FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

Digest

U.S. Agricultural Trade With Mexico (see page 6). U.S. agricultural imports from Mexico were valued at \$327 million in 1967; shipments of our farm products to Mexico totaled \$70 million. Purchases from Mexico have grown about 4 percent annually over the last 5 years. Because of higher production in Mexico and increased demand in the United States, this growth rate is expected to increase more rapidly. Nonagricultural exports to Mexico more than offset the agricultural trade deficit.

Principal agricultural imports from Mexico are sugar, coffee, tomatoes, cattle, beef, molasses, and strawberries. U.S. farm exports to Mexico are mainly hides, dairy stock, evaporated milk, edible offals, prepared feeds, live poultry, and seeds and nursery stock.

* * * * *

Agricultural Exports as Share of Production (see page 21). Agricultural exports are important to the American farmer. In 1967/68, exports were equivalent to nearly 15 percent of the cash receipts from farm marketings, and required the production of 71 million acres of cropland to meet the world demand. The export market accounted for over 60 percent of the production of dried peas, rice, and wheat; around half of the cotton and cattle hides; two-fifths of the soybeans, tallow, and raisins; around a third of the hops, tobacco, and dried prunes; between a fourth and a fifth of the flaxseed, grain sorghums, lemons and limes, nonfat dry milk, and dry edible beans. Corn exports accounted for 23 percent of the sales from farms, but only 12 percent of the production.

* * * * *

Selected Price Series of International Significance (see page 23). U.S. export wheat in September averaged \$1.50 a bushel, the same as in August. Continued declines in rice and soybean prices were significant, but other price changes were mostly small.

* * * * *

World Trade Highlights (see page 25). Beginning with this issue, highlights of world trade by the major exporting and importing countries will be provided periodically.

This issue features agricultural import data for Japan, Taiwan (the Republic of China), and the Republic of Korea, and agricultural exports of Australia and New Zealand. Japan's agricultural imports in 1967 were valued at \$3,296 million, 74 percent higher than in 1962. Demand for agricultural products has increased in Japan because of higher per capita incomes, widening taste for different foods, and growth in urban populations. The United States accounted for 31 percent of Japan's imports in 1967; we are also the principal suppliers of agricultural commodities to Taiwan and the

Australian agricultural exports were \$2,249 million in 1967, nearly a fourth above the 1962 level. Animal products -- Australia's largest export group -- totaled \$1,336 million. New Zealand exported \$886 million worth of farm products in 1967, down 10 percent from 1966. Australia shipped 12 percent of its farm products to the United States, while New Zealand shipped 15 percent.

U.S. Agricultural Exports: July-September 1968 (see page 31). U.S. agricultural exports totaled \$1,425 million in July-September 1968, compared with \$1,429 million a year earlier. The decline resulted mainly from a substantial decrease in exports of grains and preparations, especially wheat and flour. Shipments of oilseeds and products were up slightly, chiefly because of a rise in soybeans. Exports of animals and

animal products, cotton, tobacco, and vegetables increased.

Exports of U.S. farm products to the European Economic Community (EEC) advanced to \$334 million in the first quarter of 1968/69, up 9 percent from the year-earlier period. U.S. exports of commodities subject to the EEC's variable levies totaled \$144 million during July-September 1968, 11 percent higher than a year earlier. This substantial increase occurred as a result of large shipments of feed grains and wheat to the EEC countries. Exports of non-variable-levy commodities rose 7 percent from July-September 1967. Commodity groups with higher export values were hides and skins, oil cake and meal, tobacco, and vegetable oils.

U.S. Agricultural Imports: July-September 1968 (see page 36). U.S. imports of agricultural products in the first 3 months of the current fiscal year amounted to \$1,344 million against \$1,064 million last year. Supplementary imports totaled \$800 million and complementary products accounted for \$544 million. Most of the commodity groups showed gains from the same period last year, such as cattle, beef, pork, hides and skins, dairy products, fruits, edible nuts, sugar, vegetable oils, wines, bananas, coffee, cocoa, rubber, tea, crude drugs, spices, essential oils, and carpet wools.

Table 1.--U.S. exports: Value of total and agricultural exports, including specified Government-financed programs 1/and commercial (dollar) sales by selected commodities and commodity groups, averages 1955-59 and 1960-64; annual 1965-68 and July-September 1968

U.S. AGRICULTURAL TRADE WITH MEXICO

by
Thomas A. Warden 1/

Movements of agricultural products between the United States and Mexico are primarily northward. Last year, U.S. agricultural imports from Mexico amounted to \$327 million. Shipments of U.S. farm products to Mexico in the same period totaled \$70 million. U.S. agricultural imports from Mexico have grown at an average annual rate of 4 percent over the last 5 years, while exports have ranged between \$63 million and \$87 million. A large part of this increase in imports resulted from a sharp rise in Mexico's farm production, especially for fresh fruits and vegetables. Development of water resources in northwest Mexico, improvements in transportation facilities, and the introduction of new crops in the south-central regions have shown substantial success.

Higher levels of demand in the United States reflect population and income growth contributing to an increase in imports generally, including purchases from Mexico. The trend in U.S. agricultural imports from Mexico is expected to continue upward. In the short run (3-5 years) such imports are likely to exceed the recent 4 percent average annual increase.

Mexico is a major producer of temperate zone agricultural products like those grown in the United States. Since the growing season in most areas of Mexico extends throughout the year, this country is an important supplementary source of fresh produce for U.S. markets during the winter and spring. Supplementary U.S. farm imports from Mexico in 1967 were valued at \$259 million or 79 percent of total agricultural products from that country. The remainder consisted of such tropical commodities as coffee, sisal, cocoa, bananas, and spices.

Because Mexico is a surplus producer of most agricultural commodities, there is a limited import market for such goods. Mexico imported about \$114 million worth of farm products in 1966, according to the most recent United Nations data available. The United States was the largest supplier with \$68 million or 60 percent of these products, principally live animals, hides, grain, fruits, hops, seeds, tobacco, and certain essential oils. France was the largest country of origin for dairy products; Australia and Argentina were the principal sources of wool.

The deficit in agricultural trade with Mexico is more than offset by U.S. nonagricultural exports. In 1967 exports of these products totaled \$1,153 million, up from \$1,057 million in 1966 and \$676 million 5 years earlier. Nonagricultural commodities usually account for more than 90 percent of U.S. exports to Mexico (table 2). Manufactured goods -- mainly machinery, vehicles, and chemicals -- make up the largest commodity groupings.

¹/ Agricultural Economist, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

U.S. imports of nonagricultural products from Mexico in 1967 amounted to \$398 million or 55 percent of total purchases. These imports were mainly shellfish, nonferrous ores, chemicals, and petroleum products.

Imports by Commodity

The second of th

U.S. agricultural imports from Mexico in 1967 were valued at \$327 million, about the same as a year ago (table 3). This leveling took place as larger purchases of sugar, molasses, fibers, tobacco, cottonseed cake, and lime oil offset declines in several leading commodity imports, including cattle, meat, some fruits and vegetables, and coffee.

Mexico shipped 501,000 head of cattle -- valued at \$36 million -- to the United States in 1967, down from 584,000 and \$42 million a year ago. Pasture conditions in the northern plateau regions were very dry, causing cattlemen to hold much of their stock. Reduced marketings also affected beef exports; U.S. imports of Mexican beef dropped to 47 million pounds (\$20 million) in 1967 from 56 million pounds (\$23 million) in 1966.

Some fruit and vegetable imports from Mexico declined following heavy west coast rains and blight. Fresh strawberry imports rose to 20 million pounds -- value \$3 million -- from 12 million pounds -- value \$2 million -- a year earlier. But frozen strawberry purchases declined to 73 million pounds (\$10 million) from 83 million pounds (\$15 million). Cantaloup imports fell to 117 million pounds from nearly 137 million pounds, but price increases pushed value up to \$6.1 million from \$5.9 million. Some offsetting influence occurred in larger imports of oranges, grapes, and tropical fruits.

The main reduction in vegetable imports from Mexico was in fresh tomato values. While the quantity of imports rose slightly to 362 million pounds from 359 million pounds a year earlier, value declined because of poor quality to \$43 million from \$52 million. Imports of tomato paste and sauce increased to 10 million pounds (\$1.4 million) from 7 million pounds (nearly \$1 million). Tomatoes usually account for more than 70 percent of U.S. vegetable imports from Mexico. Higher U.S. purchases were recorded for several other fresh vegetable categories, including cucumbers, eggplant, garlic, okra, peppers, and squash.

- U.S. imports of green coffee from Mexico declined to 131 million pounds (\$48 million) from 137 million pounds (\$57 million) in 1966 and nearly 189 million pounds in 1964. Mild Central American coffees have encountered increasing competition on world markets from lower priced robustas grown in Africa and Asia.
- U.S. imports of sugar and molasses from Mexico have expanded with higher levels of U.S. consumption and increased foreign quota allotments. Cane sugar purchases from Mexico rose steadily to 520,000 short tons -- \$66 million -- in 1967 from 364,000 tons -- \$48 million -- in 1963; Mexico's share of the volume of U.S. sugar imports increased to 11 percent from less than 9 percent. Inedible molasses imports from Mexico of 131 million gallons, valued at \$14 million, were more than one-third of total U.S. imports.

Vegetable fiber imports from Mexico rose to \$13 million in 1967, largely because of higher cotton shipments. U.S. raw cotton imports for consumption from Mexico reached 40,000 bales (480 pounds each), valued at \$5.5 million, compared with 2,000 bales totaling \$0.3 million a year earlier. Short-staple cotton -- less than 1-1/8 inches -- made up almost 37,000 bales valued at \$4.9 million. Cotton linter imports from Mexico dropped to 33 million pounds (\$2.8 million) from 43 million pounds (\$3.4 million) in

Sisal accounts for most of U.S. hard fiber imports from Mexico. These purchases advanced to 36,000 long tons (2,240 pounds) from 34,000 tons in 1966, but weak prices

Nostly blueberries.
Mostly paprika.
Lemon oil, 8,000 lbs. (\$8,000).
Chicken eggs in shell, 1,448,000 doz. (\$477,000).

reduced the value to \$3.6 million from \$3.9 million. Replacement of natural cordage by synthetically produced fibers was the chief reason for the price decline.

Unmanufactured tobacco imports from Mexico by the United States have grown steadily to 3.9 million pounds and \$2.5 million in 1967. Deliveries of burley, flue-cured, wrapper, and scrap tobaccos all showed increases from 5 years ago. In 1967, imports of filler leaf amounted to \$1,343,000; burley leaf, \$404,000; wrapper, \$166,000; and scrap, \$627,000. Increased output of tobacco, mainly in Nayarit state, has not only boosted exports but also reduced imports.

Exports by Commodity

Over the last 5 years U.S. agricultural exports to Mexico averaged \$78 million, fluctuating from \$70 million to \$87 million (table 4). The highest level was recorded in 1965 and the lowest in 1967. Sharp changes in grain shipments caused most of the irregularities in U.S. farm exports to Mexico. Other commodities have generally expanded over the same period. Cattle exports to Mexico, mostly dairy stock, increased to nearly \$6.3 million (17,000 head) from \$4.2 million (13,000 head) in 1963. Live poultry shipments also gained steadily to \$2.0 million from \$1.3 million. Edible offal exports rose to \$2.4 million in 1967 from less than \$500,000 in 1963.

The total value of U.S. dairy product exports to Mexico changed little between 1963 and 1967 because larger shipments of evaporated milk were nearly offset by reductions for dry skim milk. France has been the major supplier of dry milk to Mexico for the last 2 years.

U.S. exports of cattle hides to Mexico in 1967 amounted to almost \$13 million against \$8 million a year earlier and \$3 million in 1963. An increase in the demand for hides by Mexican shoe manufacturers accounted for most of the rise.

Shipments of seeds and nursery stock to Mexico by U.S. exporters climbed to \$3.6 million in 1967 from \$2.3 million in 1963. Nursery stock exports during the period more than tripled in value. Expanded and diversified horticultural production in Mexico raised import demand for stock.

Increased livestock production in Mexico also boosted U.S. exports of feeding materials to that country. Prepared dairy and poultry feed shipments to Mexico were \$2.3 million in 1967 against \$1.7 million in 1963.

Grain exports from the United States to Mexico fell to \$3.6 million in 1967 from \$9 million a year earlier and nearly \$30 million in 1963. Corn exports shrank to less than \$1 million from \$21 million during the same period. Barley shipments rose to a peak of \$7.5 million in 1965 from less than \$1 million in 1963, then fell steadily again to less than \$500,000. Rice exports followed the same pattern with the highest level at \$2.6 million in 1965. Sorghum sales also declined sharply over the 5-year period. At the same time, Mexican grain output attained surplus positions and corn was exported.

Large shipments of cottonseed oil occurred in 1965, further swelling the total of U.S. farm exports to Mexico during that year. Lard exports grew in volume, but prices fell toward the end of the period causing value to drop sharply.

The Mexican market for imported tobacco disappeared in 1967, following production increases; U.S. exports of tobacco, mostly burley leaf, had averaged about \$4 million prior to 1966.

Hops, dried beans, and essential oils accounted for most of the remaining U.S. farm exports to Mexico. Hop exports to that country usually amount to about \$2 million

annually; only \$1.5 million worth were shipped in 1967. Dried beans amounted to \$1 million, up slightly from the previous year. The value of essential oils, mostly mint oils, totaled \$1.6 million, about equal to 1966.

Donations of food by the U.S. Government through charitable organizations fell off sharply in the last 2 years from \$10 million in 1964. Prior to 1966, these donations included principally wheat flour and nonfat dry milk (table 5).

Shortening accounted for \$56,000 in 1965, \$15,000 in 1966, and \$4,000 in 1967.

SPECIAL in this issue

AGRICULTURAL EXPORTS AS SHARE OF PRODUCTION

U.S. agricultural exports, totaling \$6.3 billion in fiscal 1968 (year ended June 30), were equivalent to about 15 percent of 1967 cash receipts from farm marketings. Although animals and animal products accounted for about 57 percent of these receipts, they comprised only 10 percent of the agricultural exports in 1967/68. Crop products, which made up most of the export total, formed about 31 percent of the 1967 cash receipts from crops.

The production of commodities for which the export shares increased from 1966/67 include wheat and wheat flour, cotton, soybeans, raisins, lemons and limes, and dry edible beans (table 6). Those with declining shares were dry edible peas, rice, cattle hides, tallow, hops, tobacco, dried prunes, flaxseed, grain sorghums, nonfat dry milk, dried whole milk, rye, variety meats, and barley.

The export market is particularly important for a number of commodities. In 1967/68, over 70 percent of the dry edible pea production was exported. Rice exports represented 64 percent of domestic production, up 58 percent for the 1962-64 average. Wheat exports accounted for 63 percent of total production, about the same as the 1962-64 average. Around half of the hides and skins and cotton were exported. The share of cotton production that was exported increased in both 1966/67 and 1967/68. Soybeans and soybean product exports continued to increase and accounted for two-fifths of the total production, about the same as the 1962-64 average. The increase in exports has more than matched the increase in domestic production of soybeans since 1961/62.

About one-third of the production of tobacco, dried prunes, and hops and about a fifth of the monfat dry milk, lemons, and dry edible beans were exported.

Even though corn, barley, grain sorghums, and other feed grains are exported in large quantities, exports account for a relatively small share of their total production. This is due partly to the large share of feed grain production that is used on the farm where it is grown for feed and seed rather than sold. Corn and barley exports were only 12 percent and 8 percent, respectively, of production. However, of the total sold from farms and made available for export in 1967, corn exports accounted for 23 percent of sales from farms and barley exports, 11 percent.

^{2/} Includes bean equivalent of soybean products for export.

THE STATE OF THE S

SPECIAL in this issue

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Continued declines in rice and soybean prices were significant, but other price changes from August to September were mostly small.

The September price of U.S. No. 1, Hard Winter wheat, ordinary protein, f.o.b. Gulf ports, averaged \$1.50 a bushel, unchanged from August (table 7). Weekly price quotations, from which the monthly averages are computed, reached a low point of \$1.47 at the end of August, but recovered to \$1.52 at the end of September and beginning of October. The cost of export certificates, which exporters pass on to their buyers, resulted in an average buyers' price of \$1.74, in line with the minimum price provisions of the International Grains Arrangement. The sellers' price of U.S. No. 1, Hard Winter wheat, 14 percent protein, averaged 12 cents a bushel above that of similar wheat with ordinary protein. At the end of September and beginning of October, 14 percent protein wheat was quoted at \$1.65, the highest price reported so far this marketing year and previously attained only once, in mid-July. American No. 2, Hard Winter wheat, c.i.f. U.K., was quoted on average at 30.5 pounds sterling a long ton or \$1.96 a bushel in September, up 2 cents from August. That quotation is the closest c.i.f. U.K. equivalent of Gulf port, ordinary protein, quotations. The differential between No. 1, as used in the f.o.b. Gulf quotation, and No. 2, as used in the U.K., is typically not more than I cent a bushel. The implicit average freight cost from Gulf ports to U.K. ports was 23 cents a bushel.

The price of Australian wheat, c.i.f. U.K., held steady at 29.1 pounds sterling a long ton in September, while the forward price for new crop Argentinian wheat dropped to 29.0 pounds, slightly below the average quotation for Australian wheat. Most of the time, the c.i.f. U.K. price for Argentine wheat is slightly above that for Australian wheat. A premium for the former is also reflected in the International Grains Arrangement.

The price of Canadian No. 1, Northern wheat, basis Fort William-Port Arthur, continued its slight climb in recent months. At Canadian \$2.01 a bushel, the September 1968 price exceeded that of a year earlier by 8 cents.

The price of U.S. No. 3, yellow corn, c.i.f. U.K., continued to decline. At 22.2 pounds sterling a long ton in September, it was 1 percent below a month earlier and, in terms of dollar equivalent, 12 percent below a year earlier. The Argentine corn price, c.i.f. U.K., increased slightly to 25.1 pounds in September, and the premium of Argentine corn over U.S. corn rose to 2.9 pounds or 13 percent. Sorghum grain prices, c.i.f. U.K., were not quoted in September.

The export price of Thai rice declined further to 80.6 pounds or \$193 a metric ton. This price is still higher than it was from 1960 to February 1967. The price of U.S. soybeans, c.i.f. U.K., dropped 0.5 percent, in response to the large U.S. crop and the substantial U.S. carryover stocks.

Memphis Territory cotton, strict middling 1-1/16 inches, c.i.f. Liverpool, was nominally quoted at 34.10 cents a pound, 1 percent lower than in August and July.

^{1/} These are seller's prices excluding export certificates at an average cost of \$0.23 in June, \$0.21 in July, \$0.23 in August, and \$0.24 in September, raising the buyer's prices to \$1.71 in June, \$1.73 in both July and August, and \$1.74 in September. 2/ U.S. No.1, September to mid-December 1967. 4/ Nominal.

World Trade Highlights

AGRICULTURAL IMPORTS OF JAPAN, CHINA (TAIWAN), AND THE REPUBLIC OF KOREA

Beginning with this issue, the Foreign Development and Trade Division will publish selected world trade data on agricultural imports and exports of various countries. In this article, import data are shown for Japan, Taiwan, and the Republic of Korea and agricultural exports for Australia and New Zealand.

Agricultural Imports of Japan.—Agricultural imports of Japan in 1967 reached \$3,296 million, 74 percent higher than in 1962 (table 8). Its agricultural imports have increased each year since 1962, reflecting upward trends in imports of animals and animal products, food and feed grains, fruits and vegetables, oilseeds, tobacco, coffee, cocoa, tea, and other products (fig. 2). The continuous growth of the country's economy, the widening acceptance of diverse products by the Japanese as a result of higher per capita income, and personal preferences have promoted living standards and demand for imports of many agricultural products. Imports of animals and animal products increased to \$684 million in 1967, 68 percent over 1962. Over the same period, imports of feed grains prompted by the rising production of animals and meat rose threefold to \$485 million. Fruit and vegetable imports in 1967 reached \$194 million, the highest level in 6 years. Imports of oilseeds also reached a 6-year high in 1967, rising to \$415 million.

The U.S. share of total Japanese agricultural imports in 1967 was 31 percent. This is about the average for the period 1962-67. Among the food grain imports by Japan, the U.S. share has expanded from 29 percent in 1962 and reached a high of 45 percent in 1967. The U.S. share of Japanese oilseed imports has declined since 1962. Although the range has been narrow, this share fluctuated from 62 percent in 1964 to 57 percent in 1967. The U.S. share of coffee, cocoa, and tea imports declined from nearly one-third in 1962 to about 3 percent in 1967, and that of animals and animal product imports from about 13 percent to 10 percent. In 1962, the U.S. share of fruit and vegetable imports by Japan was 23 percent; by 1967, it had declined to 16 percent after reaching a 10w of 15 percent in 1966 (fig. 3).

By commodity group, the U.S. share of Japan's agricultural imports was 45 percent for food grains, 54 percent for feed grains, 68 percent for oils and fats, 57 percent for oilseeds, and 70 percent for tobacco.

The other principal suppliers of agricultural products to the Japanese market are shown in table 9. Australia is Japan's second largest supplier of agricultural products. Australian exports are primarily grains, meats, wool, and animal products. Except for wool, these products are strong competitors with U.S. products. Furthermore, the imports from other major countries are mainly similar to those commodities from the United States.

Agricultural Imports of Taiwan.--Agricultural imports of Taiwan totaled \$184 million, 51 percent higher than in 1966, and 78 percent higher than the average for 1962-64. The United States is the principal supplier of these imports with the U.S. share ranging from 61 percent to 77 percent.

Origin :	1966	: : 1967	Percentage change
: : :		dollars 1,027,991	Percent
Inited States Australia Canada China, Mainland Thailand Mexico South Africa China, Taiwan New Zealand	1,078,831 453,651 176,876 188,121 127,926 142,137 46,085 119,808 95,705 814,710	45.,364 193,316 171,475 133,202 116,055 111,386 99,555 91,268 899,572	-0.3 +9.3 -8.8 +4.1 -18.3 +141.7 -16.9 -4.6 +10.4
New Zealand	3,243,850	3,296,184	+1.6

The principal commodities imported by Taiwan in 1967 were oilseeds, cotton, animals and animal products, and grains. Oilseeds, totaling \$46 million, were 25 percent of total agricultural imports, followed closely by cotton, valued at \$45 million. Imports of oilseeds by Taiwan have increased substantially during 1962-67, rising from \$7 of oilseeds by Taiwan have increased substantially during that period have fluctuated considerably, though in an upward trend. While the textile industry has tuated considerably, though in an upward trend. While the textile industry has to the textile growth. Food grains -- 1967 value \$23 million -- account for more ship to the textile growth. Food grains -- 1967 value \$23 million -- account formore than two-thirds of the total grain imports. Tobacco imports, which from 1962 through 1966 were at a relatively low level, increased substantially in 1967, reaching a high of \$11 million.

In 1967, the U.S. share of imports by Taiwan was 94 percent for oilseeds, 92 percent for tobacco, 86 percent for food grains, and 82 percent for cotton. The U.S. share of feed grains, however, was quite low, amounting to \$477,000 or 4 percent. Imports of animals and animal products from the United States totaled \$1.3 million or 8 percent.

U.S. Agricultural Imports of the Republic of South Korea. -- In 1967, agricultural imports of South Korea totaled \$177 million, 12 percent above the total for 1966, and 33 percent above the average for 1962-64. The 1967 figure represents the second highest level reached in 6 years. Food grains in 1967 to aled \$71 million, 40 percent of level reached in 6 years. Imports of cotton -- value \$49 million -- ranked second. Imports of both commodities have increased substantially since 1962. However, food Imports of both commodities have increased substantially since 1962. However, food grain imports have fluctuated and reached a high in 1963, when they totaled \$84 grain imports have generally trended upward, from \$34 million in 1962 to \$49 million in 1967.

The United States is the principal supplier of agricultural products for the Republic of Korea. In 1967, the United States supplied \$126 million or 71 percent of South Korea's agricultural imports. Two of the major import products of South Korea are food grains and cotton. However, the U.S. share of these commodities has trended downward since 1962 although the totals have increased. Imports of food grains and cotton by South Korea were totally from the United States in 1962. The U.S. shares in 1967 were 81 percent and 94 percent, respectively.

In comparison with food grains and cotton, other agricultural imports of South Korea are relatively small. Nevertheless, in 1967 the United States supplied South Koreans with 90 percent of their feed grains, 97 percent of their feeding stuffs, 85 percent of their oils and fats, 51 percent of their oilseeds, and three-fourths of their coffee, cocoa, and tea.

Exports of Australia and New Zealand

Australia. -- Agricultural exports from Australia in 1907 amounted to \$2,249 million. This was 24 percent above the 1962 figure and the second highest level in 6 years (table 10). Animals and animal products, Australia's largest export commodity, totaled \$1,336 million. Food and feed grain exports at \$565 million ranked second. Other export items of importance were fruits and vegetables and sugar. Each of these commodity groups amounted to nearly \$120 million.

Australian exports of animal products to the United States in 1967 reached \$244 million, the highest total during 1962-67. In terms of total exports of animals and animal products, this was the largest share of exports from Australia. In comparison, shipments to the United Kingdom totaled \$188 million and to other Western European countries, \$188 million.

Food grain exports from Australia, notably wheat, were valued at \$517 million. As a wheat exporter, Australia competes with the United States in many of the major commercial markets. For example, in 1967 Japan received wheat exports from Australia totaling \$32 million, compared with \$159 million from the United States. Australia also exports wheat to Western European countries; in 1967, these shipments to the United Kingdom totaled \$19 million.

Sugar was the only commodity besides the category of animals and animals products to show any significant share in Australian exports to the United States. The U.S. share of Australian sugar exports increased somewhat during 1962-67 and reached a high of \$25 million in 1967. This was about 21 percent of Australia's total sugar exports. However, sugar imports of the United States are subject to import quotas. In terms of total agricultural exports from Australia, the United States received about 12 percent.

New Zealand. -- Agricultural exports from New Zealand in 1967 totaled \$886 million, 10 percent below those of 1966. Principal commodities exported were animals and animal products, with smaller shipments of fruits and vegetables and oils and fats.

Animals and animal products accounted for practically all of the shipments in 1967 --with the United States receiving about 15 percent. The U.S. share represented a decline of about 2 percent from 1966. Other important markets for Nº2w Zealand exports of animals and animal products included the United Kingdom, Japan, and France.

Among the other commodities exported from New Zealand, shares moving to the United States were relatively insignificant. Although fruit and vegetable exports accounted for \$15 million of New Zealand's agricultural exports in 1967, only about 2 percent -- value \$299,000 -- were shipped to the United States. The \$10 million in exports of oils and fats from New Zealand were all exported to countries other than the United States.

Export Highlights

U.S. AGRICULTURAL EXPORTS: JULY-SEPTEMBER 1968

During the first quarter of fiscal 1969 (year ending June 30), U.S. agricultural exports totaled \$1,425 million, about the same as a year earlier (table 11). Declines resulted mainly from a substantial decrease in the export value of grains and preparations, especially wheat and flour. Exports of oilseeds and products were up slightly, due principally to a rise in shipments of soybeans and protein meal. Exports of animals and animal products, cotton, tobacco, and vegetables and preparations increased.

Although exports during July-August 1968 were up slightly from those of July-August 1967, exports during September 1968 were down from those of a year earlier. Exports of wheat and flour during September 1968 were down substantially from those of September 1967, falling 57 percent to \$53 million. However, September exports of feed grains and soybeans increased.

Exports of animals and animal products during the first quarter of 1968/69 totaled \$172 million, 14 percent above those of July-September 1967. Pacing the increased export value of animals and animal products was a sharp increase in dairy product exports, which rose 46 percent to \$38 million. In addition, meats and meat products and hides and skins increased substantially above the first quarter level in 1968/69. Larger shipments of anhydrous milkfat and nonfat dry milk accounted for much of the increase in dairy product exports. Among the meats and meat product exports, shipments of pork were three times the value in July-September 1967.

The value of cotton exports in July-September 1968 totaled \$98 million, 15 percent higher than in the first quarter of the past fiscal year. Most of the increase took place during July and August due to heavy buying of cotton during the early months of 1968 for later delivery. July and August exports were higher than usual since these months are usually the seasonal low period for cotton exports. Cotton exports during July-August (latest data available) moved primarily to Japan, South Korea, and the Philippines. Exports to these countries were 31 percent higher than during July-August 1968 and accounted for 46 percent of total cotton exports.

Exports of grains and preparations during July-September 1968 totaled \$543 million, 15 percent below a year earlier. Most of this decline resulted from a sharp reduction in exports of wheat and flour, which fell 35 percent to \$222 million from \$341 million in July-September 1967. All of the decline occurred in exports of wheat grain. Wheat flour increased 43 percent to \$20 million during the first quarter of 1968/69. Exports of feed grains were up 4 percent to \$241 million. Corn shipments continued to surpass those of the previous year with the first quarter total value reaching \$187 million, 26 percent higher than the first quarter exports of 1967/68. A sharp reduction in the export value of sorghums, barley, and oats partly offset the increased export value of corn. Lower prices for feed grains also contributed to the decline and the export value of feed grains. The quantity of corn exported was about 42 percent higher in July-September 1968 than in the same months of 1967. Shipments of rice during July-September 1968 totaled \$63 million, 26 percent higher than the corresponding months of last year.

^{1/} Preliminary.

U.S. exports of oilseeds and products totaled \$240 million in July-September 1968. This was 2 percent above July-September 1967. The value of soybean exports, accounting for more than half the total value of oilseeds and products, was up 6 percent from \$126 million in July-September 1967. Quantity was up 11 percent. The smaller increase in value occurred due to the lower export price for the July-September 1968 period, compared with the export price of July-September 1967. Exports of cottonseed and soybean oil were down sharply, falling 33 percent to \$24 million. Protein meal exports were up in quantity and value even though the price was lower during the first quarter of the current fiscal year. For July-September 1968, protein meal exports totaled \$59 million, 7 percent higher than the corresponding quarter last year.

A STATE OF THE PROPERTY OF THE

Tobacco exports during the first quarter of 1968/69 totaled \$154 million, up 28 percent from July-September 1967. A substantial increase in exports of flue-cured and burley tobaccos accounted for most of the change. Exports to West Germany, which in the early part of 1968 were below the year-earlier levels, increased substantially during July-September 1968, compared with purchases during the previous fiscal year's first quarter.

Fruit and vegetable exports totaled \$117 million in July-September 1968, 1 percent above a year earlier. This increase took place because of higher exports of vegetables and preparations, which rose 6 percent to \$36 million in July-September 1968. The increase occurred mainly in exports of fresh vegetables with tomatoes rising to \$4.4 million, from \$2.1 million in July-September 1967. Exports of dried beans and dried peas were slightly above the year-earlier levels. Among the preparations, dehydrated soups and vegetables were up about one-third. Increased fruit exports included canned peaches and cocktail.

U.S. Agricultural Exports to the EEC: July-September 1968

U.S. agricultural exports to the European Economic Community (EEC) totaled \$334 million during the first quarter of 1968/69, 9 percent higher than exports during the first quarter of 1967/68 (table 12).

U.S. exports of commodities subject to the EEC's variable import levies totaled \$144 million during the first quarter of 1968/69, 11 percent higher than those of the first quarter of 1967/68. This substantial increase resulted from larger exports of feed grains and wheat to the EEC countries. Feed grain exports totaled \$97 million in 1968/69, compared with \$89 million in 1967/68. However, this was 19 percent below the value of feed grain exports for July-September 1966/67. Wheat exports showed considerable improvement over exports during first quarter 1967/68. The improved grain export situation in 1968/69 reflects the somewhat lower production of feed grains and wheat in the EEC in the crop year harvested for 1968, which resulted in increased demand from the export channels. In addition, exports of feed grains from world competitors of the United States, such as Argentina, were down from the previous year. In terms of quantity, feed grain exports to the EEC were substantially higher than during July-September 1968, but lower prices lessened the gain in total value.

Other variable-levy commodities, such as wheat flour and beef and veal, also increased, compared with the July-September 1967 total. Exports of poultry and eggs totaled \$3 million in July-September 1968, 35 percent below those of the corresponding first quarter of last year. A continued expansion of the European poultry industry has reduced the demand for U.S. exports of poultry and poultry products.

Among the non-variable-levy commodities (agricultural products not subject to the LDC's variable import levies), hides and skins, oil cake and meal, tobacco, and vegetable oils increased. These increases more than offset declines in cotton, fruits and vegetables, soybeans, tallow, and variety meats, raising first quarter exports 16 percent over the year-earlier level.

^{1/} Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on September I, 1964; and beef and dairy products, on November 1, 1964. The variable-levy classification is designed to show overall changes in exports rather than to measure the impact of the variable levies. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, the import duties are bound in GATT. 4/ Variable-levy on sugar content only.

Compiled from U.S. Bureau of the Census data.

Soybean exports to the EEC, which during the latter part of 1967/68 were below those of 1966/67, showed improvement in the first quarter of 1968/69. The increased demand for feed ingredients resulted in an advance in the value of soybean exports despite lower prices. The average export price for soybeans during the first quarter of 1968/69 was \$2.77, compared with \$2.92 in the first quarter of 1967/68. Improved prices were a factor in the rising value of hide and skin exports during the first quarter of 1968/69. Exports of unmanufactured tobacco totaled \$48 million in July-September 1968, up 55 percent from the corresponding period of last year. This substantial increase resulted primarily from the larger takings by West Germany. U.S. exports of variety meats to the EEC totaled \$7.4 million in July-September 1968, the lowest level for the first quarter of the last 4 fiscal years. Increased hog slaughter during 1968 in the EEC countries contributed to the lower demand from the export market.

Import Highlights

U.S. AGRICULTURAL IMPORTS: JULY-SEPTEMBER 1968

In the first 3 months of fiscal year 1969 (year ending June 30), U.S. imports of agricultural products totaled \$1,344 million, compared with \$1,064 million during the same period in 1967/68. Imports of competitive (supplementary) commodities in July-September rose to \$800 million from \$666 million in the same 3 months last year; non-competitive (complementary) imports increased to \$544 million from \$398 million (table 13).

Increases in imports were recorded for most individual commodities with notable gains in cattle, beef, pork, hides and skins, apparel wools, certain dairy products, fruits, edible nuts, vegetable oils, cane sugar, and wines. Among complementary imports, rapid rises were evident for bananas, coffee, cocoa, rubber, tea, carpet wools, crude drugs, and essential oils.

Heavier than usual imports during July-September partly reflected hedge buying of many storable commodities by importers in anticipation of expiring longshoremen's union contracts at East Coast and Gulf ports. Temporary restraining orders were issued by a Federal court in early October after a 2-day strike; an injunction under the Taft-Hartley Law is expected to either delay the strike until December 20 or resolve differences between companies and labor groups.

Another unusual factor contributing to expanded imports during the period had to do with cheeses. U.S. imports of several types of cheeses in July-September were substantially above a year ago, apparently because of anticipated quota controls by importers and foreign suppliers. These cheese imports included processed Edam and Gouda, Emmenthaler or Swiss with eye formation, Gruyere process, and cow's milk cheeses in the unspecified "other cheese" categories (Tariff Schedules of the United States, codes 117.75 and 117.85). On September 24, 1968, the President established emergency import quotas for the above named cheeses under provisions of Section 22 of the Agricultural Adjustment Act. 1/

With the exception of across-the-board limitations on processed Edam and Gouda cheese, quotas affect only cheeses priced under 47 cents per pound, f.c.b. country of origin; cheeses priced above 47 cents are not restricted.

The quotas will remain in effect until the Tariff Commission reports, and the President acts upon the report, on its current investigation of the effect on the Department's price support program for milk on the imports of these cheeses and several other items not considered in the emergency action.

^{1/} Based on 332 classifications.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural exports statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$100-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$100-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
