**Chickens and Eggs:** Final estimates for 1988-1993. Agricultural Statistics Board, National Agricultural Statistics Service, U.S. Department of Agriculture.

### Abstract

This publication presents final chicken and egg estimates, made by the Agricultural Statistics Board for the period 1988-93 including some revisions and continues the official series published in Statistical Bulletin No. 801 issued December 1989. This series includes monthly and quarterly layer and egg numbers, rate of lay, and chickens inventory and value as of December 1. Estimates contained in this publication provide a historic record and benchmark for current estimates.

### Introduction

Chicken and egg estimates were published monthly in "Eggs, Chickens, and Turkeys" and annually in the "Layers and Egg Production Summary" during the 1988 through 1993 period. Primary data were collected from monthly questionnaires sent to egg producers. An attempt was made to collect information from all known contractors and independent producers with over 3,000 layers in their flock. Producers with less than 3,000 layers in their flock were sampled from the list of egg producers.

Grower surveys were conducted monthly in 20 selected States during 1988-93. The remaining States conducted quarterly surveys. During the non-quarterly months, data for the 30 quarterly States were estimated based on the percent change in the 20 States conducting monthly surveys.

Revisions were made only after a thorough review of original data with consideration given to all additional data now available, including information on egg-type chicks hatched, chickens slaughtered, and the 1992 Census of Agriculture.

Estimates of chicken value per head were based on responses of average value of birds in flocks as of December 1. Producers report separate values for hens and pullets of laying age, pullets not of laying age, and roasters. These values per head were weighted together by the number of hens and pullets of laying age and all other chickens for each State.

The number of chickens by class is estimated as of December 1. These estimates are based on survey and historical data relationships of the various classes to layers and total chickens.

<sup>1/</sup> Data for the non-quarterly months (Jan, Feb, Apr, May, Jul, Aug, Oct, Nov) were derived based on the percent change in the 20 States making monthly estimates. These monthly States accounted for the following percent of U.S. egg production: 1988 - 84; 1989 - 83; 1990 - 83; 1991 - 83; 1992 - 82; and 1993 - 82.

<sup>2/</sup> December preceding year.
