Agricultural Production Economics

The Art of Production Theory

David L. Debertin

Agricultural Production Economics

The Art of Production Theory

Agricultural Production Economics (The Art of Production Theory) is a companion book of color illustrations to *Agricultural Production Economics* (Second Edition, Amazon Createspace 2012) and is a free download. A bound print copy is also available on amazon.com at a nominal cost under the following ISBN numbers:

ISBN- 13: 978-1470129262
ISBN- 10: 1470129264

This is a book of full-color illustrations intended for use as a companion to *Agricultural Production Economics, Second Edition*. Each of the 98 pages of illustrations is a large, full-color version of the corresponding numbered figure in the book *Agricultural Production Economics*. The illustrations are each a labor of love by the author representing a combination of science and art. They combine modern computer graphics technologies with the author's skills as both as a production economist and as a graphics artist. Technologies used in making the illustrations trace the evolution of computer graphics over the past 30 years. Many of the hand-drawn illustrations were initially drawn using the Draw Partner routines from Harvard Graphics®. Wire-grid 3-D illustrations were created using SAS Graph®. Some illustrations combine hand-drawn lines using Draw Partner and the draw features of Microsoft PowerPoint® with computer-generated graphics from SAS®. As a companion text to Agricultural Production Economics, Second Edition, these color figures display the full vibrancy of the modern production theory of economics.

This is one of three agricultural economics textbooks by David L. Debertin. *Agricultural Production Economics (Second Edition*, Amazon Createspace 2012) is a revised edition of the Textbook *Agricultural Production Economics* published by Macmillan in 1986 (ISBN 0-02-328060-3). and a free pdf download of the entire book. As the author, I own the copyright. Amazon markets bound print copies of the book at amazon.com at a nominal price for classroom use. Bound paper copies of the book can also be ordered through college bookstores using the following ISBN numbers:

ISBN-13 978-1469960647 or
ISBN-10 1469960648

The third book is aimed at upper-division undergraduate students of microeconomics in agricultural economics and economics. It is a 242-page book titled *Applied Microeconomics (Consumption, Production and Markets)* and is a free download. Bound print copies are also available at amazon.com and through college bookstores at a nominal cost under the following ISBN numbers:

ISBN-13: 978-1475244342
ISBN-10: 1475244347

This book *Applied Microeconomics* is much newer than *Agricultural Production Economics*, having been completed in 2012. As the author, I would suggest downloading and studying this *Applied Microeconomics* book before diving into *Agricultural Production Economics*. This book uses spreadsheets to calculate numbers and draw graphs. Many of the examples and numbers are the same ones used in Agricultural Production Economics, so the two books are tied to each other.

David L. Debertin
Professor Emeritus
University of Kentucky
Department of Agricultural Economics
Lexington, Kentucky, 40515-0276
ddeberti@uky.edu

David L. Debertin is Professor Emeritus of Agricultural Economics at the University of Kentucky, Lexington, Kentucky and has been on the University of Kentucky Agricultural Economics faculty since 1974 with a specialization in agricultural production and community resource economics. He received a B.S. and an M.S. degree from North Dakota State University, and completed a Ph.D. in Agricultural Economics at Purdue University in 1973. He has taught the introductory graduate-level course in agricultural production economics in each year he has been at the University of Kentucky. The first edition of Agricultural Production economics was published in hardback by Macmillan in 1986. He began work on the second edition of the book after the Macmillan edition went out of print in 1992, taking advantage of emerging two-and three-dimensional computer graphics technologies by linking these to the calculus of the modern theory of production economics. This is a book of full-color illustrations intended for use as a companion to *Agricultural Production Economics, Second Edition*. Each of the 98 pages of illustrations is a large, full-color version of the corresponding numbered figure in the book Agricultural Production Economics.

Agricultural Production Economics

THE ART OF PRODUCTION THEORY

DAVID L. DEBERTIN
University of Kentucky

This is a book of full-color illustrations intended for use as a companion to 428-page *Agricultural Production Economics, Second Edition*. Each of the 98 pages of illustrations is a large, full-color version of the corresponding numbered figure in the book *Agricultural Production Economics, Second Edition*. The illustrations are each a labor of love by the author representing a combination of science and art. They combine modern computer graphics technologies with the author's skills as both as a production economist and as a technical graphics artist.

Technologies used in making the illustrations trace the evolution of computer graphics over the past 30 years. Many of the hand-drawn illustrations were initially drawn using the *Draw Partner* routines from *Harvard Graphics®*. Wire-grid 3-D illustrations were created using *SAS Graph®*. Some illustrations combine hand-drawn lines using *Draw Partner* and the draw features of Microsoft *PowerPoint®* with computer-generated graphics from *SAS®*. As a companion text to *Agricultural Production Economics, Second Edition*, these color figures display the full vibrancy of the modern production theory of economics.
