FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

Soybeans -- Top Dollar Export Earner (see page 6). Steady growth in production of U.S. soybeans and strong foreign demand have combined to make soybeans the leading U.S. crop as a dollar earner in foreign trade. In 1967/68, the value of U.S. soybean and soybean product exports exceeded \$1.1 billion -- nearly one-fifth the value of total U.S. agricultural exports. The United States has supplied about 90 percent of world soybean exports in recent years, in contrast to only about 2 percent back in 1934-38. The United States exported more than a fourth of its total soybean production during each of the past several years. Japan, Canada, the Netherlands, and West Germany have been taking about three-fourths of all U.S. shipments of soybeans. Market development has been a major factor both in growth of soybean exports and in the increased U.S. share of world soybean trade.

* * * * *

U.S. Foreign Trade in Nursery and Greenhouse Stock (see page 17). From 1961/62 to 1967/68, U.S. imports of nursery and greenhouse stock increased 8 percent -- up to \$15.3 million from \$14.2 million. The Netherlands supplied about five-sixths of U.S. imports of bulbs, roots, and corms which accounted for the bulk of nursery stock purchases. Import value of cut flowers gained 400 percent in 6 years. During the same period, U.S. exports gained 68 percent -- up to \$10.3 million from \$6.1 million. Canada was the leading market, followed by Mexico and the Netherlands. Cut flowers made up the principal category of nursery stock exports.

* * * * *

U.S. Agricultural Export Price Index Down, Import Price Index Unchanged in 1968 (see page 21). The U.S. agricultural export price index for 1968 was 4.6 percent below 1967, while the import price index did not change. The fourth quarter 1968 export index was 1.6 percent below a year earlier, while the import index was up 3.2 percent. All these indexes reflected the price movements of most individual commodities. The decline in the U.S. agricultural export price indexes is unique. Other comparable price indexes were higher because they include import commodities or livestock and products -- both commodity groups with more price strength than the leading U.S. agricultural export items.

* * * * *

Selected Price Series of International Significance (see page 25). The Liverpool price for Memphis Territory strict middling cotton, 1-1/16 inches, continued to drop for the fifth consecutive month, averaging 29.47 cents a pound in January. Changes in individual grain quotations tended to be small in January, but the relationship between wheat prices of various origins, c.i.f. U.K., changed more appreciably.

* * * * *

U.S. Agricultural Exports: July-January 1968/69 (see page 29). U.S. agricultural exports in July-January 1968/69 totaled \$3,287 million, 12 percent below the same period a year earlier. This decline reflected the sharp reduction in U.S. agricultural exports in January as a result of the longshoremen's strike. Among the major commodity groups, exports of animals and animal products, vegetables, and tobacco increased. However, exports of cotton, fruits and preparations, grains and preparations, and oilseeds and products were down substantially.

Exports of U.S. farm products to the European Economic Community (EEC) in July-January 1968/69 totaled \$754 million, down 15 percent from those of a year earlier. Few shipments were made to the EEC in January, except for limited amounts of grains, fruits and vegetables, soybeans, and animal products (such as tallow, meats and meat products, and hides and skins).

As expected, U.S. agricultural exports to the EEC in 1968 were lower than in 1967. Twelve-month data now available show a decline of 6 percent. Feed grain exports were \$37 million lower. The value of exports of soybeans, cotton, tobacco, and fruits and fruit preparations also declined.

* * * * *

U.S. Agricultural Imports: July-January 1968/69 (see page 36). During the first 7 months of 1968/69, U.S. agricultural imports climbed 6 percent above levels a year earlier to \$2,789 million. Competitive imports rose by \$122 million, and noncompetitive products were up \$44 million. Most commodity groups indicated gains, with notable expansion in cattle, meats, dairy products, fruits, nuts, oilbearing materials, sugar, and wines. The Atlantic and Gulf Coast longshoremen's strike cut January imports back to \$209 million from \$421 million in December, but the rapid pace of overseas purchases last fall held cumulative totals above similar months a year earlier. U.S. imports of meats by country of origin for calendar year 1968 are provided in a special table.

Table 1.--U.S. exports: Value of total and agricultural exports, including specified Government-financed programs ^{1/} and commercial (dollar) sales by selected commodities and commodity groups, averages 1955-59 and 1960-64; annual 1965-68 and July-January 1968/69

^{1/} Includes programs authorized under Public Law 480 (including all barter), and Mutual Security (AID) programs 1955-64. Since 1963, the emphasis in the barter program has been on overseas procurement for U.S. agencies, which has a favorable effect on the U.S. balance of payments and is not primarily authorized by P.L. 480. Barter shipments are being reclassified from 1963 to include in "Programs" shipments under contracts for strategic materials and in "Commercial" shipments under contracts for procurement for U.S. agencies. For 1964-68, pending completion of the reclassification, barter exports are shown separately. For July-September 1967 and 1968, barter exports are shown under the new classification, i.e., shipments for strategic materials under "Programs" and separately shipments for U.S. agency procurement under "Commercial." ^{2/} Includes donations through voluntary relief agencies not separately reported by the Bureau of the Census. ^{3/} Less than \$500,000. ^{4/} Preliminary data (unrevised). ^{5/} Exports under Mutual Security (AID) programs were omitted from "Program" totals for July-September 1968 because of a delay in the preparation of the report for these programs.

SPECIAL in this issue

SOYBEANS, ⁴/₄ TOP DOLLAR EXPORT EARNER

by
I.E. Lemon ¹/₁

U.S. exports of soybeans and soybean products have shown fantastic growth in recent years. During the past fiscal year, the category of oilseeds and oilseed products -- mostly soybeans and their products -- continued as the Nation's top dollar earner for agricultural exports.

Back in fiscal year 1956 (year ending June 30), the value of U.S. soybean exports (including oil and meal) was \$263 million -- less than one-twelfth the value of total agricultural exports. In 1967/68, U.S. soybean and soybean product exports reached \$1.1 billion -- nearly one-fifth the value of total U.S. agricultural exports (table 2).

In the interim, U.S. soybean output went up sharply, and the booming world economies -- notably in Western Europe and Japan -- created strong demand for the high-protein foods and feeds we could supply in volume. Growing prosperity does not fully account for the tremendous gains in U.S. soybean exports. Export market development has also been a major factor, as reflected both in dollar sale export figures and in the U.S. share of world soybean trade. U.S. exports of soybeans and soybean meal have been virtually all dollar sales. In 1967/68, however, the relatively large proportion of soybean oil marketed under Government programs brought the total for U.S. exports of soybeans and soybean products to about 90 percent dollar sales and 10 percent under Government programs. The U.S. share of world soybean exports escalated from less than 70 percent of the total in 1953-57 to over 90 percent in 1963-65.

The U.S. Government and cooperating agencies, the American Soybean Association, and the Soybean Council of America -- representing U.S. producers and the fats and oils trade -- have helped keep soybean exports expanding by conducting an effective program of promotional activities.

Commercial production of soybeans in the United States began near the end of the first World War. The acreage harvested for beans has grown steadily -- from only 448,000 acres in the 1924 crop year to nearly 41 million in 1968. Per acre yields have jumped from 11.0 to 26.4 bushels over the same period of time. Thus, with both acreage harvested and yield contributing significantly, production of soybeans in the United States has increased from less than 5 million bushels in 1924 to 1,080 million bushels in 1968.

Soybean exports in fiscal year 1968 reached a record 265 million bushels of beans, valued at \$751 million, in addition to the 1,011 million pounds of soybean oil, valued at \$117

^{1/} Preliminary.

million, and the 2.9 million tons of soybean meal worth \$241 million. Thus, the value of U.S. soybeans and soybean products exported during 1967/68 was more than \$1.1 billion (tables 2 and 3 and fig. 1)

Exports of U.S. soybeans since World War II have expanded rapidly, as the percentage of total U.S. soybean production sold in foreign markets climbed from less than 2 percent in 1947/48 to nearly 30 percent in 1967/68. Soybeans and soybean meal moved primarily into the dollar export markets of Europe, Canada, and Japan. An excess of soybean oil over domestic and dollar export market needs was exported under the Food for Freedom program.

Expanding livestock production in Europe and Japan in recent years increased the demand for poultry and hog feeds and thus, the demand for U.S. soybean meal. Higher prices for feed grains, particularly in the EEC, have encouraged the feeding of more protein supplement, which has been supplied largely by the United States in the form of soybean meal. Meanwhile, these high grain prices have placed U.S. soybean meal in a favorable competitive position and thereby have contributed to the huge gains in U.S. soybean meal exports.

In the 7 years from 1961/62 through 1967/68, inclusive, soybeans and products, valued at more than \$6.2 billion, moved from the United States into foreign markets, thus adding importantly to the U.S. balance of payments. In 1967/68, soybeans and products contributed about 18 percent of total U.S. agricultural export trade in contrast to 1.3 percent in 1947/48 (fig. 2).

The United States supplied more than 90 percent of world soybean exports in 1963-65, versus only 2.3 percent in 1934-38 (table 4). The United States has been exporting more than a fourth of its total soybean production during each of the past several years.

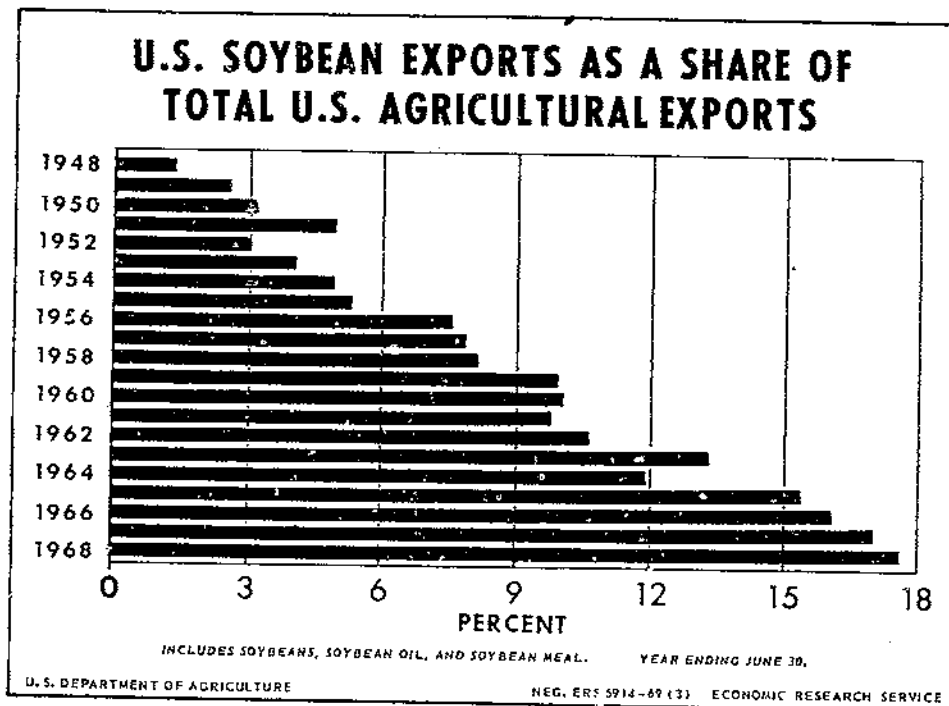

Figure 2

Over the past 20 years, the leading export customers for U.S. soybeans were Japan, Canada, the Netherlands, West Germany, Denmark, Taiwan, Italy, Israel, Belgium-Luxembourg, and the United Kingdom. Japan has the distinction of buying nearly as many soybeans as any other two countries combined. In fact, Japan alone purchased approximately one-fourth of all U.S. soybean exports in typical recent years. Japan, Canada, the Netherlands, and West Germany combined accounted for approximately three-fourths of all U.S. shipments of soybeans (fig. 3).

Soybean oil production per bushel of beans crushed increased to 10.6 pounds in crop year 1967/68 from 7.4 pounds in 1924/25. A peak of 11.1 pounds of oil per bushel was reported in 1955/56. Oil production per unit of soybeans crushed increased one-half between 1924/25 and 1955/56. Total U.S. soybean oil production climbed steadily to 6.1 billion pounds in 1967/68 from only 2 million pounds in 1924/25. In the same period, soybean meal production rose to 13.8 million tons from 8,000 tons. Soybean meal per bushel of beans crushed remained relatively stable at a level of about 48 pounds.

In fiscal year 1968, 15 States supplied 92 percent of the total value of all U.S. soybean exports. Illinois led all States with nearly 19 percent of the total -- \$143 million worth of soybeans in world trade. The leading States -- Illinois, Iowa, Arkansas, Missouri, and Indiana -- supplied \$438 million in soybean exports (table 5 and fig. 4).

U.S. soybean exports in 1967/68 were all dollar sales (table 6). In 1958/59, soybean exports under Government programs reached a peak value of \$26.9 million or 11 percent of the total. Since 1958/59, they have declined steadily until there were none in 1967/68. From 1954/55 through 1967/68, shipments under Government programs amounted to about 2 percent of U.S. soybean exports.

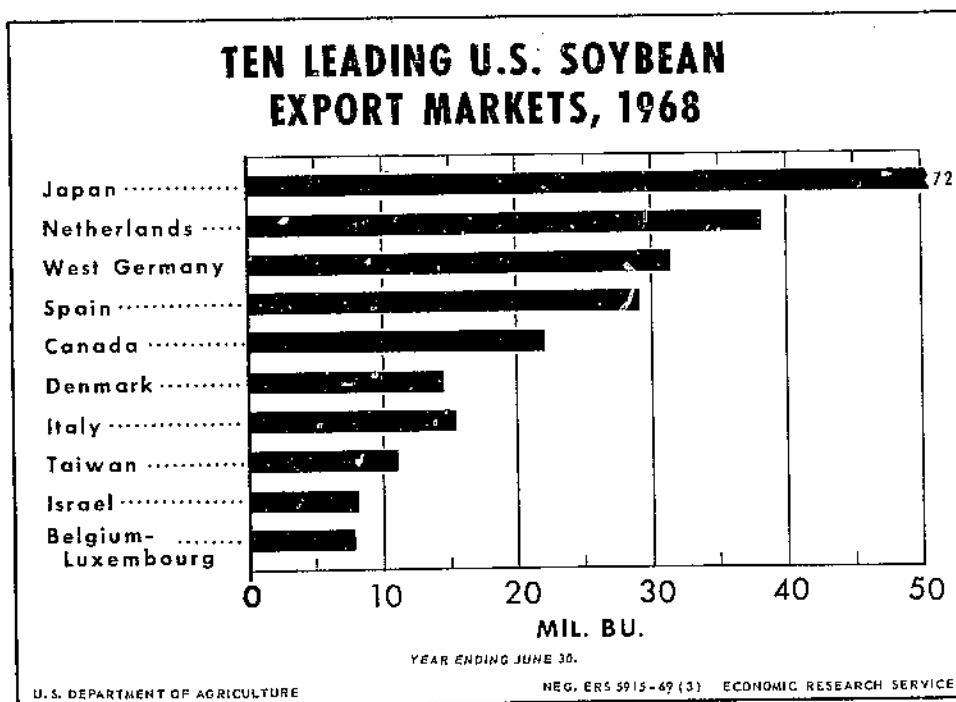

Figure 3

Table 5.--U.S. exports of soybeans by States, fiscal years 1954, 1960, 1964, 1966, and 1968

Country	Year ending June 30				
	1954	1960	1964	1966	1968
	-- Million dollars --				
United States	126.2	299.9	515.7	734.4	750.7
Illinois	37.0	70.2	121.2	152.0	142.6

North Carolina	1.9	5.4	10.3	17.6	21.0

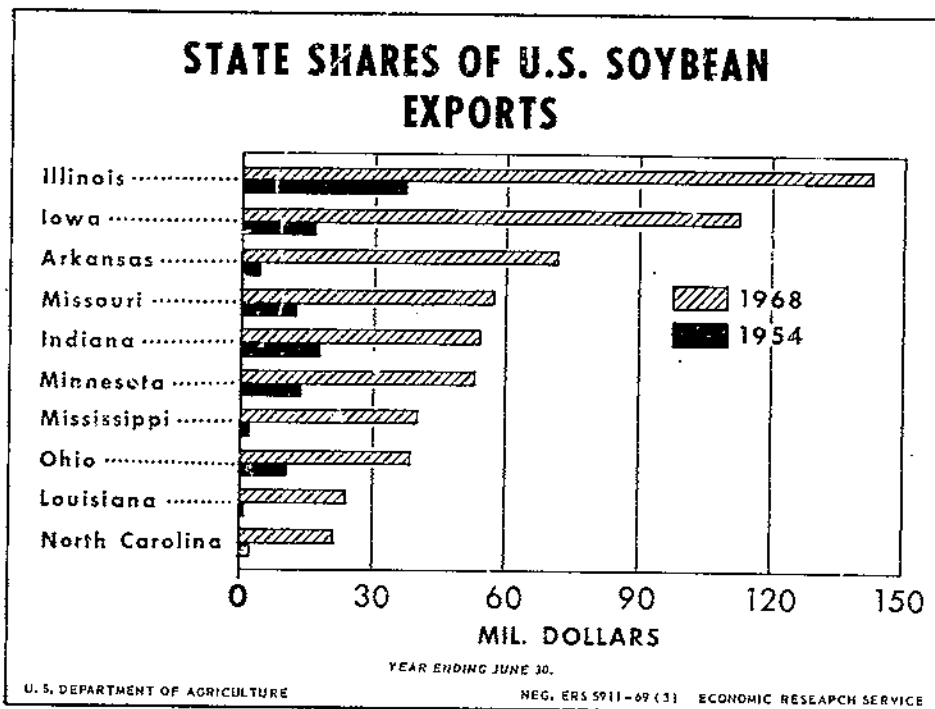

Figure 4

The soybean and soybean oil share of world exports of oils, oilseeds, and fats (oil equivalent basis) more than tripled in 13 years -- it expanded to 18.6 percent in calendar year 1967 from 6.1 percent in 1954. World exports of soybean oil and soybeans (oil equivalent basis) trended steadily upward to 4,360 million pounds in 1967 -- more than five times the 870 million pounds traded in 1954 (table 7). The soybean share in world exports of edible vegetable oils increased from less than one-fourth to more than two-fifths during the 13-year period.

American soybean farmers and processors and the Department of Agriculture are deeply concerned by the European Economic Community's recent proposal to impose a user tax on soybean oil and soybean meal. The EEC is seriously considering the imposition of an internal user tax of \$60 per ton on soybean oil and \$30 per ton on soybean meal. These taxes are designed to increase the prices of oils that compete with butter and thus reduce the mounting European butter surplus, and also to encourage increased feeding of home-grown feeds in lieu of imported oil cake and meal. The impact of these internal taxes would fall primarily on the foreign producer, since the EEC imports about 95 percent of its oil cake and meal -- nearly all from the United States. The value of U.S. exports of soybeans and products to the EEC totaled \$450 million in fiscal year 1968 or about 40 percent of total U.S. shipments for that year.

SPECIAL in this issue

U.S. FOREIGN TRADE IN NURSERY AND GREENHOUSE STOCK

by
I.E. Lemon ^{1/}

While U.S. foreign trade in nursery and greenhouse stock and cut flowers is not of great significance in relation to our total agricultural trade, there has been a noteworthy gain during recent years, particularly in our exports of these products.

In fiscal year 1962 (year ending June 30), U.S. imports valued at \$14.2 million together with exports worth \$6.1 million produced total nursery stock trade of \$20.3 million. By 1967/68, the value of trade had advanced to \$15.3 million of imports and \$10.3 million of exports, providing a total value of \$25.6 million -- a gain of more than 26 percent, of which four-fifths was due to increased exports. The foreign trade in nursery stock in 1967/68 represented about one-fourth of 1 percent of total U.S. foreign agricultural trade.

U.S. imports of cut flowers and nursery and greenhouse stock increased to \$15.3 million in 1967/68 from \$14.2 million in 1961/62 (table 8). Bulbs, roots, and corms (tulips, hyacinths, gladioli, narcissi, lilies, etc.) accounted for a large but slowly decreasing share of the total -- 96 percent in 1961/62, compared with 92 percent in 1967/68. Imports of cut flowers rose steadily to \$548,000 in 1967/68 from \$110,000 in 1961/62. The share represented by cut flowers increased from less than 1 percent to nearly 4 percent. The remaining imports included small quantities of fruit stocks, orchid plants, rose stocks and plants, and other minor items. The 400-percent increase in imports of cut flowers was the most significant development in U.S. imports of nursery and greenhouse stock during the 6-year period.

The Netherlands supplied about five-sixths of all U.S. imports of bulbs, roots, and corms (table 9). This share fluctuated very slightly throughout the 6 years. Belgium-Luxembourg, Japan, Canada, and the Republic of South Africa also supplied moderate quantities of bulbs.

U.S. exports of nursery and greenhouse stock totaled \$6.1 million in 1961/62 and equaled only 43 percent of imports of the same materials. By 1967/68, exports had mounted to \$10.3 million, which represented 67 percent of the value of imports for that year (table 10).

Canada, the largest market for U.S. nursery and greenhouse stock, took nearly three-fourths of the total in 1961/62, but its share gradually diminished to about one-half in 1967/68 (table 11). Other leading foreign markets, in order, were: Mexico, the Netherlands, West Germany, and the Bahamas. The United Kingdom, Italy, Japan, and Sweden also were important customers.

^{1/} Agricultural Economist, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

1/ Not reported separately.

U.S. exports of bulbs, roots, and corms rose steadily from \$728,000 in 1961/62 to \$2,201,000 in 1966/67, then dropped slightly to \$1,981,000 in 1967/68 (table 10). The overall 6-year change represented a 172-percent increase.

U.S. exports of cut flowers (including buds, foliage, and related materials) increased to \$2.6 million in 1967/68 from \$1.8 million in 1961/62 (table 10). This represented a 44-percent gain. In comparison, U.S. imports of cut flowers gained from \$110,000 in 1961/62 to \$548,000 in 1967/68 -- an increase of nearly 400 percent. The absolute gain in the value of exports was somewhat greater than the absolute gain in the value of imports, but the rate of gain was significantly larger for imports.

U.S. exports of other nursery and greenhouse stock were valued at nearly \$3.6 million in 1961/62. They increased regularly until they reached \$5.8 million in 1966/67 and then dropped to \$5.7 million in 1967/68. This category of miscellaneous nursery product exports accounted for 58 percent of the nursery and greenhouse total in 1961/62 and 55 percent in 1967/68.

U.S. AGRICULTURAL EXPORT PRICE INDEX DOWN,
IMPORT PRICE INDEX UNCHANGED IN 1968

by
Hans G. Hirsch ^{1/}

Prices (unit values) of the leading U.S. agricultural export commodities in 1968 averaged 95.4 percent of a year earlier, while the import price index was 100.0 (table 12). Thus the terms of trade index (export index divided by import index) was 95.4. During the fourth quarter of 1968, the terms of trade index was of similar magnitude -- 95.3 -- but the quarterly export and import price indexes were higher than those for the entire year, amounting to 98.4 and 103.2 percent of a year earlier.

In the annual series, prices of nearly all individual export commodities were down. The majority of these, including unit values of grains, flour, soybeans, protein meal, and hides and skins, ranged from 90 to 96 percent of a year earlier. Inedible tallow and soybean oil prices dropped still more, amounting to 85 and 81 percent. On the other hand, rice, the only commodity with a substantial increase in unit value, was priced at 106.5 percent of a year earlier. While monthly rice prices declined from the peak reached in early 1968, the annual unit value was up in comparison with 1967. Unit values of flue-cured tobacco and cotton were also up -- about 2 percent each.

Most import prices in the annual series changed little from a year earlier; six of the nine price relatives ranged from 98 to 103. The cocoa bean price, however, continued strong with a 14-percent increase. Wool and rubber prices, on the other hand, declined 15 and 7 percent, respectively.

In the quarterly series, individual export commodity price movements were evenly divided between increases and declines. Wheat flour, protein meal, as well as hides and skins were up although they showed declines in the annual series. The 6.6-percent increase in the unit value of cotton seems to contradict a 10-percent decline in the average fourth quarter 1968 c.i.f. Liverpool quotation for the most typical American staple length, compared with a year earlier. (See page 25 for an analysis of this apparent discrepancy.)

Quarterly import prices were predominantly up with increases in the prices of cocoa beans, rubber, and beef and veal by far outdistancing the other commodities. Wholesale prices for cocoa beans and rubber in this country during the fourth quarter were 47 and 24 percent higher than a year earlier in contrast to the more moderate 21- and 13-percent increases in import unit value for these commodities. Import unit values for beef and veal have trended upward for years; but the 8.3-percent increase for fourth quarter 1968 over a year earlier compares with a mere 2.0-percent increase for fourth

Average, i.e., index number ^{2/}				97.2			100.1

^{1/} Unit values were computed from the value and quantity figures published in Foreign Agricultural Trade of the United States. Cotton poundages were obtained from U.S. Bureau of the Census Reports, Supplement to EM 522.

^{2/} The index numbers are of "Fisher's Ideal" type.

quarter 1967. Recently the demand has been keen for a supply limited by undertakings of leading foreign suppliers to keep imports into the United States below a level which would trigger the imposition of quotas under existing law.

The unit value of sugar was 98.3 percent of a year earlier. Actually, the fourth quarter price (raw, c.i.f. New York) was 4.0 percent above a year earlier; but the decline in the unit value of sugar imports reflects a much smaller share of Philippine sugar in fourth quarter 1968 imports, compared with a year earlier. Because Philippine sugar enjoys a temporary tariff preference in the United States, it is slightly higher priced at the point of exportation than sugar of other origins. Thus a relatively large proportion of Philippine sugar during the fourth quarter of 1967 gave a relative boost to the overall unit value, while a smaller proportion a year later slightly depressed it. Unit values of both Philippine sugar and sugar from all other origins increased. Wool was the only other import commodity with a price decline.

A comparison of the annual U.S. agricultural export price index with other pertinent indexes (table 13) leads to the conclusion that the leading U.S. agricultural export commodities suffered a unique price drop in 1968. The index of agricultural export prices derived from United Nations data, at 99.4, was 4.0 percentage points higher than the U.S. agricultural export price index.

Several pertinent indexes of domestic farm products and food prices were also substantially higher than the U.S. agricultural export price index. The Dow-Jones spot price

Table 13.--Comparison of U.S. agricultural trade price indexes with other price indexes

Type of index	Year 1968 (1967 = 100)	Fourth quarter 1968 (Fourth quarter 1967 = 100)
U.S. agricultural exports	95.4	98.4
U.S. agricultural imports	100.0	103.2
U.S. agricultural trade	97.2	100.1
United Nations agricultural export prices	99.4	101.3
Reuters' ¹ / ₁	---	102.8
Dow-Jones	101.9	101.0
Consumer prices, all food	103.6	104.4
Wholesale prices:		
All food	103.3	104.6
Farm products	102.5	105.1
Prices received by farmers:		
Crops	101.8	98.8
Livestock	104.0	107.5
All	102.8	104.0

¹/ Year to year comparison not shown because it would be distorted by British currency devaluation in November 1967; fourth quarter comparison is actually December 1968 relative to December 1967.

index, 1.9 percent higher in 1968 than in 1967, was buoyed by the inclusion of import commodities. These also had their effect on the two wholesale price indexes shown: The all food amounting to 103.3 and the farm products 102.5. However, the principal reason for the increase in these wholesale indexes is that they include livestock and products, which had a price rise of 4.0 percent at the farm level.

Prices received by farmers for all crops were up 1.8 percent, considerably less than the gain in livestock and product prices; but, at 101.8, the index of prices received for all crops averaged substantially above the U.S. agricultural export price index of 95.4. A principal reason for that difference is the inclusion in the "all crops" price index of fruits and vegetables and their exclusion from the U.S. agricultural export price index. Prices received by farmers for commercial vegetables and fruit were up 11 and 30 percent, respectively, in 1968. These steep increases obviously exercised a powerful influence on the "all crops" price index.

Although most quarterly indexes were higher than the annual ones, the U.S. agricultural export price index in the quarterly series was again lower than most of the other indexes for reasons similar to those applicable to the annual series. Only two quarterly indexes, the Dow-Jones and that for prices received by farmers for crops, were lower than the corresponding annual indexes. The latter, at 98.8, was only slightly more than the agricultural export price index; one reason was that the price increase for commercial vegetables and fruits was much less pronounced during the fourth quarter than earlier in the year.

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

The price of American cotton, c.i.f. Liverpool, continued to drop in January. The January price averaged 29.47 cents a pound, down 1.1 percent from December and 20 percent below the nominal quotation a year earlier (table 14). The end of January quotation was 29.20 cents, 1.2 percent below quotations earlier in the month.

This price weakness of the most important staple length of American cotton in a leading market is associated with a significant decline in the quantity of U.S. cotton exports. That quantity during August-December of the current marketing year was down 24 percent, compared with a year earlier; exports to most leading countries declined. Large foreign carryover stocks and the declining price trend are principal reasons for this development. However, the unit value (export value divided by export quantity) of these exports was up 5 percent. This is due in part to the unusual supply, demand, and price relationships for various types of cotton which have recently prevailed in world markets and in part to the time lag with which trade unit values tend to follow spot price quotations. Thus, August-December 1968 export unit values were heavily influenced by contracting during the preceding higher-price period. On the other hand, August-December 1967 export unit values were influenced by the preceding lower-price period.

The most noteworthy developments in January for the grain price series shown in table 14 were 1.2-percent increases in the c.i.f. United Kingdom quotations for Argentine and Canadian wheats and a 2.0-percent increase in the similar price for U.S. No. 3 yellow corn.

Adverse weather late in the growing season reduced the size of the Argentine wheat crop, which is coming onto world markets at this time. Canadian wheat (Northern, Manitoba No. 2) c.i.f. U.K. quotations are shown for the first time in table 14 to round out the European market picture for overseas wheats. In contrast to the moderate increases in Argentine and Canadian wheat prices, c.i.f. U.K., the prices of Australian wheat, c.i.f. U.K., and Canadian wheat, in store Fort William-Port Arthur, remained unchanged and the c.i.f. U.K. quotation for U.S. No. 2 Hard Winter wheat dropped from 31.5 pounds sterling a long ton during the second half of December to a January average of 30.9 pounds and to 30.75 pounds during the last week of the month. The ready availability of new-crop wheat from the Southern Hemisphere and of Canadian wheat, on the one hand, and the severely limited availability of U.S. wheat because of the longshoremen's strike on the U.S. East and Gulf Coasts, on the other hand, caused a lack of interest in U.S. wheat. A further factor may have been the lowering of the cost of export certificates, which resulted in lower U.S. f.o.b. prices (see footnote 1, table 14).

U.S. corn, on the other hand, for present or immediate future delivery, commanded a strong demand enhanced by the U.S. longshoremen's strike. It was quoted at 24.7 pounds sterling a long ton, c.i.f. U.K., up 0.9 pound or 3.8 percent from December. New-crop Argentine corn, however, for which the supply outlook is favorable, will not be available

for some weeks. Its c.i.f. U.K. price was stable. Argentine sorghum grain, also with a favorable supply outlook, was quoted at 23.5 pounds sterling a long ton, down 0.4 pound or 2 percent from December.

The export price of Thai rice continued the climb begun in the second half of November until the middle of January but dropped off to 73.5 pounds sterling during the second half of the month. The U.S. soybean price, c.i.f. U.K., advanced slightly despite abundant supplies in the United States, thus reflecting the U.S. longshoremen's strike.

^{1/} Preliminary.

Export Highlights

U.S. AGRICULTURAL EXPORTS: JULY-JANUARY 1968/69

Longshoremen's strikes at ports on the Atlantic and Gulf Coasts during January sharply reduced U.S. agricultural exports for that month, and contributed importantly to a substantial decrease in the total for July-January 1968/69. As a result of the longshoremen's strike, U.S. agricultural exports in January 1968 dropped to \$178 million, 71 percent below January 1967 (table 16). U.S. agricultural exports were limited mainly to shipments through the Pacific ports and into Canada and Mexico.

U.S. agricultural exports in July-January 1968/69 totaled \$3,287 million, 12 percent below the like period a year earlier (table 15). Among the major commodity groups, animals and animal products, vegetables, and tobacco exceeded those of a year earlier. However, exports of cotton, fruits and preparations, grains and preparations, and oilseeds and products were down substantially. The quantity index for January also reflected the results of the strike, showing a sharp decline from January 1968.

An indication of how the longshoremen's strikes changed the pattern of agricultural trade is indicated in table 16. In the strikes of 1963 and 1965, January exports fell 51 percent and 61 percent, respectively, below the monthly average of the preceding July-December period. However, exports in November and December were up 11 percent in 1963 and 13 percent in 1965 from the July-December average. Exports in November and December 1968 were up by 18 percent. Following the strike of 1963, March exports picked up sharply, but fell to the more normal levels for April-June. In 1965, they increased after the strike and maintained a higher level through April and May. Currently, exports for the remaining months of 1969 would have to total considerably above the average of July-December 1968 if the loss during January and February is to be recovered. Exports of animals and animal products were less affected by the strike than some of the other major agricultural commodity groups. For January 1969, they totaled \$39 million, 36 percent below those of January 1968. But for July-January 1968/69, they were about 13 percent above a year earlier. Shipments of animal fats and oils in July-January 1968/69 were down 11 percent, compared with July-January 1967/68. Poultry product exports, totaling \$34 million in July-January 1968/69, were down about \$2 million. Increased exports of meats and meat products, hides and skins, and dairy products more than offset declines in animal fats and oils and poultry products.

Cotton exports in July-January 1968/69 totaled 1.5 million bales, valued at \$179 million. This value was 28 percent below a year earlier. Cotton exports in January 1969 were about four-fifths below those of December 1968, reflecting also the export stoppage at the Gulf ports. However, some shipments through the California ports continued. Generally, the costs of transporting cotton from storage areas in the Texas Panhandle to East Asian markets through West Coast ports, compared with Gulf Coast ports, are not competitive. However, some small amounts did move from points such as Lubbock, Tex., to the West Coast for export during January.

Exports of fruits and vegetables totaled \$264 million in July-January 1968/69, about 3 percent below those of July-January 1967/68. July-January exports of fruits and preparations dropped 6 percent to \$171 million, reflecting a 5-percent reduction in exports in January 1969, compared with those of January 1968. Since much of the fruits and preparations are exported from West Coast ports, the major impact of the strike was felt for shipments primarily from Florida. Exports of vegetables and preparations were down about 14 percent from those of January 1968, resulting in an approximate 1 percent increase for July-January 1968/69.

Shipments of grains and preparations suffered most from the lonshoremen's strike. Grain exports last July-December were down 18 percent, but inclusion of January 1969 data dropped the total 27 percent below July-January 1967/68. This was a result of a 78-percent decline in exports of grains and preparations for January. Since most U.S. grain exports are moved through Atlantic and Gulf ports during the winter, these shipments came to a near standstill. The July-January 1968/69 wheat total was down 34 percent to \$517 million from July-January 1967/68; feed grain exports were down 24 percent to \$472 million; and rice exports were down 13 percent. Prior to January, exports of rice had been running above the corresponding level of a year earlier.

U.S. exports of oilseeds and products during January 1969 were 83 percent below those of January 1968. For the July-January 1968/69 period, they totaled \$708 million, 2 percent below a year earlier. This reflected a decline in exports of vegetable oils and protein meal. Exports of both soybeans and flaxseed came to a near standstill in January. However, due to large shipments that had been made in the previous months of 1968/69, soybean exports in July-January 1968/69 totaled about the same as those of July-January 1967/68. However, this was offset by the declines in vegetable oils and protein meal.

1/ Preliminary.

Although tobacco exports in January 1969 were about one-fourth of those of January 1968, the July-January 1968/69 total was \$324 million, about 1 percent above July-January 1967/68. Since most of the tobacco moves through the Atlantic and Gulf ports, shipments to the major markets in Western Europe nearly stopped. Movements were limited mainly to shipments across the border into Canada.

U.S. Agricultural Exports to the EEC: July-January 1968/69

U.S. agricultural exports to the EEC in July-January 1968/69 totaled \$754 million, down 15 percent from a year earlier (table 17). The near standstill for January in movements of U.S. agricultural products to the EEC added little to the total for July-December 1968/69, and resulted in the substantial decline for July-January 1968/69. There were limited shipments of grains, fruits and vegetables, soybeans, and animal products such as tallow, meats and meat products, and hides and skins to the EEC during January.

U.S. Agricultural Exports to the EEC, A Followup

Calendar year 1968 data are now available on U.S. agricultural exports to the EEC. This is a followup to the article "A Perspective on U.S. Agricultural Exports to the EEC," which appeared in the February issue of Foreign Agricultural Trade of the United States, when only 11-month data were available.

Expectations were that U.S. agricultural exports to the EEC during 1968 would not reach their 1967 level, but that December 1968 exports would be at a near-normal level, with exports heavy during the first part of the month in anticipation of the longshoremen's strike. Instead, exports in early December were light. Thus, the value of U.S. exports to the EEC during 1968 was lower than had been expected -- \$1,367 million, the lowest since 1963. This represents a 6-percent decline from their value in 1967 and a 13-percent decline from their high in 1966.

The situation in individual export items for all of 1968 did not change significantly from that for the first 11 months of 1968 (table 18). The value of variable-levy exports was \$44 million less than in 1967. There were a few exceptions to the general decline. Rice exports were up \$2.2 million. Live poultry exports were up \$0.5 million due to exports of expensive breeders. An increase in corn exports was not enough to compensate for a decline in small feed grains; thus, total feed grain exports were \$37 million lower in 1968 than in 1967.

The value of non-variable-levy exports fell \$48 million during 1968. Declines in exports of cotton (\$16 million), fruits and fruit preparations (\$20 million), and tobacco (\$21 million) contributed to this loss. An increase in exports of soybean meal was not enough to compensate for the \$22 million decrease in exports of soybeans.

^{1/} Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. The variable-levy classification is designed to show overall changes in exports rather than to measure the impact of the variable levies. ^{2/} Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. ^{3/} Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. ^{4/} Variable levy on sugar-added content only.

Compiled from U.S. Bureau of the Census data.

^{1/} Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. The variable-levy classification is designed to show overall changes in exports rather than to measure the impact of the variable levies.

^{2/} Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

^{3/} Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

^{4/} Variable levy on sugar-added content only.

Compiled from U.S. Bureau of the Census data.

Import Highlights

U.S. AGRICULTURAL IMPORTS: JULY-JANUARY 1968/69

During the first 7 months of fiscal year 1969 (year ending June 30), U.S. agricultural imports for consumption totaled \$2,789 million, 6 percent above the same months a year earlier. Competitive (supplementary) imports showed a \$122 million increase to \$1,726 million, and noncompetitive imports rose \$44 million to \$1,063 million (table 19). January imports amounted to only \$209 million, as compared with \$421 million in December and with \$415 million during January 1968.

The slowdown in imports during January reflected an almost negligible volume of entries through Atlantic and Gulf Coast ports due to the longshoremen's strike which began on December 20. Imports were thus limited mainly to entries from bonded warehouses, through West Coast ports, and the Mexican and Canadian border points. Perishable commodities such as bananas continued to be unloaded at some locations.

An advance in fresh banana imports in July-January to nearly 2.5 billion pounds (\$113 million) from 2.1 billion pounds (\$98 million) in the same months of 1967/68 was the result of increased purchases from Costa Rica, Guatemala, Nicaragua, and from smaller suppliers such as British Honduras (Belize), Haiti, the Dominican Republic, Colombia, and Venezuela. Fresh banana imports from Honduras, Panama, Ecuador, and Mexico declined.

Imports of most major agricultural items such as beef, sugar, coffee, and rubber fell sharply in January from previous months, but cumulative 7-month totals remained well above the corresponding period a year earlier. Cocoa bean imports continued to be depressed by short supplies and relatively high prices.

Nonagricultural imports in July-January advanced 19.5 percent above the same months of 1967/68 to \$16,352 million (table 20).

U.S. Imports of Meats, by Country of Origin, Calendar Years 1967 and 1968

U.S. imports of the principal meats for calendar year 1967 and 1968 are presented in table 21. U.S. imports of beef and veal rose to 1,128 million pounds in 1968 from 979 million pounds a year earlier. The increase resulted from larger imports of boneless beef (fresh, chilled, and frozen) from Australia, New Zealand, Mexico, Canada, and Central American countries. In addition, imports of fresh beef with bone in, from Canada, Australia, and the Dominican Republic, increased sharply. Other prepared and preserved beef and veal increased from Argentina.

U.S. meat imports which are subject to quotas under Public Law 88-482 consist of the following categories: Fresh, chilled, or frozen beef, veal, mutton, and goats meat.

The United States was a very attractive market for foreign suppliers in the past year. U.S. prices were up sharply. Utility cow prices averaged \$18.45 per 100 pounds in 1968, compared with \$17.52 in 1967. Boneless beef (fresh, chilled, or frozen) is

(Continued on page 42)

1/ Preliminary.

2/ Less than 500.

3/ Reported in value only.

4/ Excludes the weight of "other hides and skins," reported in value only.

5/ From Census unpublished data.

6/ Includes silver ores, scrap, and bullion.

primarily competitive with cow beef and other low-grade meats. This meat is used primarily for manufacturing meat products. With the sharp rise in personal incomes, demand for meat in the United States was exceptionally strong. In addition, Americans are consuming larger quantities of convenience-type meat products that are made from imported beef.

U.S. imports of pork totaled 324 million pounds in 1968, compared with 307 million pounds in 1967. Larger imports of canned and cooked hams and shoulders accounted for most of the increase. Imports from Denmark and the Netherlands increased, while those from Poland declined slightly. Imports of fresh pork, totaling 48 million pounds and nearly all from Canada, were up only slightly from 1967. Pork sausage imports from Canada and Denmark increased slightly, but those from Italy declined. Other prepared or preserved pork fell slightly.

Imports of mutton totaled 62 million pounds in 1968, up from 54 million in 1967; Australia was the principal supplier. Mutton imports are also used primarily in the manufacturing of meat products. Imports of fresh, chilled, or frozen lamb increased to 23 million pounds from 12 million in 1967. New Zealand and Australia were the principal suppliers.

		Quantity		Value		Quantity		Value	
		1968	1969 1/	1968	1969 1/	1967/68	1968/69 1/	1967/68	1968/69 1/
Vegetable and preparations		Thousands		1,000 dollars		Thousands		1,000 dollars	
Canned, prepared, or preserved:									
Asparagus	Lb.	1,039	898	321	238	10,470	10,882	3,202	3,114
Corn	Lb.	929	824	192	150	8,247	7,357	1,576	1,409
Soups	Lb.	1,748	1,093	405	263	11,263	10,540	2,591	2,185
Tomatoes, tomato sauce, tomato puree, etc.	Lb.	912	1,770	212	350	7,727	10,557	1,691	2,151
Other	Lb.	2,377	2,049	387	384	18,991	20,366	3,281	3,231
Total canned vegetables	Lb.	7,005	6,624	1,517	1,385	56,692	59,702	12,341	12,090
Dried beans, including donations	Lb.	11,393	17,243	1,449	1,777	178,718	189,191	16,446	17,344
Dried peas, including cow and chick	Lb.	29,339	38,382	2,137	2,245	176,267	213,977	12,490	13,856
Fresh:									
Lettuce	Lb.	26,521	25,339	1,513	1,171	117,228	123,689	6,253	6,273
Onions	Lb.	10,162	6,327	519	432	59,869	44,640	2,833	2,170
Potatoes, except sweet potatoes	Lb.	11,334	6,314	310	209	124,930	111,990	3,708	3,377
Tomatoes	Lb.	4,331	1,935	436	196	52,737	73,672	5,147	7,816
Other	Lb.	60,697	33,197	2,897	2,357	153,285	130,735	11,472	9,127
Total fresh vegetables	Lb.	92,745	72,212	5,775	4,365	508,049	488,726	29,413	28,757
Frozen vegetables	Lb.	1,203	1,510	226	278	12,241	14,266	2,372	2,588
Soups and vegetables, dehydrated	Lb.	3,156	1,736	924	553	19,582	17,252	6,292	6,041
Tomato juice, canned	Gal.	81	115	97	140	912	707	1,012	816
Vegetable seasonings	Lb.	409	484	232	247	3,273	5,429	2,025	2,888
Other		3/	3/	1,399	724	3/	3/	9,273	8,638
Total vegetables and preparations				13,756	11,734			91,664	91,018
Other vegetable products									
Coffee	Lb.	1,756	2,657	1,443	2,273	10,712	15,438	10,035	13,493
Drugs, herbs, roots, etc.	Lb.	800	297	572	665	5,105	4,870	5,539	5,461
Essential oils and resinoids	Lb.	725	347	2,301	1,305	6,014	5,488	15,464	17,115
Feeds and fodders, except oil cake and meal		3/	3/	7,337	5,527	3/	3/	50,511	63,827
Flavoring sirups, sugars, and extracts		3/	3/	2,713	1,143	3/	3/	19,566	21,091
Hops	Lb.	4,079	1,732	2,366	1,041	12,200	9,603	7,106	5,957
Nursery stock		3/	3/	930	1,165	3/	3/	5,244	5,271
Nuts and preparations	Lb.	15,652	8,045	3,058	2,740	104,333	72,388	25,180	21,736
Seeds, except oilseeds	Lb.	9,108	2,186	3,260	3,145	47,325	43,765	18,293	18,250
Spices	Lb.	451	393	294	196	3,402	3,662	2,480	2,461
Other, including donations		3/	3/	4,569	3,032	3/	3/	36,727	46,465
Total other vegetable products				23,759	22,232			196,155	221,137
Total vegetable products				501,342	438,285			3,383,845	2,867,074
Total agricultural exports				545,078	477,694			3,737,124	3,286,564
Total nonagricultural exports				2,162,222	1,893,776			14,390,176	16,228,236
Total exports, all commodities				2,709,300	2,371,470			18,127,300	19,514,800

1/ Preliminary.
2/ Prior to Jan. 1, 1969, included in baby chicks.
3/ Reported in value only.
4/ Excludes the number of "other hides and skins," reported in value only.
5/ From Census unpublished data.
6/ Includes silver ore, scrap, and bullion.

1/ Based on 332 classifications.

2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Table 25.--Imports: Quantity indexes of foreign trade in agricultural products, fiscal years 1962-68, monthly and accumulated, July 1967 to date

Year and month	Supplementary 1/					Complementary 1/			All agricultural commodities 2/
	Animal and animal products	Grains and feeds	Vegetable oils and oilseeds	Sugar molasses and syrups	Total supplementary	Cocoa, coffee, and tea	Rubber and allied gums	Total complementary

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all other, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers. 2/ Based on 417 classifications. 3/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural exports statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$100-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$100-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
