Digest

U.S. Agricultural Exports Decline (see p. 2). U.S. agricultural exports fell 10 percent in value in calendar year (CY) 1986 to \$26 billion and 9 percent in volume to 108.7 million tons. Rising grain production in importing countries cut overseas demand and U.S. exports. The USSR accounted for the largest drop by cutting its purchases of U.S. grain 11.6 million tons. As world grain and oilseed stocks grew, prices fell, further reducing the value of U.S. agricultural exports. However, high-value exports generally performed better than bulk exports, possibly reflecting overseas response to the weaker dollar.

U.S. Agricultural Imports Highest Ever (see p. 73). Farm product imports rose \$1.1 billion in 1986 to a record high of \$21.1 billion because of higher world coffee prices, unfavorable U.S. weather, and strong consumer demand. Noncompetitive imports, such as coffee and spices, rose 14 percent in 1986 to \$7.9 billion. Competitive imports, such as vegetables and fresh fruits, remained virtually unchanged at \$13.2 billion. December import values, however, declined to \$1.5 billion from \$1.8 billion in December 1985.

Commodity Prices Lower (see p. 120). Bulk commodity prices weakened in CY 1986, with only a few exceptions. World prices for primary commodities, excluding oil, fell about 7 percent in the first 11 months of 1986. Food prices fell even more sharply. Of the products important to U.S. agricultural trade, only prices for coffee and soybean meal averaged above 1985 levels.

Export Shares of Farm Production Post 14-Year Low (see p. 125). The share of farm production used for exports fell to 14 percent in fiscal year 1986 (October 1985-September 1986), the lowest level in 14 years. Declining U.S. agricultural exports and record-high agricultural production in CY 1985 caused the decline. The domestic market was unable to compensate for this drop in demand, and farm prices consequently fell 10 percent.

U.S. Agricultural Aid Abroad Declines (see p. 129). Concessional farm exports under U.S. Government-financed programs fell 10 percent in volume in FY 1986 to about 7 million tons worth nearly \$1.23 billion. Public Law (P.L.) 480 shipments accounted for the bulk of Government-financed exports. Exports under Section 416 fell, while exports under the Commodity Import Program rose sharply.

U.S. Agricultural Exports Decline

U.S. agricultural exports fell 10 percent in value in calendar year 1986 to \$26 billion and 9 percent in volume to 108.7 million tons. Rising grain production in importing countries cut overseas demand and U.S. exports. The USSR accounted for the largest drop by cutting its purchases of U.S. grain 11.6 million tons. World grain trade fell in 1986. As world grain and oilseed stocks grew, prices fell, further reducing the value of U.S. agricultural exports. However, high-value exports generally performed better than bulk exports, possibly reflecting overseas response to the weaker dollar.

Sluggish foreign economic growth and, in some cases, exporter competition also helped reduce U.S. exports. Weak domestic demand and poor export earnings reduced effective import demand in many countries, particularly in Mexico and Nigeria. Exporter competition reduced U.S. cotton sales to virtually every customer in 1986. However, competition for oilseed exports waned in 1986, and U.S. exports of soybeans and soybean meal rose.

U.S. Exports to the EC Rise in 1986

U.S. agricultural sales to the European Community (EC) rose for the first time since 1980, increasing 1 percent to \$6.6 billion. However, integration of Spain and Portugal into the EC reduced trade in some products for non-EC exporters, including the United States. U.S. agricultural exports to Spain and Portugal fell 22 percent, or \$283 million, in 1986 as they adopted the import levies of the EC's Common Agricultural Policy (CAP). Between 1980 and 1985, the CAP played a key role in reducing U.S. agricultural exports to the EC by nearly \$1 billion a year.

While the value of U.S. agricultural exports to the EC improved in 1986, shipments of some products continued to fall. Competition cut U.S. cotton sales, and EC self-sufficiency in grains continued to grow.

U.S. grain exports to the EC fell 4.3 million tons in 1986. Much of the reduction in U.S. products to Spain and Portugal came in grains. Elsewhere in the EC, local corn production and the use of starch made from wheat rose. Outside of Spain and Portugal, much of the EC's purchases of U.S. grain in recent years has been industrially consumed corn.

U.S. oilseed and product exports to the EC rose 20 percent in 1986, offsetting lower grain sales. Unlike grains, EC oilseed imports are not regulated by the CAP and, in fact, have been boosted by the CAP's regulation of competing grains. U.S. oilseed and product exports to the EC in 1986 were boosted by increased market share, increased EC consumption, and a weaker U.S. dollar. The dollar fell as much as 40 percent from peak levels against European currencies in 1986.

United States Regains Oilseed Market Shares

U.S. exports of oilseeds and products climbed 24 percent in volume in 1986 to 29.3 million tons and 11 percent in value to \$6.5 billion. Eastern Europe, the USSR, North Africa, Canada, and much of Asia increased their purchases from the United States.

In 1985, U.S. oilseed exports contracted sharply as Brazil's production and market share jumped. Drought subsequently cut Brazil's production, and U.S. market share and exports rebounded strongly in 1986. Volume in 1986 approached its 1984 level as soybean exports rose 4.5 million tons and soybean meal exports climbed 1.2 million tons. However, prices were much weaker in 1986 compared with 1984, holding export value of oilseeds and products about \$2 billion below the 1984 level.

Grain Exports to USSR 11.6 Million Tons Lower

In 1986, the value of U.S. grain and feed exports fell from \$11.9 billion to \$8.6 billion. Much of this decline stemmed from a 15.9-million-ton decline in export volume, most of which represented lower exports to the USSR.

The USSR failed to fulfill the terms of the U.S.-USSR long-term agreement, despite a limited extension of the Export Enhancement Program (EEP) for Soviet wheat purchases. U.S. grain sales to the USSR fell 11.6 million tons. U.S. wheat exports to the USSR dropped to zero and corn exports to 2.7 million tons as the USSR harvested one of its best grain crops in nearly a decade.

Other economic factors helped cut Soviet purchases. The USSR's declining hard currency earnings made importing less attractive. Prices for oil and gas, major Soviet export earners, tumbled in 1986. Soviet imports of nonagricultural products and some agricultural products not domestically produced fell. For example, Brazil's drought, which raised coffee prices for U.S. consumers, reportedly caused shortages in the USSR.

U.S. grain sales to Sub-Saharan Africa fell 2 million tons in 1986, also because of increased local production and reduced export earnings. Chad and Burkina Faso had record-high harvests, and Somalia, Sudan, Kenya, and Zimbabwe had near record-high harvests. Nevertheless, food aid needs remained large in some countries, including Ethiopia and Sudan. Food aid accounts for about 40 percent of U.S. agricultural exports to the region.

U.S. sales to Nigeria fell 52 percent to \$148 million in 1986 as severe financial problems from Nigeria's declining oil revenues forced delays for wheat import licensing. Imports of U.S. wheat fell 535,000 tons to under 1 million tons and probably will fall again in 1987. Nigeria banned wheat imports later in 1986, adding wheat to a list of banned products that already included rice and corn.

U.S. grains to Latin America fell 2.3 million tons. Exports to Brazil remained at 2.6 million tons. U.S. coarse grain exports to Mexico and Venezuela fell 2.3 million tons because of improved grain production and lower export earnings in those countries.

Japan, the largest single customer for U.S. grain, cut its imports from 17 to 15 million tons. More competition and reduced Soviet imports caused the decline. Reduced Soviet needs forced competitors' grain into Japanese and other markets, cutting the U.S. market share.

Competition Cuts Cotton Exports

U.S. cotton exports dropped 40 percent to 440,000 tons. Cotton, tobacco, and grains were the only large commodities that fell in 1986. Cotton's \$869-million decline in export value was the second largest, well above tobacco's \$311-million drop.

Foreign competitors dominated world cotton trade in 1986, while importers awaited lower U.S. prices after July. Exports to Japan fell \$129 million; to the rest of East Asia, \$276 million; and to the EC, \$165 million. No sales were reported to the USSR in 1986, a \$64-million decline.

Lower Prices Major Factor in Cutting Export Value

Volume for U.S. agricultural exports fell 9 percent in 1986, while value fell 10 percent. Although the similarity in these changes in percentage terms for value and volume implies value dropped because of falling volume, falling prices probably had at least as great an effect. Lower prices reduced wheat export value \$565 million, despite little change in volume. Coarse grain exports were \$929 million lower than they would have been with 1985's higher prices, and soybean exports were \$360 million lower.

Lower prices in 1986 reduced the combined export value of wheat, coarse grains, soybeans, rice, cotton, and vegetable oils more than \$2.2 billion. Higher prices for meat, hides, live animals, horticultural goods, and nongrain feeds added \$685 million to U.S. export value. The difference between these figures implies a larger role for lower prices than that implied by the difference between percentage changes in value and volume (see table 2 for volume, table 5 for value).

Two factors relating to the distribution of changes in price and export volume among commodities account for this contradiction. First, products not included in export tonnage can add to value without changing volume. For example, animal hides are sold by the piece, and no meaningful tonnage measure of these exports is available. Hide and furskin exports rose \$226 million in 1986. Excluding hides from total export value increases the year-to-year decline in value from 10 percent to 12 percent.

Second, commodities losing export volume in 1986 had lower prices, while commodities gaining export volume generally had higher prices. Rising high-value exports such as fruits, vegetables, and corn gluten added to total U.S. export value relatively more than they did to total volume. At the same time, lower corn and sorghum exports subtracted proportionally less from total value than from total volume. Total export volume received a strong downward push and a weak upward push; value received a stronger upward push and weaker downward push. Therefore, the negative impact on total volume was stronger than it was on value, masking the effect of falling prices.

Falling Dollar Value Has Limited Effect on Exports

Examining the commodity distribution of export gains and losses demonstrates the effect of the U.S. dollar on agricultural exports. Although a stronger U.S. dollar clearly helped reduce U.S. agricultural exports between 1980 and 1985, the continued aggregate export drop after the dollar weakened in early 1985 muddles the previously discerned relationship between exports and the exchange rate. Comparing 1986 U.S. export performance commodity by commodity and sales to developing and developed countries exposes changes related to the exchange rate that are masked in the export decline.

First, the declining value of the dollar against currencies heavily traded on foreign exchange markets, such as the German mark and the Japanese yen, was much

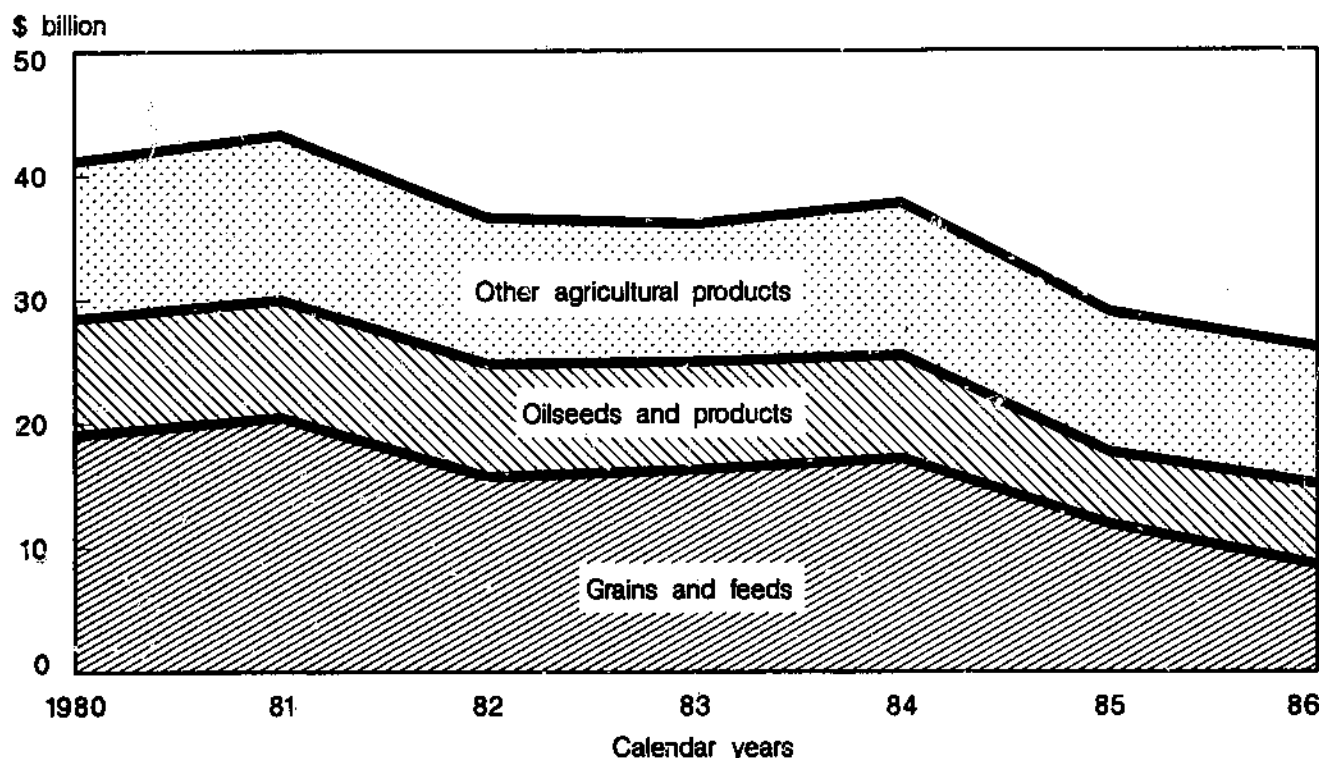

stronger than the decline against currencies of other major agricultural customers. Developing countries bought about 40 percent of U.S. agricultural exports in 1986, and in most cases, the dollar did not weaken against currencies of those countries. U.S. agricultural exports to developed countries fell 8 percent in 1986 compared with 15 percent to developing countries.

Second, for some important U.S. exports, factors other than exchange rates were far more important in determining export levels. Export changes in U.S. commodities facing especially strong competition in 1986 differed little between developing and developed countries. For these commodities, the increased availability of cheaper foreign supplies was more important than a weaker U.S. dollar, and U.S. sales fell to both groups of countries.

For example, the export value of grains to developing countries fell 16 percent; fruit juices, 22 percent; tobacco, 15 percent; and cotton, 51 percent. The export value of grains to developed countries fell 18 percent; fruit juices, 21 percent; tobacco, 21 percent; and cotton, 47 percent.

However, in cases where U.S. export performance improved, exports to developed countries improved more than exports to developing countries. For example, oilseeds and products was the only major U.S. agricultural commodity group that improved its contribution to the U.S. trade balance in 1986. Sales to developed countries accounted for virtually all of the growth; sales to developing countries fell 3 percent.

Value of U.S. Agricultural Exports

Sales to developed countries in 1986 of sugar and tropical products rose 28 percent; fruits, 17 percent; animal products, 18 percent; and nuts, 21 percent. Sales to developing countries of sugar and tropical products rose 10 percent; fruits, 8 percent; and animal products, 3 percent. Nuts fell 26 percent.

What the above figures show is that U.S. exports to strong currency countries outperformed exports to weak currency countries. This implies that the weakening of the U.S. dollar since February 1985 probably improved agricultural exports, if only for certain commodities. (Stephen MacDonald, International Economic Indicators Branch).

U.S. Agricultural Imports Highest Ever

U.S. agricultural imports rose \$1.1 billion in calendar year 1986 to a record high of \$21.1 billion because of higher coffee prices, unfavorable U.S. weather, and strong consumer demand. Noncompetitive imports, such as coffee and spices, rose 14 percent to \$7.9 billion. Competitive imports, such as vegetables and fresh fruits, remained virtually unchanged at \$13.2 billion. December import values, however, declined to \$1.5 billion from \$1.8 billion in December 1985 due to sluggish trade for major items, especially sugar and coffee.

U.S. agricultural imports from developing countries rose to \$12.3 billion, compared with \$8.3 billion from developed countries. Imports from Canada gained 6 percent to \$2 billion, mainly because of higher values for pork, grains, and malt beverages. Imports from Brazil slipped to third place, dropping 24 percent to \$1.8 billion, because of lower values for orange juice and coffee. Imports from Mexico soared 40 percent to \$2 billion because of increased volume in vegetables, coffee, and live cattle. Market shares in the United States for the European Community (EC), Colombia, Australia, Ecuador, and Guatemala gained.

Noncompetitive Import Values Up Sharply

Higher values for coffee and spices boosted noncompetitive imports to \$7.9 billion in 1986, offsetting declines for cocoa, rubber, and tea. Higher prices and strong demand advanced coffee imports to a record high of \$4.5 billion, 36 percent above year-earlier levels. However, volume gained marginally to 1.2 million tons. Coffee import unit prices, rising steadily since January, reached an average high of \$1.71 per pound, up 32 percent from a year earlier. Average U.S. wholesale prices for Brazilian coffee advanced from \$1.38 per pound in January to \$2.30 per pound in March. Prices began a downward slide after March because of the improved Brazilian coffee crop and averaged \$1.46 per pound in December. The major suppliers were Colombia, Brazil, Mexico, Guatemala, Ecuador, Indonesia, El Salvador, Uganda, and the Ivory Coast.

Import values for cocoa and products fell 21 percent in 1986 to \$1.1 billion, reflecting smaller cocoa bean imports. Volume dropped 14 percent to 485,000 tons as import unit prices declined 4 percent to \$1.04 per pound. Cocoa bean imports declined 26 percent to \$418 million. Imports of chocolate and unsweetened cocoa increased, however. The New York cocoa futures price averaged 99 cents per pound in 1985, but abundant supplies reduced prices to 89 cents per pound in 1986. Principal cocoa suppliers were Brazil, the Ivory Coast, the Dominican Republic, Ecuador, and Ghana.

Continued weak prices in 1986 depressed rubber import values to \$615 million. Volume dropped to 777,000 tons, with unit import prices diminishing 1 percent to \$792 per ton. Indonesia supplied 56 percent of U.S. rubber imports, while Malaysia, Thailand, and Liberia provided nearly all of the rest.

Banana import volume in 1986 changed little from 1985's 3.1 million tons. Larger imports from Ecuador, Costa Rica, Colombia, and Guatemala offset reduced shipments from Honduras, Panama, and Nicaragua. Value totaled \$749 million as import unit prices fell slightly to \$244 per ton.

Spice imports jumped 46 percent in value to \$353 million, due mainly to sharply higher prices for black pepper. Volume rose 15 percent to 102,000 tons. Import unit prices rose rapidly to \$1.58 per pound, compared with \$1.23 per pound in 1985.

Competitive Import Values Unchanged

Competitive import values remained virtually unchanged at \$13.2 billion, despite declines for some products. Beef import values remained unchanged from 1985's \$1.3 billion as import unit prices slipped 3 percent to \$1,827 per ton. Volume gained 3 percent to 695,000 tons. Australia supplied nearly 45 percent of beef volume, with New Zealand, Canada, and Argentina shipping most of the rest.

Lower U.S. pork output and higher prices in 1986 hiked import values almost 15 percent to a record of \$986 million. Pork imports from Canada gained substantially.

Gains from Mexico boosted live cattle imports to 1.3 million head (\$426 million) in 1986 from 836,000 head (\$307 million) in 1985. About 247,000 head of Canadian feeders and stockers entered U.S. markets, down from 1985's 359,000 head. Countervailing duties reduced live hog entries from Canada over 50 percent to 501,000 head.

An 8-percent rise in average import unit prices pushed up the value of U.S. cheese imports to \$389 million, compared with \$374 million in 1985. However, volume declined 4 percent to 132,000 tons. Western Europe and New Zealand shipped most of the imported cheese.

U.S. sugar imports tumbled 23 percent in value to \$625 million and 19 percent in volume to 1.8 million tons due to weak consumer demand, a larger U.S. sugar beet crop, and sharply reduced import quotas. U.S. sugar consumption in 1986 fell to 6.7 million tons (raw value), compared with 6.9 million in 1985. The Dominican Republic, the largest foreign supplier, provided 16 percent or 278,000 tons, down 137,000 tons from 1985. Volume also declined from most other major suppliers, particularly The Philippines, Brazil, Argentina, and South Africa.

Imports of vegetables and preparations gained 14 percent in value to \$1.6 billion, mainly because of higher vegetable prices. Volume gained 5 percent to 2.3 million tons, with import unit prices increasing 9 percent. Higher prices for tomatoes, onions, and canned vegetables boosted the value of vegetables from Mexico 27 percent to \$668 million. Lower prices depressed canned mushroom imports nearly 13 percent in value to \$117 million, while volume expanded almost 3 percent to 69,000 tons. Taiwan, China, and Hong Kong, the leading canned mushroom suppliers, provided 87 percent of volume.

Imports of fruits and preparations fell 6 percent to \$1.6 billion because of higher U.S. production and lower prices. Orange juice imports dropped 6 percent in volume to 547 million gallons and 44 percent in value to \$387 million. However, imports of melons from Mexico, fresh apples from New Zealand and Canada, and canned pineapples from The Philippines and Thailand gained.

Import values for oilseeds and products declined 22 percent to \$586 million, due mainly to lower prices for vegetable oils. Coconut oil imports fell 38 percent in value to \$174 million. However, volume rose from 450,000 tons to 534,000 tons. Import unit prices of vegetable oils averaged \$427 per ton in 1986 compared with \$676 per ton in 1985 and \$938 per ton in 1984. The Philippines and Malaysia supplied most of the vegetable oils.

Grain and feed imports gained 9 percent in value to \$678 million, mainly because of higher prices for bakery products. Import volume of biscuits, wafers, and cookies, coming mostly from the EC and Canada, rose from 116,484 tons to 125,884 tons. Value climbed 16 percent to \$250 million. Imports of barley, rice, and corn also gained.

Reduced U.S. output of flue-cured tobacco and abundant world supplies at stable prices pushed up unmanufactured tobacco imports 7 percent to 209,000 tons valued at \$602 million. Filler leaf tobacco, 92 percent of U.S. tobacco imports, rose 7 percent to 169,000 tons, with an import value of \$551 million. Import unit prices of filler leaf tobacco remained steady at nearly \$1.48 per pound. Turkey, Brazil, and Greece were the major suppliers.

Values gained for other competitive imports. Malt beverage imports jumped 24 percent in value but 12 percent in volume due to higher prices. Cut flower imports, of which Colombia and The Netherlands provided 74 percent, rose 4 percent to \$229 million. Imports of nuts and preparations fell 1 percent to \$370 million, mostly in cashew nuts, which accounted for over 30 percent of U.S. tree nut imports. India and Brazil supplied most of the cashew nuts. (Charles E. Goode, International Economic Indicators Branch)

Commodity Prices Lower

Bulk commodity prices weakened in calendar year 1986, with only a few exceptions. World prices for primary commodities, excluding crude oil, fell about 7 percent in the first 11 months of 1986, according to the International Monetary Fund. Food prices fell even more sharply. Of the products important to U.S. agricultural trade, only prices for coffee and soybean meal averaged above 1985 levels.

Grain Prices Fall

Continued large global supplies and U.S. policy changes stemming from the 1985 Food Security Act depressed grain prices in 1986. Largely because of a drop in Soviet import needs, world grain trade shrank for the second consecutive year while surplus stocks grew dramatically. Given these global supply and demand conditions, U.S. wheat prices continued to fall, despite a drop in U.S. production.

U.S. efforts to boost competitiveness included cutting loan rates about 27 percent in June, the beginning of the 1986/87 crop year. U.S. farm and export prices immediately reflected the change, and June 1986 gulf port prices for wheat were 20 percent below those of June 1985. Australian and Argentine wheat prices also immediately dropped 20 percent below their June 1985 levels, as did Canada's by August.

Rice prices fell following U.S. policy changes. The 1985 Food Security Act authorized marketing loans for rice, with repayment rates pegged to world prices. The program started mid-April, and U.S. rice prices fell 20 percent in May, boosting U.S. rice exports.

Corn prices steadily declined from June through September due to the record-large size of the U.S. corn crop and the downward adjustment in loan rates. Although U.S. corn prices subsequently firmed, gulf port export prices remained below both gulf sorghum prices and Buenos Aires corn prices near the close of the year. Gulf port corn prices were higher in each case in 1985.

Cotton Prices Rebound

A marketing loan program reduced U.S. cotton prices. However, the U.S. eight-market price climbed 102 percent in the months following its 59-percent drop in August. Cotton prices overseas followed a similar pattern, leaving a great deal of uncertainty about the sources and limits of the price increases. Global cotton use is expected to reach its fifth consecutive record high during the 1986/87 marketing year, and the availability of both Soviet and Chinese cotton appears constrained. Ending stocks outside China and the United States are expected to fall slightly.

Vegetable oil prices also strengthened in the latter months of 1986. U.S. soybean oil prices in September were 38 percent below those of September 1985 because of rapid growth in Malaysia's palm oil production since the introduction of pollinating weevils and increasing supplies of coconut oil from The Philippines during much of 1986. Prices subsequently strengthened as growth in palm and coconut oil supplies abated.

Soybean Meal Prices Higher

Although soybean oil prices fell 40 percent in 1986, U.S. soybean meal prices rose 24 percent. Lower oil prices helped sustain meal prices as oilseed crushing received less incentive from oil production. A drop in foreign soybean production following a drought in Brazil was a factor, but currency realignments were also important.

Although Japan and the European Community (EC) consume less than 15 percent of the world's grain, they account for nearly 30 percent of the world's soybean meal consumption. As a result, the strengthening of their currencies had a greater effect on soybean meal prices than on grains. Because the German mark and the Japanese yen rose about 40 percent between February 1985 and December 1986, meal prices were lower in Germany and Japan despite the 19-percent climb in the dollar price over those months. In the long run, a weaker U.S. dollar will help strengthen all prices in dollar terms, but other factors proved offsetting for most commodities in 1986.

January Coffee Prices Highest Since 1977

The same drought that reduced Brazil's soybean production cut coffee production there even more drastically, sparking an intense surge in prices. Brazil accounts for a large share of world coffee production, and prices remained relatively high during much of the year as traders awaited assurance that production would rebound in the 1987/88 season. By December, prices had eased to about \$100 per ton less than the average for the 1980's. (Stephen MacDonald, International Economic Indicators Branch).

Export Shares of Farm Production Post 14-Year Low

The share of farm production used for exports fell to 14 percent in fiscal year 1986 (October 1985-September 1986), the lowest level in 14 years. Declining U.S. agricultural exports and record-high agricultural production in CY 1985 caused the decline. The domestic market was unable to compensate for this drop in demand, and farm prices consequently fell 10 percent.

Farm Production at Record High

Exports fell from \$31.2 billion in FY 1985 to \$26.3 billion in FY 1986, largely due to poor sales of corn, cotton, wheat, sorghum, and soybean oil. These five commodities accounted for \$5.5 billion of the decline. Meanwhile, the value of farm production (measured by gross cash income) rose to a record high of \$156.2 billion in CY 1985, the last year of higher support prices set by previous legislation.

Grain Exports Stagnate

Wheat production fell 7 percent in 1985 and alleviated some of the pressure from a 9-percent decline in export sales in FY 1986 and a 31-percent decline in 1985. Although domestic use has expanded, the bulk of the excess wheat production went into stocks.

Overseas corn sales usually account for 25 percent of domestic production, but that figure fell to a 15-year low of 14 percent in FY 1986. Corn production posted a record high of 225 million tons. The export price for corn fell to \$82 a ton in September in an effort to market the excess production as stocks soared to a record high of 103 million tons.

Soybean Export Share Rises

The export share of U.S. soybean production in FY 1986 rose from 44 percent to 47 percent, despite a \$266-million decline in soybean oil exports. This share includes soybeans and products (meal and oil). About 75-80 percent of soybeans, 20-25 percent of soybean meal, and 10-15 percent of soybean oil output are generally exported. (To avoid double counting, only soybean meal exports are converted to bean equivalent to compute the export share.)

Cotton Exports at 40-Year Low

Cotton exports fell to their lowest level since World War II, 482,000 tons, or 2 million bales. This export share of 16 percent of production compares with 45 percent in FY 1985.

Stock Levels Rise in 1985/86

When the expected price of a storable commodity exceeds the current price and the storage costs, demand for stocks of that commodity increases. Table 20 indicates that larger stocks accumulated as export levels declined.

Table 20--Ending stocks for selected U.S. commodities, crop years 1983-86

Commodity	1982/83	1983/84	1984/85	1985/86

Tobacco	12.1	35.0

Export Share Variability

In the bidding process among exporters, stockholders, and domestic users, the share of farm commodities that goes into the export market may or may not be responsive to prices. The variability of export shares of production in 1971-86 can be measured as the coefficient of variation, which is the standard deviation divided by the mean.

While there are similarities in price variability, except that for tobacco, the export share variability shows considerably more disparity. Wide swings in the distribution pattern of a commodity between exports, stocks, and domestic use indicate either a systematic inability on the part of producers to correctly anticipate demand or interference in the market. The higher the export share generally is the lower the share's variability is because that commodity sector is likely attuned to foreign demand. However, commodity price support programs can distort this relationship, for example, by encouraging production while demand is falling. (Stephen R. Milmo, International Economic Indicators Branch).

U.S. Agricultural Aid Abroad Declines

Concessional agricultural exports under U.S. Government-financed programs fell 10 percent in volume in fiscal year (FY) 1986 (October 1985-September 1986) to about 7 million tons worth nearly \$1.23 billion. Chief exports were wheat, flour, and soybean oil. Egypt, Pakistan, and Bangladesh, the top three recipients, took more than one-third of the value of shipments. Preliminary data indicate that Public Law (P.L.) 480 accounted for the bulk (78 percent) of Government-financed exports; shipments fell under Section 416 of the Agricultural Act of 1949, as amended. Exports under the Commodity Import Program, administered by the Agency for International Development, rose sharply. In total, these programs accounted for approximately 5 percent of the total value of agricultural exports in FY 1986.

Shipments under P.L. 480 fell to 5.8 million tons valued at \$960 million. Exports under the Title I/III program, 4 million tons worth nearly \$590 million, accounted for the bulk (60 percent) of the value of P.L. 480 shipments. Eight commodities were shipped through Title I/III, with wheat, flour, and rice being the top three. Egypt, Bangladesh, and Sudan were main destinations out of 30 recipients, and received almost half of the value of Title I/III shipments. Chief destinations of wheat were Egypt, Bangladesh, and Sri Lanka, while Egypt, Sudan, and Somalia received all of the flour. Guinea, Liberia, and Jamaica received nearly half of the rice. Other Title I/III commodities were soybean oil, inedible tallow, corn, cottonseed oil, and cotton.

Title II donations declined from preliminary FY 1985 levels to roughly 1.8 million tons, worth more than \$370 million. Top commodities were soybean oil, bulgur wheat, and wheat. India and Ethiopia were chief soybean oil recipients. Almost 80 percent of the bulgur wheat was shipped to Ethiopia and India. Pakistan and Bangladesh received about 80 percent of the wheat shipments. Ethiopia, India, and Pakistan received almost half of the value of all Title II exports. Voluntary relief agencies distributed almost 60 percent of Title II commodities, followed by the World Food Program with nearly 30 percent. About 15 percent of the commodity value was distributed through government-to-government channels.

Exports under Section 416 fell to slightly more than 230,000 tons worth more than \$135 million. Nonfat dry milk, anhydrous milk fat, and cheese make up 90 percent of the value of shipments. Main recipients were Mexico, Brazil, and Poland. Mexico and Brazil were chief destinations for nonfat dry milk, while Mexico received about half of the anhydrous milk fat exports. Mexico, Poland, and Chile received most of the cheese.

Exports under the Commodity Import Program increased about 45 percent in value and approximately 80 percent in volume. Wheat and corn accounted for about 80 percent of the commodity value. Pakistan and Egypt received nearly 90 percent of the shipments. (Mark E. Smith, International Aggregate Analysis Branch, and Fannye G. Lockley, International Economic Indicators Branch)

1/ Preliminary.

2/ Negative values in the "commercial" column indicate an excess of Government programs over total exports attributed to reporting lags, classification differences, or transshipments through other countries.
