Agriculture and Trade Analysis Division, Economic Research Service, U.S.
Department of Agriculture. Statistical Bulletin No. 779.

Abstract

This bulletin provides State-level time-series data on production levels and trends for all wheat, winter wheat, durum wheat, and other spring wheat for 1949-88. Table variables include area planted, area harvested, yield per harvested acre, quantity produced, quantity used on farm where produced, quantity sold, season (marketing year) average price received by farmers, value of production, and value of sales. All estimates for 1949-82 are final, while estimates for 1983-88 are subject to revision by USDA.

Keywords: Wheat, production, time-series data, State-level data

Author Note

Jim Langley is an agricultural economist in the Agricultural Stabilization and Conservation Service, USDA, and Suchada Langley is an agricultural economist with the Economic Research Service, USDA.

State-Level Wheat Statistics, 1949-88

Jim Langley
Suchada Langley

Introduction

Wheat production levels and trends differ widely among States. However, a major constraint in investigating State and regional differences in wheat production and disposition is the effort in assembling relevant data at the State level. This report provides State-level time-series data for all wheat, winter wheat, durum wheat, and other spring wheat for 1949-88.

Each table provides data previously available only from 23 statistical bulletins and crop reports published as far back as 1956, many of which are now out of print. All estimates for 1949-82 are final, while estimates for 1983-88 are subject to revision by the National Agricultural Statistics Service (NASS).

Description of Variables¹

Table variables include area planted, area harvested, yield per harvested acre, quantity produced, quantity used on farm where produced, quantity sold, season (marketing year) average price received by farmers, value of production, and value of sales.

Acreage

Area planted represents acres planted and area harvested represents acres harvested for each type of wheat. NASS collected acreage estimates based on (1) acreage data for a given crop season obtained from the quinquennial census of agriculture, State farm censuses, or other complete or nearly complete enumerations and (2) indicated acreages obtained by questionnaires from samples of farms.

Yield and Production

Yield refers to production per harvested acre. Forecasts and estimates of yields and quantities produced for crops are usually provided during the later part of the growing season. End-of-year estimates for several crops in many

¹For further information on how these variables are constructed and used, see (12, 13). Underscored numbers in parentheses refer to terms listed in the References.

States are also based on objective yield survey data where enumerators visit selected fields to count and measure plants. At harvesttime, actual yields in the sample plots are measured for use in forecasting and in computing sampling errors. The official estimates of production and yields are reviewed and revised when final survey indications and cross-check data for a crop become available, usually several months after completion of harvest.

Disposition and Value

Quantity used on farm where produced relates to disposition of a given year's production within the marketing season shown regardless of the time of actual disposition. Estimates of quantities used on farm include quantities fed to livestock and poultry and total homegrown seed. These estimates do not represent total quantities used for livestock and poultry feed or for seed. Some of the amounts shown as sales are used for feed and seed on other farms.

Quantity sold is estimated directly from an analysis of survey data in which farmers report production and sales. This measure includes all amounts sold to consumers, dealers, handlers, or other farmers, measured at first point of sale. Sales also include quantities of a commodity delivered to the Government for unredeemed loans and purchase agreements or for Government resale programs.

Data described by quantity used on farm where produced and quantity sold are not available for the winter, durum, or other spring wheat tables.

Season average price received by farmers for each crop is computed by weighting average prices by the estimated percentage sold each month. The State and U.S. season average prices include an allowance for unredeemed loans and Government purchases valued at the average loan and purchase rate. State and U.S. season average prices for 1964-74 also include direct Government price support payments but do not include such payments as those for acreage diversion, conservation practices, and soil bank.

Beginning with the 1986 crop, the basis for prices was changed from season average to marketing year average.² Marketing years for the United States are defined as June 1-May 31 for wheat. The season average price series calculated the average price for the 12 months following usual harvest in each State. Marketing year average prices received by farmers at the U.S. level are according to U.S. monthly prices weighted by monthly marketings during specific months in the official marketing year. The marketing year approach will mean that two different production years will be combined in the marketing year average price series. For example, crops in the South that are harvested and marketed before the start of the official marketing year will be included in the marketing year price for the preceding marketing year. Months included in the marketing year for individual States will continue to be based on the local harvesting and marketing patterns.

Data for value of production are derived by multiplying quantity produced by the season (marketing year) average price received by producers, with allowance for rounding error. Similarly, value of sales data are derived by multiplying quantity sold by the same price.

²Information on the shift to market year average price was obtained from (24).

Get these timely reports from USDA's Economic Research Service

These periodicals bring you the latest information on food, the farm, and rural America to help you keep your expertise up-to-date. Order these periodicals to get the latest facts, figures, trends, and issues from ERS.

Agricultural Outlook. Presents USDA's farm income and food price forecasts. Emphasizes the short-term outlook, but also presents long-term analyses of issues ranging from international trade to U.S. land use and availability. Packed with more than 50 pages of charts, tables, and text that provide timely and useful information.

Economic Indicators of the Farm Sector. Updates economic trends in U.S. agriculture. Each issue explores a different aspect of income and expenses: national and State financial summaries, production and efficiency statistics, costs of production, and an annual overview.

Farmline. Concise, fact-filled articles focus on economic conditions facing farmers, how the agricultural environment is changing, and the causes and consequences of those changes for farm and rural people. Synthesizes farm economic information with charts and statistics.

Foreign Agricultural Trade of the United States. Every 2 months brings you quantity and value of U.S. farm exports and imports, plus price trends. Subscription also includes monthly update newsletters and two big 300-page supplements containing data for the previous fiscal or calendar year. A must for traders!

Journal of Agricultural Economics Research. Technical research in agricultural economics, including econometric models and statistics on methods employed and results of USDA economic research.

National Food Review. Offers the latest developments in food prices, product safety, nutrition programs, consumption patterns, and marketing.

Rural Development Perspectives. Crisp, nontechnical articles on the results of the most recent and the most relevant research on rural areas and small towns and what those results mean.

Check here for a free subscription to *Reports*, a quarterly bulletin describing the latest ERS research reports. It's designed to help you keep up-to-date in all areas related to food, the farm, the rural economy, foreign trade, and the environment.
