Leading Commodity Cash Receipts, 1960-87

Robert P. Williams
Janusz Kubica
Constance F. Dixon

INTRODUCTION

Cash receipt values of all individual commodities will continue to increase as the U.S. economy expands. Relative changes between commodities or between States will likely be gradual. Cattle and dairy products will continue to be leading commodities into the foreseeable future. Tobacco cash receipts will continue to decline relative to other commodities because of continued emphasis on public health. Greenhouse and nursery receipts are likely to gain as the popularity of landscaping and interior decorating continues to rise.

Cash receipts reflect cash received for the commodity sold, regardless of expenses involved in producing the commodity. The Economic Indicators of the Farm Sector: State Financial Summary (ECIFS), published annually by the U.S. Department of Agriculture (USDA), Economic Research Service (ERS), presents cash receipts for each commodity in each State.¹ However, the ECIFS contains only the 3 most current years of data. Revisions to cash receipts data for years prior to the period covered by a given ECIFS have been incorporated only in more aggregated cash receipts totals such as total U.S. and State cash receipts, livestock cash receipts, and crop cash receipts. This bulletin reflects all revisions to cash receipts for individual commodities since the data were last published at the same level of detail. This bulletin does not include State and commodity cash receipts estimates from 1949 to 1959 because they are available only from historical publications and could not be fully documented. Prior to 1960, data on cash receipts for individual commodities are reliable only at the U.S. level.

Commodities selected for this report were ranked in the top 25 based on their arithmetic average among all U.S. commodity cash receipt values (table 1). These rankings exclude forest products despite their appearance in annual rankings and aggregate cash receipts from 1960 to 1977. Forest products were discontinued in the cash receipts accounts after 1977 and are currently included in the "other farm income" account as a component of gross farm income.

This report is the first to present commodity cash receipts by State for 1960-87. This reorganization of the cash receipts should provide a useful

¹ Previously published as State Estimates: Supplement to the Farm Income Situation, annual 1960-77.

reference for both State and commodity financial analysis. The data also help in developing a more complete understanding of the dynamics of U.S. agriculture. The length of the data time series is long enough to capture shifts in regional production patterns and demand for various commodities.

MAJOR U.S. TRENDS

Total U.S. farm cash receipts are computed by aggregating estimates for approximately 120 crop and livestock commodities.² Thirty of these commodities have appeared in the commodity ranking tables of the Economic Indicators of the Farm Sector: State Financial Summary (ECIFS). Twenty of these 30 commodities were ranked in the top 25 every year between 1960 and 1987 (table 2).

Overall, rankings of the 25 leading U.S. cash receipts commodities have remained relatively stable. From 1960 to 1987, 30 different commodities appeared on the ECIFS list. Cattle and calves were top-ranked each year and dairy products second every year except 1974. Commodities ranked from positions 20 to 25 tend to rotate on and off the ranking list with four or five other commodities not currently ranked. Oats, sheep and lambs, and forest products were not listed among the top 25 commodities since 1970, 1973, and 1977, respectively. Cane for sugar became a ranked commodity on a regular basis beginning in 1974. Almonds first appeared in the top 25 rankings in 1979 and dry beans first appeared in 1980. Lettuce appeared sporadically as a ranked commodity since the 1960's.

Year-to-year cash receipt rankings depend on the production and price level of specific commodities. Longer term changes in product demand raised soybean rankings but lowered tobacco rankings. Other major commodities exhibiting notable changes in rankings relative to all other commodities include cotton, greenhouse and nursery products, broilers, and eggs. Greenhouse and nursery and broiler rankings trended upward between 1960 and 1987, but cotton and egg rankings fell in the long run.

Rankings also reflect the percentage of total cash receipts each commodity represents. On average, the 25 leading commodities accounted for about 90 percent of total U.S. cash receipts. This percentage ranged from a maximum of 92.3 percent in 1973 to a minimum of 89.3 percent in 1987 (fig. 1). One contributing factor for the declining importance of the top 25 ranked commodities is the decline of commodities such as cotton, tobacco, and eggs (figs. 2-4). Increases in commodities such as soybeans and greenhouse and nursery products have been too small to offset these declines (figs. 5-6).

Other factors contributing to this downward trend include changes in Government programs and increased demand for unranked commodities. During the 1980's, supply reduction programs have been in effect for several of the top 25 commodities, such as wheat and dairy. The 1980's have also seen increased market demand for a wide range of specialty fruits and vegetables, which are unranked. The expansion of aquacultural product markets may also have reduced other market shares.

STATE DATA TRENDS

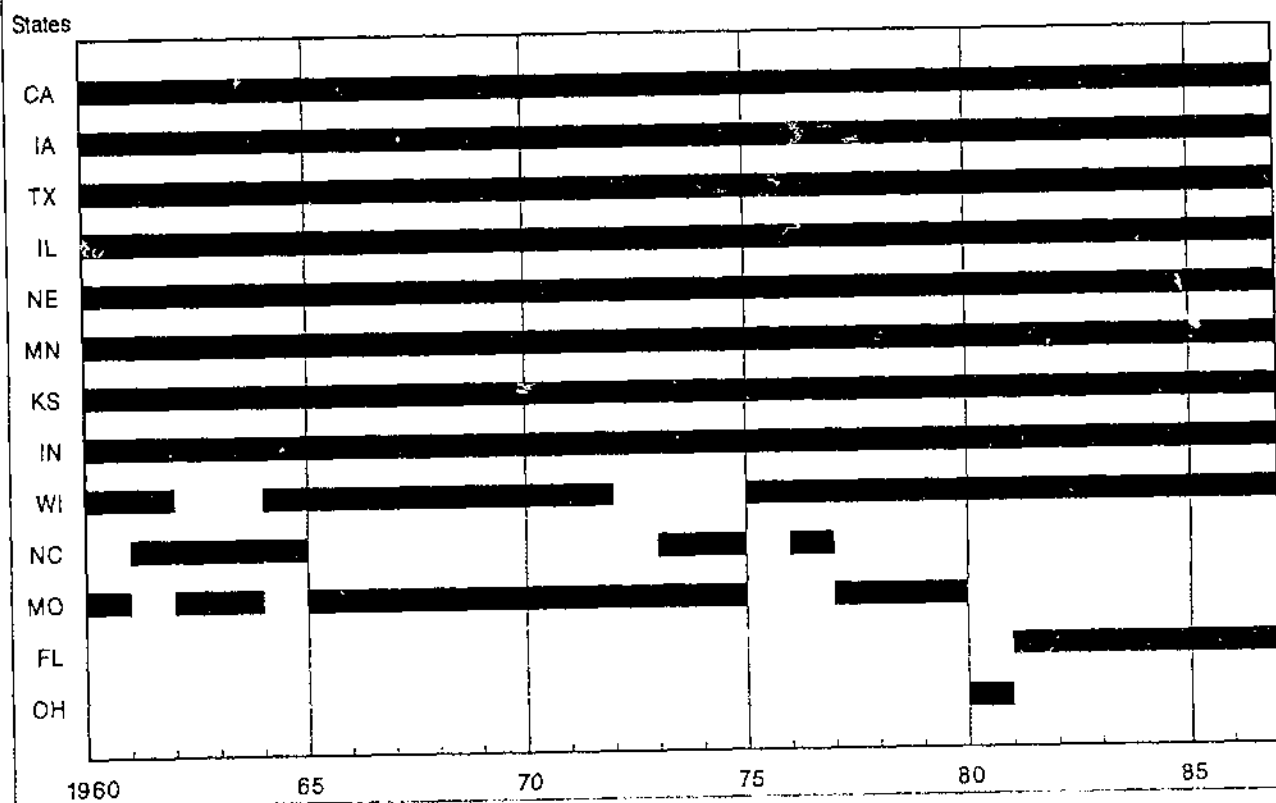

Between 1960 and 1987, 13 different States appeared among the top 10 States in all commodity cash receipts (table 4). Eight States appeared on the list every year (California, Iowa, Texas, Illinois, Nebraska, Minnesota, Kansas, and Indiana), and five others appeared one or more times (Wisconsin, North Carolina, Missouri, Florida, and Ohio). California has been the leader in cash receipts every year between 1960 and 1987. Since 1981, the same 8 States remained on the top 10 list along with Florida and Wisconsin (fig. 7). Although the top 10 States remained the same, their relative positions changed from year to year.

Each of the top 10 States was ranked as a leading cash receipt State for one or more commodities (table 5). California appeared on the cash receipt ranking table for 20 of the 25 commodities detailed in this report. California was also on 17 different commodity ranking tables every year from 1960 to 1987. Texas was on the commodity ranking tables for 18 different commodities and was ranked every year for 10 of the commodities. The remaining leading cash receipt States were included on the ranking tables of between 7 and 12 different commodities and were often ranked every year.

Top 10 cash receipt rankings for individual commodities tended to remain relatively stable, much like the cash receipt rankings for all commodities (table 6). Because oranges, rice, and cane for sugar are produced in only a few States, all of these States appeared on the ranking table for every year of their production. The cash receipt ranking tables for the remaining 22 commodities contain between 11 and 18 States in top 10 ranked positions between 1960 and 1987.

Figure 7

Years in which States appeared in the top 10 rankings of all commodity cash receipts, 1960-87

For most commodities, a core group of States were ranked in the top 10 every year. The remainder of the States for a given year tended to rotate in and out of top 10 positions. For example, 11 States ranked in the top 10 for cattle and calf cash receipts between 1960 and 1987; 6 of these appeared on the ranking table each year. The top 10 ranked States for cattle and calves in a given year included California, Colorado, Iowa, Kansas, Nebraska, Texas, and four of the following five: Illinois, Minnesota, Missouri, Oklahoma, and South Dakota. Several other commodities, including dairy products, hogs, broilers, tobacco, grapes, peanuts, sugar beets, and lettuce, had similarly stable State rankings.

Several factors may explain the apparent instability of cash receipt ranking tables for other commodities. One reason for a relatively large number of States being ranked for a particular commodity would be a comparative advantage in the production of the commodity by a small group of States. For example, although 17 different States appeared as top wheat producers, only 5 appeared every year. These States are the major wheat-producing States of Kansas, North Dakota, Montana, Oklahoma, and Washington, whose large areas of open land with favorable climatic conditions give them a comparative advantage over other States in wheat production. The other 5 State appearances in the top 10 wheat cash receipt rankings rotated among a large group of States that produce wheat on a much smaller scale.

Cash receipt rankings may also be affected by Government programs brought into play by weather or market conditions in a particular year. Wheat and corn are examples of crops whose cash receipts can be thus affected.

Other factors affecting many States' appearances on the cash receipt ranking table for a commodity may be changes in demand for a commodity or changes in conditions favoring production of a commodity causing a shift in the principal region of production. Soybeans are an example of a commodity with a tremendous increase in demand from 1960 to the early 1980's. States that previously had little or no soybean production responded to this demand by expanding production during 1960-87. Egg ranking instability is likely due to the geographical shift in production regions from the Northeast to the South between 1960 and 1987.

California, Iowa, and Texas will likely continue to lead all States in total cash receipt rankings. Dominance of California and Texas in rankings of either all commodities or individual commodities may depend on the economic feasibility of irrigation. Should the availability of irrigation water become critical in either State, cotton and corn production would likely shift to the South or Midwest.
