Abstract: FY 1994 Exports Dip Slightly --U.S. agricultural exports totaled $26.4 billion for October 1993-April 1994, 1 percent lower than during the same period in fiscal year (FY) 1993. Exports dipped below FY 1993 because of lower grain, oilseed, and tobacco shipments. Bulk exports totaled $11.4 billion, 9 percent less than the previous year. High-value product (HVP) exports gained 5 percent to $15 billion on increased sales of meat, chicken, horticultural products, and sugar and tropical products. Imports Rise, Pushed by Grain and Feed from Canada --U.S. agricultural imports from October 1993 through April 1994 totaled $15.4 billion, 5 percent over the same period in FY 1993. Export Share of Agricultural Production Remains Steady --The dollar share of U.S. agricultural production exported in FY 1993 was 17 percent, unchanged from the previous year.

Digest

FY 1994 Exports Dip Slightly (see p. 2)—U.S. agricultural exports totaled $26.4 billion for October 1993-April 1994, 1 percent lower than during the same period in fiscal year (FY) 1993. Exports dipped below FY 1993 because of lower grain, oilseed, and tobacco shipments. Bulk exports totaled $11.4 billion, 9 percent less than the previous year. High-value product (HVP) exports gained 5 percent to $15 billion on increased sales of meat, chicken, horticultural products, and sugar and tropical products.

Imports Rise, Pushed by Grain and Feed from Canada (see p. 6)—U.S. agricultural imports from October 1993 through April 1994 totaled $15.4 billion, 5 percent over the same period in FY 1993. Competitive imports gained 6 percent, reaching $12 billion while noncompetitive imports rose only slightly to $3.4 billion.

Export Share of Agricultural Production Remains Steady (see p. 7)—The dollar share of U.S. agricultural production exported in FY 1993 was 17 percent, unchanged from the previous year.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs and marital or familial status. (Not all prohibited bases apply to all programs). Persons with disabilities who require alternative means for communication of program information (braille, large print, audiotape, etc.) should contact the USDA Office of Communications at (202) 720-5881 (voice) or (202) 720-7808 (TDD). To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, D.C., 20250, or call (202) 720-7327 (voice) or (202) 720-1127 (TDD). USDA is an equal opportunity employer.

FY 1994 Exports Dip Slightly

U.S. agricultural exports totaled $26.4 billion for October 1993-April 1994, 1 percent lower than during the same period in FY 1993. Exports dipped below FY 1993 because of lower grain, oilseed, and tobacco shipments. Bulk exports totaled $11.4 billion, 9 percent less than the previous year. High-value product (HVP) exports gained 5 percent to $15 billion on increased sales of meat, chicken, horticultural products, and sugar and tropical products.

Bulk Exports Decline

The United States shipped 59 million tons of wheat, rice, coarse grains, oilseeds, cotton, and tobacco during October-April 1994, 21 percent less than during the same period of FY 1993. U.S. bulk exports have slowed in FY 1994 because of lower foreign import demand, particularly in the former Soviet Union (FSU), and increased export competition. Higher FY 1994 export prices for corn, soybeans, rice, and tobacco limited the decline in bulk export value to 9 percent. The average export unit value for corn through April was $119 per ton, 19 percent higher than in 1993; soybeans were $257 per ton, 17 percent higher; rice was $355 per ton, 16 percent higher; and tobacco was $6,520 per ton, 9 percent higher.

Wheat exports totaled 19 million tons, 15 percent below a year earlier. The value of exports dropped 17 percent to $2.5 billion. Weak demand in the FSU, South Asia, and North Africa dampened U.S. wheat exports. Exports to the FSU were down 50 percent to 1.4 million tons. Improved wheat production in India, Pakistan, Morocco, and Egypt resulted in lower U.S. exports through April. Shipments dropped nearly 900,000 tons to India, over 200,000 tons to Pakistan, and over 550,000 tons to both Morocco and Egypt. Continued drought conditions in Algeria pushed U.S. wheat exports 55 percent higher to 980,000 tons.

Corn exports fell from 27 million to 21 million tons during October-April of fiscal 1994. Shipments declined to almost every market. Exports to South Africa plunged 2 million tons to 12,000 tons as corn production rebounded after a severe drought. U.S. exports to the FSU fell nearly 800,000 tons to 2.5 million tons because of low import demand, especially in the livestock sector. The United States exported 800,000 tons less to Poland, and 600,000 tons less to Japan. Corn shipments to Mexico increased 37 percent to 413,000 tons, with most of the shipments entering Mexico after the North American Free Trade Agreement went into effect in January 1994. Exports to Portugal rose to 210,000 tons from 157 tons. The value of corn exports was down only 10 percent to $2.5 billion because of the higher export prices.

October-April soybean shipments dropped 23 percent to 12 million tons, falling in almost every market except Mexico. However, higher export prices limited the value decline to 10 percent at $3.1 billion. Higher soybean prices and increased exports from South American producers cut into U.S. exports. Exports to the European Union (EU) dropped 29 percent to 5.8 million tons, as higher soybean prices and lower EU grain prices have made soybean use less price competitive. Shipments declined to all major Asian markets including Japan, Taiwan, Korea, and Southeast Asia. At 946,000 tons, exports were 61 percent higher to Mexico.

Unmanufactured tobacco exports declined 13 percent to $841 million because of high global tobacco supplies and lower cigarette consumption. Sales to the EU, normally the United States' largest market, declined 36 percent to $254 million. Exports to Japan rose to $306 million, a gain of nearly 50 percent, as Japanese cigarette manufacturers continue to increase the use of quality American tobacco in their cigarette blends.

Cotton and Rice Gain in FY 1994

U.S. cotton exports have improved substantially in fiscal 1994, totaling $1.2 billion for October-April, 19 percent higher than a year earlier. Shipments rose nearly 140,000 tons to 890,000 tons. There were substantial declines in cotton production in most foreign exporting countries that reduced world exportable supplies, and boosted opportunities for U.S. exports. Demand for cotton imports in China increased significantly because of the poor quality of domestic stocks. The United States exported 47,000 tons of cotton to China during October-April, compared with 160 tons during the same period last year. Exports also increased to Mexico, Thailand, Indonesia, and the Philippines. Shipments to Korea and Japan, the first and second leading markets for U.S. cotton, fell 8 percent and 9 percent, respectively.

Rice exports for October-April totaled 1.5 million tons, 3 percent higher than last year. However, higher rice prices pushed the value of U.S. exports

to $545 million, 20 percent higher than last year. The United States exported nearly 300,000 tons of rice to Japan through April. Shipments declined to Latin American and EU markets although the value rose because of the higher export prices.

HVP Export Growth Continues

HVP exports reached $15 billion, 5 percent higher than last year, and were the highest level of HVP exports ever for October-April. High valued cattle and horse exports, and increased meat and poultry product shipments, boosted animal product exports 8 percent to $4.9 billion. Fruit, nut, and vegetable exports totaled $4.2 billion for October-April, 10 percent higher than last year. Sugar and tropical product exports rose 18 percent to nearly $740 million.

Meat and Poultry Exports Rise

Beef exports totaled $1.2 billion, 7 percent over the previous year, because of increased shipments to Japan and Korea. The strong yen relative to the dollar and previous tariff reductions boosted beef shipments to Japan by 30,000 tons, valued at $727 million. Exports to Korea increased nearly 10,000 tons to over 31,000 tons, valued at $123 million. Pork export volume rose 26 percent, but lower export prices limited value gains to 11 percent as pork export value rose to $295 million. The largest gains were to the FSU and Mexico. Shipments to the FSU totaled 17,000 tons, valued at $27 million. There was a 12-percent increase to $43 million in pork exports to Mexico.

Chicken meat exports continued strong during October-April, totaling nearly $600 million, 44 percent higher than for the same period last year. The largest gain was to the FSU with chicken meat exports of $150 million during October-April, compared with $6 million last year. Nearly 183,000 tons of chicken were shipped to the FSU. Shipments also increased substantially to Hong Kong, rising 38 percent to $117 million.

Fruit exports rose $111 million on gains in fresh fruit exports of citrus, apples, grapes, and pears. Most of the gains were to Mexico and Asian markets. The value of fresh fruit exports to Mexico was $83 million, 85 percent higher than last year, with apples, peaches, and pears accounting for the bulk of fresh fruit shipments. There were also gains in apple and grape exports to Southeast Asian countries. Raisin exports were 16 percent higher at $110 million, on increased sales to the EU and Japan.

Nut exports rose sharply in value but export volume declined. Sharply higher almond prices, $4,480 per ton compared with $3,203 per ton last year, accounted for most of the gain in nut export value. Almond export value was $501 million compared with $372 million for the same period last year, although export volume declined 3 percent. Walnut exports increased in both value and volume to 55,000 tons and $128 million. Nearly $416 million worth of nuts was shipped to the EU, with Germany the largest market at $139 million. Japan was the second largest market for nuts at $120 million.

Vegetable exports rose to nearly $2 billion, 6 percent higher. Most of the gain was in frozen potato exports, rising to $106 million from $89 million, and in the highly processed vegetables which rose to over $900 million from $757 million. U.S. fresh vegetable exports declined because of lower shipments to Canada, down 16 percent to $368 million.

Exports of sugar and tropical products totaled $737 million, 18 percent higher than last year. Chocolate exports increased 35 percent to over $240 million. Most of the increase in U.S. chocolate sales was to the FSU, $76 million compared with $20 million last year. There were also increased exports to Hong Kong, Korea, and Taiwan. Coffee exports also rose 28 percent to $107 million. Shipments of coffee and products to Canada rose 28 percent to $55 million, and jumped to over $18 million to the EU, up from $1 million last year. ***(Joel Greene, Commodity and Trade Analysis Branch, 202-219-0020)***

Imports Rise, Pushed by Grain and Feed from Canada

U.S. agricultural imports from October 1993 through April 1994 totaled $15.4 billion, 5 percent over the same period in FY 1993. Competitive imports gained 6 percent, reaching $12 billion while noncompetitive imports rose only slightly to $3.4 billion.

Imports reached a record monthly high in March 1994, peaking at $2.4 billion, $67 million over March 1993. April imports fell $203 million to $2.2 billion, but were still 4 percent ahead of April 1993.

Grain and feeds were a major factor in shifting imports up, with increases far above other major categories. April shipments pushed cumulative FY 1994 grain and feed imports to 5.9 million tons, 119 percent greater than FY 1993 shipments of 2.7 million tons. Wheat, barley, and corn shipments from Canada, and oat shipments from the European Union (EU), were behind the increases.

Oilseed and oilseed product imports also increased in FY 1994, reaching 2 million tons. Shipments through April, of 1.3 million tons from Canada, almost doubled last fiscal year's 700,000 tons for the same period. Rapeseed imports from Canada were a significant factor, shooting from 9,000 tons for October 1992-April 1993 to 306,000 tons during the same period this year. Low U.S. soybean production in 1993 and excess crushing capability in North Dakota created a favorable market for Canadian rapeseed, much of which is then exported to Canada as rapeseed oil.

Beef imports of 440,000 tons for October 1993-April 1994 were 4 percent below the same period in FY 1993. Lower shipments from Australia and New Zealand were partially offset by higher shipments from Canada of 103,000 tons, 32 percent ahead of FY 1993 through April. Australia and New Zealand have voluntary restraint agreements which limit the amount they may ship to the United States. Beef imports from Australia and New Zealand were 20 percent below the previous year, largely due to a surge in imports in January 1993 resulting from the voluntary restraint agreement. Shipments in 1994 should be more evenly distributed over the year. U.S. pork imports were up 23 percent to nearly 200,000 tons for the fiscal year through April, with Danish shipments, mostly of processed and canned pork, up 55 percent to 64,000 tons.

Fruit juice imports also gained, rising 30 percent in volume over the previous year. Fresh and frozen vegetables gained 3 percent in volume. Garlic shipments from China increased from just over 1,000 tons to over 14,000 tons, amid U.S. producer charges of dumping.

Rising coffee prices have lowered October 1993-April 1994 imports 23 percent in volume with value unchanged from the previous year. Continued price increases due to production shortfalls may further reduce coffee imports in the remainder of the year.

Canada accounted for 20 percent of total agricultural import value for the fiscal year to date, making it the major source of U.S. agricultural imports. In FY 1993, Canada shipped 17 percent of U.S. imports. During FY 1994, the value of Canadian shipments to the United States has risen 18 percent. Besides the products previously mentioned, cheese, fruits, and beer showed gains. Cheese shipments increased 17 percent in value for the year to date with a cumulative total of $4.6 million. Fruits rose 16 percent to $41 million. Vegetables gained 23 percent in value. Onions were up in value by over $6 million. Imports of Canadian beer totaled $111 million, up more than 50 percent from last year.

Mexico, the second largest source, shipped 12 percent of U.S. agricultural imports in FY 1994 through April, unchanged in volume from the same period in FY 1993. But the value of Mexican shipments was up 7 percent. Mexico is a more important source of noncompetitve products than Canada. As a group, the value of these rose 22 percent, mostly due to a 58-percent increase in the value of coffee shipments. Among competitive products for FY 1994, beef and veal surged from just under $500,000 to over $2.8 million and fruit juice shipments were valued at $32 million, almost double this time last year, due to a jump in orange juice shipments. ***(Tom Capehart, Commodity and Trade Analysis Branch, 202-219-1262)***

Export Share of Agricultural Production Remains Steady

The dollar share of U.S. agricultural production exported in FY 1993 was 17 percent, unchanged from the previous year. The export share of production reflects how dependent the United States is on the world market and how competitive the United States is relative to other agricultural producers. Domestic markets are increasingly affected by overseas sales as the export share of production rises. Production is most obviously affected. In addition, consumers may be faced with competition from overseas buyers that bid up prices. Or, as export shares grow and influence production, economies of scale may cause domestic prices to fall.

The export share of production is the ratio of exports (including the farm-equivalent portion of processed products) to total production of the commodity. The lagged calendar year (or crop year, if appropriate) is used for production (denominator) and exports are based on the fiscal year of interest. Export shares of production may be calculated using value or volume. Value is more appropriate when many different types of commodities are being considered. When considering changes in one commodity over time, volume is more meaningful. Domestic supply and demand, and foreign demand are the primary determinants of export shares. Foreign demand for U.S. agricultural products is due to relative domestic and world supply and demand of a commodity, relative efficiencies of production, and the value of the dollar relative to other currencies. For instance, exports could be constant but declining domestic production would cause the export share of production to rise. On the other hand, exports might increase with little effect on share due to concurrent higher domestic production.

The current export share of production is the highest since 1984. Short foreign supplies of bulk commodities during the early 1980's drove the export share to the mid-20 percent level, boosting demand for U.S. products. But export share declined after 1985 when export value declined.

Bulk Commodity Share Declines Slightly

In FY 1993, the export share of the value of production for bulk commodities and products, (grains, oilseeds, cotton, and tobacco) fell from FY 1992's 34 percent to 33 percent.

Corn is the major bulk commodity export and changes in its export levels affect the bulk export share of production. A large increase in corn production in the 1992 crop year caused the FY 1993 export share of production to fall from 21 to 17 percent, despite slightly higher exports.

The export share of production for wheat fell from FY 1992's 66 percent to 56 percent. Slight gains in exports were overwhelmed by a 24-percent production increase in 1992. The export share of wheat reached 80 percent in FY 1989 after 2 years of low world production; 2 years later, in FY 1991, it fell as low as 38 percent as competition from other exporters increased.

Soybean exports declined in FY 1993, and production was up 5.5 million tons, pushing the export share down from 49 to 45 percent. FY 1992 followed a year of lower world production and rising U.S. production, which gave the United States an export advantage. Soybean meal exports in FY 1992 reached 6,300 tons, contributing to the high share.

Cotton exports declined for the third consecutive year, reaching 1,125 tons in FY 1993 but production fell 300,000 tons, a smaller proportion, so the export share fell from 39 to 32 percent. The export share of rice increased, due to a slight rise in exports coupled with a production decline. Rice production increased in FY 1992, but exports rose almost 20 percent, sending the FY 1993 export share of production to 48 percent.

Record Share of High Value Product Exported

The export share of production for high-value products (HVP) has been increasing steadily since FY 1984, after a previous high of 9 percent in 1981. It reached 12 percent in FY 1993, up from 11 percent in FY 1992. The increase was probably dampened by an appreciating dollar.

HVP export share growth in the 1980's was spurred by strong economic growth in developed countries. However, as economic growth slowed in many of these countries towards the end of the decade, demand for HVP's subsided and the rate of growth in the HVP export share of production

slowed. Bulk commodities, on the other hand, are exported primarily to developing countries and the former Soviet Union which are more dependent on food imports.

High-value products include fruits, nuts, vegetables, livestock products, and processed or prepared foods. As with bulk commodities, the great disparity between unit values makes aggregate volume-based shares meaningless. Also, unit values for exports are often higher than unit values for total production. However, individual HVP's may be compared using volume-based share calculations.

Certain commodities within the HVP category had export shares far above the overall (value-based) share for the entire category (17 percent). Fresh oranges had export shares of 23 percent, but the export share for oranges peaked in FY 1992 at 37 percent, when exports were 500,000 tons. Orange shipments rose to 580,000 tons in FY 1993 due to increased demand in Canada and Hong Kong, but production was up also, and export share fell to 24 percent. Apples reached a 20-percent share in FY 1991 on exports of 530,000 tons before dipping to a 19-percent share for FY 1992. In FY 1993, shipments to Western Europe dropped 100,000 tons. As European production recovered from freeze-reduced 1992 crops, the export share for apples fell to 17 percent. Hops were higher than the overall HVP category at 36 percent. Poultry's export share was 8 percent, although it has increased steadily in the past few years, and beef and pork are unchanged at 2 and 4 percent. But both beef and pork have made major gains in recent years and should continue increasing in the near future. Dried beans had an export share of 28 percent, more than double the overall HVP share, and up slightly in FY 1993. ***(Tom Capehart, Commodity Trade Analysis Branch, 202-219-1262)***

SUMMARY OF REPORT FAER-253

U.S. Investment in Mexican Agribusiness Quintupled From 1987 to 1992

July 1994

Contact: Christine Bolling, 202-219-0689

U.S. investment in Mexico's agribusiness increased five-fold from 1987 to 1992, and may, under the North American Free Trade Agreement (NAFTA), increase even more rapidly during the 1990's. Mexico ranked fifth among host countries for U.S. direct investment in food and agribusiness in 1992, with nearly $2 billion, up from $320 million in 1987. Changes in Mexico's land tenure and investment laws have driven the rapid growth. Other contributing factors include economic growth and increased consumption in Mexico, as well as the complementary Mexican production-U.S. consumption of many seasonal fruits and vegetables.

Most U.S. investments in Mexico's agribusiness are in food processing and beverage industries, farm machinery wholesale establishments, and textiles. Other U.S. investments include packing sheds, refrigeration for fresh fruit and vegetables, restaurants, and grocery stores. A new report by USDA's Economic Research Service, *The U.S. Presence in Mexican Agribusiness,* reviews U.S. investments in Mexico, the reasons for those investments, and their impact on U.S. and Mexican agriculture.

The United States accounts for approximately 70 percent of Mexico's total foreign investment. The more visible U.S. investments include ownership of fast food chains, poultry processing, tomato products, soft drinks, agricultural chemicals, and agricultural machinery.

The textile and apparel industries have attracted $70 million in U.S. investment through the *maquiladora* system, importing raw materials to bonded warehouses and producing finished goods for export. *Maquiladoras* in the apparel industry grew from 117 plants employing 18,000 workers in 1981 to 304 plants employing 43,000 workers in 1990. Standardized apparel like bluejeans, underwear, and men's shirts are most often produced in *maquiladoras*, as are household products like sheets and towels.

Until 1992, foreign investment in Mexico's agricultural land was prohibited. As a consequence, the Mexican agricultural production sector attracted little foreign investment. According to the U.S. Department of Commerce, U.S. investment in Mexico's agricultural land was only $5 million in 1992, with horticulture the largest recipient.

Table 1—Foreign direct investment between Mexico and the United States, 1992

Category	U.S. direct investment in Mexico	Mexico's direct investment in the United States
	Million dollars	
All industries	13,330	1,184
Food industry	1,340	69
Other agribusinesses	554	NA
Total food and agribusinesses	1,894	NA
Agricultural land	5	262

NA = Not available.

SUMMARY OF REPORT #AER-683

U.S. land and labor devoted to agricultural exports have changed

May 1994

Contact: Chinkook Lee, 202/219-0785

The commodity composition of U.S. agricultural exports has changed since the 1970's. In 1977, grains and oil crops were more than half of U.S. agricultural exports. By 1990, grains and oil crops had fallen to more than a third of U.S. agricultural exports, and high-value products, such as meat and other processed products, had doubled their 1977 export volume to total about a quarter of the exported agricultural commodities. The commodity composition of U.S. agricultural exports has changed because production technology for U.S. high-value commodities has become highly mechanized, which allows greater use of the United States' abundant farmland and requires little use of labor. These factors combine to make U.S. agricultural exports highly competitive with those from other nations.

Factor Intensity and the Changing Commodity Composition of U.S. Agricultural Trade, a new report from USDA's Economic Research Service, examines the amount of U.S. land, labor, and capital devoted to the production of agricultural exports and the associated patterns of U.S. agricultural trade.

Share of U.S. agricultural exports, by commodity group, 1977-90

Commodity group	1977	1982	1990
		Percent	
Livestock	0.9	1.2	1.7
Food grains	11.6	18.3	10.3
Feed grains	20.8	17.7	18.3
Cotton	6.5	5.4	7.1
Vegetables, fruits, and nuts	4.1	4.8	7.6
Oil crops	20.3	18.6	9.8
Tobacco	4.6	4.2	3.7
Meat products	6.4	5.8	12.2
Feeds and flours	6.6	6.4	8.2
Vegetable fats and oils	9.9	8.2	5.4
Other processed foods	6.0	6.9	12.2
Other agricultural products	2.4	2.5	3.5

The composition of U.S. exports reflects the purchasing patterns of different nations. Over time, these patterns change as nations alter their purchases in response to changes in income, relative prices, and domestic shortages. Perhaps the most important of these factors are changes in income that result from the development process. As a nation develops, its agricultural imports tend to shift away from food grains and industrial raw materials toward high-value commodities, such as meat products and fruits and vegetables.

As developing nations earn higher incomes and become increasingly self-sufficient in food production, the composition of U.S. agricultural exports will likely shift toward high-value products, such as meats, fruits and vegetables, and other processed foods. However, products importing countries use to produce high-value commodities, for example feed grains and oil crops (used to produce livestock), will likely also remain a major share of U.S. agricultural exports. As the commodity composition of agricultural exports changes, the use of land and labor for producing agricultural exports will also change, because different commodities have different direct and economywide land and labor requirements.
