1.9	3.2	3.3	1.2
Real capital gains	5.4	12.5	3.4	-1.4
Total	7.3	15.7	6.8	-.2

1/ Returns to operators plus interest plus net rent to all landlords (table 1). 2/ Estimated by multiplying the total hours of labor required in U.S. agriculture times the average hourly cash wage only for farmwork minus the total value of hired labor in agriculture. 3/ Estimated to equal 5 percent of the value of the adjusted gross income (cash receipts in agriculture plus the value of Government payments minus the value of livestock and feed purchases) plus the net change in farm inventories. 4/ Excludes interest on operators' dwellings and other nonfarm purposes. 5/ Market value of farm assets minus liabilities. 6/ Nominal revaluation of production assets plus the gain or loss (in yearend dollars) resulting from a change in the purchasing power of the total funds invested or owed. The latter gain or loss is the January 1 current-dollar amount of each asset or liability multiplied by the annual (January-to-January) percentage change in the consumer price index (CPI).

Table B24--Returns from U.S. farm production income to equity in production assets, market value basis, 1940-80

1/ Changes in the dollar value of farm physical assets contributing to the farm production sector minus the value of net investment in farm production assets (capital expenditures less capital consumption allowances). 2/ Nominal revaluation of production assets plus the gain or loss (in yearend dollars) resulting from a change in the purchasing power of the total funds invested or owed. The latter gain or loss is the January 1 current-dollar amount of each asset or liability multiplied by the annual (January-to-January) percentage change in the consumer price index (CPI).
