FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

Price Indexes of U.S. Agricultural Trade Mixed During Year and Quarter Ending September 1967 (see page 5). While prices received by U.S. farmers, as well as the Reuter's, Dow-Jones, and world agricultural export price indexes were below year-earlier levels during both the year and quarter ending September 30, 1967, the U.S. agricultural export price index was up 4.0 percent and U.S. agricultural import prices dropped only 0.1 percent for the year. However, during the summer quarter 1967, both U.S. agricultural export and import price indexes were slightly below year-earlier levels, primarily reflecting lower prices for wheat flour, corn, soybeans, and protein meal. Another significant factor influencing the quarterly price index was an increase in the proportion of lower-priced short-staple cotton relative to total cotton exports.

The terms of U.S. agricultural trade were mixed: slightly unfavorable for the quarter, but favorable for the year ending September 1967. The continuing unfavorable trend in the terms of trade of the developing countries will be a principal agenda item at the Second United Nations Conference on Trade and Development in New Delhi next February.

* * * * *

Imports of Fruits and Vegetables Under Quarantine, Fiscal Year 1966/67 (see page 11). Agricultural Research Service, Plant Quarantine Division, reports of fruit and vegetable imports by country of origin and port of entry are included in this issue. Imports of fresh fruits, vegetables, and certain nuts are inspected at U.S. ports of entry for harmful insects and diseases from all countries except Canada.

* * * * *

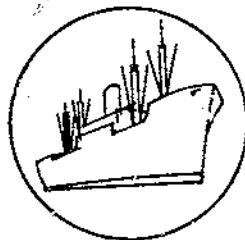

U.S. Agricultural Exports: July-November 1967 (see page 29). U.S. agricultural exports were valued at an estimated \$2,574 million in July-November 1967, 13 percent below those of a year earlier. With the exception of oilseeds and products, the value of exports of all major agricultural commodity groups in July-November 1967 were lower than those of the same period in 1966. The value of U.S. exports of animals and animal products during July-November 1967 was about 13 percent lower. The value of cotton exports dropped 13 percent although actual volume was down only 11 percent. The value of exports of grains and preparations was down 18 percent. Corn, the principal feed grain, accounted for much of the drop, while rice exports maintained a level near that of last year. Soybean exports, accounting for 63 percent of the total value of oilseed and product exports were about 2 percent above a year earlier. Protein meal exports totaled \$93 million, up 8 percent.

U.S. agricultural exports to the European Economic Community (EEC) in July-October 1967 amounted to \$438 million, about 16 percent below a year earlier. Exports of agricultural products subject to the EEC's variable-import levies declined 17 percent, while those not subject to the levies declined 15 percent.

For July-September 1967, the Netherlands received the largest share of U.S. exports to the EEC, \$117 million, 1 percent above a year earlier. Agricultural exports to West Germany declined from the corresponding quarter in 1966. Declines also occurred for U.S. agricultural exports to Italy, France, and Belgium-Luxembourg.

* * * * *

U.S. Agricultural Imports: July-October 1967 (see page 39). U.S. agricultural imports for consumption totaled \$1,441 million in July-October 1967, down 4 percent from the same months in 1966. Imports of both complementary (noncompetitive) and supplementary (partially competitive) products were down in the July-October period. Supplementary imports in July-October 1967 were \$895 million, down from \$909 million a year earlier. The decline occurred in animal products, especially dutiable cattle, dairy products, hides and skins, apparel wool and fruits. Complementary imports in July-October 1967 were \$546 million, compared with \$589 million for the like months in 1966. Most of the decline was brought about by smaller imports of bananas and carpet wool. Import values of coffee beans, crude natural rubber, and cocoa beans were also slightly below those of a year earlier. However, imports of instant coffee totaled \$6.5 million in July-October 1967, up sharply from the \$3.1 million a year earlier.

SPECIAL in this issue

PRICE INDEXES OF U.S. AGRICULTURAL TRADE MIXED DURING YEAR AND QUARTER ENDING SEPTEMBER 1967

by
Hans G. Hirsch and Ann Miller 1/

Prices received by U.S. farmers during the year ending September 1967, averaged 3.1 percent below a year earlier. For the summer quarter of 1967, the price decline was more pronounced and amounted to 5.4 percent below the summer quarter of 1966. In contrast, the prices (unit values) of 12 leading export commodities, making up nearly three-fourths of U.S. agricultural exports, averaged 4.0 percent above a year earlier during October 1966-September 1967 (table 1). During the summer quarter of 1967, these prices averaged 2.7 percent less than a year earlier; but that drop was only one-half the 5.4 percent decline in prices received by farmers.

The import price indexes of 9 leading commodities, which make up about five-eights of U.S. agricultural imports, were more stable than the export price indexes. For the year ending September 30, 1967, import prices averaged 0.1 percent below a year earlier; for the summer quarter, they averaged 1.8 percent below a year earlier. The weighted average of the export and import price indexes was 102.5 percent of a year earlier for the year and 97.7 percent for the summer quarter.

In contrast to the U.S. agricultural export price index and the U.S. agricultural trade (export and import prices combined) index for the year ending September 30, 1967, but in conformity with all other indexes discussed so far, the Reuter's, Dow-Jones, and world agricultural export price indexes portrayed in figure 1 averaged below a year earlier, both in the yearly and in the quarterly series.

These 3 indexes declined by the following percentages:

Year ending September 1967 compared with year earlier	Summer quarter 1967 compared with summer 1966
<u>-- Percent --</u>	
Reuter's	-4.7
Dow-Jones	-9.1
World agricultural export prices	-3.6

All these declines are more pronounced than those in the U.S. agricultural import price index for the year and in the U.S. agricultural export and import price indexes for the quarter.

1/ Agricultural Economist and Economic Assistant, respectively, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

Table 1.--Unit values of 21 leading U.S. agricultural trade commodities, by years and quarters, ending September 30, 1967, and 1966 1/

Commodity	Unit	Unit value, year ending			Unit value, quarter ending		
		September 30		1967 1966	September 30		1967 1966

Hams	Lb.	74.5	75.0	99.3	73.9	77.0	96.0
Average, i.e., index number 3/				99.9			98.2
All above commodities:					102.5		97.7
Average, i.e., index number 3/							

1/ Unit values were computed from the value and quantity figures published in Foreign Agricultural Trade of the United States. Cotton poundages were obtained from U.S. Bureau of the Census Reports, Supplement to EM 522. 2/ \$5 million were deducted from the export value figures from which the unit values were computed; this correction was published in the June 1967 issue of Bureau of the Census Report FT 410. 3/ The index numbers are of "Fisher's Ideal" type. 4/ Fresh, chilled or frozen. 5/ Wool unit values are derived from all wool imports.

WORLD AGRICULTURAL PRICES

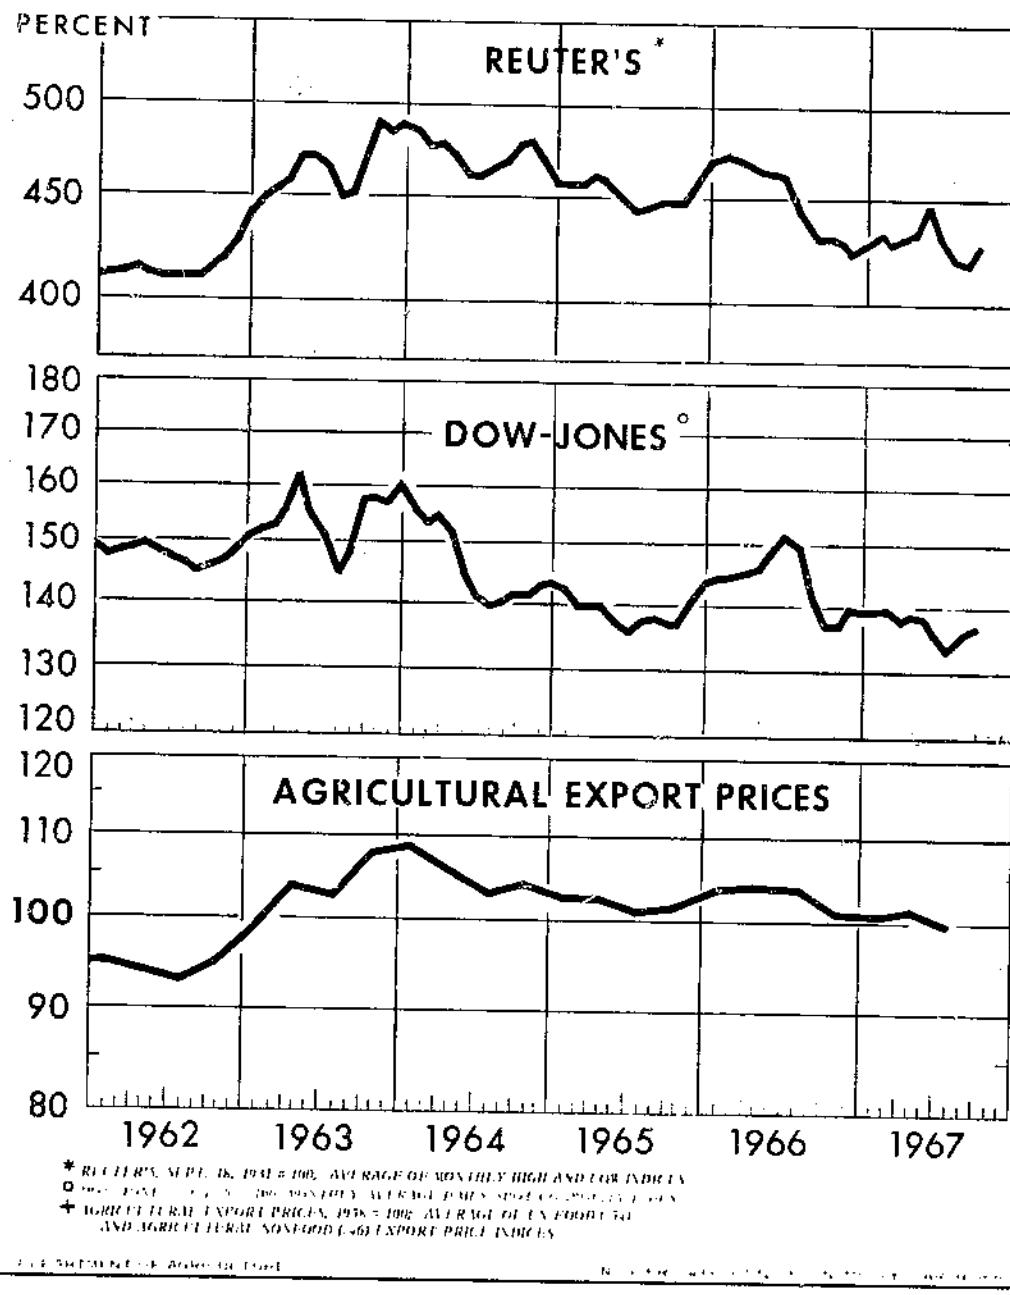

Figure 1

With price declines the apparent rule, the increase in the U.S. agricultural export price index for the year deserves special attention. Contributing to the increase in that index were higher prices for 9 of the 12 commodities examined. Export prices for sorghum grain, flue-cured tobacco, rice, and nonfat dry milk displayed sustained strength, for both the year and the quarter. The price of wheat, although down very slightly in the summer quarter, continued relatively strong and was up for the year. On the other hand, prices for wheat flour, corn, soybeans, and protein meal suffered sharp reversals: For the year, they were up substantially; for the summer quarter, they were substantially below a year earlier. Soybean oil, tallow, and cotton prices were substantially lower in both periods; summer quarter 1967 prices of these commodities were at their lowest level in at least 3 years.

The decline in the price of cotton was caused by increased foreign Free-World production 1967/68, by continued competition from synthetics, by a substantial increase in U.S. cotton exports during October 1966-June 1967 compared with a year earlier and by an increased proportion of lower-priced short-staple cotton in the total cotton export aggregate during the summer quarter. Despite the 5.2 percent decline in the cotton price in the yearly series, the value of cotton exports increased by 30.4 percent, since the quantity increased by 37.3 percent.

In the aggregate, however, the volume of exports of the 12 commodities shown in table 1 was 6.0 percent lower for the year and 9.5 percent lower for the summer quarter.

Imports of sugar, beef and veal, and cocoa beans were priced above those a year earlier, for the year as well as for the quarter. During both periods, the sugar price increased by about 5 percent, even though imports of low-priced, ex-quota sugar for re-export, livestock feed, or alcohol manufacture increased substantially. The beef and veal price increase continues a trend. The cocoa bean price has risen steadily from a long time low of 12.6 cents per pound in the fall quarter of 1965; at 23.7 cents, it is 88 percent above that low point. The remaining 6 imports examined registered a decline; notable among the lower-priced import commodities were coffee and tobacco.

The "terms of trade" index (quotient of the export and import prices) was 104.1 for the year ending September 30, 1967. However, for the summer quarter this index was 99.1, reflecting the fact that U.S. agricultural export prices declined slightly more than U.S. agricultural import prices. Though this slightly unfavorable development in the terms of U.S. agricultural trade may cause some concern, over time there must be some concern about the opposite development. Terms of trade indexes recently have tended to be favorable to U.S. agricultural trade: The yearly index series has been favorable for U.S. agricultural exports during all 9 periods for which this index has been published in Foreign Agricultural Trade of the United States (table 2). These favorable terms of U.S. agricultural trade contribute to the continuing favorable terms of all trade of all developed areas and contrast with the unfavorable terms of trade of underdeveloped or developing areas. This contrast is reflected in the United Nations terms of trade index, which has been consistently above its 1958 base for developed areas and below that base for underdeveloped or developing areas (figure 2). These 2 UN index number series pertain to all trade (not to agricultural trade alone) of all nations for which data are available.

Favorable terms of trade for the United States and other developed areas would tend to mean unfavorable terms of trade to certain trading partners ^{2/}. To the extent to which this means the underdeveloped or developing areas earn less from their exports and must pay more for their imports, they may have to reduce the amount of their purchases or go into debt to finance their purchases. Going into debt for purchases

^{2/} Considering the multilateral nature of trade, this is a simplifying statement. For instance, the countries to which we sell tobacco and rice more dearly may not be the countries from which we buy coffee and rubber more cheaply.

Table 2.--Terms of trade indexes of principal U.S. agricultural exports and imports, by years and by quarters/ September 1965-September 1967

Period ending	Yearly	Quarterly
-- Percent --		
September 1965	106.9	112.3
December 1965	109.3	103.2
March 1966	108.2	101.6
June 1966	103.2	99.1
September 1966	100.3	99.4
December 1966	101.7	107.6
March 1967	102.3	103.7
June 1967	104.1	104.8
September 1967	104.1	99.1

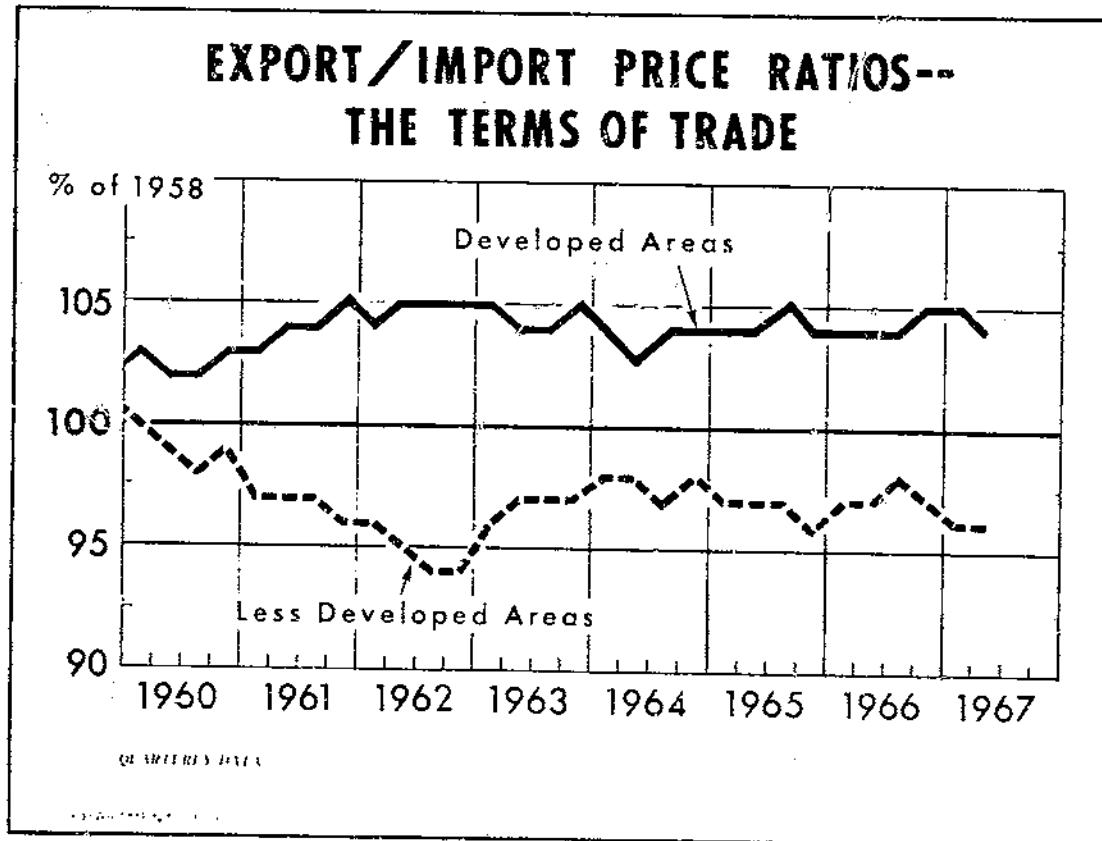

Figure 2

of U.S.) exports may mean that the United States must extend credit to them. If they cannot qualify for ordinary commercial financing (cash or short-term commercial credit), the United States may increase the portion of their agricultural imports which they obtain under the Food for Peace Program. Thus, so-called favorable terms of trade may not be an unmixed blessing to the United States.

The trade-price problem facing developing countries is further illustrated in table 3. Here, agricultural export price indexes of developed countries are compared with those of developing countries. The gap between the 2 series has been widening in recent years.

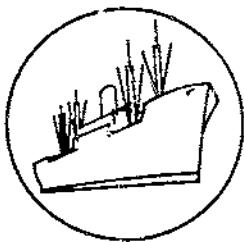

The unfavorable terms of trade which developing countries have suffered are a major, world-wide concern that will be a principal agenda item of the Second United Nations Conference on Trade and Development (UNCTAD) in New Delhi, India, in February 1968.

Table 3.--Agricultural export price indexes, developed and developing areas of the world, 1961-1966 1/

Year	Developed areas	Developing areas
-- Percent of 1958 --		
1961	101	92
1962	100	89
1963	106	100
1964	110	101
1965	109	94
1966	111	94
1967 2/.....	108	92

1/ Weighted averages of United Nations export price indexes for food and agricultural non-food commodities; Monthly Bulletin of Statistics, United Nations, September 1967. Food was weighted .52 for developed areas and .56 for developing areas; agricultural non-food commodities were weighted .48 for developed areas and .44 for developing areas.

2/ First 3 quarters.

SPECIAL in this issue

IMPORTS OF FRUITS AND VEGETABLES UNDER QUARANTINE, FISCAL YEAR 1966/67

U.S. fruit and vegetable imports consist mainly of products not grown domestically. Although some imported fruits and vegetables are also grown in the United States, domestic production is not sufficient to meet requirements, particularly in winter and early spring. Fresh fruits, vegetables, and certain nuts entering the United States from all sources except Canada are subject to plant quarantines and restrictive orders, and are examined by inspectors of the Plant Quarantine Division, Agricultural Research Service, for evidence of harmful insects and diseases.

Tables 4 and 5 were compiled from reports of Plant Quarantine Division inspectors at 47 ports of entry, including Guam, Puerto Rico, and the U.S. Virgin Islands. These data will occasionally differ from U.S. Bureau of the Census reports for 3 main reasons: commodity classifications are not identical, imports from Canada are not included, and the Census Bureau does not report separately shipments of less than \$100.

These tables have been published since 1924. For the first 5 years, they were included in annual reports of the Federal Horticultural Board; from 1929 to 1932, they were published in the annual reports of the Plant Quarantine and Control Administration; from 1932 to 1934, they appeared in annual reports of the Bureau of Plant Quarantine; and in 1935 and 1936, they were published in the annual report of the Bureau of Entomology and Plant Quarantine. Tables from 1937 to 1952 were published by the Office of Foreign Agricultural Relations; from 1953 to 1960, by the Foreign Agricultural Service; and since 1960, by the Economic Research Service.

Fruits

U.S. inspections of fresh fruits in 1966/67 totaled more than 4 billion pounds. Bananas were again the major fruit imported, accounting for almost 3.7 billion pounds. The leading banana suppliers were Ecuador, Panama, and Costa Rica. Nicaragua, Guatemala, and Mexico followed. Plantains added another 62 million pounds, principally from Venezuela, Honduras, Costa Rica, and Guatemala.

Melon inspections were 278 million pounds, composed chiefly of cantaloupes (51 percent), and watermelons (38 percent). Mexico was the major supplier of cantaloupes and watermelons, while Chile and Spain shipped a large proportion of the other types. Melon imports enter the United States mainly through Nogales, New York, and Laredo.

Strawberry inspections in 1966/67 fell to 99 million pounds from 107 million pounds a year earlier, due to a reduction in frozen strawberries. Inspections of frozen strawberries fell to about 80 million pounds from 97 million pounds in 1965/66. Mexico is by far the largest supplier of fresh and frozen strawberries; Poland is a small supplier, but becomes more important each year, especially for frozen berries. Laredo is the major port of entry for frozen strawberries and second largest for fresh strawberries, behind Hidalgo.

Inspections of fresh oranges fell 9 million pounds from a year earlier with smaller imports from Mexico. Fresh oranges entered the United States mainly through Hidalgo and Seattle. Imports of fresh oranges from Japan through Seattle climbed sharply, but those from Israel to New York dropped to zero from nearly 9 million pounds in 1965/66.

Fresh pineapple inspections, primarily from Mexico, fell almost 17 million pounds from a year ago. Entry points along the Texas-Mexico border experienced the most activity in pineapples, led by Brownsville and Hidalgo.

Vegetables

Nearly 750 million pounds of vegetables were reported by Plant Quarantine Division inspectors to have entered the United States in 1966/67. More than 61 percent of this volume consisted of fresh tomatoes, largely from Mexico, which entered chiefly through Nogales. Mexico was the principal supplier of most other fresh vegetables (including artichokes, asparagus, snap beans, beets, broccoli, brussels sprouts, cabbage, carrots, cauliflower, chayotes, corn, cucumbers, eggplant, garlic, mustard greens, okra, onions, peas, peppers, radishes, spinach, squash, and turnips). Entry points for these imports ranged from Texas to California; Nogales, San Ysidro (Los Angeles), Calexico, Laredo, and Brownsville were the major points.

Inspections of edible rootstocks totaled 12 million pounds in 1966/67. These consisted of arrowhead, cassava, dasheens, and yam bean root. Of this, dasheens made up 48 percent, and cassava 47 percent. The Dominican Republic supplied the bulk of these 2 products; the principal port of entry was New York.

Nuts

Inspections of certain types of nuts, including chestnuts, coconuts, litchi nuts, and water chestnuts, amounted to nearly 13 million pounds in 1966/67. Chestnuts accounted for 12 million pounds of the total. Italy supplied nearly all the chestnuts; New York was by far the chief port of entry.

Export Highlights

U.S. AGRICULTURAL EXPORTS: JULY-NOVEMBER 1967

U.S. agricultural exports during July-November 1967 are estimated at \$2,574 million, 13 percent below last year's \$2,945 million for the same period (table 6). This was based on preliminary exports worth \$1,965 million for July-October 1967 and an estimated \$609 million for November.

November's exports were estimated to be 13 percent below those of November 1966. Exports of most major agricultural commodities in November 1967 are expected to be lower than those of November 1966. The value of animals and animal product exports was lower because of sharply reduced exports of hides and skins, and less substantial reductions for animal fats and oils, meat products, and poultry products. Cotton exports were estimated below the level of the corresponding month of last year. Exports of grains and preparations declined 13 percent, due principally to smaller shipments of corn and sorghums. The decline in the price of soybeans accounted for the lower export value of oilseeds and products. The quantity of soybeans, however, was estimated to be only slightly below those in November 1966. Tobacco exports for November 1967 were estimated somewhat lower than those of November 1966.

U.S. exports of animals and animal products during July-November 1967 are estimated at \$258 million, about 13 percent below a year earlier. Most of the commodities in this group declined. Exports of animal fats, oils, and greases were valued at an estimated \$69 million in July-November 1967, about 12 percent below their value a year earlier; this decline resulted from lower prices, since the volume of exports was up 10 percent. Exports of meat and meat products were down 13 percent from July-November 1966. Smaller exports of pork and variety meats contributed to this decline, although U.S. pork production was up. Hog production has also increased in some of the West European countries during 1967. The value of hide and skin exports was down sharply in July-November 1967, falling nearly one-third below a year earlier. Although the quantity exported in July-November was down 12 percent, unit value was even lower, resulting in a sharp decline in the overall value of hide and skin exports.

Exports of cotton during the July-November 1967 period were valued at an estimated \$167 million, 13 percent below the value of cotton exports in the corresponding period last year. However, volume was down 11 percent. The more pronounced reduction in the export value resulted from the substantial volume of short-staple cotton taken from storage for export in lieu of the higher valued long-staple cotton.

The value of exports of grains and preparations in July-November 1967 was estimated at \$1,089 million, 18 percent below that of last year's corresponding months. All of the grains, except rice, showed a decline during this period. Exports of wheat and wheat flour, valued at \$548 million, were 18 percent below those of July-November 1966.

1/ November estimated.

Since feed grains account for a large share of total U.S. agricultural exports to the EEC, a large decrease in U.S. feed grain exports to the EEC would also result in a substantial decrease in total agricultural exports. In July-October 1967, for instance, U.S. feed grain exports to the EEC were 22 percent below those of the same months in 1966. As a result, total variable-levy exports were down substantially in 1967.

However, the decline in variable-levy commodities was not confined to feed grains. Exports of wheat and wheat flour, meat, lard, dairy products, and poultry and eggs decreased. Broiler and fryer exports were off sharply, accounting for the overall decline in poultry. Exports of turkeys were 13 percent below 1966, and 38 percent lower than the value of turkey exports in 1965.

U.S. exports of commodities not subject to the EEC's variable-import levies totaled \$259 million in July-October 1967. Rather substantial declines occurred in exports of cotton, fruits and vegetables, hides and skins, tallow, tobacco, variety meats, and vegetable oils.

Cotton exports to the EEC in July-October 1967 totaled \$17 million and were 28 percent below July-October 1966, and about the same as the corresponding months of 1965. Although foreign Free-World cotton production is expected to increase in the coming year, consumption is also expected to increase, possibly nearly matching the increase in production. Most of the increased consumption will occur in India, Japan, and the producing countries, with the Free-World importing countries showing little change in imports for the current year from last year's level. With the increased supplies available for export in Free-World producing countries, U.S. cotton exports to EEC countries in 1966/67 may fall short of last year's level, but still maintain a level near that of 1965/66.

Exports of fruits and vegetables to the EEC were down 25 percent to \$29 million in July-October 1967. Much of the reduction in U.S. fruit exports was due to smaller supplies. The reduction in processed noncitrus fruits is pronounced, with higher prices. This situation is likely to continue through most of the 1967/68 marketing year. For citrus fruits, 1967/68 supplies are expected to be down sharply from last year's record availability. Supplies of fresh vegetables are expected to be about the same as last year, with perhaps some increase in processed vegetables. With these prospects, exports of fruits and vegetables to the EEC will probably continue to run below last year's level.

The value of exports of U.S. tobacco to the EEC, at \$43 million in July-October 1967, fell nearly one-third below a year earlier. However, the volume for the year may continue higher than recent years except for 1966/67. Although a continuation of the sanctions against Rhodesian tobacco is expected to sustain demand for U.S. tobacco, other factors may influence the EEC market. Somewhat larger supplies of flue-cured tobacco are available from several competing countries, and there is some uncertainty about developments that may be formulated in the Common Agricultural Policy of the EEC regarding tobacco imports. As a result of the "Kennedy Round" negotiations, the EEC has scheduled a multi-stage reduction from 28 percent ad valorem (maximum charge 17.2 cents a pound, minimum 13.2 cents) to 23 percent (maximum 15 cents, minimum 12.7 cents) in its main duty on unmanufactured tobacco. Most U.S. tobacco imported into the EEC has been subject to the maximum duty, whereas most competitive tobaccos from non-EEC countries have been subject to the minimum. ^{1/} As these new EEC duties come into effect, demand for U.S. tobacco is expected to rise. However, the first stage does not become effective until July 1, 1968.

1/ See Tobacco Situation, TS-121, U.S. Dept. Agr., Econ. Res. Serv., September 29, 1957, page 29.

Corn -- the principal feed grain -- totaled \$275 million and was about 18 percent below the \$335 million in July-November 1966. Sorghum grains were down about one-third from the \$158 million in 1966. The value of rice exports was slightly higher than last year. For July-November 1967, it was estimated at \$96 million, 4 percent above that of July-November 1966.

U.S. exports of oilseeds and products totaled \$505 million in July-November 1967, 1 percent higher than the corresponding period in 1966. Soybeans -- the principal commodity among the oilseeds and products -- accounted for 63 percent of the total oilseeds and products exported. They were up \$6 million, 2 percent higher than the corresponding period last year. Exports of flaxseed were about one-third below those of July-November 1966, due principally to short supplies and high domestic prices. Exports of soybean and cottonseed oil in July-November 1967 were running close to the level of exports in July-November 1966. Exports of protein meal totaled \$93 million -- up 8 percent from July-November 1966 as a result of larger soybean meal exports. The total soybean meal supply for the current fiscal year is higher, and somewhat larger quantities will be available for export. Export demand for soybean meal is strong, particularly in Western Europe.

U.S. fruit and vegetable exports in July-November 1967 totaled \$207 million, about 5 percent below that of July-November 1966. Exports of fruits and preparations were down about 1 percent, declining to \$146 million. The substantial decline in exports of canned (prepared or preserved) fruits contributed to the bulk of this decline, although dried prunes and raisins were also down for this period. Fresh fruit exports were 14 percent higher in July-October (the latest period for which preliminary data are available) encouraged by larger exports of oranges, tangerines, and clementines. Grape exports also increased about 6 percent in July-October 1967 from a year earlier. Among the exports of vegetables and preparations, canned vegetables declined 25 percent to \$7.8 million primarily as a result of lower exports of canned asparagus. In addition, dried beans and peas were down 22 percent, falling to \$12.9 million. Partially offsetting these declines were increased exports of fresh vegetables, notably potatoes.

The quantity of tobacco exports in July-November 1967 was estimated at 240 million pounds, 20 percent below July-November 1966. The bulk of the decline resulted from a substantial drop in exports of flue-cured varieties (which for the July-October period fell from 186 million pounds to 137 million pounds). Burley tobacco dropped about 1.7 million pounds to 14 million in July-October 1967. However, slightly higher prices in the current fiscal year have resulted in the value of tobacco exports declining only 20 percent from July-November 1966.

Agricultural Exports to the European Economic Community
July-October 1967

For the month of October 1967, exports to the EEC totaled \$131 million. Exports in October 1965 and 1966 were higher (table 7). However, variable-levy commodities exported in October 1967 were about the same as those of October 1966. A 57 percent increase in the value of wheat exports to \$12 million offset the reductions in exports of feed grains, poultry and eggs, and rice. Exports of products not subject to the EEC's variable levies declined, dropping 10 percent to \$82 million in October 1967. Cotton, fruits and vegetables, and variety meat exports led the decline.

For July-October 1967, U.S. exports to the EEC totaled \$438 million, down 16 percent from the like period in 1966. For these first 4 months of 1967/68, commodities subject to the variable-import levies fell to \$179 million, a decline of 17 percent from July-October 1966. Non-variable-levy commodities declined 15 percent from a year earlier, reaching \$259 million.

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on September 1, 1964; and beef and dairy products, on November 1, 1964. The variable levy classification is designed to show overall changes in exports rather than to measure the impact of the variable levies.

2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

3/ Although canned poultry, tallow, and variety meats are subject to variable levies, the import duties are bound in GATT.

4/ Less than \$500.

Compiled from U.S. Bureau of the Census data.

Among the variable-levy commodities, feed grains continued to decline, reaching a low of \$119 million. Feed grain harvests in the principal grain-producing countries of the EEC were good in 1966/67, resulting in abundant supplies. Barley and oat production in France in the current crop year is anticipated to be near last year's level, resulting in continued large supplies. In the 1966/67 crop year, France's exports of corn were about 2 million metric tons. However, in the current crop year with production about the same as in 1967 and with anticipation of increased domestic utilization, a moderate rebuilding of stocks, and smaller import expectation, exports will probably be smaller than those of 1966/67. West Germany and Spain were important markets for French corn in 1966/67. In Italy, 1966/67 barley and oat production was about 10 percent higher than the previous year. West German barley and oat production was also higher. In the EEC as a whole, barley and oat production was up about 5 percent in 1966/67.

Corn imports by the EEC countries more than doubled in the 6-year period from 1961 through 1966 (table 8). The U.S. share has grown at a more rapid pace than total imports, nearly tripling. However, corn imports from other countries, both EEC and non-EEC, have expanded sharply.

Competition for the EEC corn market appears to be holding, and the United States faces another year of meeting more than ample supplies in that market. Argentine farmers, large contenders for the EEC market in fiscal 1967, indicate larger corn planting for the coming year and expansion in the use of hybrid seed. Production of 1967 crops in Eastern Europe and South Africa was also good, resulting in further quantities available in the European market.

Table 8.--Corn imports by the EEC, 1961-66

1/ 1963 = 100 for Brazil.

Source: United Nations.

Four countries provided about 50 percent of the tobacco imported by the EEC prior to 1967 (table 9). They were the United States, Rhodesia, Greece, and Turkey. The United States accounted for about one-fourth of the total, and Rhodesia, Greece, and Turkey together provided about one-fourth. While UN data on tobacco imports by the EEC from all origins are not available for years later than 1966, they show the relative position of these 4 countries in the EEC market prior to the Rhodesian political situation. From 1961 to 1965, EEC imports from Rhodesia expanded sharply, rising 74 percent compared with a rise of 27 percent in imports from the United States, and an overall increase in EEC tobacco imports of 29 percent. In 1966, U.S. shipments of tobacco continued to increase, while the index of Rhodesian tobacco shipments declined 49 percentage points from 174 in 1964 to 125 in 1966. The political crisis of Rhodesia with its unilateral declaration of independence in late 1965, and a reduction in 1967 production, resulted in declining 1966 imports of tobacco from Rhodesia to a 5-year low of 21 thousand metric tons. The UN sanctions against Rhodesian tobacco became effective near the end of 1966. As a result, U.S. tobacco exports jumped during the January-June period of 1967, rising three-fourths above January-June 1965 and 1966 (table 10).

July-September Exports to the EEC, by Country

According to official data of the U.S. Department of Commerce, the Netherlands received the largest share of U.S. agricultural exports during July-September 1967. However, a portion of the shipments to the Netherlands is transshipped to other countries, principally in Europe, although there is presently no way to extract the value of agricultural products transshipped through the Netherlands.

July-September exports to the Netherlands totaled \$117 million, 1 percent above the \$115 million of a year earlier (table 11). Exports of variable-levy commodities (agricultural products subject to the EEC's variable-import levies) declined 4 percent to \$63 million. Exports of wheat and feed grains accounted for the decrease.

Agricultural products not subject to the EEC's variable-import levies exported to the Netherlands rose to \$54 million in July-September 1967, 8 percent above a year earlier. A sharp increase in soybeans, oil cake and meal, and tobacco contributed to this increase. Soybeans more than doubled, reaching \$18 million, while oil cake and meal exports rose 64 percent to \$8 million. Tobacco exports rose 22 percent, reaching \$7 million.

West Germany, which received the largest share of first quarter exports to the EEC in 1966 (34 percent) accounted for one-fourth in July-September 1967. This decline resulted from a substantial drop in exports of both variable and non-variable-levy commodities, which in total, fell to \$78 million from \$130 million in July-September 1966.

Feed grains, wheat, and poultry products showed the largest drop among the variable-levy commodities. Feed grains were nearly \$13 million in July-September 1967, 42 percent below those of a year earlier. Wheat exports dropped 29 percent to less than \$5 million. Exports of poultry products fell 30 percent to \$3.3 million, primarily as a result of the sharp decline in broilers and fryers. The substantial rise in poultry production in the EEC and other Western European countries has sharply reduced the demand for U.S. broilers and fryers. Rice exports, however, were up 57 percent from a year earlier, totaling over \$2 million in July-September 1967.

Among the non-variable-levy commodities exported to West Germany, soybeans and vegetable oils were the only commodities to show an increase in July-September 1967 from a year earlier. Cotton, fruits and vegetables, hides and skins, oil cake and meal, tallow, tobacco, and variety meats declined. The total value of non-variable-levy products exported to West Germany was down 42 percent to \$55 million from \$94 million in July-September 1966.

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on September 1, 1964; and beef and dairy products, on November 1, 1964. The variable-levy classification is designed to show overall changes in exports rather than to measure the impact of the variable levies.

2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

3/ Although canned poultry, tallow, and variety meats are subject to variable levies, the import duties are bound in GATT.

4/ Less than \$500.

Compiled from U.S. Bureau of the Census data.

U.S. agricultural exports to Italy totaled \$50 million for July-September 1967, down 7 percent from a year earlier. Exports of products subject to the variable-import levies accounted for the decrease, dropping 13 percent to \$26 million. Exports of non-variable-levy commodities, at \$23 million, remained about the same.

As with the other EEC countries, U.S. exports of feed grains and wheat declined, although the decline in feed grain exports was less significant. Wheat exports dropped 54 percent to \$1.8 million. On the other hand, U.S. exports of poultry products were higher in July-September 1967 than a year earlier. This increase occurred from larger exports of turkeys, eggs, and stewing chickens.

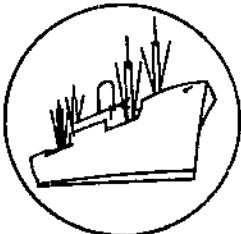

Soybean and tobacco exports to Italy advanced sharply. Soybean exports rose from \$1.1 million to \$4.5 million in July-September 1967, and tobacco exports rose to \$4.4 million from \$0.4 million in July-September 1966. These increases were more than enough to offset the declines in exports of cotton, fruits and vegetables, hides and skins, and oil cake and meal.

The value of feed grain exports to France declined to an insignificant amount in July-September 1967, totaling \$30 thousand, compared to \$1.5 million a year earlier. Wheat exports were down slightly, but made up 78 percent of variable-levy exports to France. Live poultry, valued at \$302 thousand, accounted for almost all of the poultry product exports. In total, variable-levy exports to France declined 17 percent to \$6.6 million from \$7.9 million in July-September 1966.

The decline in exports of non-variable-levy commodities to France was less, dropping 3 percent to \$25 million in July-September 1967. Oil cake and meal, soybeans, tallow, and vegetable oils increased to \$11.5 million, 39 percent above a year earlier. However, this gain was more than offset by declines in cotton, hides and skins, tobacco, and variety meats. Total agricultural exports to France were \$32 million in July-September 1967, 7 percent below a year earlier.

U.S. agricultural exports to Belgium-Luxembourg totaled \$31 million in July-September 1967, 37 percent below those of a year earlier. Variable-levy commodities were down 60 percent to \$11 million. Declining exports of feed grains were the major contributor; they dropped \$16 million to \$8 million in July-September 1967, from the same months of 1966. Lard exports fell from \$218 thousand a year earlier to nil in July-September 1967. Hog production in Belgium increased substantially in 1967. Belgium's hog numbers on September 1, 1967, totaled 2.9 million head; 27 percent above that level on September 1, 1966.

Exports of non-variable-levy commodities to Belgium-Luxembourg declined to \$20 million in July-September 1967, 9 percent below a year earlier. Shipments of oil cake and meal were up sharply to \$6.5 million in July-September 1967. Other commodities except variety meats declined. Tobacco exports dropped to \$2.1 million from \$4.0 million, accounting for the largest single decline. Exports of cotton, fruits and vegetables, soybeans, and tallow also decreased.

Import Highlights

U.S. AGRICULTURAL IMPORTS: JULY-OCTOBER 1967

U.S. agricultural imports for consumption in July-October 1967 were valued at \$1,441 million, down 4 percent from the \$1,498 million in 1966 (table 12). Imports of supplementary (partially competitive) products and complementary (noncompetitive) products both declined.

Imports of nonagricultural products during July-September 1967 were valued at \$7,337 million, compared with \$7,368 million for the same months in 1966.

The value of supplementary imports in July-October 1967 declined \$14 million from a year earlier. The decline occurred in animal products (especially dutiable cattle, dairy products, hides and skins, and apparel wool) as well as sugar and fruits and preparations. U.S. imports of dutiable cattle in July-October 1967 were 36 percent below a year earlier (table 13). Imports from Canada were 95,000 head in July-October 1967, compared with 178,000 in 1966, and those from Mexico were 48,000 head in 1967, compared with 44,000 in 1966. Total cattle numbers in Canada have been down somewhat in both fiscal year 1966 and 1967 from previous years. At present, Canada is rebuilding its domestic herd rather than exporting to the United States. In addition, the price situation is favorable for more slaughter in Canada.

U.S. imports of meats and products increased slightly to \$247 million in July-October 1967 from \$224 million in the same months in 1966. Imports of beef and veal rose to 403 million pounds in 1967 from 357 million in 1966. Beef and veal from Australia accounted for 31 percent of total U.S. imports in July-October 1967. Pork imports were 94 million pounds in July-October 1967, up slightly from those same months in 1966.

Imports of dairy products fell sharply because of new quotas under Section 22 of the Agricultural Adjustment Act for some dairy products not previously covered. Dairy product imports in July-October 1967 were \$13 million below the same period in 1966. Imports of apparel wool were down \$8 million from the same period a year earlier.

Complementary imports totaled \$546 million in July-October 1967, down \$43 million or 7 percent for the same months in 1966. The decline was brought about by smaller imports of bananas and carpet wool. Imports of bananas totaled 1,120 million pounds in July-October 1967, compared with 1,271 million a year earlier. The decline resulted from smaller imports from Latin America. U.S. imports of carpet wool were down \$14 million from a year earlier, reflecting increased competition from synthetic fibers. Import values of coffee, natural rubber, and cocoa beans were also slightly below those of the previous year. However, the volume of coffee imports increased slightly to 963 million pounds in July-October 1967 from 945 million for the like months in 1966.

Other	64	65	+2	
Total complementary	<u>589</u>	<u>546</u>	-7	
Total agricultural imports	1,498	1,441	-4	

Imports of instant coffee were \$6.5 million in July-October 1967, up sharply from the \$3.1 million a year earlier. Most of the increase in imports of instant coffee has come from Brazil, which is processing much of its lower grade coffee into instant coffee for export. Imports of crude natural rubber totaled 304 million pounds in July-October 1967, up slightly from the 289 million in 1966. However, value declined slightly, reflecting lower prices. The United States imports natural rubber from Indonesia, Malaya, and Liberia.

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all other, about 98 percent of which consist of rubber, coffee raw silk, cacao beans, wool for carpets, bananas, tea and vegetable fibers. 2/ Based on 414 classifications. 3/ Preliminary.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural exports statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$100-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$100-\$1,999 are sampled.

IMPORTS Imports for consumption consist of commodities released from U.S. Customs custody upon arrival, or entered into bonded manufacturing warehouse, or withdrawn from bonded storage warehouse for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
