The Conservation Reserve Program: Enrollment Statistics for Signup Periods 1-11 and Fiscal Years 1990-92. By C. Tim Osborn, Felix Llacuna, and Michael Linsenbiger. Resources and Technology Division, Economic Research Service, U.S. Department of Agriculture. Statistical Bulletin No. 843.

Abstract

The United States Department of Agriculture accepted approximately 33.9 million acres of cropland into the Conservation Reserve Program (CRP) during 1986-89. These acres were enrolled in nine separate signups under the authority of the Food Security Act of 1985. Enrollment was extended through 1995 by the Food, Agriculture, Conservation, and Trade Act of 1990. Two signup periods were held in 1991. The 10th signup was for fiscal year 1991 retirement of land from production, and the 11th signup was for fiscal year 1992. Approximately 1.5 million additional acres were enrolled in these two signup periods under significantly revised program rules. This report presents statistics covering all CRP cropland enrolled in signup periods 1-11 and CRP cropland newly retired in fiscal years 1990-92.

Keywords: Conservation Reserve Program, highly erodible land, long-term land retirement, supply control, production adjustment, erosion control.

Acknowledgments

The authors acknowledge the contributions of the Agricultural Stabilization and Conservation Service and Soil Conservation Service field personnel in collecting the information summarized in this report. The authors also thank numerous individuals in the Agricultural Stabilization and Conservation Service and the Economic Research Service who reviewed the report.

Introduction

This report is the fourth in a series summarizing participation in the Conservation Reserve Program (CRP). Statistical Bulletin No. 763, *The Conservation Reserve Program: Implementation and Accomplishments, 1986-87*, was published in January 1988. It summarized CRP land retirement in fiscal years 1986 and 1987 and presented information on CRP rules, regulations, and implementation. The 1987 statistics were preliminary and should no longer be used. Statistical Bulletin No. 785, *The Conservation Reserve Program: Enrollment Statistics for 1987-88 and Signup Periods 1-7*, was published in September 1989. It contained final statistics for land newly retired in fiscal years 1987 and 1988, and enrollment statistics for signup periods 1-7. Statistical Bulletin No. 811, *The Conservation Reserve Program: Enrollment Statistics for Signup Periods 1-9 and Fiscal Year 1989*, was published in July 1990 as the third in the series. In this fourth report, we provide enrollment statistics for signup periods 1-11 and CRP land newly retired in fiscal years 1990, 1991, and 1992. Following passage of the Food, Agriculture, Conservation, and Trade Act of 1990 (FACTA), CRP operating rules were significantly revised, greatly affecting the acreage accepted in the 10th and 11th signup periods.

Program Description: Signup Periods 1-9

Congress established the CRP in Title XII of the Food Security Act of 1985 (P.L. 99-198) as a voluntary long-term cropland retirement program to be administered by the U.S. Department of Agriculture (USDA). USDA provided CRP participants (farm owners or operators) with an annual per-acre rent and half the cost of establishing a permanent land cover (usually grass or trees) in exchange for retiring highly erodible or environmentally sensitive cropland for 10 years. The enrollment mandate established in the 1985 Act was 40-45 million acres by the end of the 1990 crop year.

The primary goal of the CRP during 1986-89 was to reduce soil erosion on highly erodible cropland. Secondary objectives included protecting the Nation's longrun capability to produce food and fiber, reducing sedimentation, improving water quality, fostering wildlife habitat, curbing the production of surplus commodities, and providing income support for farmers.

To enroll cropland in the CRP, farmers applied at their county Agricultural Stabilization and Conservation Service office during a designated signup period. Farmers indicated the fields they proposed to enroll, the annual rental payment that they would require (rental bid), and the Commodity Credit Corporation (CCC) crop base (the amount of the farm's land that can be enrolled in CCC programs) that would be reduced during the 10-year life of the CRP contract. Crop base is reduced by the proportion of the farm's CRP enrollment to its total cropland acreage. Nine signup periods were held from 1986 through 1989. In all but the first signup, USDA allowed farmers to retire their land in the current year or to postpone retirement and payments until the following year (see box).

Once all bids were received for a particular signup period, the Secretary of Agriculture determined maximum acceptable rental rates (MARR's) for multicounty areas (referred to as pools). Counties were assigned to pools based on similarity of soil erosion rates, crop production levels, and other agricultural criteria. County Agricultural Stabilization and Conservation Committees reviewed each application after verifying that eligibility conditions were met. In general, all bids not exceeding the applicable pool MARR were accepted.

#11 July 1991							X

Although CRP eligibility criteria and the amount of land eligible for CRP changed frequently with subsequent signup periods, roughly 101 million acres of cropland met the basic highly erodible definition for CRP eligibility during 1986-89. However, CRP participation was limited to no more than 25 percent of the cropland in a county unless a waiver was requested by county officials and the Secretary of Agriculture determined that exceeding this limit would not seriously depress the county's economy. This limitation, in effect, reduced the area of highly erodible cropland available for CRP enrollment to 70 million acres.

Several CRP program changes affecting cropland eligibility were instituted beginning in 1987.¹ Eligibility was expanded beginning with the sixth signup period to include filter strips along waterways and, beginning with the eighth signup period, to include cropped wetlands and areas subject to scour erosion. These additions were made to improve water quality. In addition, eligibility criteria were relaxed beginning with the sixth signup period for tree planting. Formerly, for enrollment of a field, at least two-thirds of the field had to have been classified as highly erodible. Beginning with the sixth signup, only one-third of the field had to contain highly erodible soil if it was to be planted to trees. Erosion requirements for acres planted to trees were reduced from 3T to 2T, or twice the normal soil loss tolerance level.² Relevant eligibility criteria for each of the nine signups held in 1986-89 are listed below.

SIGNUP PERIOD 1 ELIGIBILITY (MARCH 3-14, 1986)

Land in Land Capability Classes (LCC) II-V having an annual erosion rate greater than 3T; or land in LCC VI-VIII.

SIGNUP PERIOD 2 ELIGIBILITY (MAY 5-16, 1986)

Same as signup period 1.

SIGNUP PERIOD 3 ELIGIBILITY (AUGUST 4-15, 1986)

Same as signup period 2; or land in LCC II-V having an annual erosion rate of 2T or greater and with serious gully erosion.

SIGNUP PERIOD 4 ELIGIBILITY (FEBRUARY 9-27, 1987)

For 1987 contracts: Same as signup period 3; or land with (1) an erodibility index (EI)³ equal to or greater than 8, and (2) an erosion rate with cover, management, and practice factors in crop years

¹ Interim and final rules and regulations are presented in the Economic Research Service Statistical Bulletin No. 763, *The Conservation Reserve Program: Implementation and Accomplishments, 1986-87* (Jan. 1988).

² The soil loss tolerance level (T) has been defined as the maximum annual rate of per-acre erosion that would still permit indefinitely a high level of crop productivity.

³ The EI is a measure of a soil's inherent potential to erode relative to T, and is based on soil type, slope of the land, rainfall, and wind exposure.

1981-85 greater than that recommended by the Soil Conservation Service (SCS) Field Office Technical Guide (generally greater than T).

For 1988 contracts: Land with (1) an EI equal to or greater than 8, and (2) an erosion rate with cover, management, and practice factors in crop years 1981-85 greater than that recommended by the SCS Field Office Technical Guide (generally greater than T).

SIGNUP PERIOD 5 ELIGIBILITY (JULY 20-31, 1987)

Same as signup period 4, 1987 contracts.

SIGNUP PERIOD 6 ELIGIBILITY (FEBRUARY 1-19, 1988)

Same as signup period 5; or land in LCC II-V having an annual erosion rate greater than 2T if planted to trees (only one-third of the field required to meet the erodibility criteria as opposed to the former two-thirds requirement); or filter strips 66 to 99 feet wide adjacent to waterbodies regardless of erodibility.

SIGNUP PERIOD 7 ELIGIBILITY (JULY 18-AUGUST 31, 1988)

Same as signup period 6.

SIGNUP PERIOD 8 ELIGIBILITY (FEBRUARY 6-24, 1989)

Same as signup period 7; or land having evidence of scour erosion caused by out-of-bank water flows. The field must be planted to trees unless SCS determines the area unsuitable for trees; or cropped wetlands. If natural conditions permit, the eligible wetlands must be planted to trees to improve water quality, enhance wetland development, and provide wildlife food and cover.

SIGNUP PERIOD 9 ELIGIBILITY (JULY 17-AUGUST 4, 1989)

Same as signup period 8.

Slightly more than 33.9 million acres were enrolled in the CRP during signup periods 1-9. Of this acreage, 62 percent was located in the Northern Plains, Southern Plains, and Mountain States.

Program Description: Signup Periods 10-11

The 10th signup period (March 4-15, 1991) was the first to be held under the extended CRP enrollment authority provided by the Food, Agriculture, Conservation, and Trade Act of 1990 and under revised USDA program rules. USDA chose not to conduct any signups during the 19 months following the 9th signup period (July-August 1989) in anticipation of CRP program changes that could result from the 1990 legislation.

The 1990 FACTA did not change the basic form of the CRP. However, the CRP was combined with a new Wetlands Reserve Program (WRP) to form a larger program to be called the Environmental Conservation Acreage Reserve Program (ECARP). The 1990 FACTA mandated that 40-45 million acres be enrolled in the ECARP by the end of the 1995 calendar year including the 33.9 million acres enrolled in the CRP during 1986-1990. Since USDA plans to enroll 1 million acres in the WRP, this leaves 5.1 million acres of remaining CRP enrollment to meet the minimum 40-million-acre mandate.

Besides extending the deadline for CRP enrollment, the 1990 FACTA also designated eligible lands, provided incentives for hardwood tree planting and conversion of existing CRP acres to trees, and established conservation priority areas in the Chesapeake Bay, the Great Lakes, and the Long Island Sound regions. In addition, it called for 1 million acres per year to be reserved for CRP enrollment in calendar years 1994 and 1995. These acres are intended to provide a buffer that can be used to enroll highly erodible lands that cannot be treated with a conservation plan under the conservation compliance provision of the 1985 Farm Act.

Taking direction from the 1990 FACTA provisions, USDA developed revised program rules for operation of the CRP during 1991 through 1995. Published in the Federal Register, these rules include new CRP eligibility criteria and a new bid acceptance process.

All CRP eligibility criteria proposed by the 1990 FACTA were adopted beginning with the 10th signup except for marginal pastureland. It was judged that conservation on marginal pastureland could be achieved more efficiently under other USDA cost-sharing programs. Land eligible for enrollment in the 10th and 11th signup periods is listed below.

SIGNUP PERIOD 10 ELIGIBILITY (MARCH 4-15, 1991)

Land in Land Capability Classes (LCC) II-V having an annual erosion rate of 3T or greater; or land in LCC II-V with an erosion rate of 2T or greater if trees are planted or a serious gully erosion problem exists; or land in LCC VI-VIII; or land with (1) an EI equal to or greater than 8, and (2) an erosion rate with cover, management, and practice factors in crop years 1981-85 greater than that recommended by the Soil Conservation Service (SCS) Field Office Technical Guide (generally greater than T); or land devoted to useful life easements of 15 or 30 years for filter strips, waterways, contour grass strips, permanent wildlife habitat, field windbreaks, shelterbelts, living snow fences, salt tolerant vegetation, or terraces; or land in identified State water quality areas (Hydrologic Unit Areas under the President's Water Quality Initiative); or land in conservation priority areas established by the 1990 FACTA (Chesapeake Bay, Long Island Sound, and the Great Lakes regions); or land within a public wellhead protection area established by the Environmental Protection Agency; or land having evidence of scour erosion caused by out-of-bank water flows.

SIGNUP PERIOD 11 ELIGIBILITY (JULY 8-19, 1991)

Same as signup period 10.

Farmed wetlands (wetlands that may be farmed under natural conditions), formerly eligible for CRP enrollment, were made ineligible even if they would be otherwise eligible under other criteria. This reflected the preference of Congress to place farmed wetlands in the new established Wetlands Reserve Program. Prior converted cropland (wetlands converted prior to December 23, 1985), however, remain eligible for enrollment in the CRP provided that it otherwise meets eligible land criteria.

Because remaining enrollment opportunities in the CRP will be limited to approximately 5.1 million acres, it was expected that more acreage would be offered by farmers than could be accepted. Consequently, USDA developed a new bid acceptance process to select acres that provide the greatest conservation and environmental benefits relative to the Government cost of enrollment. The process also promotes rental rate competition between farmers while complying with legislative requirements by ensuring that CRP rental payments do not exceed prevailing local rents for comparable land.

In the 10th and 11th signup periods, farmers could submit up to four different CRP bid types. "Standard" bids comprised the majority of bids. They contained conservation practices, such as introduced grasses, for which useful life easements of 15 or 30 years were not required. Conversely, "easement" bids contained practices, such as filter strips, that required useful life easements beginning with the 10th signup period. "Wellhead standard" bids were similar to standard bids except that the land being offered was within an approved wellhead protection area. Finally, "wellhead easement" bids were for land within an approved wellhead protection area and required the farmer to grant a useful life easement.

At the conclusion of the 10th and 11th signup periods, all bids were reviewed by local county committees to determine if the land was eligible for CRP enrollment and if the farmer was eligible to participate. If one or both of these conditions were not met, the bid was flagged for further review.

All bids were then transmitted to the national office of the Agricultural Stabilization and Conservation Service (ASCS). There, each rental payment requested by farmers was screened against a soil-specific estimate of the rent that could be earned on local comparable cropland. Bids that exceeded this amount,

adjusted for costs farmers incur due to CRP participation, were rejected. The bid screen amounts used in the 10th and 11th signup periods were not related to the Maximum Acceptable Rental Rates (MARR's) that were uniformly applied within bid pools in signup periods 1-9.

Eligible "easement," "wellhead standard," and "wellhead easement" bids that survived the bid screen were automatically approved for CRP enrollment. These bids typically involve a limited number of acres and a small Government cost, but provide significant conservation and environmental benefits.

Eligible "standard" bids that survived the bid screen had to compete for the remaining acreage that could be enrolled based on a predetermined limit. At the heart of this competition was a formula that ranked bids based on the ratio of an environmental benefits index (EBI) to the Government cost of the contract. The EBI measured the potential contribution to conservation and environmental program goals that the bid would provide if enrolled. The seven coequal conservation and environmental goals targeted in the 10th and 11th signup periods included:

- surface water quality improvement,
- potential ground water quality improvement,
- preservation of soil productivity,
- assistance to farmers most affected by conservation compliance,
- encouragement of tree planting,
- enrollment in Hydrologic Unit Areas identified by the President's Water Quality Initiative, and
- enrollment in established conservation priority areas.

As the CRP continues, these goals may be revised to achieve other priorities. For purposes of CRP enrollment, there is little that a farmer can do, other than planting trees or selecting easement practices, to increase the EBI for a given parcel of cropland that is bid. Consequently, if farmers who offered "standard" bids wished to maximize their probability of CRP acceptance, their only real option was to submit competitive rental payment requests.

Consistent with predetermined enrollment limits, nearly 1.5 million acres were enrolled in the 10th and 11th signup periods. Owing to the redesigned bid acceptance process and new eligibility criteria, enrollment in these signup periods was quite different from that obtained in signup periods 1-9. As indicated above, 62 percent of the acreage enrolled in signup periods 1-9 was located in the Northern Plains, Southern Plains, and Mountain States. However, only 32 percent of 10th and 11th signup period acres was accepted from these regions, while much greater percentages came from the Corn Belt, Delta, and Lake States. Enrollment percentages also increased in the Appalachian, Southeast, and Northeast regions.

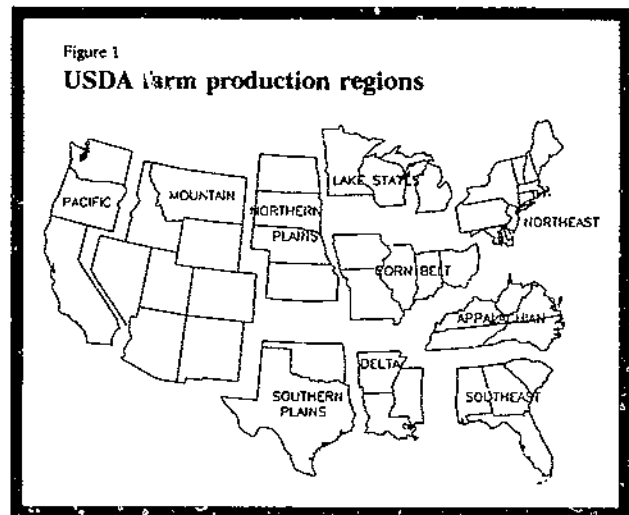

Data Collection and Preparation

Two data sets are developed by USDA's Agricultural Stabilization and Conservation Service (ASCS) following each CRP signup period. The first set contains information on all bids received during the signup period. Information contained in the first data set includes State and county Federal identification codes (FIPS), farm identification numbers, rental bids, acreage offered for enrollment, estimated current erosion rate, land capability class and subclass of land in the field(s) offered for enrollment, soil loss tolerance level, crop (fiscal) year in which retirement would begin, acres of trees to be planted, and the type of crop base, base acreage, and base yield to be retired for the 10-year CRP contract period. This information is preliminary since it was collected before inspection of the site.

Approximately 120 to 180 days after each signup, ASCS and SCS personnel develop a second data set for contracted acreage following onsite inspections. This contract data set contains verified information of the above plus additional information including estimated erosion after CRP retirement; the cost, type, and extent of conservation practice treatment; and the farm size.

The statistics presented in this report are based on land initially contracted in signup periods 1-11. Some of these contracts were prematurely terminated. While the exact number has not been quantified, the number of acres involved is believed to be small.

CRP contract data were aggregated to the State, regional, and national levels. USDA farm production regions (fig. 1) served as the focus for regional aggregation. Acreage variables were summed across individual contracts to the different aggregation levels. Variables, such as rental rate and erosion reduction, which are not additive, were summarized as acre-weighted averages. This aggregation leads to some mathematical rounding errors. Information presented in the following tables should, consequently, be considered as approximate.

Description of Tables

Twelve sets of tables were developed to display information contained in the CRP contract data sets. Tables 1-9 represent all CRP acreage enrolled in signup periods 1-11, while tables 10, 11, and 12 present corresponding statistics only for land newly retired in fiscal years 1990, 1991, and 1992. Tables 1, 10, 11, and 12 summarize general interest variables: number of contracts, acres enrolled, acres with tree plantings, average annual per-acre rental payments, average erosion reductions, and total acres of cropland base reduction. The average erosion reduction is the difference between before-CRP and after-CRP erosion rates as estimated by the Soil Conservation Service.

Table 2 shows the number of contracts and acres enrolled under the wetland and scour erosion eligibility criteria that were first introduced in the eighth CRP signup period. The table also shows contracts and acres enrolled in conservation priority areas, water quality areas, and wellhead protection areas. The last three designations relate to land made eligible beginning with the 10th signup period following passage of the 1990 FACTA. In the 10th and 11th signup periods, conservation priority areas included all cropland in the Chesapeake Bay, the Great Lakes, and the Long Island Sound regions. Water Quality areas included cropland within Hydrologic Unit Areas identified under the President's Water Quality Initiative. Wellhead protection areas related to cropland within Environmental Protection Agency State-approved wellhead protection programs.

Table 3 describes the number of contracts and enrolled acres by contract or bid type. In signup periods 1-9 the only contract type was the "standard" 10-year contract. In the 10th and 11th signup periods, "easement," "wellhead standard," and "wellhead easement" contracts were also offered. Easement contracts required farmers to maintain vegetative covers for the "useful-life" of the practice. The useful life of grass filter strips, for example, is 15 years, while the useful life of tree filter strips is 30 years.

Table 4 gives the number of contracts and acres enrolled by soil loss tolerance level. The soil loss tolerance level (T) has been defined as the maximum rate of per-acre annual soil erosion that will permit a high level of crop productivity to occur indefinitely. T is an indicator, on a scale of whole numbers from 1 to 5, of the soil's natural rate of regeneration in tons per acre per year. Soil with a tolerance level of 1 is more susceptible to erosion-induced productivity loss than soil with a tolerance level of 5. The 1982 National Resources Inventory indicates that 71.4 percent of the Nation's cropland has a T-value of 5, 11.4

percent has a T-value of 4, 12.9 percent has a T-value of 3, 3.6 percent has a T-value of 2, and 0.6 percent has a T-value of 1.

Table 5 describes the number of acres enrolled at various levels of before-CRP erosion. Wind erosion is the major source of erosion in the Western United States, while sheet and rill erosion caused by the action of water dominates in the East.

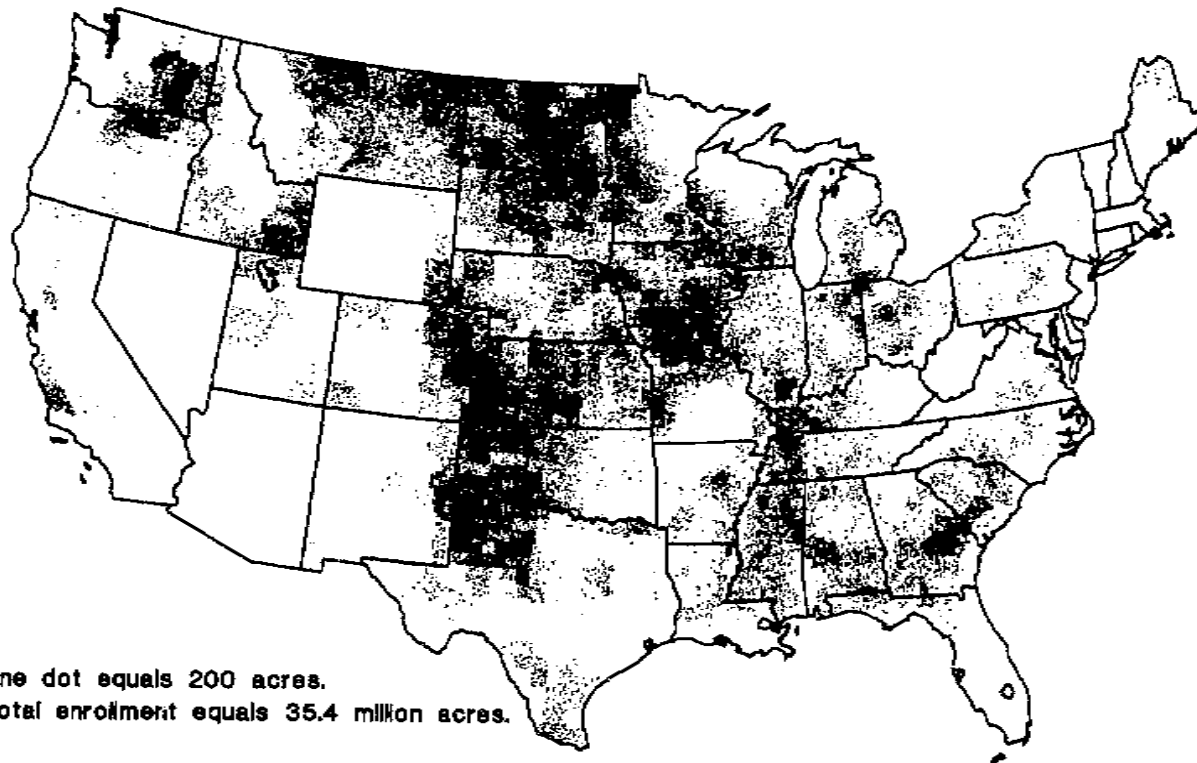

Table 6 shows the number of contracts and acres enrolled by erodibility index level. The erodibility index, based on the physical factors of the Universal Soil Loss Equation and the soil loss tolerance level, characterizes the inherent tendency of a soil to erode. Higher numbers indicate a greater erosion tendency. The conservation compliance provision of the 1985 Farm Act applies to fields in which one-third or more of the soil exhibits an erodibility index of 8 or more. Erodibility indices were not collected prior to the 10th signup period.

Table 7 provides a detailed breakdown of CRP acres enrolled by land capability class and subclass. The eight land classes denote the degree to which certain factors interfere with crop production. There are no limits to crop production on land class I soils, while soils in land class VIII have the greatest limitations for crop production. Factors that inhibit or limit continuous crop production are referred to as Subclass C (climate conditions), Subclass E (erosion), Subclass S (soil characteristics), and Subclass W (wet soils).

Tables 8A and 8B describe the base acreage retired by the CRP for 10 USDA program crops: barley, corn, extra-long staple cotton, upland cotton, oats, peanuts, rice, sorghum, tobacco, and wheat. The number of contracts and the average base yield are also provided for each of the crops. One should not assume that these yields and acres provide a measure of the reduction in commodity production provided by the CRP. The yields reported are program yields and may not reflect current actual crop yields. The acres may not have been planted to the program crop in previous years (that is, land could have been idle, fallow, set-aside, or planted to other crops).

Finally, tables 9A through 9I present the number of contracts, acres treated, total cost share, and cost share per treated acre for the various conservation practices approved for CRP enrollment. The per-acre cost share sometimes appears quite large for practices such as WP 1 (sediment retention/water control structures) and WP 3 (sod waterways). However, these practices are usually placed on only a few acres and more than one conservation practice may be applied to a specific acre in a field. The average cost share for treating an entire field seldom exceeds \$100 per acre. The information presented in these tables is based on the sum of acreage treated by each practice rather than the sum of acres enrolled. The sum of acres treated will usually exceed the total acres enrolled.

Figure 2
Conservation Reserve Program enrollment, signup periods 1-11

One dot equals 200 acres.
Total enrollment equals 35.4 million acres.

A DASH (-) INDICATES NO CRP ENROLLMENT FOR THAT COLUMN.

^{1/} THE ERODIBILITY INDEX, BASED ON THE PHYSICAL FACTORS OF THE UNIVERSAL SOIL LOSS EQUATION AND THE SOIL LOSS TOLERANCE LEVEL, CHARACTERIZES THE INHERENT TENDENCY OF A SOIL TO ERODE. HIGHER NUMBERS INDICATE A GREATER EROSION TENDENCY. THE CONSERVATION COMPLIANCE PROVISION OF THE 1985 FARM ACT APPLIES TO FIELDS IN WHICH ONE-THIRD OR MORE OF THE SOIL EXHIBITS AN ERODIBILITY INDEX OF 8 OR MORE.

A DASH (-) INDICATES NO CRP ENROLLMENT FOR THAT COLUMN.

1/ DATA SHOWN ARE BASED ON CONTRACTS REPORTING AT LEAST 0.1 ACRE OF TREE PLANTINGS.

2/ EROSION REDUCTION EQUALS EROSION RATE BEFORE IMPLEMENTATION OF CONSERVATION PRACTICE MINUS EROSION RATE AFTER IMPLEMENTATION.

CONSERVATION RESERVE PROGRAM (CRP), CROPLAND FIRST IDLED IN FISCAL YEAR 1991

2/ EROSION REDUCTION EQUALS EROSION RATE BEFORE IMPLEMENTATION OF CONSERVATION PRACTICE MINUS EROSION RATE AFTER IMPLEMENTATION.

Get these timely reports from USDA's Economic Research Service

These periodicals bring you the latest information on food, the farm, and rural America to help you keep your expertise up-to-date. Get the latest facts, figures, trends, and issues from ERS. To subscribe to these periodicals, call our order desk toll free, 1-800-999-6779 (in the United States and Canada), or use the order form on the next page.

Agricultural Outlook. Presents USDA's farm income and food price forecasts. Emphasizes the short-term outlook, but also presents long-term analysis of issues ranging from international trade to U.S. land use and availability. Packed with more than 50 pages of charts, tables, and text that provide timely and useful information. 11 issues annually.

Economic Indicators of the Farm Sector. Updates economic trends in U.S. agriculture. Each issue explores a different aspect of income and expenses: national and State financial summaries, production and efficiency statistics, and costs of production for livestock and dairy and for major field crops. 5 issues annually.

Farmline. Concise, fact-filled articles focus on economic conditions facing farmers, how the agricultural environment is changing, and the causes and consequences of those changes for farm and rural people. Synthesizes farm economic information with charts and statistics. 11 issues annually.

FoodReview. Offers the latest developments in food prices, product safety, nutrition programs, consumption patterns, and marketing. 4 issues annually.

Foreign Agricultural Trade of the United States. Every 2 months brings you quantity and value of U.S. farm exports and imports plus price trends. Subscription also includes two big 300-page supplements containing data for the previous fiscal or calendar year. A must for traders.

Journal of Agricultural Economics Research. Technical research in agricultural economics, including econometric models and statistics on methods employed and results of USDA economic research. 4 issues annually.

Rural Conditions and Trends. Tracks rural events: macroeconomic conditions, employment and underemployment, industrial structure, earnings and income, poverty and population. 4 issues annually.

Rural Development Perspectives. Crisp, nontechnical articles on the results of the most recent and the most relevant research on rural areas and small towns and what those results mean. 3 issues annually.

Situation and Outlook Reports. These reports provide timely analyses and forecasts of all major agricultural commodities and related topics such as finance, farm inputs, and land values. Specific titles are listed on the order form on the next page.

Reports. This free catalog describes the latest in ERS research reports. It's designed to help you keep up-to-date in all areas related to food, the farm, the rural economy, foreign trade, and the environment. 4 issues annually
