Monthly Cash Receipts from Farm Marketings, 1972-91, by Robert P. Williams and Roger P. Strickland, Agriculture and Rural Economy Division, Economic Research Service, U.S. Department of Agriculture. Statistical Bulletin No. 845.

Abstract

Monthly cash receipts data for 12 major commodity groups are summarized to reflect production and sales at the U.S. level during 1972-91. Cash receipts data for three major commodity groupings (crops, livestock, and all commodities) by State are included.

Keywords: Cash receipts, monthly receipts, commodity groups, States

Acknowledgments

Special thanks to Devlin for providing valuable assistance in finding and retrieving all necessary historical data files for this bulletin. Thanks also are extended to Janusz Kubica for the systems analysis and computer programming necessary to construct the tables.

Monthly Cash Receipts from Farm Marketings, 1972-91

Robert P. Williams
Roger P. Strickland

Introduction

U.S. Department of Agriculture (USDA) farm cash receipts reflect the value of all agricultural commodities marketed or removed from the farm where produced during a calendar year. Cash receipts account for sales through open-market channels, placement of commodities under Commodity Credit Corporation (CCC) nonrecourse loan, and any gain (excess of market value over CCC contract value) on CCC commodity loans reclaimed. Sales of Payment-in-Kind (PIK) commodities are not included in the cash receipts accounts. The value of PIK commodity certificates is included in the Government payments account. Cash receipts include sales of commodities regardless of the year produced. National annual estimates for cash receipts from farm marketings incorporate separate estimates for approximately 120 crop and livestock commodities. Most estimates are calculated at the State level. National estimates are the sum of State estimates.

Cash receipts result from the disposition of commodities and are not equivalent to value of production. The value of inventory change and the value of products used or consumed on farms where produced must be added to cash receipts to determine value of production for either the agricultural sector of the economy or an individual commodity. A positive inventory change represents current year production remaining unsold at yearend; while a negative inventory change represents sales of production from prior years. The value of these changes serves to offset effects on cash receipts. Inventory statistics are not a part of this report.

Cash Receipts from Livestock

Data compiled for livestock receipts are based on data from three National Agricultural Statistics Service (NASS) periodicals: 1) *Meat Animals: Production, Disposition, and Income*, 2) *Milk Production, Disposition, and Income*, and 3) *Poultry Production and Value*. Minor livestock commodities and livestock from minor producing States (for which NASS publishes no statistics) are combined as miscellaneous livestock.

The Economic Research Service's (ERS) estimate of livestock cash receipts is an accrual of receipts for each livestock commodity on a State-by-State basis. Monthly livestock cash receipts are estimated by distributing annual receipts according to each State's seasonal sales distribution pattern. Meat animals, dairy products, poultry and eggs, and miscellaneous livestock are estimated on a monthly basis.

Cash Receipts from Crops

Crops are marketed on either a calendar-year or crop-year basis. Calendar-year crops are typically perishable and are marketed during the same year in which they are

produced. Crop-year crops are generally harvested in the fall and marketing extends into the next calendar year. Major U.S. crops such as wheat, corn, soybeans, and cotton are crop-year crops.

Farm income accounting is done on a calendar-year basis by ERS; however, many value, production, and disposition statistics are reported on a crop-year basis by NASS. To estimate calendar year cash receipts and farm income, ERS analysts distribute crop-year marketings of commodities by month.

To partition marketings of crop-year crops, analysts use typical marketing patterns to distribute the proportion of production marketed in each month. Marketing patterns for major crops in major producing States are published in the December *Crop Production* report. All other patterns are developed by ERS analysts in consultation with NASS specialists. The marketing patterns used assume that farmers dispose of all crop production within 12 months after harvest. Crops in storage beyond 12 months are susceptible to deterioration, and storage space is often needed for the next harvest.

Monthly Cash Receipts

Cash receipts for major commodities and major producing States are estimated monthly. Monthly estimates of State cash receipts are generally based on NASS survey data of production quantities and market prices. The market value of some minor commodities is provided directly by State Statistical Offices (SSO's) without intermediate quantities and prices. Preliminary monthly cash receipts estimates for individual commodities in the current forecast year may be based on indications of the direction and magnitude of change from the previous year when NASS data were not available.

The normal lag time between the end of a month and the publication of a preliminary monthly cash receipts estimate for that month is 3 months. Preliminary monthly cash receipts estimates vary in quality. Estimates are revised as more accurate data become available. Statisticians in the SSO's are uniquely knowledgeable about their State's agriculture and play a crucial role in calculating and revising these estimates. SSO's provide revised State-level data and check final ERS estimates before publication.

Revisions to Monthly Receipts

Revisions to monthly cash receipts continue to be made for as long as production, price, or sales revisions occur (typically 3-5 years). Cash receipts estimates contained in this report reflect revisions that occurred between 1972 and 1992. An electronic database product also is available containing data starting with 1960. The data included here (and related databases) are consistent with the preliminary monthly cash receipts report. State cash receipts data for crops, livestock, and all commodities are included. U.S. data include aggregate cash receipt values for meat animals, dairy products, poultry and eggs, miscellaneous livestock, food grains, feed crops, cotton, tobacco, oil crops, vegetables, fruits and nuts, and all other crops.

Food Marketing Review, 1991

Discover what's happening in the U.S. food marketing system as fewer but larger firms compete for limited retail shelf space and a share of the consumer food dollar.

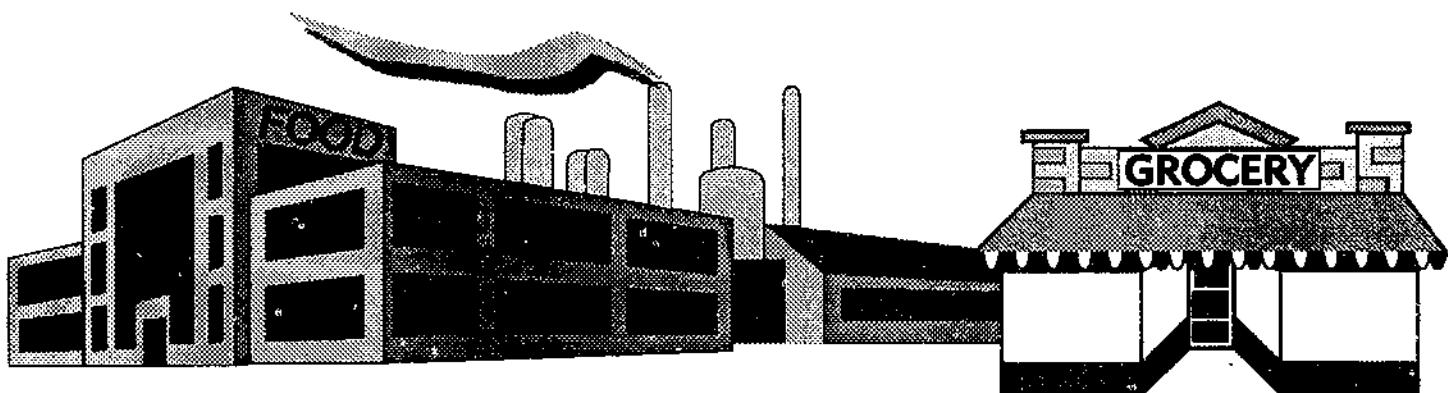

Here's a sampling of the topics covered in detail by this fact-filled report from the Economic Research Service:

- A smaller portion of the Nation's resources is being used each year to feed a larger population. But to compete in a slow growth market, food manufacturers are issuing record numbers of new products and competing for shelf space in a system increasingly dominated by fewer but larger firms.
- Retail sales of the food marketing system failed to keep up with inflation in both 1990 and 1991, but reached about \$750 billion in 1991. Wage and price stability helped keep processor and retailer operations profitable in both 1990 and 1991, despite poor sales growth.
- In both 1990 and 1991, the food system continued its restructuring, global thrust, automation, and competition for the consumer dollar.

Food Marketing Review, 1991 provides an in-depth view of the U.S. food marketing system. It examines developments in all firms servicing the U.S. food supply—manufacturing, wholesaling, and retailing.

Food Marketing Review, 1991. Order # AER 657. March 1992. 140 pages. \$14.
