DIGEST

U.S. Agricultural Exports Advance in Fiscal Year 1987 (see p. 2). U.S. agricultural exports rose in both value and volume in fiscal year (FY) 1987 for the first time in nearly a decade, gaining \$1.6 billion and 20 million tons. Exports for the October 1986-September 1987 period totaled \$27.9 billion and 129.5 million tons. The export turnaround, largely spurred by new U.S. farm programs and 2 years of the dollar's steady decline on foreign exchange markets, was a small step in regaining the losses of the first half of the 1980's. Record-high exports of high-value products accounted for virtually all of FY 1987's increased export value. However, in FY 1981-86, falling bulk product exports accounted for nearly all of the \$17.5-billion decline in U.S. agricultural export value.

Imports Fall to \$20.6 Billion in FY 1987 (see p. 72). U.S. agricultural imports fell in FY 1987 for the first time in 5 years. Imports totaled \$20.6 billion, \$300 million below the record high of FY 1986. Record-high levels of competitive imports, such as meats, live cattle, fruits, and vegetables, were unable to offset the \$1.2-billion drop in coffee imports.

U.S. Farm Exports to the European Community Rise (see p. 122). U.S. agricultural exports to the European Community (EC) rose 5 percent in FY 1987, after 4 years of decline, to \$6.8 billion. Exports of numerous commodities increased, including oilseeds, cotton, rice, feeds and fodders, and fruits and vegetables. Yet, U.S. exports of such major commodities as grains and tobacco declined. After the accession of Spain and Portugal into the EC in FY 1986, the EC surpassed Japan to become the top buyer of U.S. farm goods.

Prepared by the Commodity and Trade Analysis Branch, Commodity Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators were Thomas A. Warden and Mary L. Fant. Denise Morton and Erma McCray provided word processing and table formatting support. Editorial support was provided by Teri L. Davis, Research Information Branch, Information Division, Economics Management Staff. Data processing support was provided by Sharlan Starr and William Meiller, International Economics System Branch, Data Services Center.

U.S. AGRICULTURAL EXPORTS ADVANCE IN FISCAL YEAR 1987

U.S. agricultural exports rose in both value and volume in fiscal year (FY) 1987 for the first time in nearly a decade, gaining \$1.6 billion and 20 million tons. Exports for the October 1986–September 1987 period totaled \$27.9 billion and 129.5 million tons. The export turnaround, largely spurred by new U.S. farm programs and 2 years of the dollar's steady decline on foreign exchange markets, was a small step in regaining the losses of the first half of the 1980's. Record-high exports of high-value products accounted for virtually all of FY 1987's increased export value. However, in FY 1981–86, falling bulk product exports accounted for nearly all of the \$17.5-billion decline in U.S. agricultural export value.

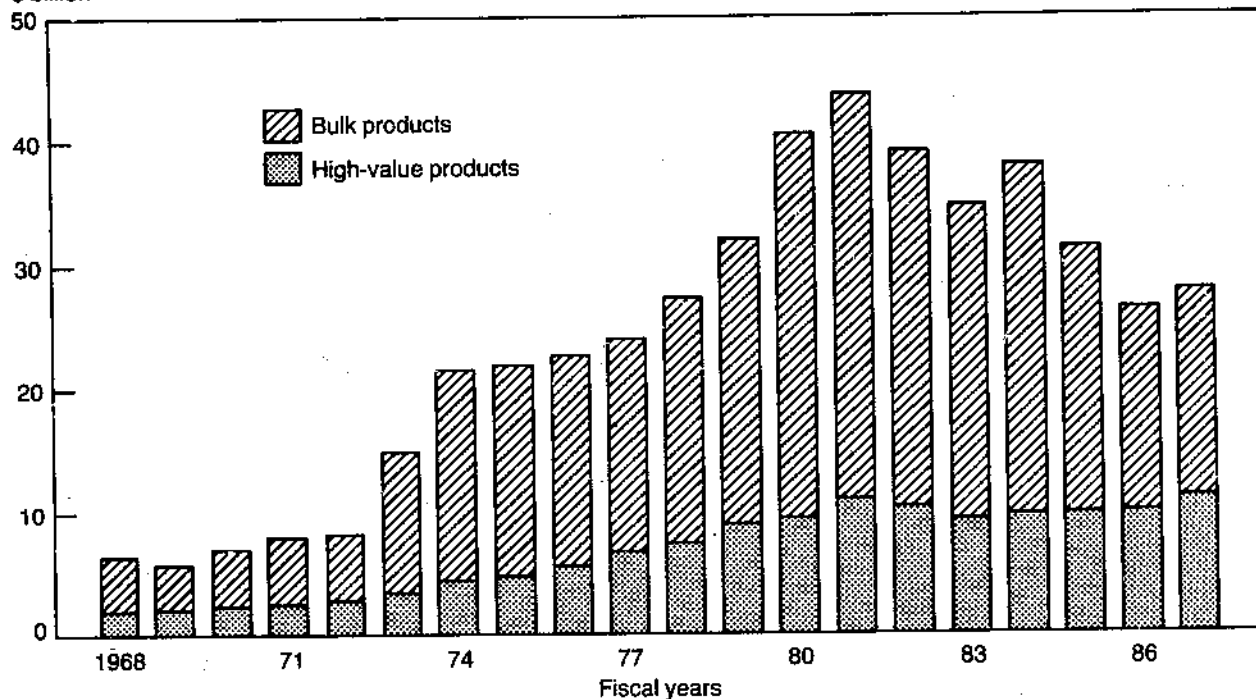

Exports of high-value products, which are not traditionally major export items, rose \$1.2 billion to a record \$11.1 billion in FY 1987. Exports of livestock products rose \$660 million to a record \$5 billion, and horticultural exports (fruits, nuts, and vegetables) jumped \$501 million. These and other high-value products consistently outperformed bulk products (grains, oilseeds, and cotton), the more traditional major export items, on world markets before FY 1987. High-value products continued to outperform bulk exports, other than cotton, in FY 1987 (fig. 1).

The combined export value of grains, oilseeds, and cotton rose 2 percent, or \$365 million, in FY 1987 to \$16.8 billion, 50 percent below the FY 1981 peak of \$32.9 billion for U.S. bulk agricultural exports. In contrast, high-value exports surpassed the previous record by 2 percent.

Figure 1

U.S. agricultural bulk and high-value product exports¹

\$ billion

¹Bulk products are defined as grains and feeds, oilseeds and products, and cotton. High-value products are the residual after bulk products are subtracted from total products.

Cotton Exports Rebound

Cotton exports rose \$741 million, or 109 percent, in FY 1987, the largest increase for any commodity. Higher cotton exports offset a \$409-million drop in grain export value, lifting the total bulk export value slightly above that for FY 1986. U.S. cotton export volume reached 1.3 million tons in FY 1987, nearly triple its dismal showing in FY 1986, when U.S. cotton exports fell to an unusually low 482,000 tons. The implementation of a marketing loan program renewed the competitiveness of U.S. cotton.

Sales fell in FY 1986 as foreign buyers delayed buying from the United States in anticipation of a significant price drop at the beginning of the 1986/87 marketing year (August 1986-July 1987). In addition, foreign competitors slashed prices to maximize their sales before U.S. prices fell to world levels. Thus, the U.S. share of world cotton trade fell to about 10 percent in the 1986/87 marketing year compared with 30 percent during the previous marketing year.

The United States recovered its traditional 30-percent share of the world cotton market in 1987, as the marketing loan program closed the gap between U.S. and world prices. Cotton prices rose in FY 1987 as consumption grew and estimates of world stocks declined. By the end of the year, U.S. and world cotton prices had rebounded from their earlier lows and had exceeded previous-year levels by hundreds of dollars.

Nevertheless, U.S. cotton export prices in FY 1987 fell below \$1,000 per ton early in the year and averaged 23 percent lower than those of FY 1986. As a result, export value in FY 1987 remained \$526 million below its FY 1985 level and \$976 million below export value in FY 1984. Such poor performance compared with exports in FY 1984-85 was even more pronounced for other bulk exports in FY 1987.

Bulk Agricultural Exports Slow.

To some extent, all exports are affected by similar factors. In 1981-83, slowing world economic growth reduced the world trade level. Exports for agricultural and most other commodities fell for the United States and most other countries. However, as world trade recovered after 1983, the degree of recovery varied between countries and commodities. The United States recovered more slowly than did the rest of the world, and agricultural exports recovered more slowly than did exports of other commodities. The relatively strong U.S. dollar and economic growth hampered U.S. exports, and large outstanding stocks, high production in importing countries, and foreign exchange constraints in many debtor countries partly depressed world agricultural trade.

U.S. bulk agricultural exports were particularly weak after 1983, a factor that helped shape the Food Security Act of 1985. The 1985 Act lowered loan rates and expanded export promotion programs for agricultural commodities. These changes helped boost bulk export value 2 percent in FY 1987. However, as with cotton, changes under the 1985 Act boosted export volume through lower prices for bulk commodities.

U.S. wheat exports rose 10 percent, or 2.7 million tons, in FY 1987 as export prices fell \$26 to \$102 per ton. The Export Enhancement Program (EEP) proved

crucial in increasing U.S. wheat exports by offering substantial discounts to foreign buyers. Use of the EEP raised exports to the USSR, China, Iraq, Eastern Europe, and Morocco, and allowed the price of wheat sold to the USSR to fall from \$125 per ton in FY 1986 to \$80 per ton in FY 1987.

U.S. coarse grain exports rose 31 percent, or 11.4 million tons, as export prices fell \$36 to \$78 per ton. The EEP raised barley exports more than 2 million tons through sales to Saudi Arabia, but most of the 11.4-ton increase came in corn exports. Poor production in several competing countries increased U.S. sales opportunities. Falling production in Argentina, Australia, and Thailand forced them to cut back exports. Argentina cut its exports 4.6 million tons. China also cut exports and but raised imports as Chinese consumption rebounded faster than production. China's coarse grain consumption in 1987 was its closest to production in 3 years, and net exports fell 4.4 million tons.

U.S. coarse grain sales to the USSR fell from 6.7 million tons to 3.9 million tons as the Soviets harvested a larger crop. U.S. coarse grain sales to the European Community (EC) dropped after Spain reoriented its grain trade away from non-EC countries. However, U.S. coarse grain exports to virtually every other region rose in FY 1987, particularly to developing countries. Exports to developing countries rose 10.3 million tons and accounted for 48 percent of U.S. coarse grain export volume in FY 1987.

Oilseed and Product Exports Stronger

U.S. exports of oilseeds and products rose 7 percent, or 2.1 million tons, in FY 1987, and export prices fell \$15 to \$212 per ton. Changes in both export volume and prices for oilseeds and products were similar to changes for other bulk commodities but were smaller. Several related factors account for this difference. First, export volume for oilseeds and products rose 16 percent in FY 1986, while volume for wheat, coarse grains, and cotton fell 11, 35, and 62 percent. The magnitude of each commodity's volume gain in FY 1987 was proportional to its FY 1986 losses. Losses in FY 1986 reflected U.S. competitiveness in each commodity that year.

Second, lower loan rates for bulk commodities cut export prices in FY 1987, but the loan rate for soybeans fell 5 percent compared with more than 30 percent for wheat and corn. Grain prices were also pressured by a stocks-to-use ratio of about 60 percent, while the ratio for soybeans was closer to 20 percent. This means that the ending stocks for grains were considerably larger than those for soybeans, hence the smaller price cut for the more popular soybeans.

Efforts to restore competitiveness through new farm legislation affected U.S. exports of oilseeds and products less than exports of other commodities in FY 1987 because oilseeds and products suffered less from poor competitiveness before 1987. The absence of direct Government payments to U.S. soybean producers helped prevent both a runup in stocks and downward price pressure. In addition, an international accord prevented the EC from imposing tariffs that distort world oilseeds markets.

Because the history of U.S. and foreign policies is more favorable to U.S. oilseed competitiveness, the export volume of U.S. oilseeds and products in FY

1987 was only 16 percent lower than its peak of 35.6 million tons. In contrast, wheat and coarse grain export volume was 35 percent below the peak, even after gaining 14.1 million tons in FY 1987. A similar but more pronounced contrast is apparent between bulk and high-value agricultural exports.

U.S. exports of high-value agricultural products rose in FY 1987 because of increases in both price and volume. Like soybeans, most U.S. high-value exports have been spared the effects of U.S. direct payments to producers and the massive shift in the EC's trade stance. Also, U.S. high-value exports have benefited from steady economic growth and strong currencies in developed foreign markets. Developed countries purchased about 60 percent of U.S. high-value agricultural exports in FY 1987 and about the same percentage of U.S. manufactured products. Developed countries took about 45 percent of U.S. bulk agricultural exports, which depend more heavily on sales to developing countries and centrally planned economies. Poor export earnings and debt repayment requirements have restricted imports by many developing countries and centrally planned economies, and their currencies have shown little, if any, strength against the U.S. dollar.

U.S. exports of fruits and preparations rose \$192 million in FY 1987 as sales to developed countries climbed \$164 million. Exports of nuts and preparations rose \$91 million as a \$111-million sales increase to developed countries offset a drop in exports to the USSR. Fruit exports reached a record high of \$1.28 billion, while nut exports were 2 percent below their \$787-million peak.

U.S. cattlehide exports rose \$122 million to a record \$1.3 billion because of the indirect influence of consumption in developed countries. South Korea, the largest U.S. customer for cattlehides and a relatively advanced developing country, purchased \$531 million of U.S. whole cattlehides in FY 1987 compared with \$415 million in FY 1986. In turn, Korea exported leather products to developed countries, including the United States.

U.S. Export Prospects

Bulk commodities led U.S. export gains in the 1970's. World demand for grains and oilseeds rose as the developing countries and centrally planned economies increased their imports. Prices for these commodities rose in conjunction with export volume. However, macroeconomic (general) conditions and the supply and demand balance facing the United States in FY 1987 were discouraging when compared with the earlier boom years.

The poor performance of bulk exports and the greater economic benefits of exporting value-added products indicate that high-value products will become major U.S. agricultural exports. For now, at least, bulk exports predominate. Grains, oilseeds, and cotton accounted for 60 percent of the export value of U.S. farm products in FY 1987 and 94 percent of the volume. A strong foundation of bulk exports remains a prerequisite if the United States is to regain the export level and the world share that marked the farm sector's prosperity in the 1970's and the early 1980's. However, a resurgence of bulk exports may hinge on the developing countries and centrally planned economies overcoming the constraints of debt and slow growth. (Stephen MacDonald, Commodity Trade Analysis Branch)

IMPORTS FALL TO \$20.6 BILLION IN FY 1987

U.S. agricultural imports fell in fiscal year (FY) 1987 for the first time in 5 years. Imports totaled \$20.6 billion in the October 1986–September 1987 period, \$300 million below the record high of FY 1986. Record-high levels of competitive imports, such as meats, live cattle, fruits, and vegetables, were unable to offset the \$1.2-billion drop in coffee imports.

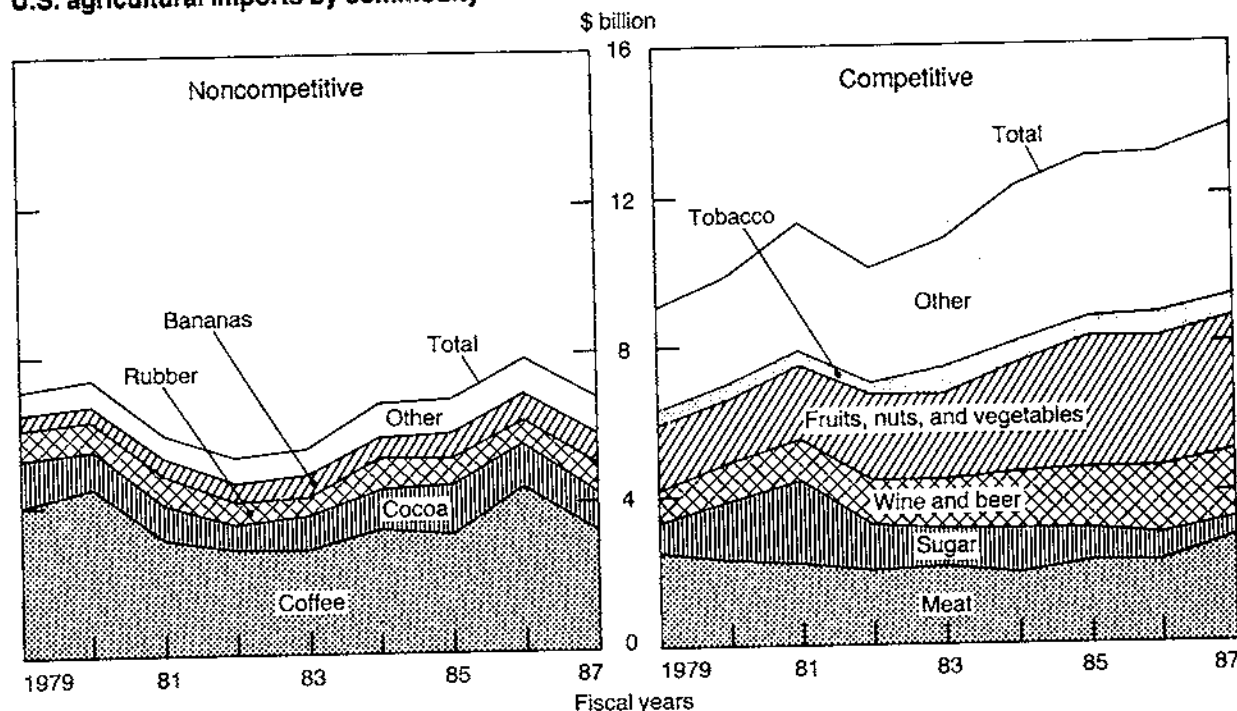

The lower exchange rate was one factor limiting imports in FY 1987. When the dollar lost 15 percent in value over the last 2 years, foreign goods became more expensive. Also, on the demand side, growth in real disposable U.S. income slowed to 1 percent in FY 1987 after an increase of 4 percent in FY 1986. Real U.S. expenditures on food and beverages, approximately 18 percent of total consumption expenditures, grew only 2 percent in FY 1987. Exchange rates, prices, income growth, and consumption expenditures generally have a delayed effect on agricultural imports.

Noncompetitive Imports Fall

The value of noncompetitive imports fell 13 percent in FY 1987 to \$6.8 billion, led by the \$1.2-billion drop in the coffee import value (fig. 2). Coffee prices fell from a high of \$1.87 per pound in FY 1986 to a low of 97 cents per pound in FY 1987. U.S. coffee processors took advantage of this price decline by maintaining purchases at last year's high level of 1.2 million tons. Stockbuilding, however, in both the United States and Western Europe has made it difficult for the International Coffee Organization (ICO) to manipulate prices through the use of export quotas. The coffee price did

Figure 2

U.S. agricultural imports by commodity

Noncompetitive imports include coffee, cocoa, rubber, and bananas. Competitive imports include meat, sugar, live animals, fruits, nuts, vegetables, wine, tobacco, and sugar.

not rise above \$1.07 per pound by mid-October, forcing the ICO to reduce the global export quota from 58 million bags to 56.5 million bags. With supplies abundant, further reduction of 1.5 million bags in November may not drive the price up to \$1.20 per pound, as desired by the ICO.

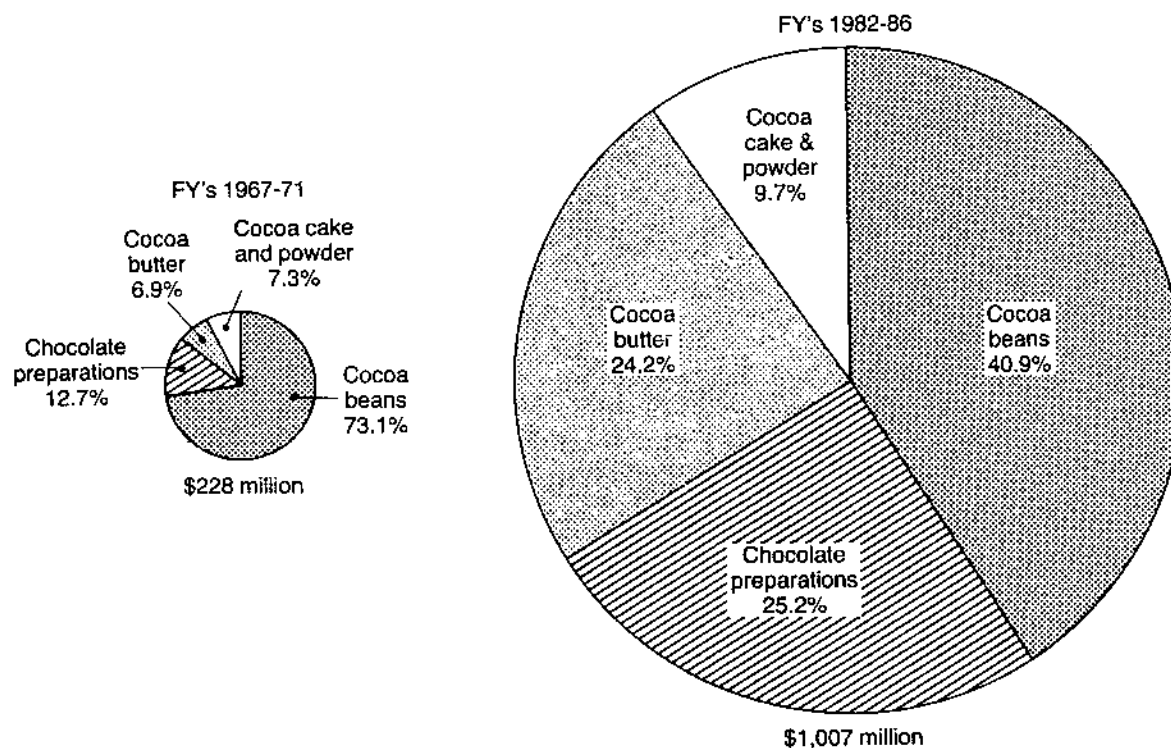

The United States now imports a greater percentage of processed cocoa products (as opposed to cocoa beans) than it did in 1970 (fig. 3). In 1967-71, cocoa beans made up 73 percent of the dollar value of cocoa product imports. By 1982-86, this ratio had fallen to 41 percent. In FY 1987, the ratio fell to 37 percent. Over the years, U.S. companies have established cocoa processing facilities overseas, giving U.S. firms more flexibility in importing cocoa beans or one of its products (for example, butter, cake and powder, or chocolate preparations), depending on price.

Prices fell 7-12 percent for most cocoa products (beans, cocoa butter, and chocolate preparations), but the price of cocoa cake and powder, the least expensive cocoa product, rose 10 percent. Price declines prompted a volume increase for all cocoa product imports except chocolate preparations.

U.S. natural rubber imports in FY 1987 were at their highest level since the early 1950's. The increase in world demand returned rubber prices to 55 cents per pound in FY 1987 after spending the last 2 years at 40 cents per pound. Virtually all (92 percent) of the imported rubber is dry form rubber, and the remainder is latex. Tire and inner tube production make up about 57 percent of U.S. rubber use.

Figure 3

Cocoa product imports

The United States imported 3 million tons of bananas valued at \$770 million in FY 1987. Ecuador, Honduras, Costa Rica, Colombia, Panama, and Guatemala supplied 96 percent of the volume. These six suppliers have dominated the U.S. banana market for at least 20 years. Since 1968, Honduras, Costa Rica, Ecuador, and Panama have each been the largest supplier at least once. Colombia's export volume to the United States has grown at the rate of 33 percent per year since 1968. In a period of declining real prices for most agricultural commodities, the export price for bananas has risen, even since the 1972 onset of an inflationary period.

World trade in bananas reached 6 million tons in 1970 but took another 15-16 years to reach 7 million tons. With the exception of those from the Philippines, exports from Africa and Asia have withered since 1970, leaving Latin America and the Philippines with 94 percent of the global banana export market.

Competitive Imports at Record Level

Imports of competitive products in FY 1987 rose 5 percent above last year's record high to \$13.9 billion. Imports of meats (beef and pork), live cattle, fruits, and vegetables were at or near record-high levels. Domestic beef supplies fell 4 percent in FY 1987 and are expected drop another 4 percent in 1988. Although pork supplies increased 2 percent in 1987, the gain comes a year after supplies fell 5 percent. Mexico shipped a record-high 1.45 million head of live feeder cattle into the United States last year. U.S. feeder cattle prices jumped 15-20 percent from October 1986 to June 1987, providing incentive to Mexican producers to ship to the United States rather than to Mexico City.

Grain and feed imports topped \$700 million in FY 1987, 43 percent of which came from Canada, 30 percent from the European Community (EC), and 13 percent from Thailand, Japan, Sweden, and Australia combined. Canada mostly supplies the less expensive bulk products, such as oats, barley, wheat, and animal feed. The EC is the primary supplier of highly processed grain products, such as biscuits, wafers, pasta, and noodles.

Fruit imports, including juices, fell \$100 million below the record high of FY 1985 to \$1.7 billion. Most of the increase above FY 1986 totals came in fresh fruits, including strawberries (up \$20 million), grapes (up \$50 million), melons (up \$23 million), and pineapples (up \$8 million).

India was the largest supplier of nuts to the United States in FY 1987, led by \$136 million of cashew nuts. Pistachio imports were almost eliminated as the largest supplier (Iran) shipped virtually none. Iran accounted for 81 percent of U.S. pistachio imports in FY 1986.

Vegetable import volume rose 10 percent in FY 1987. Tomatoes (up 4 percent), cucumbers (up 4 percent), onions (up 47 percent), and potatoes (up 51 percent) gained the most. Volume increased despite the fact that Florida's 1986/87 winter fresh vegetable crop did not encounter freezing temperatures as it had the previous year.

The United States imported as much unmanufactured tobacco as it exported in FY 1987. Both imports and exports totaled 224 million tons. The FY 1987 export price for tobacco is nearly twice that for imported tobacco.

Wine imports fell for the third consecutive year in FY 1987, following nearly a decade of continuous growth (1976-84). French and Italian wine producers have profited from a rapidly growing U.S. wine market, increasing their combined share of U.S. consumption from 13 percent in FY 1975 to 24 percent in FY 1985. (Stephen R. Milmo, Commodity and Trade Analysis Branch).

U.S. FARM EXPORTS TO THE EUROPEAN COMMUNITY RISE

U.S. agricultural exports to the European Community (EC) rose 5 percent in fiscal year (FY) 1987, after 4 years of decline, to \$6.8 billion. Exports of numerous commodities increased, including oilseeds, cotton, rice, feeds and fodders, and fruits and vegetables. Yet, U.S. exports of such major commodities as grains and tobacco declined. After the accession of Spain and Portugal into the EC in FY 1986, the EC surpassed Japan to become the top buyer of U.S. farm goods.

The U.S. export share in the EC declined from 31 percent in 1982 to 25 percent in 1987, about the same level as last year. The Netherlands (a major re-exporter of agricultural products to the rest of the EC), West Germany, Spain, Italy, and the United Kingdom were major importers of U.S. farm products in Western Europe.

Export prices fell for several commodities, partly explaining the rise in Western European demand. U.S. soybean exports, stimulated by lower prices and favorable crushing margins in the EC, increased about 10 percent to 9.8 million tons. Although growth in soybean meal demand was small in the livestock sector, EC imports from the United States increased sharply, reflecting lower world prices and reduced supplies from competitors. Most soybean meal consumed in the EC comes from continental crushers. However, a combination of EC support programs and better technology has stimulated output of protein crops, such as rapeseed, peas, and beans. The extremely cold, wet summer did not hurt oilseed crops as much as it did grains in FY 1987.

Lower prices for both food and feed grains did not stimulate demand for U.S. grains in the EC market because variable import levies offset lower U.S. prices. EC grain stocks were relatively high, and purchases from foreign suppliers, such as Canada, and EC producers inhibited U.S. sales. A demand surge of more than 150,000 tons for U.S. rice reflected sharply lower prices in FY 1987. However, as demand from both industrial users and feed manufacturers declined, U.S. corn exports continued to drop despite a price decline. Under the terms of a U.S.-EC trade agreement, the United States could supply a large percentage of non-EC corn and sorghum to Spain over the next 4 years. However, at the close of FY 1987, U.S. corn exports to Spain totaled only 240,000 tons.

U.S. cotton exports to the EC rebounded by more than 100 percent in FY 1987, following a dip last year. The increase reflected both lower prices and a demand increase for natural fibers in the textile industries.

Relatively high excise taxes in the EC, combined with a wide awareness of health factors associated with tobacco use, have depressed purchases of U.S. tobacco for several years. In FY 1987, a decline in tobacco unit values failed to reverse this trend and shipments fell about 6 percent to 89,000 tons.

Demand for U.S. fruits and vegetables continued to expand in FY 1987. Imports of U.S. fruits rose a near-record 45 percent to \$233 million, while U.S. vegetable exports increased more than 30 percent. The strong demand for U.S. nuts in FY 1986 was not repeated, although U.S. nut exports, at \$356 million in FY 1987, were close to last year's level.

Outlook for FY 1988

The FY 1987 upturn in U.S. agricultural exports to the EC should continue in FY 1988. A declining U.S. dollar is likely to stimulate demand for certain commodities.

Although oilseed demand will likely remain bouyant, exports of both soybeans and soybean meal could be smaller, depending on supplies from Brazil and Argentina, EC feed demand, and domestic availability of feed wheat, oilseeds, and pulses. Increased supplies of EC-produced feeds could also reduce U.S. exports of feeds and fodders.

The outlook for certain grains, such as corn, should improve with greater access to the Spanish market under the terms of the U.S.-EC enlargement agreement. In general, the highly protected EC grain market and the relatively high level of self-sufficiency in the EC will prevent expansion in U.S. grain sales, other than for corn in FY 1988. U.S. rice exports in FY 1988 are unlikely to match those in FY 1987, although rising unit values should increase the total value of shipments.

Greater U.S. cotton sales could reflect lower prices, a result of both a declining U.S. dollar and reduced loan rates. Average EC economic growth could slow slightly in FY 1988, but demand for natural fibers in the textile industries has been brisk and should continue to be strong.

Proposed EC policies, if enacted, could hurt exports of U.S. livestock and livestock products, a category of U.S. exports already hurt by a wide variety of nontariff barriers. An EC proposal to ban imports of animals on which growth hormones are used, if enacted, could terminate the small U.S. market for hotel-quality beef. U.S. exports of this commodity category to the EC equaled about \$220 million in FY 1987. (Marshall H. Cohen, Agriculture and Trade Analysis Division)
