## Digest

**High-Value Product Exports Surpass Shipments of Traditional Products** (see p. 2). In FY 1991, high-value products (HVP) exceeded traditional bulk products, something virtually unprecedented in U.S. agricultural exports. Data for the first 11 months of FY 1991 (October 1990-August 1991) showed HVP exports rising by \$1.1 billion to a record \$18.6 billion. Bulk product exports fell by \$3.9 billion to \$16.2 billion. Because of reduced bulk product exports, total U.S. agricultural exports fell by \$2.7 billion in FY 1991, their first decline in 5 years.

**Neighboring Countries Are Major Sources of U.S. Agricultural Imports** (see p. 6). Canada and Mexico provided about 25 percent of the \$20.8 billion of agricultural goods imported into the United States during October 1990-August 1991. Imports from Canada totaled about \$3 billion, imports from Mexico about \$2.5 billion. Live animals, fruits, vegetables, malt beverages, and coffee made up most of those imports.

**U.S. Agricultural Trade Boosts Overall Economy** (see p. 8). U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1990 stimulated another \$1.59 (an additional \$62.8 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 1,062,000 full-time civilian jobs, including 623,000 jobs in the nonfarm sector.

**Ocean Freight Rates for Grain Exports Up in 1991** (see p. 12). The cost of shipping grain overseas generally rose during the first half of 1991. Ocean vessel costs from U.S. gulf ports to Western Europe increased about 11 percent, while those from the gulf to Japan rose 14 percent.

## High-Value Product Exports Surpass Shipments of Traditional Products

In FY 1991, high-value products (HVP) exceeded traditional bulk products, something virtually unprecedented in U.S. agricultural exports. Data for the first 11 months of FY 1991 (October 1990-August 1991) showed HVP exports rising by \$1.1 billion to a record \$18.6 billion. Bulk product exports fell by \$3.9 billion to \$16.2 billion. Because of reduced bulk product exports, total U.S. agricultural exports fell by \$2.7 billion in FY 1991, their first decline in 5 years.

HVP exports are all agricultural exports other than raw grains, oilseeds, cotton, and tobacco. HVP's undergo additional processing beyond the farm gate or represent a higher priced segment of a group of differentiated products. Wheat flour is an example of an HVP processed after leaving the farm, and wheat for seed is a high-priced subset of wheat exports that can be considered HVP. All meats and animal byproducts are considered HVP's because of processing at packing plants. Since a substantial proportion of U.S. livestock consumes processed feed rather than pasture, U.S. animal product exports have frequently been called HVP in the form of value-added grain. U.S. fresh fruit and vegetable exports tend to be higher quality than average U.S. production and have additional value added beyond the farm gate due to specialized handling.

Based on 11 months of data, 54 percent of all U.S. agricultural export value was accounted for by HVP's, up from 47 percent in FY 1990. Since at least the middle of the 19th century, bulk exports have almost never accounted for less than half the value of U.S. farm product exports. Long-term changes in relative prices and recent government intervention in world markets account for much of this shift to HVP's.

The HVP share of U.S. agricultural exports has been rising since 1985. From the 1950's through the mid-1980's, HVP's accounted for about a third of the value of U.S. agricultural exports. During the second half of the 1980's, however, HVP's captured an increasing proportion of U.S. exports because of gains in HVP shipments and the relative sluggishness of bulk exports.

The earliest agricultural exports from North America were HVP's such as indigo and furs. Then, tobacco and, especially, cotton exports predominated for much of the 19th century. Improvements in transportation first made grain exports prominent in the second half of

the 19th century, and the United States' ability to increase the production of bulk products through mechanization and innovation sustained grain's predominance in agricultural exports well into the 1980's. During this time, the real prices of bulk products generally fell, with the 1970's and early 1980's proving to be a temporary exception.

During the past 20 years, U.S. agricultural export prices (including both bulk and HVP products) have risen about 130 percent. But, U.S. consumer prices and nonfarm export prices have risen more than 200 percent. As the purchasing power of raw agricultural products has declined, cash receipts from farm marketing have fallen from as much as 7 percent of GNP during the early 1960's to 3 percent since 1985. Several factors account for the declining purchasing power of farm products. One is the long-term tendency of food consumption to increase more slowly than income. Another is the tendency of prices of manufactured goods to rise more quickly than prices of raw materials. Also, widespread government intervention in agriculture has increased production in regions of the world otherwise lacking a natural comparative advantage in producing farm products. USDA's Economic Research Service has calculated that global transfers supporting agriculture averaged nearly \$100 billion annually during 1982-86. The price impact of this intervention has fallen most heavily on bulk products, particularly grains.

### Prices and Volume Down for Grains in 1991

Bulk exports fell from \$20 billion to \$16 billion in FY 1991. Much of the decline in bulk export value occurred in grains. U.S. grain exports fell following a record 1990/91 world wheat crop, record grain production in China, and a near-record grain crop in the Soviet Union. With production up in the Soviet Union, and its declining ability to finance purchases during FY 1991, Soviet coarse grain imports from all sources fell by an estimated 9 million tons, constituting much of the decline in world trade. China's improved grain production allowed it to cut its imports and raise its coarse grain exports to their highest level in 5 years. With world trade shrinking, and competitor exports rising, U.S. coarse grain exports fell by 18 million tons and \$2.4 billion in FY 1991.

Volume changed less for U.S. wheat exports during FY 1991 than for coarse grains, but prices fell substantially on world markets. The volume of U.S. wheat and flour exports fell by only 1 million tons to 24 million tons, but export value dropped by \$1.3 billion. Overseas

importers paid \$47 per ton less for U.S. wheat than they did in FY 1990 as increased world supplies drove prices down. When world prices fell further below the European Community's domestic prices, EC export subsidies rose sharply, driving world wheat prices still lower.

**Changes in U.S. Recordkeeping Affect Data for Canada**

The largest gain reported for HVP exports involved Canada, where U.S. exports rose by \$742 million (see fig. 1). Much of this apparent growth, however, reflected more exact export reporting during 1991 rather than increased sales. Adopted in January 1990, the U.S. Government's decision to use Canada's import statistics accounted for much of an apparent \$1.5-billion increase in U.S. agricultural exports to Canada.

U.S. agricultural exports to Canada during October-December 1989 (first quarter of FY 1990) were undercounted by an estimated \$300-\$400 million. But, October-December 1990 exports were reported correctly, resulting in substantially higher reported

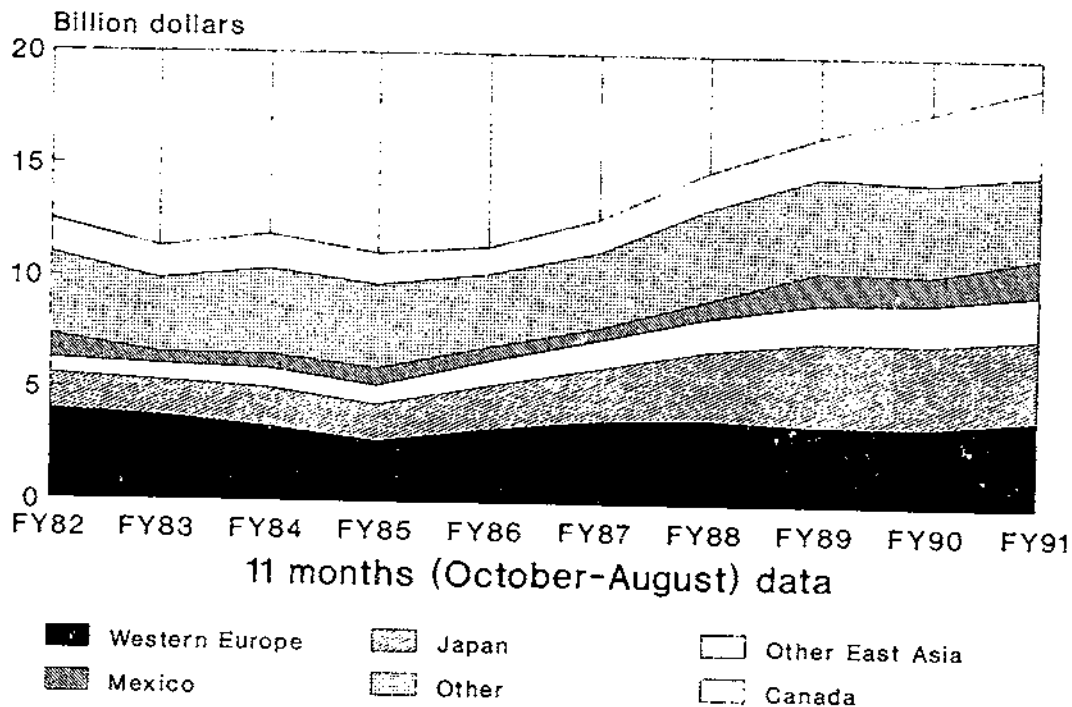

exports than in the first quarter of FY 1990. This suggests that U.S. agricultural HVP exports to Canada in FY 1991 were only \$300-\$400 million higher than a year earlier rather than the \$742-million difference between reported exports in each year. For further details on Canadian trade statistics, see *Outlook for U.S. Agricultural Exports*, May 1990, p. 7.

The largest increase elsewhere in U.S. HVP exports came in shipments to Mexico, which rose by \$408 million, and to Western Europe, which rose by \$389 million. Western Europe overtook Japan to recover its position as the largest market for U.S. HVP exports. HVP exports to Japan did not grow in 1991, but exports to Other East Asia rose by \$113 million, the sixth consecutive annual increase to these rapidly developing countries.

**Exports to Japan Steady**

HVP exports to Japan fell slightly in 1991 for the second year in a row, but the declines were so slight that 1991's exports were just 2 percent below their 1989 peak. Between 1985 and 1989, U.S. HVP exports to Japan more than doubled and Japan

**Figure 1--U.S. HVP exports**

overtook Western Europe as the largest market for U.S. HVP's in 1989 and 1990. Increased meat exports alone accounted for more than half of the \$2-billion gain to Japan between 1985 and 1989, but meat exports fell slightly in 1990 and failed to rebound in 1991. Meat exports climbed in earlier years as an increasingly strong Japanese yen reduced the cost of importing.

In 1988, a Beef and Citrus Agreement between the United States and Japan led to progressively higher import quotas for beef in Japan, driving exports still higher through 1989. However, beef stocks grew in Japan as retail prices remained high, and imports weakened in 1990. Stocks remained high in 1991 and, beginning in April 1991, Japan replaced its system of import quotas with a 70-percent tariff. The tariff will be reduced in the future, but it reduced imports during the last half of FY 1991.

While the decline in HVP exports to Japan was not particularly large at \$39 million, exports declined substantially in some markets. HVP exports to South Asia fell \$192 million in FY 1991 as soybean oil exports to Pakistan halted. Provisions of the Pressler Amendment have precluded shipments to Pakistan under P.L. 480 because of concerns with Pakistan's nuclear energy research. In addition,

Pakistan raised its soybean oil tariff and lowered its palm oil tariff, encouraging a shift in import demand to palm oil. In the absence of U.S. export programs, stiff price competition from palm oil and Latin American soybean oil suppliers eroded U.S. market share.

HVP exports to the USSR in 1991 fell \$103 million due to foreign exchange and credit constraints on Soviet purchases, but export value remained the second highest on record. U.S. HVP exports to the Soviets have risen in recent years as relations between the two countries have improved, and declining Soviet Government procurements from farmers in the USSR have increased the State's need to maintain supplies through imports. The largest single change in HVP exports to the Soviets in 1991 came in butter, which fell from \$68 million to zero in 1991. Although HVP exports to the USSR fell 20 percent in 1991, at \$411 million, they were still well above the \$66-million annual average during 1982-87.

HVP exports to the Middle East declined by \$163 million due to the United Nations embargo on trade with Iraq. HVP exports to North Africa also fell by \$88 million because of reduced flour and soybean meal exports. (Stephen MacDonald, Commodity and Trade Analysis Branch, (202) 219-0822)

### Neighboring Countries Are Major Sources of U.S. Agricultural Imports

Canada and Mexico provided about 25 percent of the \$20.8 billion of agricultural goods imported into the United States during October 1990-August 1991. Imports from Canada totaled about \$3 billion, imports from Mexico about \$2.5 billion. Live animals, fruits, vegetables, malt beverages, and coffee made up most of those imports.

Canada accounted for almost 60 percent of the live animals imported during FY 1991. Most of the animals were cattle, but Canada was also the largest source of imported swine. Mexico provided about 39 percent of all live animal imports, mostly cattle. Both countries exported vegetables to the United States, but Mexico's exports were about four times those of Canada's in value. Mexico's vegetable exports to the United States, at \$866 million, exceeded those of all other countries. They included \$248 million worth of tomatoes, and over \$100 million of peppers, as well as onions, cucumbers, asparagus, and other vegetables. Canada exported \$216 million worth of vegetables, with potatoes making up about a third of the total.

Canada provided the United States with almost half of its imports of pork, oilseeds, malt beverages, feed and

fodder (excluding oilcakes), and biscuits and wafers. Neither the value nor volume of these exports changed greatly from FY 1990.

Mexican coffee exports to the United States dropped about 25 percent from last year, but at \$328 million, coffee was still the second major agricultural import (after vegetables). U.S. fruit and fruit product imports from Mexico totaled \$310 million, about a quarter of all such imports, making Mexico the largest single source of such products. Melons made up about a third of the total, but grapes, mangoes, strawberries, and fresh citrus were also significant. Imports of fruits rose 34 percent in value from last year, partially to compensate for crop loss from the 1990 California winter freeze.

Brazil was the third largest source of agricultural goods (\$1.2 billion) to the United States in FY 1991. By far, the most important commodity was coffee, valued at \$403 million. Brazil, the largest coffee producer, saw its exports rise 38 percent in value and 42 percent in volume during this period. Brazil was also the major foreign source of orange juice to the United States. While U.S. orange juice imports dropped off drastically in FY 1991 (60 percent in value and 43 percent in volume), they still provided Brazil with revenues of \$202 million, making orange juice the country's second largest agricultural export to the United States. Other

major Brazilian exports included cocoa and its products, unmanufactured tobacco, and sugar.

Australia exported \$1.1 billion in agricultural goods to the United States. Beef and veal exports, valued at \$789 million, constituted 69 percent of the total. Wool accounted for 11 percent.

Other large exporters included New Zealand (\$805 million--mostly beef and veal and some casein), the Netherlands (\$713 million--mostly malt beverages), and Colombia (\$710 million--mostly coffee and cut

flowers). Countries exporting at least \$600 million in agricultural goods included Italy, France, and Indonesia.

Argentina showed the largest jump (44 percent) among all countries exporting to the United States in FY 1991. Beef (the largest Argentine export commodity to the United States) rose 45 percent, and sugar, 65 percent. Oilseed products, although still not a major export to the United States, climbed by more than 300 percent to over \$23 million. (Susan Pollack, Commodity and Trade Analysis Branch, (202) 219-0822)

## U.S. Agricultural Trade Boosts Overall Economy

U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1990 stimulated another \$1.59 (an additional \$62.8 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 1,062,000 full-time civilian jobs, including 623,000 jobs in the nonfarm sector. Farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

U.S. agricultural export value fell slightly in 1990 after three consecutive annual increases. Production from more than a third of U.S. cropland moved into export channels. The United States exported an estimated 62 percent of its wheat, 50 percent of its rice, 33 percent of its soybeans, 31 percent of its corn, and 63 percent of its cotton in FY 1990 (October 1989-September 1990).

U.S. agricultural exports peaked in 1981 at \$43.3 billion after years of steady growth, but then declined 33 percent by 1986. In 1990, agricultural exports maintained 1980 value levels. Bulk and processed agricultural exports provided employment for 1.2 million workers in 1981. Employment from agricultural exports nearly regained that level in 1990, reaching over 1 million workers. Exports in 1981 generated \$106.3 billion in business activity: \$43.3 billion for exports and \$63 billion for supporting activities. Exports generated a little more than \$102 billion in business activity in 1990: \$39.3 billion for exports and nearly \$63 billion for supporting activities. Thus, each dollar received from agricultural exports produced a multiplier effect of more than 2. Net exports in 1990 contributed \$16.5 billion to the U.S. trade balance, a fall from \$18 billion in 1989.

### Exports Generate New Business, Add Jobs

The United States exported \$39.3 billion of agricultural products in 1990. The value of exported raw products was \$17.8 billion; processed commodities, \$15.1 billion; and transportation and trade services for raw and processed products, \$6.4 billion.

The nearly \$63 billion in 1990 supporting activity included \$10.2 billion from the farm sector, \$4.8 billion from the food processing sector, \$20.2 billion from other manufacturing sectors, \$7.6 billion from trade

and transportation, and \$20 billion from other services. Nonfarm sectors of the economy received about 84 percent of the additional economic activity.

Of the 1,062,000 full-time civilian jobs related to agricultural exports, more than 439,000 U.S. farmworkers, 14 percent of the farm labor force, worked in the production of export commodities. In addition, 623,000 jobs in the nonfarm sector were directly or indirectly related to assembling, processing, and distributing agricultural products for export. About 75,000 of these were in food processing, 231,000 in trade and transportation, 117,000 in other manufacturing sectors, and 200,000 in other services.

### Bulk Exports Lower in 1990

For the first time in recent experience, bulk agricultural exports (grains, oilseeds, and cotton) failed to dominate the export mix. Nonbulk (fresh fruits and vegetables, semi-processed, and high-value processed) products now contribute the majority share of value to the \$39 billion in agricultural exports in 1990. Higher value agricultural exports accounted for \$21 billion, or 55 percent of all direct exports. Bulk exports have a smaller proportional effect on the nonfarm economy than processed exports. Direct bulk exports generated an additional \$26.6 billion of business activity, while direct nonbulk exports spurred an additional \$36.1 billion (\$1.48 additional output per dollar of bulk exports compared with \$1.59 for all agricultural exports and \$1.70 for higher value exports). The business activity attributable to bulk exports was distributed differently across economic sectors (4 percent to farming, 39 percent to manufacturing, 44 percent to other services, and 12 percent to wholesale trade and transportation) than the additional business activity for higher value agricultural exports (26 percent to farming, 39 percent to manufacturing, 23 percent to other services, and 12 percent to wholesale trade and transportation). Of the 1,062,000 jobs related to U.S. agricultural exports, 555,400 (52 percent) supported nonbulk exports.

### Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. trade balance increased substantially through the 1970's. Net U.S. agricultural exports (exports minus imports) rose to \$27 billion in 1981 from about \$1 billion in 1969. Net agricultural exports of \$18 billion partially offset a \$132-billion deficit in nonfarm trade in 1990, leaving the U.S. trade balance in deficit by \$114 billion.

## **The Effect of Agricultural Imports on U.S. Output**

The United States imported \$22.8 billion in agricultural commodities in 1990. Some \$5.6 billion of this total was spent on bananas, coffee, tea, and other tropical products that did not compete directly with U.S. agriculture. The balance of \$17.2 billion was spent on imports of meat, dairy products, fruits, nuts, vegetables, sugar, and wines, that compete with U.S. products.

Since 1980, noncompetitive farm product imports have been declining at an annual rate of about 2 percent. Competitive agricultural imports are moving in the opposite direction, growing annually by 4.7 percent. Only competitive imports were included in the input-output (I/O) analysis of the effects of imports on the economy.

Using the I/O model, we estimated that the equivalent domestic output effect of the \$17.2 billion of competitive imports in 1990 was \$44.7 billion. That is, each dollar spent on imports would have required roughly another \$1.60 in supporting goods and services if those imported items had been produced domestically, an output multiplier of about 2.6.

## **Stimulating the U.S. Economy through Agricultural Trade**

All of the positive trade balance or direct benefit comes from bulk agricultural exports. The port value of other agricultural exports and imports just about offset each other (table 5). The additional business activity needed to produce the supporting goods and services for exports and the output lost by importing competitive farm products reveals a different picture. The economywide 1990 net business surplus for agricultural trade was an estimated \$51.8 billion, a result of \$102.1 billion of total output generated by farm exports minus \$50.3 billion stimulated by agricultural imports (including noncompetitive products).

U.S. agricultural trade positively affects most sectors of the economy. The farm sector's \$28 billion of output associated with agricultural exports more than offset the \$11.6 billion of farm output implicitly lost because of competitive agricultural imports. All manufacturing, including the food processing sectors, gained \$13.8 billion in total output, about 80,000 jobs and \$3.4 billion in income.

Some industrial sectors were examined for their net gain or loss to trade. It was found that in terms of income, employment, and output, trade aided the meat processing, grain, sugar, fats and oils milling, and the miscellaneous foods industries. Agricultural trade was not beneficial to domestic dairy plants, canners, freezers and dehydrators, beverage and flavoring makers, and confectioners and bakers.

The U.S. economy outside of farming and food processing directly accrued a net \$5.1 billion from agricultural trade and a net increase in output of \$47.8 billion after considering the output lost to competitive agricultural imports.

## **Nonfarm Sector Receives Most Income Effects**

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although \$1 of agricultural exports in 1990 generated \$2.59 in total (direct and supporting) economic activity, \$1 represented income to wage earners, profits, and taxes.<sup>1</sup> Thus, the \$39.3 billion of agricultural exports in 1990 generated \$102.1 billion of total economic activity but \$39.3 billion of income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

The I/O analysis used in this article enables researchers to determine the impact of imports on the economy had they been domestically produced. The following descriptions of income from imports is income that would have been realized had those commodities been produced in the United States.

In 1990, the share of total income stimulated by agricultural exports and competitive imports in the nonfarm sector was 74 percent and 79 percent, respectively, with nonfarm, nonfood sectors of the economy receiving 66 percent of income from agricultural exports and 61 percent of the income effects attributed to competitive imports. The

---

<sup>1</sup> This income is directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers can purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. More purchasing power is spread throughout the total economy. The heightened activity, trade, and transportation can boost investment in plants and equipment. Because I/O analysis does not consider this additional income, our estimates of the economywide influences of agricultural trade are conservative.

Table 5--U.S. economic activity triggered by agricultural trade

Item	1986 total	1987 total	1988 total	1989 total	1990

Food processing share of total income from exports	9	8	8	8	8	4	16

distribution of the income remainder within the farm and food processing sectors differed markedly. The farm sector received 26 percent of the total income from agricultural exports, while the food processing sector received 8 percent, reflecting the importance of raw agricultural commodities in the export bill of goods. The total income effect of competitive imports (a lower level than exports) was more evenly divided between

the farm and food processing sectors, with the food processing sector assuming about 18 percent and the farm sector about 21 percent, mirroring the greater importance of processed food products in the competitive import bill of goods. (William Edmondson and Michelle Robinsen, National Economy and History Branch, Agriculture and Rural Economy Division, (202) 219-0785)

## Ocean Freight Rates for Grain Exports Up in 1991

The cost of shipping grain overseas generally rose during the first half of 1991. Ocean vessel costs from U.S. gulf ports to Western Europe increased about 11 percent, while those from the gulf to Japan rose 14 percent. Charges are negotiated between the ship's operator and the shipper in an essentially free market. Shipping corridors between one port and another are known as "trades." The quarterly weighted average of charter rates for shipments of heavy grain (corn, wheat, soybeans, and sorghum) on a metric ton basis are the ocean freight rates used in this article.

### Rates are Influenced by Many Factors

Ocean freight rates for heavy grains are the result of complex interactions among the supply of suitable ocean cargo space and the demand for ocean shipping capacity by all dry bulk cargoes, including heavy grains. Ocean freight rates fluctuate widely from year to year and quarter to quarter. Rates from the Great Lakes to North Africa, for example, ranged from a low of \$18.37 per metric ton (1986) to \$30.72 per metric ton (1989), a 167-percent change.

### Rates are Related to Distance

Ocean freight rates are closely related to distance. For example, in the second quarter of 1991, the rate from North Pacific ports to Japan was 43 percent below that from U.S. gulf ports to Japan. The distance from Portland, OR, to Yokohama, Japan, 4,323 nautical miles, is 52 percent shorter than that from New Orleans.

### Large Vessels Offer Operating Economies

Since both large and small vessels require similarly sized crews, very large economies of scale are to be found in ocean shipping. This factor often accounts for much of the difference in rates among trades. In the second quarter of 1991, rates from U.S. gulf ports to North Africa averaged \$24.43 per metric ton, \$0.005 per nautical mile. Rates from the gulf to Japan averaged \$0.003 per nautical mile, 40 percent less. Most of this difference is due to the size of the vessels involved. Shipments from the gulf to Japan averaged 53,000 metric tons, 108 percent larger than those to North Africa.

## Size of the World Fleet Plays a Role

The number of ships available in the world fleet also plays a role in rate setting. Since 1985, total capacity of the world's bulk carrier fleet (vessels most suitable for grain cargoes) has risen despite a sharp reduction between 1986 and 1988, when total capacity fell 5 percent to 224 million deadweight tons (1 dwt ton = 2,240 lbs). Since 1988, capacity has climbed steadily to 244 million dwt ton in 1991, a 9-percent rise. About 0.5 percent of the fleet are U.S. flag vessels. In FY 1991, rates charged by U.S. vessels for grain cargoes averaged \$30 per metric ton above foreign-flag vessels. As a result, competition from foreign-flag vessels usually restricts U.S. flag vessels to carriage of P.L.-480 and other Government-sponsored cargoes.

In 1987 and 1988, the world supply of bulk cargo capacity fell from 1986's level to 224 million dwt tons in 1988, a 5-percent decline. As might be expected, ocean freight rates for grain rose in this period. Rates from the U.S. gulf to Japan rose sharply from \$9.21 per metric ton in 1986 to \$22.16 per metric ton in 1988, a 140-percent increase. Although the world bulk fleet grew during 1989-91 from 228 million dwt tons to 244 million dwt tons, rates generally rose in 1989 as international trade in bulk commodities outstripped shipping capacity. Rates averaged lower in 1990 with the decline continuing through the first half of 1991. This decline indicates that world trade in dry bulk commodities, including U.S. grain exports, did not keep pace with the growth of the dry bulk fleet (fig. 2).

### Rates Since 1989 a Mixed Picture

Since 1989, changes in ocean freight rates generally moved in the same direction as changes in grain export volume. For the nine trades considered, 1990 rates averaged \$19.90 per metric ton, 4 percent below 1989. Export volume for heavy grains dipped 13 percent during the same period.

Rates to Japan from U.S. gulf ports and North Pacific ports declined 10 and 12 percent, respectively, during 1989-90. Rates to North Africa from the Great Lakes, Atlantic, and U.S. gulf ports, however, rose 3 percent, 9 percent, and 30 percent, respectively. This chiefly resulted from a shortage of the smaller vessels required by the North African ports. Shipments to North Africa averaged about 25,000 metric tons per

voyage, while those to Japan and Western Europe averaged 50,000 to 55,000 metric tons.

In the first half of 1991, chartering activity was reported for just five of nine trades considered. Rates mostly averaged higher than in 1990 despite a slackening in

grain export volume (fig. 3). Rates from the U.S. gulf showed the largest increases: to the Antwerp-Rotterdam-Amsterdam range, up 11 percent; to Japan, up 14 percent. From North Pacific ports, rates to Japan rose 8 percent (table 6). (T.Q. Hutchinson, Crops Branch, (202) 219-0840)
