IMPORTANT INFORMATION ABOUT YOUR SUBSCRIPTION

* Foreign Agricultural Trade of the United States is published six times a
* year with two supplements. Subscription prices are \$21 a year domestic
* and \$26.25 foreign (prices subject to change). Send check or money order
* payable to "Superintendent of Documents" to Superintendent of Documents,
* U.S. Government Printing Office, Washington, DC 20402. For faster
* service, call (202) 783-3238 and charge your subscription to your VISA,
* MasterCard, or GPO Deposit Account.

IS IT TIME TO RENEW?

* Your subscription to this publication may be due to expire soon. If so,
* you will get a renewal notice in the mail from GPO about 90 days ahead of
* time. Only one notice is sent. You must return it promptly to ensure
* uninterrupted service.

DIGEST

U.S. Agricultural Exports Rise \$1.1 Billion (see p. 2). A larger U.S. share of world trade helped push U.S. agricultural export value in the first 11 months of fiscal year (FY) 1987 to \$25.5 billion, \$1.1 billion over that of the same period of FY 1986. Export volume for the October 1986-August 1987 period rose 17 percent (17 million tons) to 118 million tons, largely because of a growing share of world grain sales and a rise in the total volume of grain traded on international markets. The volume of U.S. grain and feed exports rose 14 million tons, oilseed and product exports rose 1.5 million tons, and cotton exports rose more than 800,000 tons. However, lower prices for bulk products held export value to a 5-percent increase. Although exports were higher in 1987 compared with year-earlier levels, they remained well below the peak levels of the early 1980's. Smaller grain exports accounted for most of the difference.

October-August Imports Reach \$19 Billion (see p. 72). U.S. agricultural imports in the first 11 months of FY 1987 eased to \$19.1 billion, 1 percent below the record highs of the same period in FY 1986. Unusually heavy livestock product imports helped boost the FY 1987 import forecast to \$20.5 billion. The International Coffee Organization reintroduced global coffee export quotas, which will likely end the drop in coffee prices but should not affect the level of U.S. coffee imports.

Commodity Prices Unsteady (see p. 117). Prices for most products fell after June as Southern Hemisphere crops reached European markets, U.S. crops basked in favorable weather, and continued moderate increases in wages and U.S. import prices eased fears of resurgent inflation.

U.S. Trade Benefits Economy (see p. 121). U.S. agricultural exports generate employment, income, and purchasing power in the farm and nonfarm sectors. Each dollar received from agricultural exports in calendar year (CY) 1986 stimulated another \$1.51 (or an additional \$39.3 billion for the \$26 billion of agricultural exports) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 781,000 full-time civilian jobs, including 450,000 jobs in the nonfarm sector.

Prepared by the Commodity and Trade Analysis Branch, Commodity Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators were Thomas A. Warden and Mary L. Fant. Denise Morton provided word processing and table formatting support. Editorial support was provided by Teri L. Davis, Research Information Branch, Information Division, Economics Management Staff. Data processing support was provided by Sharlan Starr and William Meiller, International Economics Systems Branch, Data Services Center.

U.S. AGRICULTURAL EXPORTS RISE \$1.1 BILLION

A larger share of world trade helped push U.S. agricultural export value in the first 11 months of fiscal year (FY) 1987 to \$25.5 billion, \$1.1 billion over that of the same period of FY 1986. Export volume for the October 1986–August 1987 period rose 17 percent (17 million tons) to 118 million tons, largely because of a growing share of world grain sales and a rise in the total volume of grain traded on international markets. The volume of U.S. grain and feed exports rose 14 million tons, oilseed and product exports rose 1.5 million tons, and cotton exports rose more than 800,000 tons. However, lower prices for bulk products held export value to a 5-percent increase. Although exports were higher in 1987 compared with year-earlier levels, they remained well below the peak levels of the early 1980's. Smaller grain exports accounted for most of the difference.

Grains Lead Export Rebound

At 118.2 million tons, farm export volume during the first 11 months of FY 1987 recovered completely from the previous year's steep decline. In 1986, export volume fell 18 million tons. Since then, U.S. loan rates were cut, the dollar continued its slide on foreign exchange markets, and both competitor supplies and customer demand shifted in favor of larger U.S. grain exports. U.S. exports of cotton, soybeans, and soybean meal were also larger, but altogether added only 2.8 million tons to export volume.

Exports of every grain increased in 1987, but coarse grains increased the most, rising 10 million tons, or 30 percent. The United States captured a larger share of a growing world grain market, where trade rose about 2 million tons. Lower production by several competitors helped boost the U.S. market share from 44 percent to an estimated 56 percent. Argentina, the largest foreign grain and oilseed competitor facing the United States, was forced to curtail its exports about 4 million tons. Furthermore, exports from Australia and Thailand fell to their lowest in 4 years. However, the largest reduction in a competitor's net exports occurred in China.

Chinese coarse grain production rose, yet U.S. coarse grain exports to China climbed from virtually nothing during the first 11 months of 1986 to more than 1 million tons for the same period in 1987. China's imports from all suppliers probably more than tripled in 1987, and exports fell about 3 million tons. The result was an estimated decline in net exports of 4.5 million tons. Lower world prices probably encouraged China to increase its net imports as Chinese consumption outpaced its production growth. In contrast, China has discouraged imports of most other products. Since 1986, China has successfully reduced its total merchandise trade deficit.

Sales to Far East Rise

While corn sales to China rose 1 million tons in 1987, the effect of reduced Chinese exports on U.S. sales to other Far Eastern markets was greater. U.S. exports to Japan rose 2.9 million tons to 13.4 million tons, despite little change in Japan's total coarse grain purchases. Exports to Taiwan increased 700,000 tons, and those to Korea rose 2.4 million tons. Lower supplies of Canadian and Australian feed wheat accounted for some of the increased U.S. sales to Korea, but lower Chinese exports had the largest effect.

U.S. coarse grain exports to North Africa rose 1.3 million tons to 3.2 million tons, and U.S. sales to the Middle East rose nearly 3 million tons to 4.4 million tons. The Export Enhancement Program (EEP) bolstered sales to the Middle East, enabling American exporters to sell 2.2 million tons of barley to Saudi Arabia compared with 232,000 tons in 1986.

Exports to the European Community Continue Falling

U.S. coarse grain exports to the European Community (EC) fell 872,000 tons in the first 11 months of FY 1987, as the introduction of EC prices and variable levies in Spain and Portugal offset the positive effect of lower competitor supplies. U.S. coarse grain exports to Spain and Portugal averaged 5.3 million tons in FY 1982-86, but during the first 11 months of FY 1987, these exports fell to only 1.4 million tons. The grain trade in Spain and Portugal has shifted away from non-EC suppliers since their accession to the EC in January 1986. A U.S.-EC agreement to maintain U.S. corn sales to Spain during a 4-year transition period had little effect on sales in FY 1987.

However, sales to the rest of the EC rose, particularly to the Netherlands and Belgium, each purchasing about 300,000 tons more U.S. coarse grains. This was the first time since FY 1977 that these members of the EC increased their purchases of U.S. coarse grains. Between FY 1977 and FY 1986, U.S. coarse grain exports to the EC-10 fell from 17.7 million tons to less than 600,000 tons.

U.S. Wheat Exports 9 Percent Higher

U.S. wheat exports rose 2.1 million tons to 25 million tons, as lower loan rates and the EEP increased U.S. competitiveness. The EEP raised exports to the USSR from a negligible 153,000 tons in 1986 to 3.7 million tons in the first 11 months of FY 1987. The EEP also raised wheat sales to China about 664,000 tons and boosted exports to Eastern Europe, Iraq, and Morocco. However, exports to Japan, the largest U.S. wheat customer in 1986, fell 4 percent to 2.7 million tons. Increased production in Pakistan cut U.S. wheat sales there by 748,000 tons, and exports to the Netherlands and Portugal each fell about 300,000 tons.

Increased price competitiveness also boosted rice exports in the first 11 months of FY 1987. U.S. rice exports rose 291,000 tons to 2.2 million tons. With the implementation of a marketing loan program for rice in April 1986, U.S. rice prices dropped to world market levels. The U.S. loan rate previously had supported U.S. prices above world prices. But, under the marketing loan program, loans from the Commodity Credit Corporation (CCC) can be repaid according to world prices, with the borrower receiving a deficiency payment for the difference between world prices and the loan rate. The rise in export volume in 1987 was spread among major markets, with exports to Western Europe rising 163,000 tons, and exports to the Middle East rising 292,000 tons.

U.S. Exports Remain Well Below Peak

Although increased U.S. competitiveness in the first 11 months of FY 1987 raised exports of every major grain over year-earlier levels, the volume of grain and feed exports remained 6.5 million tons below those of the same period in FY 1985. The partial rebound in FY 1987 left grain export volume still further below the peak levels of the early 1980's. U.S. agricultural exports fell from 164 million tons in FY 1980 to 110 million tons in FY 1986. Lower grain exports accounted for much of the 1980-86 decline and for much of the rebound in the first 11 months of FY 1987. Grain exports have proven more volatile than other products in recent years, driving the export gains of the 1970's as well as the export reductions of the 1980's.

U.S. grain and feed exports remain well below peak value levels, failing to recover from the decline of FY 1986. Grain and feed export value in the first 11 months of FY 1987 was \$521 million lower than the year-earlier level and \$4.3 billion lower than that of the same period of FY 1985. In FY 1987, the average export price of U.S. wheat fell 22 percent compared with that of FY 1986 and 32 percent compared with that of FY 1985. In FY 1986 and FY 1985, corn export prices dropped 28 percent and 38 percent, and rice export prices fell 22 percent and

35 percent. U.S. and world prices declined because world grain production and stocks continued to grow during the first half of the 1980's, while world trade slackened. Ending stocks as a percentage of consumption were higher in 1986 and 1987 than at any time since the end of the 1960's.

An important factor behind continued large world grain supplies is the EC's shift from performing as a large net importer to a large net exporter. While the dollar was strong in the early 1980's and U.S. loan rates supported world prices, the EC was able to maintain its domestic prices higher than would have been otherwise possible. Higher prices encouraged production. The dollar and U.S. loan rates have fallen since then, but EC grain prices and production have remained relatively high. High prices have simultaneously discouraged consumption, which was lower in the EC during the 1986/87 marketing year than it was 10 years earlier. Livestock producers in the EC, for example, have increasingly relied on nongrain feeds, such as corn gluten, cassava, and oilseed meal. With grain production high and domestic consumption low, the EC has had to rely on international trade to slow its buildup of stocks, thereby depressing grain prices and exports in other countries. However, increased EC demand for nongrain feeds has boosted world trade in these products.

U.S. exports of feeds and fodders gained in both volume and value during the first 11 months because of larger sales to the EC-12. Exports of feeds and fodders (largely corn gluten) rose \$168 million to a record \$1.3 billion. Export value for feeds and fodders rose 14 percent as volume rose 1.6 million tons while prices fell only 6 percent. Exports of feeds and fodders are unencumbered by EC tariffs and have grown at the expense of grain consumption in the EC.

Oilseed and Product Export Value Unchanged

For the second consecutive year, the export value of U.S. oilseeds and products remained virtually unchanged, slipping 2 percent during the first 11 months of FY 1987 to \$5.9 billion. Volume rose 6 percent to 27.8 million tons, and price changes were favorable compared with the large declines for grains. Soybean prices fell 6 percent, soybean meal prices dropped 1 percent, and vegetable oil prices dropped 11 percent.

The trade contrast with grain exports was not unique to 1987. Oilseed exports have been far less volatile. Their share of total export value reached 22 percent in FY 1987 and never exceeded 27 percent during the 1970's and 1980's. In contrast, grain exports accounted for 50 percent of export value in FY 1981 but only 32 percent in FY 1987. Nor is this contrasting performance unique to the United States. In 1981, the value of Argentina's cereal exports was nearly triple that of its oilseed and product exports, but in 1986, export earnings from grains were the smaller of the two.

The oilseeds and grains situation in the EC helps account for these changes in international trade. Until recently, EC oilseed production grew moderately compared with grain production, while oilseed consumption continued to grow. Behind these trends is an international trade protocol associated with the General Agreement on Tariffs and Trade (GATT) that prevents the EC from assessing trade-reducing tariffs on oilseeds. Oilseed prices have been more favorable for EC consumers than grain prices, encouraging substitution of grains with oilseeds and ultimately sustaining world oilseed trade and depressing world grain trade.

World Trade Boosts Soybean and Soybean Meal Exports

U.S. soybean exports rose 462,000 tons during the first 11 months of FY 1987, largely because of a 913,000-ton increase in sales to the EC. Increased EC and Soviet imports of soybeans and products boosted world trade, permitting an increase in U.S. exports, despite a decline in U.S. market share.

Soybean exports expanded further compared with 2 years earlier, reaching 19.8 million tons during the October-August period in FY 1987 compared with 15.8 million tons in the same period of FY 1985. Brazil raised its exports in 1985 at the expense of the United States but relinquished this rise in market share in FY 1986 when drought cut its production. Although Brazil's production largely rebounded in FY 1987, increased domestic demand diverted a substantial portion of this increase away from export channels. In fact, Brazil imported about 260,000 tons of U.S. soybeans in both 1986 and 1987.

U.S. soybean meal exports rose 1.3 million tons during the first 11 months of FY 1987. Like soybeans, world trade in soybean meal grew in 1987, but the U.S. share of world trade grew as well. Exports to the EC rose about 580,000 tons, and much of the remaining increase was in exports to the Western Hemisphere. Although increased Soviet imports of soybean meal was a major factor in increased world soybean and soybean meal trade in October 1986-August 1987, the United States exported no soybean meal to the USSR, and soybean exports to the USSR fell to 71,000 tons compared with 1.5 million tons in the same period during the previous year.

Agricultural Exports to Other East Asia \$500 Million Higher

After the increase to the EC, the largest increase in U.S. exports of oilseeds and products was to the industrializing countries of Other East Asia. The export-led economies of Hong Kong, Korea, and Taiwan have been among the fastest growing in the world. While little U.S. soybean meal is sold there, U.S. soybean exports gained 530,000 tons in the first 11 months of FY 1987 as domestic consumption boosted livestock production. In addition, Taiwan's growing pork exports added to its feedstuff demand.

Buoyant East Asian exports and economic growth also helped increase other U.S. agricultural exports to the region. Oilseeds accounted for about \$50 million of the \$500-million jump in total agricultural exports to Other East Asia, a \$3.1 billion market. Grain exports gained \$75 million and animal product exports rose \$162 million, but the largest increase came in cotton exports, which rose \$260 million.

Cotton Export Value Substantially Higher

U.S. cotton exports to all customers rose 121 percent during the first 11 months of FY 1987, a \$726-million increase that boosted cotton export value to \$1.3 billion. Although prices fell, the U.S. share of world trade and U.S. export volume virtually tripled, with export volume reaching 1.2 million tons. Higher volume more than offset the decline in prices that followed implementation of a U.S. marketing loan program.

U.S. cotton exports fell in FY 1986 as foreign importers delayed purchases in anticipation of a large drop in U.S. prices. Export growth in FY 1987 represents a return to a more traditional level of exports and world trade share. However, exports to Japan and Western Europe did not fully recover in FY 1987, rising only 148,000 tons and 138,000 tons. In the first 11 months of FY 1986, cotton exports to Japan and Western Europe fell 168,000 tons and 180,000 tons.

Cotton exports to Other East Asia and Southeast Asia more than rebounded in FY 1987, almost completely offsetting shortfalls elsewhere. Exports to Other East Asia rose 335,000 tons in October-August of FY 1987 compared with the same period in FY 1986, and 52,000 tons compared with the same period in FY 1985. Exports to Southeast Asia in comparable months of FY 1987 rose 121,000 tons and 49,000 tons compared with the same periods in FY 1986 and FY 1985. Growing textile exports from Southeast and Other East Asia increased the demand there for imported cotton.

High-Value Exports Rise Sharply

After cotton exports, the largest gains in export value came in animal and horticultural products. Animal and animal product exports rose \$584 million, and horticultural exports (fruits, nuts, and vegetables) rose \$410 million. These and other high-value products accounted for most of the increase in U.S. agricultural export value during the first 11 months of FY 1987, and high-value products accounted for their largest share of total export value since the 1960's. Most high-value exports benefited from increased volume and prices, in marked contrast with bulk exports.

High-value products rose largely on the strength of sales to developed countries, where exchange rates and economic growth were more favorable to U.S. sales. For example, while sales to Brazil under the Dairy Termination Program boosted beef exports about \$44 million, stronger purchases by Japan added \$84 million. Although sales under the EEP similarly increased poultry meat exports to Egypt and Iraq, Japan still accounted for 22 percent of the \$113-million increase in poultry meat exports during the first 11 months of FY 1987.

Two important exceptions to the predominance of sales to developed countries were cattle hides and pulses. Korea accounted for most of the \$118-million increase in exports of whole cattle hides and Mexico accounted for most of the \$66-million increase in pulse exports.

While high-value exports accounted for most of FY 1987's gain in export value, total agricultural exports probably would have fallen without rebounding bulk exports. During the first 11 months of FY 1987, the climbing volume of bulk exports helped cut the value loss stemming from lower prices. This rebound in volume implies that 1986 marked a low point for export volume after 6 consecutive declining years. While bulk product prices were lower on average during 1987 compared with 1986, in many cases, they posted gains during the course of the year, implying that the large annual declines of the last few years will not continue. As a result, U.S. agricultural exports could continue to grow after 1987 as high-value exports continue benefiting from the lagged effect of a weaker U.S. dollar and bulk exports recover from their severe trade and price contractions of the first half of the 1980's. (Stephen MacDonald, Commodity and Trade Analysis Branch)

OCTOBER-AUGUST IMPORTS REACH \$19 BILLION

U.S. agricultural imports in the first 11 months of fiscal year (FY) 1987 (October 1986–August 1987) eased to \$19.1 billion, 1 percent below the record highs of the same period in FY 1986. Unusually heavy imports of fruits and livestock products, mostly beef, pork, and live cattle, helped boost the FY 1987 import forecast from \$20 billion in May to the current \$20.5 billion. Imports have increased 250 percent in value since 1972, just before the large jump in commodity prices (fig. 1).

ICO Reintroduces Quotas on Global Coffee Exports

The International Coffee Organization (ICO) reintroduced global coffee export quotas during the scheduled council meetings held September 21–October 2. During the period in which quotas were not in effect, the New York spot price fell from a high of \$2.30 per pound in February 1986 to 95 cents per pound in August 1987. The reinstatement of quotas, which were suspended in February 1986, should not affect the level of U.S. coffee imports. Yet prices, which had fallen below \$1 per pound, are expected to head back up toward \$1.20–\$1.40 per pound where they have been over the last 4–5 years. Coffee accounts for 15–20 percent of the value of total U.S. agricultural imports. Brazil, Mexico, Colombia, Guatemala, Ecuador, Indonesia, and El Salvador provide roughly 70 percent of all U.S. coffee imports.

Figure 1
U.S. agricultural imports, FY 1972 and FY 1986

The International Cocoa Organization (ICCO) was not able to resolve its problems with buffer-stock operations. The stock manager, an autonomous member of the ICCO, buys (sells) cocoa beans when the price level falls below (rises above) a preselected indicator price. Since the ICCO is not scheduled to meet again until November 30, no buffer-stock operations can be conducted until December. Consumer groups lobbied to have the floor and ceiling prices for the buffer-stocks substantially lowered but were met with resistance from producer groups. U.S. imports of cocoa beans, powder, and cake all increased by roughly 1 percent in the first 11 months of FY 1987. The 7-percent decline in the overall value of cocoa product imports through August was a result of a 5- to 10-percent decline in prices. Brazil and the Ivory Coast accounted for approximately half of the \$1.02 billion in cocoa product imports.

Natural rubber imports (dry form and latex) maintained near-record highs in the first 11 months of FY 1987, with imports of 762,000 tons. Indonesia, Malaysia, Thailand, and Liberia supply about 94 percent of U.S. rubber imports. Other noncompetitive imports and their change in value from the first 11 months of FY 1986 include tea (down 14 percent), spices (up 12 percent), and bananas (up 10 percent).

Livestock Products Boost Competitive Imports

Import demand for livestock products, particularly fresh and frozen beef and pork, and live cattle rose a combined total of 18 percent in value through August. A record high of 300,000 tons of fresh pork valued at \$600 million is expected in FY 1987. Australia and New Zealand have accounted for 75 percent of all beef imports during the October-August period, as a Voluntary Restraint Agreement (VRA) was averted. The VRA, part of the meat import law, was last used in 1983. Live cattle imports through August were already at a record high of 1.42 million head. Nearly 85 percent of those cattle came from Mexico.

Grain imports amount to 2.3 million tons per year. Imports of unmilled oats climbed from 27,000 tons in FY 1982 to 450,000 tons FY 1986. Projections for oat imports in FY 1987 are 500,000 tons, almost all of which are from Canada, Sweden, and Finland. U.S. Government price-support programs helped shift land out of oats and into barley beginning in FY 1982. As a result, oat production has fallen 30 percent since 1982 to 5.7 million tons.

Fresh fruit imports, particularly strawberries, apples, grapes, melons, and pineapples in the first 11 months of FY 1987 rose 16 percent in volume over those of the same period of FY 1986. A highly seasonal commodity group, fruit imports drop off significantly in the August-January period. An 11-percent decline in prices of frozen concentrated orange juice led to a 12-percent increase in volume during October-August FY 1987.

Fresh vegetable imports, led by tomatoes, onions, and potatoes, in the 11-month period rose 16 percent over those of the same period of FY 1986. Import prices for tomatoes are back down to 18 cents per pound after hovering around 35 cents per pound during most of FY 1986.

Sugar imports for FY 1987 reached 1.4 million tons through August. This total includes approximately 500,000 tons for re-export and 400,000 tons carried over from FY 1986, neither of which are included in the quota computations. Imports of

raw sugar for domestic consumption are subject to a 680,000-ton quota in FY 1987. Total and per capita domestic sugar use is expected to increase in FY 1987 for the first time since FY 1973.

Tobacco imports remained at a record high with shipments of 210,000 tons during October-August. The import duty on stemmed-leaf tobacco was gradually reduced from 41 cents per pound in FY 1980 to 23 cents per pound in FY 1986. Imports of stemmed leaf tobacco over this period rose from zero to 63,824 tons. (*Stephen R. Milmo, Commodity and Trade Analysis Branch*)

COMMODITY PRICES UNSTEADY

Prices for most products fell after June as Southern Hemisphere crops reached European markets, U.S. crops basked in favorable weather, and continued moderate increases in wages and U.S. import prices eased fears of resurgent inflation.

Rubber and cotton prices were the exceptions, continuing to rise between June and August due to tight world supplies. Rubber prices were the highest since early 1984, and cotton prices were the highest since 1981. In contrast, coffee prices were the lowest since 1975, and grain prices were the lowest since the export boom began in the early 1970's.

Continued Large Supplies Depress Prices

Grain prices remained low as world grain stocks, as a percentage of utilization, reached their highest since 1961. During the 1986/87 marketing year, world grain stocks were estimated at 23 percent of consumption, about double the ratios of the early 1970's. During the 1974/75 marketing year, the ratio was 12 percent.

U.S. soybean oil stocks nearly tripled between FY 1984 and FY 1987, and world coffee supplies jumped in FY 1987 as Brazil's production rose more than 20 million tons.
(Stephen MacDonald, Commodity and Trade Analysis Branch)

U.S. TRADE BENEFITS ECONOMY

The U.S. farm and related sectors of the economy again adjusted to lower export levels in CY 1986. Production from more than 30 percent of U.S. cropland moves into export channels. The United States exported an estimated 48 percent of its wheat, 60 percent of its rice, 37 percent of its soybeans, 18 percent of its corn, and 70 percent of its cotton in fiscal year (FY) 1987 (October 1986–September 1987).

Farm product exports generate employment, income, and purchasing power in the farm and nonfarm sectors. For example, farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export necessitate additional economic activity in the manufacturing, trade, and transportation sectors. An input-output (I/O) model was used to measure this economic activity in terms of income, employment, and output. ^{1/}

U.S. agricultural exports peaked in calendar year (CY) 1981 at \$43.3 billion after years of steady growth, only to decline 30 percent by CY 1986. This drop in exports has been felt within the U.S. economy. Bulk and processed agricultural exports at CY 1981 levels provided employment for 1.2 million workers, 1-1/2 times the level supported by the CY 1986 agricultural exports. Exports in CY 1981 generated slightly more than \$100 billion in business activity: \$43.3 billion in exports and \$63 billion in supporting activities. By CY 1986, business activity dropped to \$65.3 billion: \$26 billion in exports and \$39.3 billion in supporting activities. Net exports in CY 1981 contributed \$27 billion to the U.S. trade balance compared with \$5 billion in CY 1986.

Exports Generate Added Business Activity

U.S. agricultural exports totaled \$26 billion in CY 1986. The value of exported raw products was \$11.7 billion, processed commodities, \$10.4 billion, and transportation and trade services for raw and processed products, \$3.9 billion.

Business activity of an estimated \$65.3 billion was required to produce the exported commodities and supporting goods and services. Thus, each dollar received from agricultural exports stimulated another \$1.51 of output in the U.S. economy, a multiplier effect of more than 2.

Therefore, supporting activity required to produce the agricultural goods and services exported in CY 1986 generated an additional \$39.3 billion of output, including \$6.3 billion from the farm sector, \$3.4 billion from the food processing sector, \$12.2 billion from other manufacturing sectors, \$4.9 billion from trade and transportation, and \$12.5 billion from other services. Nonfarm sectors of the economy contributed approximately 84 percent of the additional economic activity.

Jobs For 781,000 Workers

U.S. agricultural exports in CY 1986 supported an estimated 781,000 full-time civilian jobs. Of this total, more than 331,000 U.S. farmworkers, 10 percent of the farm labor force, worked in the production of export commodities.

^{1/} For a detailed explanation of the input-output model, see Gerald Schluter, Chinkook Lee, and William Edmondson, "Income and Employment Generation in the Food and Fiber System," *Agribusiness*, Vol. 2, No. 2 (1986), pp. 143–58.

In addition, 450,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 53,000 of these were in food processing, 167,000 were in trade and transportation, 86,000 were in other manufacturing sectors, and 144,000 were in other services.

Bulk Exports Dominate

Bulk agricultural exports (grains, oilseeds, and cotton) accounted for \$11.7 billion, or 45 percent, of the \$26 billion in agricultural exports in CY 1986. Bulk exports, however, have a smaller proportional effect on the nonfarm economy. The \$11.7 billion of direct bulk exports generated an additional \$15.7 billion of business activity (\$1.34 additional output per dollar of bulk exports compared with the \$1.51 for all agricultural exports). This additional activity was distributed differently across economic sectors (4 percent to farming, 39 percent to manufacturing, 45 percent to other services, and 12 percent to wholesale trade and transportation) than the business activity for all agricultural exports (16 percent to farming, 40 percent to manufacturing, 32 percent to other services, and 12 percent to wholesale trade and transportation). Of the 781,000 jobs related to U.S. agricultural exports, 361,000 (46 percent) supported bulk exports.

Agricultural Exports Bolster U.S. Trade Balance

Agriculture's contribution to the U.S. trade balance increased substantially during the 1970's. Net U.S. agricultural exports (exports minus imports) rose from roughly \$1 billion in 1969 to nearly \$27 billion in 1981. Net agricultural exports partially offset a \$167-billion deficit in nonfarm trade in CY 1986, leaving the U.S. trade balance in deficit by \$162 billion.

The Effect of Agricultural Imports on U.S. Output

The United States imported \$21 billion in agricultural commodities in CY 1986. Some \$7.9 billion of this total was spent on complementary items (such as bananas, coffee, and tea) that did not compete directly with U.S. agriculture. The balance of \$13.2 billion was spent on competitive imports (such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines) that competed with U.S. products.

Since CY 1970, both complementary imports and competitive imports have been growing at an annual rate of about 7.9 percent. Only competitive imports were included in the input-output analysis of the effects of imports on the economy.

Within the food processing sector, the subsectors for meat products, beverages and flavorings, sugar refining, and food freezing, canning, and drying accounted for nearly 75 percent of its import value in CY 1986. Although the producer's value (at the processing plant) of \$2.1 billion in exported meat products offset the producer's value of \$2.2 billion in imported meat products, the United States imported more than \$600 million in sugar and exported none, and imported \$1.5 billion in frozen, canned, and dried goods and exported \$800 million.

Using the I/O model, the equivalent domestic output effect of the \$13.2 billion in competitive imports in CY 1986 is estimated at around \$33 billion. That is, each dollar spent on imports required roughly another \$1.54 in supporting goods and services if those imported items had been produced domestically, an output multiplier of about 2.54.

The multiplier effect of U.S. agricultural imports is larger than that for U.S. exports because of the relatively greater amount of processed or partly processed foods in the import product mix.

Agricultural Trade Benefits U.S. Economy

The direct balance of U.S. agricultural trade in CY 1986 was nearly \$5 billion, a result of \$26 billion in exports minus \$13.2 billion in competitive imports and \$7.9 of complementary agricultural imports. However, the additional business activity needed to produce the supporting goods and services for exports and the output lost by importing competitive farm products reveals a different picture. The economywide CY 1986 net business surplus for agricultural trade was an estimated \$24 billion, a result of \$65.3 billion of total output generated by farm exports minus \$41.3 billion of agricultural imports (including complementary imports) (fig. 2).

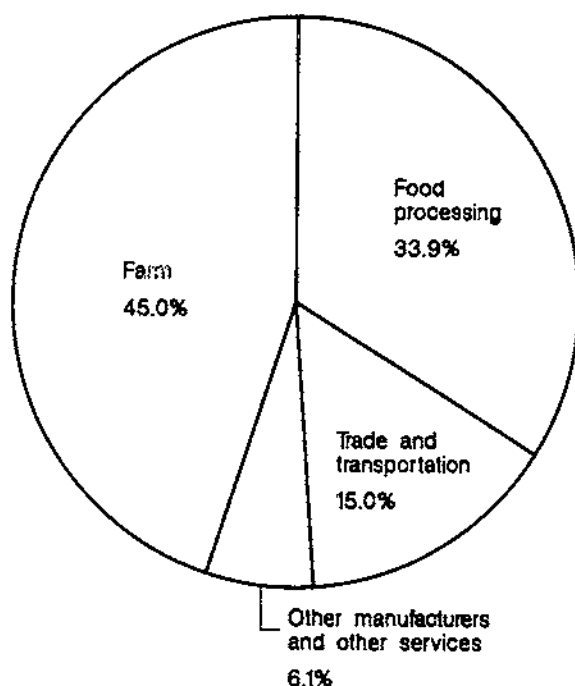

U.S. agricultural trade positively affects most sectors of the economy. The farm sector's \$18 billion in output associated with agricultural exports more than offset the \$7.1 billion in farm output implicitly lost because of competitive agricultural imports. The food processing sector gained \$1.7 billion in total output and roughly 1,000 jobs but lost \$200 million in income.

The U.S. economy outside of farming and food processing directly received a net \$3.6 billion from agricultural trade and a net increase in output of \$19.4 billion after considering the domestic output foregone from competitive agricultural imports.

U.S. agricultural trade benefited the processors of meat, grains, fats and oils, dairy products, and miscellaneous foods. Agricultural trade did not benefit sugar mills, canners, freezers, and dehydrators, beverage and flavoring makers, or confectioners and bakers.

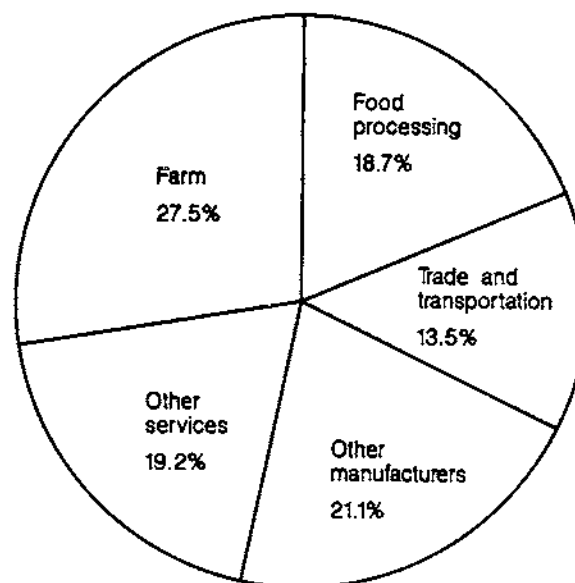

Figure 2

While direct effects of agricultural exports favor the farm sector...

Calendar year 1986 data.

...the total business activity is widely shared

Farm Sector Receives Much of Income Benefit

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although \$1 of agricultural exports in CY 1986 generated \$2.51 in total (direct and supporting) economic activity, \$1 represented income to wage earners, profits, and taxes. ^{2/} Thus, the \$26 billion in agricultural exports in CY 1986 generated \$65.3 billion in total economic activity but only \$26 billion in income in the form of wages, profits, and taxes. The distribution of these income effects showed a different pattern for exports and imports.

The share of total income attributed to agricultural exports and competitive imports to the nonfarm and nonfood processing sectors of the economy in CY 1986 was each nearly 67 percent. The distribution of the remainder within the farm and food processing sectors differed markedly. The farm sector received 28 percent of the total income from agricultural exports, while the food processing sector received 9 percent, reflecting the importance of raw agricultural commodities in the export bill of goods.

The total income effect of competitive imports (a lower level than exports) was more evenly divided between the farm and food processing sectors, with each assuming about 20 percent, reflecting the greater importance of processed food products in the competitive import bill of goods. (*William Edmondson and Gerald Schluter, National Economy and History Branch, Agriculture and Rural Economy Division*)

^{2/} This income is directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers can purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. Hence, more purchasing power is spread throughout the total economy. In addition, the heightened activity, trade, and transportation stimulated by agricultural exports can boost investment in plants and equipment. Because input-output analysis does not consider this additional income, our estimates of the economywide influences of agricultural trade are conservative.
