* Beginning with this issue, U.S. agricultural Export Statistics reflect a new reporting procedure as revised by the Department of Commerce. Effective October 1, 1969, the exemption from filing Shipper's Export Declaration for shipments valued under \$100 was extended to cover general licenses shipments valued at \$250 or less to free-world countries. Statistics for individual commodities or commodity groups, therefore, reflect some additional undercounting effective October 1969, due to the added exclusion of data for shipments valued from \$100 to \$250 from the commodity data. As a result of this change, the category (Schedule B, Number 9310050 low value shipments) which includes estimated data for shipments of value of under \$100 prior to October 1969 now includes shipments valued \$250 and under. Cumulative value for this category represents shipments valued \$250 and under in October 1969 combined with shipments valued under \$100 for prior months. These exports are included in total and nonagricultural exports.

FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

U.S. Exports of Farm Products Expected To Rise in Fiscal Year 1970 (see page 6). U.S. agricultural exports in the fiscal year to end June 30, 1970, will likely top \$6 billion, compared with last year's \$5.7 billion. The bulk of the increase in this year's export value is expected to arise from larger shipments of fruits and vegetables, grains and preparations -- mainly feed grains including products -- and oilseeds and products. Animal products, cotton, and tobacco should remain near last year's level. Higher global prices for animal products and tobacco and stable prices for feed grains will help hold the line on the total value of agricultural exports despite lower prices for wheat and flour, rice, soybeans, and protein meal.

Commercial sales for dollars (including barter for offshore procurement) should account for about 85 percent of U.S. agricultural exports in 1969/70, up considerably from a year earlier when such sales totaled \$4.7 billion.

* * * * *

Agricultural Imports by Origin, Fiscal Year 1969 (see page 12). Most regional areas and trade blocs shared in the increased U.S. agricultural imports during 1968/69. This annual report shows the value of such imports by country of origin over the last 6 fiscal years. It also includes tables showing principal commodity groups from the 50 major sources and four trade blocs.

* * * * *

Price Indexes for U.S. Agricultural Trade Up (see page 29). For the first time in 2½ years all price indexes of U.S. agricultural trade were above 100. The import price indexes for the year and quarter ended September 30, were both 104.7 percent of a year earlier. The export price index and the combined export and import price index for the July-September quarter were both 104.8, while the annual export price index for the year was 100.8. The annual export and import price index combined was 102.3. Several quarterly import prices set new records (since 1964): The coffee price dropped to a record low, while similar beef and veal, ham, rubber, and cocoa bean prices attained the highest levels. Among the quarterly export prices inedible tallow, hides and skins, as well as corn were particularly strong.

* * * * *

Selected Price Series of International Significance (see page 35). While the buyer's price of U.S. Hard Winter wheat, f.o.b. Gulf ports, dropped 5.3 percent to \$1.42 a bushel and reflected the resumption of export payments, the corresponding c.i.f. U.K. price dropped only 2.0 percent. U.S. corn, soybean, and cotton prices, c.i.f. U.K., rose moderately.

* * * * *

Ocean Freight Rate Highlights (see page 39). During second quarter 1969, ocean freight rates for heavy grains continued downward as they did during the preceding 18 months. All rates for U.S.-flag vessels were markedly lower. Only the Great Lakes and the Pacific Coast ports posted increases for foreign-flag vessels. Rates for U.S.-flag vessels sailing from U.S. Gulf ports average \$4.53 per ton (15 percent) below the previous quarter; while remaining above foreign-flag vessel rates, they showed much larger percentage declines. The supply of merchant vessels apparently is continuing to outstrip the demand generated by international commerce. During 1967, the last year for which data are available, 527 merchant vessels representing approximately 5 million deadweight tons were scrapped. Although such disposals reduced the aggregate capacity of the world's merchant fleet, it is apparent that new construction is far outweighing disposals.

* * * * *

World Trade Highlights (see page 43). Agricultural imports to Israel, Hong Kong, and Portugal increased significantly during 1968. Libya, Singapore, and Western Samoa showed slight increases in farm product imports while Yugoslavia's takings dropped sharply and Turkey's and Tunisia's were down moderately. The United States in 1968 was the leading supplier for Israel, Turkey, and Tunisia but ranked second for Yugoslavia and Hong Kong (behind the U.S.S.R. and Mainland China, respectively). Compared with 1967, the U.S. share increased for Libya, Hong Kong, and Western Samoa and decreased for Israel, Turkey, Tunisia, Portugal, Yugoslavia, and Singapore.

* * * * *

U.S. Agricultural Exports, July-October (see page 61). October's sharp gain in agricultural exports accounted for the overall increase during the first 4 months of fiscal 1970. Export value for July-October totaled \$2,056 million, 9 percent above July-October 1968. Animal products, fruits and vegetables, grains and preparations, oilseeds and products, and tobacco increased, while shipments of cotton trailed last year's pace.

Agricultural exports to the European Community totaled \$426 million in July-October, 6 percent lower than those of the same months in 1968. Variable-levy commodity exports dropped 16 percent to \$151 million, and items not subject to the EC variable import levies increased slightly to \$276 million.

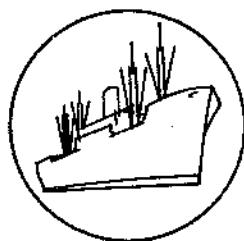

* * * * *

U.S. Agricultural Imports, July-October (see page 67). U.S. agricultural imports declined slightly in value during July-October to \$1,710 million from \$1,737 million a year ago. Lower green coffee entries contributed most to the reduction; imports of meat and crude rubber were up sharply. Last fall's stockpiling accounted for a big change in import patterns.

Table 1.--U.S. exports: Value of total and agricultural exports, including specified Government-financed programs 1/ and commercial (dollar) sales 2/ by selected commodities and commodity groups, averages 1955-59, 1960-64, and 1965-69; annual 1968-69 and July-October 1969/70

1/ Includes exports under Public Law 480 programs (sales for foreign currency, long-term dollar and convertible local currency credit sales, barter for strategic materials, and donations) and under AID programs. 2/ Commercial sales (exports outside Government-financed programs) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies, which benefit the U.S. balance of payments and relies primarily upon authority other than P.L. 480; extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash or in kind. 3/ Commodity group totals for feed grains, oilseeds and products, and animals and products include for years noted, in addition to the value reported by the Bureau of the Census, the estimated value of certain commodities donated through voluntary relief agencies, which are included in census in "Other food for relief and charity." 4/ Preliminary data.

SPECIAL in this issue

B7 U.S. EXPORTS OF FARM PRODUCTS EXPECTED TO RISE IN FISCAL YEAR 1970 *X*

by
Dewain H. Rehe and Joseph R. Corley 1/

Expectations are that U.S. agricultural exports in the fiscal year ending June 30, 1970, should top \$6.0 billion, considerably above last year's \$5.7 billion. This would be below the record achieved in 1966/67, but above the 1961-65 average of \$5.5 billion. Higher global prices for animal products, tobacco, and feed grains will help hold the line on the total value of agricultural exports despite lower prices for wheat and flour, rice, soybeans, and protein meal. The export volume is expected to increase somewhat. Commercial sales for dollars, including barter for offshore procurement, likely will account for about 85 percent of U.S. agricultural exports, up considerably from a year earlier when such sales, at \$4.7 billion, represented 82 percent.

U.S. agricultural exports should benefit from the improved economic activity in a number of the industrial countries -- notably Japan and those in Western Europe. Western Europe's economic expansion, which began accelerating in late 1966/67, appears to be continuing. In Japan, rapid economic growth has prompted the government to encourage investment activities to hold down consumer demand. In 1967/68, the Japanese had a real per capita growth rate of 12.5 percent. Although growth was also substantial for most West European countries, it was less spectacular than the Japanese growth rate. However, the U.K.'s economy remained sluggish in 1968/69, as it continued to experience balance-of-payment difficulties.

Rising economic activity in the major commercial markets for U.S. agricultural exports should continue to improve the demand for many U.S. products. U.S. export prices for many important agricultural commodities -- especially feed grains, soybeans, and protein meal -- are now more competitive and probably will remain so through the current fiscal year. Larger volumes of protein meal and feed grains likely will be required to help maintain the expanded herds and flocks in the industrial countries, where higher meat consumption is related to increased affluence.

Several developments of the past year will continue to hamper U.S. exports in 1969/70. With the world's large grain stocks, especially of wheat, competition is keen among countries exporting to grain-deficient countries. Further, the continued increase of wheat production in several of the traditional wheat importing countries has meant reduced demand for wheat grown in the traditional exporting countries. Wheat production in India and Pakistan in the current crop year will exceed the high production level of the previous 2 crop years.

1/ Assistant Chief and International Economist, respectively, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

Other adverse influences will also continue to be evident in the current fiscal year. The Japanese continue to encourage further imports of corn and grain sorghums from all countries that have available supplies at competitive prices. In particular, Japan has been stepping up its purchases from Thailand, Indonesia, Cambodia, and several East African countries. This policy, prompted by Japan's desire to diversify sources of supply and expand their industrial trade with these countries, increases competition for U.S. feed grains in this very important market.

The trend toward more protectionism in agricultural trade was a disquieting feature of international agricultural trade in 1968/69. By maintaining high price supports in the system of variable levies, the EC has insulated its domestic market in considerable degree from foreign competition. Such practices, by the EC as well as by Japan and other major foreign markets, tend to restrict international trade development.

France's recent currency devaluation likely will have little effect on overall French-U.S. trade. Considering Germany's mark revaluation, the full effect is unlikely to benefit U.S. exports to Germany the way normally expected from a revaluation, because of the special tax placed upon German purchases of agricultural products from other countries.

U.S. agricultural exports in July-October 1969 totaled \$2,056 million, 9 percent above a year earlier. This increase resulted primarily from the larger export value of fruits and vegetables, feed grains, oilseeds and products, and tobacco. Shipments of cotton and wheat and wheat flour were lower. During the first 4 months of 1969/70 agriculture's share of total U.S. exports was about 16 percent, compared with 17 percent a year earlier. The rise of 12 percent in nonagricultural exports added to the 9-percent increase in agricultural shipments, resulted in a 12-percent overall increase in U.S. exports for July-October.

Grains and preparations.--The value of U.S. exports of grains and preparations is expected to increase somewhat in July-June 1969/70 from last year's \$2,069 million. Among the various commodities, wheat and wheat flour, rice, barley, sorghum grains, and oats may finish the current fiscal year with lower export values. Total value of feed grain shipments is expected to be somewhat higher, due primarily to the substantial increase anticipated for corn exports. The quantity of corn exported may be up considerably from last year, despite a possible slowdown in the movement during second half 1969/70.

U.S. exports of wheat and wheat products will be up slightly from the 544-million-bushel outcarry in 1968/69, mainly because of a rise in shipments to non-EC areas of Western Europe. EC countries will probably reduce their wheat imports from third countries. Their carryover stocks of durum wheat and the good quality harvest in prospect should lower import requirements. With this year's output likely to be down in the United Kingdom, Portugal, and several other West European countries, their import requirements will increase. Further, the United Kingdom may import larger quantities of feed wheat.

In other areas, Japan's wheat imports are expected to gain this year after remaining stable for the past 2 years. India's and Pakistan's current production levels indicate little pickup in their wheat imports from last year's level. The desire for some buildup in buffer stocks and the availability of food-aid assistance may induce some increase in their imports during the current fiscal year. Overall, exportable supplies should improve greatly over the past year, but keen competition will continue as a result of further stockpiling in the major exporting countries.

The prospective rise in corn shipments may boost the value of feed grain exports in 1969/70 as much as 15 percent, despite smaller shipments of barley, oats, and grain sorghums. Demand for feed has continued basically strong in the major industrial countries. However in the EC, normally a large market for U.S. feed grain exports,

production continues to expand and large quantities of low quality wheat are available for feed. In addition, Japan -- a large market for U.S. feed grain exports -- is diversifying its feed grain purchases through bilateral agreements with developing countries in Asia, Latin America, and Africa. Japan also has agreements with Australia to purchase a certain volume of grain sorghums.

Although the United States is not a major world rice producer, it accounts for a significant share of international trade. In 1967/68, U.S. milled rice exports surpassed 41 million hundredweight and were record high, but declined to slightly under 39 million hundredweight in 1968/69. (However, analysis of data obtained by USDA indicates that Census-reported exports in 1968/69 were approximately 1 million cwt. lower than actual shipments.) For the current fiscal year, U.S. rice exports will probably decline even further. Estimated world rice production excluding Mainland China in the 1968/69 crop year was about 2 percent higher than the previous year's record.

Most of the decline in U.S. rice exports this fiscal year is expected to take place in food-aid shipments, which may drop as much as one-fourth below those of 1968/69. This would primarily reflect smaller shipments of rice to Vietnam, Indonesia, and other Asian countries. Asia's major exporting countries -- Thailand, Burma, and Cambodia -- all recorded production gains the past crop year. The 11-percent increase in Thailand's production was due to both expanded acreage and higher yields. Another bumper crop in Japan, along with last year's heavy carryover, aggravated an already serious problem and generated increased pressures on the government to find effective uses for the rice surplus. In Western Europe, acreage increased 6 percent while output declined 7 percent, largely because of poor weather conditions in France and Italy. As a result, U.S. commercial exports of rice to West European countries may continue at last year's level or slightly higher. Along with the lower European production, strong demand by the Europeans for the long grain rice produced in the United States continues to be favorable for the U.S. rice market in Western Europe.

Oilseeds and oilseed products.--These exports continue to be a bright spot in the U.S. agricultural export picture in 1969/70. They have shown an annual compounded growth rate of 9 percent since 1960. The export value increase for oilseeds and products will probably be slightly more than 5 percent in 1969/70, while the quantity may increase as much as 15 percent. A substantial rise in U.S. production and stocks slightly depressed the export price of soybeans in 1969; the lower price reflecting the reduced price support is expected to continue into 1970. Exports of soybeans in 1969/70 are expected to total 335 million bushels, a third of U.S. soybean production. High feed grain prices resulting from the EC's Common Agricultural Policy will also act as a stimulus to U.S. exports. European producers are continuing to stress efficiency in their livestock production which requires the use of high concentrates of protein. However, U.S. fats and oils continue to face strong competition in the EC and other major consuming areas. Eastern Europe and the Soviet Union are expected to have large supplies of sunflower seed oil for export to Western Europe. In addition, competition continues to be keen from palm kernel oil, peanuts, and from animal fats in Western Europe. At present, the EC has a butter surplus of 400,000 metric tons.

Cottonseed and soybean oil exports totaled 1,004 million pounds in 1968/69. The current year's outcarry may increase by one-fifth. The significant factor is the expected increase in cottonseed oil shipments under Government-financed programs. Food-for-Peace shipments to developing countries are expected to expand somewhat. The United States will also have larger supplies of cottonseed oil available at lower prices for export from the bigger carryover. The CCC is offering cottonseed oil for sale to certain countries. However, the large quantities of oil extracted from U.S. soybeans overseas will limit the amount of soybean and cottonseed oils that the United States can export to Western Europe and Japan.

U.S. exports of oil cake and meal will continue upward, reflecting the high price of feeds in Western Europe, and because many countries have surpluses of both animal and vegetable oils. All exports of soybean meal are sales for dollars. We expect soybean meal exports to rise about a tenth from the 3.1 million tons in 1968/69. This prospect is based on lower U.S. prices, more livestock overseas being fed high-protein rations, and higher fish meal prices.

Japan was the largest market for U.S. soybeans in 1968/69, taking about 70 million bushels or one-fourth of the U.S. total. We expect our exports to Japan to increase in 1970 because of lower U.S. prices and little change in imports from communist China. In addition, Japan's livestock industry has been expanding rapidly in recent years -- especially the poultry industry which requires substantial imports of soybean meal for efficient rations. About 25 percent of the soybeans marketed in Japan goes into human consumption and the rest is processed into high-protein feed for the poultry industry and into oil for human consumption.

Tobacco.--Tobacco exports totaled 571 million pounds, and were valued at \$507 million in 1968/69; they rose slightly above those of a year earlier. This year, exports will probably approach the level of 1968/69. The high quality of this year's flue-cured tobacco and the continuation of U.S. export-payment programs will encourage the sales of U.S. tobacco in the principal foreign markets. In addition, U.S. tobacco stocks in a number of major consuming foreign countries are at relatively low levels. Continued U.N. economic sanctions against Rhodesia will aid U.S. tobacco exports. However, U.S. exports continue to face a number of adverse situations such as increased use of filter cigarettes in foreign markets, the continued tobacco-health controversy, and higher prices for U.S. leaf compared with many foreign tobaccos.

The EC's agricultural policy for tobacco is still in the development stage. The earlier proposed system of taxes on the quality and type of tobacco was highly discriminating against U.S. tobacco. However, since no firm policy has been developed, it is still too early to determine what impact the Common Agricultural Policy may have on future purchases of U.S. tobacco. The United Kingdom still has preferential arrangements with Commonwealth producers which hinder other countries' (including the United States) exports to this top market.

About 95 percent of U.S. exports will be commercial sales for dollars. This also includes barter for offshore procurement. In 1968/69, tobacco exports for barter for offshore procurement totaled 90.5 million pounds.

Cotton.--Export prospects for cotton in 1969/70 indicate a total of about 2.8 million bales -- about the same as 1968/69. During July-October 1969/70, baleage was down from the previous year because of sharply decreased exports to the Philippines, the Republic of Korea, Thailand, Taiwan, and Japan. Partly offsetting these declines, however, were increased shipments to India. Much of the cotton exported to the East Asian countries during the first 4 months of 1968/69 was of a short staple length. These U.S. stocks of cotton were fairly well depleted during 1968/69 and exports were sharply curtailed. During the first 4 months of 1969/70, the bulk of the U.S. cotton exports was upland cotton, 1 to 1-1/8 inch staples and longer, which accounted for 70 percent of U.S. cotton exports in July-October 1969, compared with only 47 percent a year earlier. This increase took place at the expense of upland cotton exports stapling under 1 inch, the type exported primarily to East Asian countries.

During 1969/70, world cotton exports are projected to increase nearly 1 million bales from last season's 16.6 million. Increased trade is based on larger prospective exports by foreign free world countries as exports by the United States and by communist countries may not gain. Estimates on November 8 placed the 1969 U.S. cotton crop at 10 million running bales, down 8 percent from last year. While U.S. mill use during 1969/70 is estimated at about the same as last season's level, a portion of this demand

will be filled from the above average holdings of cotton by the trade. However, recent downward revisions in foreign cotton crops indicate that prospects for U.S. exports may improve.

Cotton prices generally showed a slight advance during the early months of 1969/70, but U.S. cotton types other than American-Egyptian lowered slightly. Relatively sharp price increases for American-Egyptian cotton during the first quarter of 1969/70 were sufficient to lift the average per bale price of total cotton slightly above last year's average. Further, during mid-November 1969, U.S. cotton was being quoted in Liverpool at slightly above the c.i.f. Liverpool index price for similar qualities.

Production of manmade fibers continues to expand in the industrialized countries. World output of manmade fibers in 1968 was equivalent to approximately 51 million bales of cotton and represented a 19-percent increase over 1967. The United States is the world's largest producer of manmade fibers, but production is expanding in Japan, Italy, Belgium, West Germany, and the United Kingdom as well as some of the communist countries. World producing capacity of manmade fibers is expected to expand 17 percent from 1968 to 1969, based on past and projected gains in producing capacity. Japan's producing capacity likely will rise by 19 percent, the United States' capacity by 17 percent, and Western Europe's by 14 percent between March 1969 and December 1970. The increased capacity indicates the efforts to expand production of manmade fibers, thus further increasing the competition for cotton. ^{2/}

Animals and animal products.--Current expectations for exports of animal products point to about the same sales as in 1968/69. Gains are expected in exports of meat products, poultry products, and animal fats, oils, and greases; shipments of hides and skins will probably remain about the same, while dairy products will decline substantially.

During July-October 1969/70, animal and animal product exports totaled \$254 million, up 10 percent from the corresponding period in 1968/69. There were increased shipments of hides and skins; fats, oils, and greases; and meats and meat products. Exports of dairy products declined. Infants' and dietetic foods, nonfat dry milk, and anhydrous milk fat accounted for most of this decline. Pork exports are expected to surpass the high levels of last fiscal year. The increase in pork exports will go mainly to Japan. As in the United States, incomes in Japan have been rising, lending unusual strength to consumer demand for meat. Meat production in Japan has not kept pace with the increasing demand. Even though imports by the Japanese are closely controlled, the pork import quotas have been increased sharply in an effort to satisfy the Japanese consumer demand. Marketings of variety meats in Western Europe should continue strong during the current fiscal year. Shipments to the European Community for the first 4 months of 1969/70 totaled \$12 million, up about 29 percent from a year ago.

Exports of animal fats, oils, and greases are expected to rise in value during 1969/70, although quantity will be somewhat below that of last fiscal year. Lard will probably gain somewhat in both quantity and value. Shipments of inedible tallow will likely total slightly below the 1,982 million pounds exported in 1968/69. However, favorable prices will result in an overall increase in value. The price strength reflects smaller supplies resulting from reduced tallow output and good domestic and foreign demand. Inedible tallow moving under P.L. 480 export programs is expected to fall drastically from the 364 million pounds shipped in 1968/69. The reduction in Government program exports reflects the smaller exports to India, Spain, Turkey, Korea, and several other countries. However, increased dollar shipments to Japan and Western Europe will result in a part of the overall increase in value of inedible tallow during 1969/70.

^{2/} World Man-made Fibers Survey, Textile Or'ganon, Textile Economic Bureau, Inc., New York, New York, Vol. XXX, No. 6, June 1969.

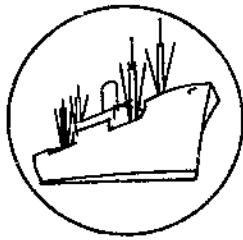

Exports of hides and skins are expected to be about the same as last fiscal year. They should total 20 million pieces, compared with nearly 21 million in the previous year. Large U.S. supplies, strong foreign demand, and a slight rise in the price of cattle hides are factors aiding U.S. hide and skin exports. Although hide and skin exports now represent about 38 percent of total U.S. production, continued use of synthetic materials will provide competition to hide exports.

Poultry meat shipments may be slightly higher as the United States continues to subsidize poultry exports to Switzerland. This support was initiated during the past fiscal year so that poultry shippers in the United States could compete better with the subsidized exports of EC-produced poultry. In addition, the EC's variable levies have effectively discouraged imports of U.S. poultry to the six member countries. U.S. poultry meat is, nevertheless, competitively priced in the other major world markets.

Fruits and vegetables.--The outlook in 1969/70 is for an increase for both fruits and vegetables, based mainly on increased domestic production of citrus fruits, canned fruit cocktail, and canned peaches. However, exports of canned pineapples, a major dollar earner in years past, have been declining because of increased foreign competition, especially from the Philippines, Malaysia, and Taiwan. Although U.S. exports of other processed fruits should increase this year, competition will continue strong. In addition, fruit production in many importing countries is expanding and quality has improved. Overall, U.S. exports of fruits in 1969/70 are expected to surpass the \$291 million level in 1968/69 by 10 percent.

U.S. exports of vegetables are expected to increase by 5 percent in 1969/70 from the previous year's \$170 million because of increased exports of dried peas and beans and fresh vegetables, especially potatoes. Exports of canned vegetables will be up slightly. Although substantial gains in U.S. production of dried peas and beans should stimulate our exports, lower prices will result in a smaller value gain for peas.

The United States is a net exporter of fruits and vegetables. In 1968/69, exports exceeded imports by \$65 million. Canada is our best market for fresh fruits and vegetables, taking approximately half of each. The United States also exports substantial quantities to the Caribbean Islands to meet the increased demand for high quality fruit products from the rapid gain in the tourist trade. For a number of products, exports to such traditional markets as Europe have declined because of increased competition from other producers. Nearly all U.S. exports of fruits and vegetables are commercial sales for dollars, but small quantities of dried beans move under Government-financed and Food-for-Peace programs.

SPECIAL in this issue

AGRICULTURAL IMPORTS BY ORIGIN, FISCAL YEAR 1969

U.S. imports of foreign farm products for consumption during 1968/69 advanced 7 percent in value to \$4,931 million. Continued expansion in domestic economic activity and higher prices made many foreign products attractive. U.S. industrial production in June advanced 4.5 percent over June 1968; disposable personal incomes for the April-June quarter were 6 percent higher than a year earlier, and wholesale food prices for the year were up about 7 percent. Price increases also occurred for some key agricultural imports, causing value to accelerate faster than volume. The quantity index (1957-59 = 100) increased only 2 percent to 121.

The pattern of imports was distorted because of strikes at Atlantic and Gulf entry points. Inventory accumulation preceded a 2-day longshoremen's walkout which began October 1, and the buildup continued through the 90-day injunction period. The strike disrupted East Coast shipping from December to February. Import gains during the first 6 months more than offset reductions in the strike period. Mexican and Canadian border points and West Coast ports were not affected.

Imports of supplementary (competitive) agricultural products contributed most to the overall value gain over a year ago. The advance was about 8 percent and amounted to \$3,072 million. Substantial growth took place in purchases of cattle, beef, pork, cheese, fruits, edible nuts, fresh vegetables, and wines. Higher prices accounted for about half of the increase in supplementary imports, with notably larger unit values for cattle, beef, pork, edible nuts, sugar, and most fresh vegetables.

As a group, complementary (primarily noncompetitive) imports rose only slightly in value to \$1,859 million from \$1,811 million a year earlier. Overall volume of this category, as measured by a quantity index, fell 1 percent. Considerable changes occurred in the commodity composition, however. They included a 5-percent value decrease for coffee and cocoa beans. Green coffee volume declined 4 percent from a year earlier, primarily because of previous inventory accumulation. A 20-percent cutback in cocoa bean volume accompanied West African crop shortages and rapid price rises. Substantial increases in volume and value were recorded for purchases of natural rubber, crude drugs, spices, and essential oils.

Nearly all areas shared in the increased U.S. imports. Larger purchases from Latin America, Europe, Asia, Oceania, and Canada resulted in most shares maintaining last year's levels (table 2). The Latin American share of U.S. agricultural imports grew by 1 point to 41 percent; Canada's increased a point to 5 percent. Africa's share declined by 2 points to 9 percent. Reductions in imports from Africa were mainly in shipments from North Africa (such as cotton from Egypt and Sudan), Ghana and Nigeria (where cocoa production diminished), coffee exporting countries (Ethiopia, Angola, Uganda, and Burundi), and South Africa for sugar and apparel wool. Nearly offsetting these declines were increases from about 15 African countries including the Ivory Coast, Liberia, Mozambique, Congo (Kinshasa), and Kenya.

Most Latin American countries raised their agricultural exports to the United States in 1968/69. Exceptions included Colombia, Ecuador, Paraguay, Uruguay, and Bolivia. In Central America, only Panama failed to attain last year's level. Caribbean area exporters with declines from a year earlier were Jamaica, Haiti, French West Indies, Barbados, and the Leeward-Windward Islands.

Three years ago, in 1966/67, Western Europe became the second largest regional area supplier of U.S. agricultural imports. Dominating our purchases from that source have been specialty items such as wines, canned pork, cheese, and olives. European Community (EC) sources exported a total of \$361 million in 1968/69, led by the Netherlands (\$128 million), and followed by France (\$88 million), Italy (\$77 million), and West Germany (\$54 million). Most of the \$218 million in farm products sent by EFTA countries was from Denmark (\$125 million); the United Kingdom followed with \$35 million and Portugal with \$25 million. Turkey and Greece added \$76 million and \$36 million, respectively, which consisted primarily of oriental tobacco, pistachio nuts, and hazelnuts. Yugoslavia also shipped oriental tobacco along with canned pork and other minor items; total value was nearly \$28 million. Other significant European sources were Spain with \$78 million (mainly olives, olive oil, and wine), and Ireland with \$38 million (mostly chilled, boneless beef).

The Central American Common Market (CACM) held third place among major trade blocs as a supplier of U.S. agricultural imports. Four commodities accounted for more than 90 percent of CACM exports to the United States in 1968/69: fresh bananas (\$109 million), green coffee (\$100 million), beef (\$48 million), and sugar (\$32 million). Costa Rica and Honduras were the largest sources with \$88 million and \$72 million, respectively, with bananas accounting for over half the value. Guatemala shipped products worth \$70 million; coffee was the main item but there were significant amounts of beef, sugar, and bananas. From Nicaragua came \$43 million worth of products, mainly beef. El Salvador's exports to the United States --- value, \$37 million were primarily coffee (table 3).

B X PRICE INDEXES FOR U.S. AGRICULTURAL TRADE UP +
E

by
Hans G. Hirsch 1/

For the first time in 2-1/2 years the price indexes of U.S. agricultural trade -- for exports as well as for imports -- were above 100, for both the 12-month period and the quarter ended September 30 (table 5). The terms of trade index (export index divided by import index) for the quarter was 100.1 after it had fluctuated narrowly around 95.3 for seven quarters. The terms of trade index for the year was 96.1, slightly above the 95.0 level of a year earlier.

The higher level of all indexes was the result of substantial increases in the prices (unit values) of seven of the 21 leading agricultural trade commodities which make up the indexes. Among export commodities, quarterly prices of inedible tallow increased by 35 percent, hides and skins by 21 percent, and corn by 11 percent. Among import commodities, the quarterly price of rubber rose by 38 percent. Cocoa beans continued their phenomenal price rise with a 29-percent increase over a year ago. As of mid-November, however, reports of improved prospects for the Ghanaian and Nigerian cocoa bean crops dampened New York spot and future prices for that commodity. Meat prices (beef and veal as well as hams) rose about 12-1/2 percent.

As usual, even the largest price increases in the annual series were of lesser magnitude than in the quarterly series. The hide and skin price for the year was 13 percent above a year earlier and the inedible tallow price was up 9 percent. On the import side, the rubber price was up 31 percent, the price of cocoa beans increased 23 percent and the beef and veal price 10 percent.

Price declines were few but they related to leading commodities and thus affected the indexes markedly. In the quarterly import price series, coffee was the only commodity registering a price decline but that decline amounted to a substantial 6.7 percent. Coffee is the leading import item; it accounted for one-fourth of the value of all commodities in the import price index during the summer quarter 1969 and for much more than that a year earlier. Thus the decline in the coffee price pulled down the index considerably. In the annual series, the coffee price dropped only 2.7 percent.

The unit value of tobacco imports for the year declined by a like amount. This was not only in contrast to a 1.5-percent increase in the price of imported tobacco for the quarter, but also in contrast to increases of 7 percent in the annual and quarterly prices of flue-cured tobacco exports. Indeed, quarterly unit values of flue-cured tobacco

1/ Agricultural Economist, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

Average, i.e., index number 2/				104.7			104.7
<u>All above commodities</u>							
Average, i.e., index number 2/				102.3			104.8

1/ Unit values were computed from the value and quantity figures published in Foreign Agricultural Trade of the United States. Cotton poundages were obtained from U.S. Bureau of the Census Reports, Supplement to EM 522.

2/ The index numbers are of "Fisher's Ideal" type.

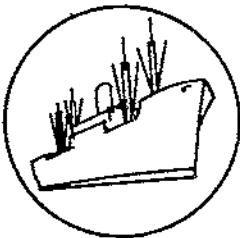

have trended upward at an annual rate of 3.6 cents a pound during the last 5 years, while those of tobacco imports have trended downward at an annual rate of 1.9 cents -- inspite of the recent small rise in the quarterly unit value of tobacco imports. During the four quarters of the year ended in September 1965, the export unit value averaged 82.0 cents a pound and the import unit value 69.1 cents, a difference of 12.9 cents. During the four quarters of the year ended in September 1969, the export unit value averaged 99.8 cents and the import unit value 62.0 cents, a difference of 37.8 cents, almost three times as much as 4 years earlier.

Among export commodities, wheat and soybean prices declined during both the year and the quarter. The decline in wheat prices appears to be nominal, less than 1 percent. Actually, unit values of wheat exports have been buoyed by the doubling of the proportion of high-priced durum wheat in total wheat exports -- 11.0 percent during the year ended September 30, 1969, compared with 5.5 percent a year earlier. Similarly, durum wheat exports during July-September 1969 were 10.5 percent of all wheat exports, compared with 6.4 percent a year earlier. (These percentages are based on inspections for exports).

The soybean price was about the same for the year and the quarter, \$2.69 a bushel, with hardly any fluctuation during the last four quarters, but 4 and 3 percent below prices a year earlier. The soybean oil price, at 10.6 cents a pound during the July-September quarter, was 8 percent above a year earlier. However, the annual price at 10.3 cents was affected by the record low of 9.1 cents during October-December 1968 and was 6 percent below a year earlier.

Relative changes in export prices for the year resulted in an index of 100.6, the first such index above 100 in 2 years. The quarterly export index was 104.8, the highest level in 2-1/2 years. The import price indexes for the year and the quarter were coincidentally the same, 104.7, and the export and import indexes combined were 102.3 for the year and 104.8 for the quarter.

The quantity indexes obtained as byproducts in the calculation of the price indexes were all down. The yearly export quantity index (85.4) still showed the effect of the dock strike last winter, while the quarterly export quantity index (99.3) registered a very small decline to which cotton contributed most significantly. The yearly import quantity index was 95.6 percent with coffee, wool, and cocoa beans each down about one-fifth. The quarterly import quantity index was 92.6 with coffee down almost one-third.

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

The October buyer's price of U.S. No. 1 Hard Winter wheat, ordinary protein, f.o.b. Gulf ports, showed the full effect of the mid-September resumption of export payments. That price was \$1.42 a bushel, down 8 cents from September and 31 cents below a year earlier (table 6). On the other hand, the seller's price (i.e. buyer's price plus export payment), at \$1.54, was 3 cents above the September level and 14 cents above the 1969 low recorded in July, the beginning of the new crop year. Also in contrast to the buyer's price, the seller's price was only slightly below a year earlier. The c.i.f. U.K. price for similar wheat (No. 2 grade instead of No. 1, the grade quoted at Gulf ports) declined by 2.0 percent from September and by 4.3 percent from a year earlier. In October 1968, the spread between the c.i.f. U.K. price and the Gulf ports buyer's price for U.S. Hard Winter wheat was \$10.90 a metric ton; last September it was \$17.66 and in October it was \$19.05.

For Northern Manitoba No. 2 wheat, the spread between the c.i.f. U.K. price and the in-store Fort William-Port Arthur export price for the No. 1 grade increased much less: It was U.S. \$11.89 a metric ton in October 1968, \$12.74 last September, and \$13.50 in October. The Fort William-Port Arthur export price was virtually unchanged from a month earlier and 7 percent below October 1968. The corresponding c.i.f. U.K. price for the No. 2 grade was \$75.70 a metric ton, slightly up from September and 4 percent below October 1968. This meant a premium of \$4.48 over U.S. No. 2 Hard Winter wheat, c.i.f. U.K., compared with \$4.63 a year earlier. During the intervening months that premium was by no means stable, but rose to \$7.49 in January and dropped to \$1.46 in July. At \$4.48, it was near the average for the year and made U.S. Hard Winter wheat a more attractive buy in the U.K. market than it had been from May to September.

Australian wheat, c.i.f. U.K., declined in price similarly to U.S. wheat, 2 percent below September and 5 percent below a year ago. Argentine wheat continued unquoted, even though the harvest season for the new crop is about to start and some forward pricing for that crop might have been expected.

Argentine corn, in midyear between the March-April 1969 and 1970 harvesting seasons, also was unquoted. U.S. No. 3 yellow corn, c.i.f. U.K. was priced \$62.00 a metric ton, 1 percent above September and 15 percent above a year earlier.

U.S./Argentine sorghum grain transshipped to the United Kingdom from the Continent was quoted at \$62.88 a metric ton, substantially below the abnormally high September price of \$65.16, but still slightly above the price of corn and thus unattractive to buyers.

Although the export price of Thai rice decreased very slightly to register the third consecutive decline, it was 2.5 percent above October 1968. Considering the good prospects for the crop nearing harvest in principal export countries and the sharp price

1/ Buyer's price equals seller's price plus cost of export certificate or minus export payment, except for rounding errors.

2/ December 1968-February 1969 and May-September 1969, Argentine granifero; March-April and October 1969, U.S./Argentine sorghums transhipped from Continental European ports.

3/ Nominal, October 1968.

Source: Monthly Bulletin of Agricultural Economics and Statistics, FAO; The Public Ledger, London; Grain Market News, USDA, C&MS; Bangkok Board of Trade; and Cotton and General Economic Review, Liverpool.

drop from September to October 1968, the stability of the rice price is remarkable. The price of U.S. No. 2 soybeans, c.i.f. U.K., rose to \$102.40, a 2.3-percent gain despite plentiful supplies; it was still at a low level compared with any other month during the past several years except last August and September. The price of cotton, Memphis Territory, strict middling, 1-1/16 inches, c.i.f. Liverpool, climbed 1 percent during each of the last 2 weeks of October and for the month averaged 0.5 percent above September, apparently in response to the 560,000-bale reduction in the estimate of U.S. cotton production announced on October 10.

Ocean Freight Rate Highlights

67
E

X DECLINE NOW SPANS 18 MONTHS X

by
T. Q. Hutchinson 1/

During the second quarter of 1969, ocean freight rates for heavy grain continued down. This movement now spans 18 months. All second-quarter rates for U.S.-flag vessels markedly lowered. The Great Lakes and Pacific Coast ports posted small increases for foreign-flag vessels (table 7 and fig. 1).

At the Great Lakes ports, rates per ton to the United Kingdom averaged 39 cents above the previous quarter and those to Antwerp-Rotterdam-Amsterdam (A-R-A) declined 14 cents for a net average gain of 12 cents a ton. On either an absolute or a relative basis, this is the smallest change registered.

Rates from the St. Lawrence River ports averaged \$1.27 per ton below the previous quarter and 50 cents per ton below the 1968 average. These declines represent percentage changes of 27 and 12 percent, respectively.

Only the Antwerp-Rotterdam-Amsterdam trade reported any shipments from U.S. Atlantic ports during the second quarter of 1969. Rates for those cargoes averaged 31 cents per ton (34 percent) under the previous quarter and 68 cents per ton (19 percent) under the 1968 average.

U.S.-flag charter rates from U.S. Gulf ports averaged \$4.53 below the previous quarter, and decreased as much as \$4.73 per ton to East Coast India. Rates for U.S.-flag vessels showed large percentage declines, but remained well above foreign-flag voyage rates. Most likely, the decline was due to greatly reduced grain exports under Public Law 480 to India the past fiscal year. Wheat shipments to India under that law had declined about 45 percent between 1966/67 and 1967/68.

All of the foreign-flag-carried trades from the U.S. Gulf ports, for which comparisons can be made, reported rates ranging from \$2.80 (U.S. Gulf to West Coast of India) to 24 cents per ton (U.S. Gulf ports to A-R-A) below the first quarter. The foreign-flag rate to the East Coast of India declined \$1.57 per ton from the fourth quarter of 1968. These general declines in the rates to India may indicate greatly decreased demand for grain imports by that country. In 1968/69, India's imports of wheat, rice, sorghum, and corn totaled 4.3 million metric tons, compared with 8.2 million metric tons the previous year.

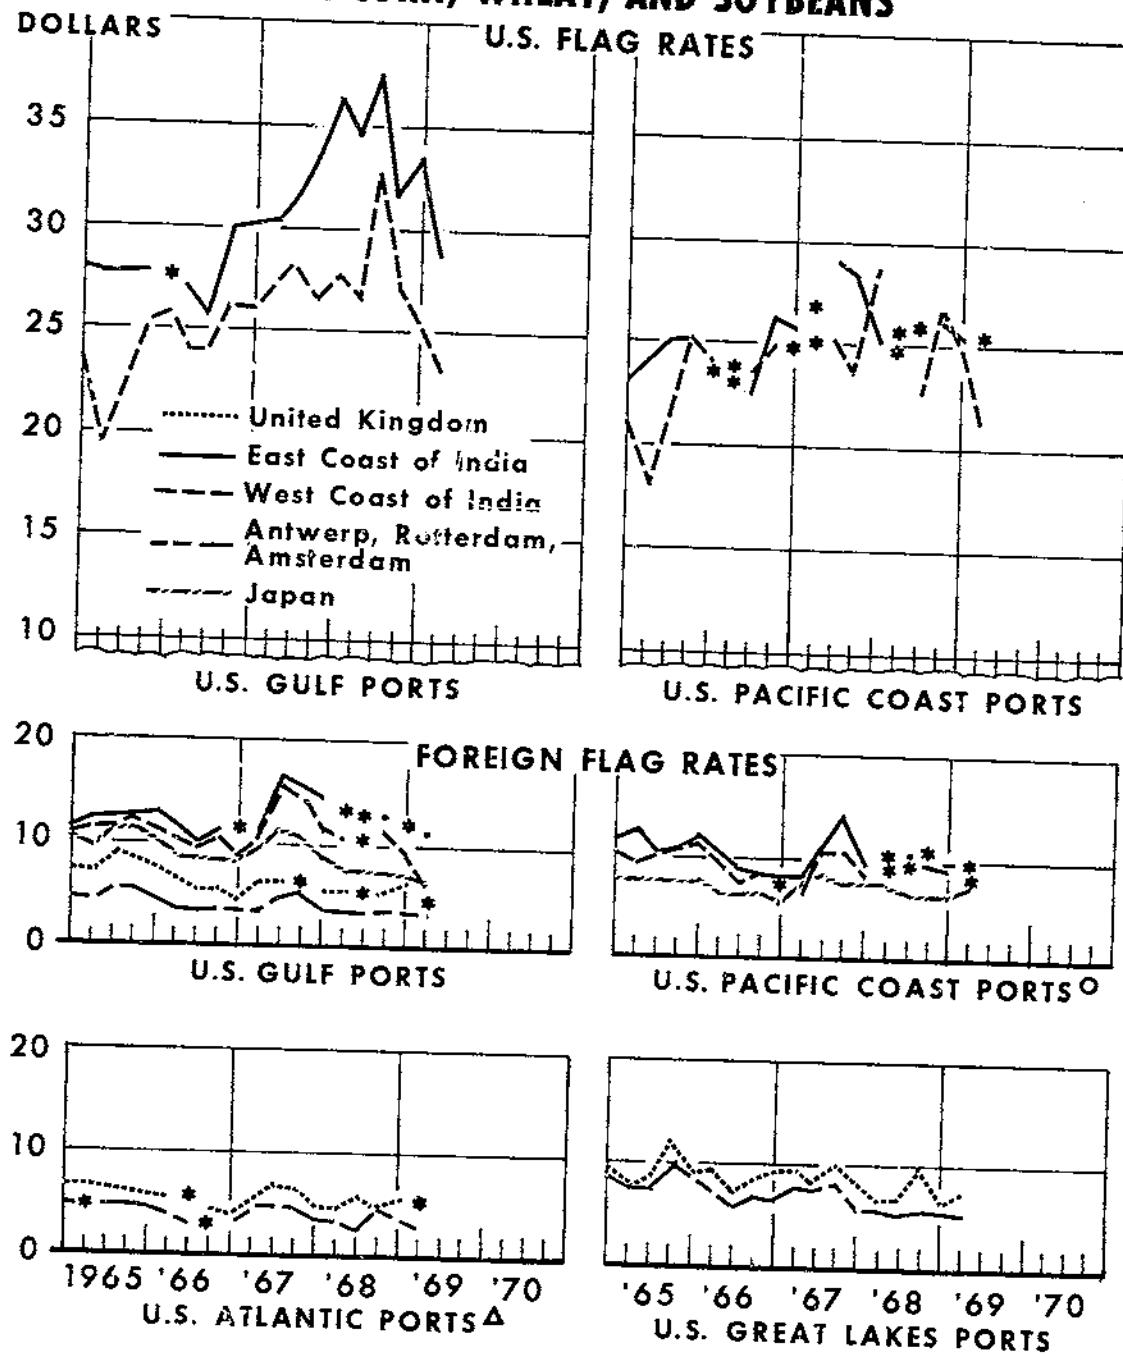

1/ Industry Economist, Marketing Economics Division, Economic Research Service.

AVERAGE VOYAGE CHARTER RATES PER SHORT TON FOR CORN, WHEAT, AND SOYBEANS

U. S. DEPARTMENT OF AGRICULTURE

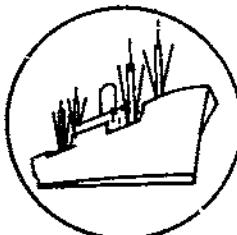

NEG. ERS 4869-69 (11) ECONOMIC RESEARCH SERVICE

Figure 1

Only two trade originating at Pacific Coast ports showed any activity. The rate for shipments to West Coast India in U.S.-flag vessels declined \$3.55 per ton (14 percent) while rates to Japan increased 11 percent from the first quarter. Even so, rates from the Pacific Coast to Japan were 12 cents per ton below the 1968 average.

It appears that the supply of merchant vessels is continuing to outstrip the demand generated by international commerce. As of April 1, 1969, some 2,045 vessels were being built or were on order in the world's shipyards. Upon completion, these vessels will add 80.5 million d.w.t. (deadweight tons) to the 252.2 million d.w.t. that comprised the world's merchant fleet in June 1969.

During 1967, the last year for which data are available, 527 merchant vessels representing about 5 million d.w.t. were scrapped. Although such disposals reduce the aggregate capacity of the world's merchant fleet, it is apparent that new construction far outweighs disposals. Unless world trade picks up or a significant number of vessels are placed in layup by their owners, there seems to be little prospects of ocean freight rates for grain turning in the near future.

World Trade Highlights

AGRICULTURAL IMPORTS OF SELECTED COUNTRIES

Israel.--Agricultural imports of Israel increased more than 12 percent to total \$179 million in 1968. Feed grains, wheat and flour, and oilseeds (mainly soybeans) accounted for over half the total. Imports of wheat and flour showed the largest increase from a year earlier. Purchases of meats, rice, wool, and dairy products increased significantly. Of the major import commodities, only feed grains and oilseeds declined (table 8).

Israel's agricultural imports from the United States reached a record \$103 million in 1966, dropped to \$88 million in 1967, and rebounded to \$96 million in 1968. Although the United States has remained Israel's principal supplier, our market share declined from 56 percent in 1966 to 54 percent in 1968. Feed grains, oilseeds, and wheat and flour accounted for 84 percent of Israel's 1968 agricultural purchases from the United States. In 1968, the United States supplied the following percentage shares of Israel's principal agricultural imports: Wheat and flour, 99.7; oilseeds, 92; feed grains, 82; rice, 63; animal and vegetable oils and fats, 60; tobacco, 34; and cotton, 20.

Imports increased in 1968 from all of Israel's 10 leading suppliers of farm products. Increases ranged from Canada's 178 percent to 10 percent for the United States. Argentina, with 7 percent of the total, and the United Kingdom with 6 percent, ranked second and third as suppliers of Israel's agricultural purchases. Argentina exported mostly meat to Israel. United Kingdom supplied coffee, tea, cotton, and wool. Other important sources of Israel's imports were: Wool, Australia; cotton, Uganda; rice, Argentina; oilseeds, Ethiopia; feed grains, Canada and France; meats, Uruguay and Brazil; sugar, Yugoslavia; coffee, Ivory Coast and the Netherlands; and animal and vegetable oils, West Germany and the Netherlands.

Libya.--Aided by its booming economy and spectacularly expanding petroleum sector, Libya has been able to import more food in recent years. Agricultural purchases increased steadily to a record \$86 million in 1968 from \$22 million in 1962. Live animals led the list of imports in 1968 with over 18 percent of the total value. Of total Libyan agricultural imports, wheat and flour accounted for 14 percent; coffee, tea, cocoa, and spices, 12 percent; and fruits and nuts, 10 percent (table 9). Largest import gains in 1968 were registered for coffee, tea, cocoa, and spices and fruits and nuts. Of the 10 leading import products in 1968, all except animal and vegetable oils and fats, sugar, and vegetables showed increases over the previous year.

Italy was Libya's leading source of farm products in 1968 with nearly 11 percent of the total. Principal imports from Italy were fruits, wheat and flour, sugar, animal feeds, dairy products, vegetables, and meats. West Germany was a close second with 10 percent of the total (mainly wheat and flour and dairy products).

The principal sources of Libyan imports in 1968 by commodities were: Live animals, Romania and Bulgaria; coffee and tea, Ceylon; fruits, Lebanon and Italy; dairy products, the Netherlands; meats, Denmark and Tunisia; animal and vegetable oils and fats, Tunisia and Spain; and sugar, U.S.S.R. and Italy.

Table 8.--Israel's agricultural imports, calendar years 1967 and 1968

Imports of U.S. farm products in 1968 were valued at \$3.9 million -- up from \$1.8 million a year earlier. The U.S. share increased to 4.5 percent from 2.1 percent. U.S. shares of Libya's 1968 imports included: Feed grains, 71 percent; fruits and nuts, 9 percent; rice, 14 percent; vegetables, 8 percent; meat, 4 percent, tobacco, 7 percent; and dairy products, 2 percent.

Turkey.--In 1968, Turkey's agricultural imports totaled \$28 million -- 23 percent below the 1967 level and 78 percent lower than the 1963 peak. Imports of wheat and fats and oils -- formerly the largest import items -- have virtually disappeared. In 1968, wool and rubber accounted for nearly two-thirds of Turkey's imports of farm products. Only three other groups -- coffee, tea, cocoa, and spices; hides and skins; and animal and vegetable oils and fats -- were imported in significant amounts. All declined sharply in 1968 except the coffee group, which showed a 57 percent increase (table 10).

The United States remained the leading supplier of Turkey's agricultural imports, although the U.S. share fell to 24 percent from the previous year's 38 percent. In both 1967 and 1968, the United States was the leading source of rubber, hides and skins, and animal and vegetable oils and fats. The U.S. shares in 1968 were 58 percent of the rubber, 41 percent of the hides and skins, and 49 percent of the animal and vegetable oils and fats.

Australia supplied \$5.5 million worth of wool to rank as the second largest supplier. Other important import sources by commodities were: Wool, United Kingdom and Switzerland; rubber, United Kingdom and Malaysia; hides and skins, France and the Netherlands; and the coffee group, Brazil and Lebanon.

Yugoslavia.--Agricultural imports of Yugoslavia fell to \$256 million in 1968 from \$331 million a year earlier. Purchases were smaller for all major products listed in table 11, although the declines ranged from less than 1 percent for wool to nearly 51 percent for cereals. Imports of wheat and flour dropped to a fifth of the 1967 level. Purchases of cotton, the largest import item, declined 11 percent. Imports of meats, sugar, hides and skins, and vegetable oils declined sharply while takings of coffee, tea, cocoa, and spices, fruits and nuts, animal feeds, wool, rubber, and animal fats were about the same as the year before. Rice and oilseed imports, though still small, increased sharply.

The U.S. share of Yugoslavia's imports fell to \$22 million in 1968 from \$77 million in 1967. The U.S.S.R. replaced the United States as the main supplier when its 1968 share reached 14 percent of the total while the U.S. share dropped to 9 percent in 1968 from 23 percent a year earlier. The U.S.S.R. supplied principally cotton and fats and oils. The U.S. shares of major commodity imports in 1968 were: Animal feeds, 43 percent; cotton, 17 percent; cereals, 15 percent; and hides and skins, 10 percent. Nearly all of the tobacco shipments came from the United States.

Third-ranked Australia supplied \$18 million worth of wool and \$3 million worth of hides and skins. Other important sources by commodities were: Coffee, Brazil and Colombia; fruits and nuts, Israel, Ecuador, Greece, and Italy; hides and skins, Argentina, Italy, and West Germany; sugar, Cuba; cotton, United Arab Republic; and animal feeds, Peru.

Portugal.--Agricultural imports of Portugal have increased steadily since 1962. In 1968, they reached a record \$266 million -- nearly double the 1962 level. Substantial import declines in meats, wheat and flour, and oilseeds were more than compensated by sharp purchase gains in feed grains, animal feeds, and cotton. Cotton, feed grains, oilseeds, and sugar accounted for more than half of Portugal's agricultural imports (table 12).

Over half of Portugal's agricultural imports came from African countries -- mainly Mozambique and Angola. Mozambique was the leading source of cotton, sugar, and fats and oils. In 1968, Mozambique supplied the following percentage of Portugal's foreign purchases: Sugar, 72; cotton, 43; fats and oils, 38; and feed grains, 22. Angola was the top source of feed grains, animal feeds, coffee, fruits, and vegetables in addition to supplying substantial amounts of cotton, oilseeds, meats, sugar, tobacco, and fats and oils. Nigeria was the principal source of oilseeds and Spain and Romania supplied most of the imported wheat. Australia, New Zealand, and South Africa supplied nearly all of the wool while Denmark and U.S.S.R. were the leading sources of meats.

Imports from the United States, valued at just under \$21 million in 1968, were about the same as a year earlier. Sharply lower purchases of U.S. wheat and flour were more than offset by larger shipments of U.S. cotton, tobacco, animal feeds, and fats and oils. In 1968, the U.S. shares of the market were tobacco, 57 percent; animal feeds, 28 percent; feed grains, 22 percent; fats and oils, 18 percent; and wheat and flour, 14 percent. Overall, the U.S. share decreased slightly to 7.8 percent in 1968 from 8.1 percent a year earlier.

Tunisia.--With improved rainfall, Tunisia crop production in 1968 recovered from the drought conditions and reduced output of the year before. Foreign purchases of wheat, feed grains, and vegetable oils declined to near pre-1967 levels. Imports of coffee and tea dropped sharply in 1968 while purchases of dairy products, cotton, and tobacco increased moderately (table 13).

Although the United States remained Tunisia's principal supplier, its share of the market declined to 43 percent in 1968 from 56 percent in 1967. Wheat and flour and vegetable oils accounted for 82 percent of U.S. farm exports to Tunisia in 1968. The U.S. shares of Tunisia's principal imports in 1968 were: Vegetable oils, 96 percent; wheat and flour, 69 percent; feed grains, 50 percent; cotton, 42 percent; and dairy products, 29 percent.

France accounted for 50 percent of Tunisia's takings of feed grains and 39 percent of the dairy product imports to remain the second largest supplier. However, Tunisia took no French wheat in 1968 after buying \$2.4 million worth a year earlier. Brazil was the leading supplier of sugar and the second best source of coffee and tobacco. Bulgaria supplied mostly wheat and flour while India was the principal source of the coffee-tea-cocoa-spices group. The most spectacular gains in exports to Tunisia were made by Canada, Spain, Syria, and Yugoslavia. The 1968 imports from these four nations totaled \$5.3 million, compared with \$537,000 a year earlier.

Hong Kong.--Agricultural imports of Hong Kong have increased every year since 1962, except for a very slight dip in 1967. The \$542 million record in 1968 was 4 percent above the year earlier and 41 percent higher than 1962. Cotton replaced rice as the leading import commodity in 1968. These were followed by live animals, fruits, meats, vegetables, and dairy products and eggs (table 14).

Farm products from the United States totaled \$84 million, an increase of 21 percent over 1967. The U.S. share moved up to 15 percent in 1968 from 13 percent the year before. Of Hong Kong's major purchases, the United States accounted for 34 percent of the cotton, 24 percent of the fruits, 15 percent of the rice and wheat, and 12 percent of the meats. The United States also supplied two-thirds of the tobacco and animal feeds.

Mainland China was the principal source of Hong Kong's agricultural imports, followed by the United States, Thailand, Pakistan, and Australia. In 1968, Hong Kong's \$205 million worth of farm product imports from Mainland China included live animals (\$50 million), meats (\$27 million), fruits (\$24 million), rice (\$23 million),

vegetables (\$19 million), eggs (\$17 million), fats and oils (\$7 million), and sugar (\$6 million).

Other important sources were Thailand for rice and feed grains, Pakistan and Tanganyika for cotton, Netherlands for dairy products, Japan for vegetables, and Australia for wheat, sugar, fruits, and dairy products.

Singapore.--Although rubber was the main agricultural commodity imported by Singapore (mostly from Malaysia), most of this rubber was graded, packed, and reshipped from Singapore. Agricultural imports of Singapore totaled \$462 million in 1968, 1 percent above a year earlier. But imports other than rubber increased 9 percent. Included were larger shipments of rice, wheat and flour, meats, sugar, and spices. Purchases of dairy products and fruits declined slightly (table 15).

The United States accounted for 3 percent of agricultural shipments to Singapore in 1968, about the same as the year before. The United States supplied 35 percent of the tobacco, 41 percent of the cotton, and smaller shares of meats, fruits, rice, and wheat.

Important sources of farm products other than rubber were Mainland China for sugar, fruits, and vegetables; Thailand for rice and animal feeds; Malaysia for fruits, vegetables, and dairy products; and Australia for wheat, meats, sugar, fruits, and dairy products.

Western Samoa.--In 1968, agricultural imports of Western Samoa were valued at \$2 million, 25 percent higher than the previous year but 15 percent lower than in 1966. Principal imports were wheat and flour and rice from Australia; sugar from Fiji; and meats, vegetables, and dairy products from New Zealand (table 16).

Australia and New Zealand supplied three-fourths of Western Samoa's agricultural purchases. The U.S. share was 5 percent, up from 4 percent in 1967. Meats and preparations accounted for about one-third of the \$102,000 worth of farm commodities imported from the United States in 1968.

Export Highlights

U.S. AGRICULTURAL EXPORTS, JULY-OCTOBER 1969

Exports of agricultural products from the United States for July-October 1969 totaled \$2,056 million, 9 percent above those of July-October 1968 (table 22). Animal products, fruits and vegetables, grains and preparations, oilseeds and products, and tobacco all contributed. Shipments of cotton trailed last year's pace. Agriculture's share of total U.S. exports during July-October was about 16 percent, down from 17 percent in 1968. Exports of nonagricultural products were up 12 percent, and total exports rose 12 percent.

The sharp gain in agricultural exports during October accounted for the overall increase for the first 4 months in 1969/70. Most of this increase resulted from a sharp rise in grains and preparations, oilseeds and products, fruits and vegetables, and tobacco. Further, there was a slight increase in the average unit prices of several export commodities from the corresponding month of 1968, such as hides and skins, meat and meat products, feed grains, and tobacco.

Animal and animal product exports in July-October 1969 totaled \$254 million, 10 percent above a year earlier. All animal product commodity groups except dairy products moved at a higher rate. Hides and skins were about 26 percent higher than those of July-October 1968. Lard exports totaled 86 million pounds, more than a half higher than in July-October 1968. Value of lard exports was up 82 percent, reflecting the higher export prices during the current fiscal year compared with last year. Continued large pork shipments to Japan and larger shipments of variety meats to Western Europe advanced the exports of meats and meat preparations. Nonfat dry milk and anhydrous milk fat accounted for most of the decline in dairy products.

Cotton exports, valued at \$89 million, were 23 percent below those of July-October 1968. Upland cotton exports with staples an inch or longer have raised the per unit value of cotton exports thus far in 1969/70. Exports of upland cotton under 1 inch were substantially lower, reflecting reduced shipments to Japan, Korea, Taiwan, and Thailand.

Shipments of U.S. fruits and vegetables were up 21 percent in July-October. Contributing most to the rise were fruits and preparations, up 24 percent from July-October 1968. Increases occurred in exports of canned, dried, and fresh fruits, and fruit juice exports. Canned peaches boosted sealed fruit exports to \$30 million, compared with \$21 million in July-October 1968. Fresh orange-tangerine-clementine exports totaled \$16.6 million, nearly twice the July-October 1968 value. Larger shipments to Canada, the Netherlands, and Hong Kong accounted for much of this rise. Exports of vegetables and preparations, totaling \$57 million, were 14 percent above those of July-October 1968. Shipments of dried peas, including cow and chick peas, added most of the increase, canned and fresh vegetables were up slightly. Vegetable seasonings were down.

Vegetables and preparations	50	57	+14
Other	130	137	+ 5
Total exports	1,888	2,056	+ 9

As 1969/70 continues, the export outlook for wheat and feed grains improves. For instance, during July-September, wheat exports were down 9 percent from July-September 1968; during July-October, the negative difference decreased to 5 percent below last year's comparable export period. Wheat and wheat flour in July-October 1969 were valued at \$278 million, compared with \$293 million in July-October 1968. Data indicate that current fiscal year sales of wheat and wheat flour to Japan and Latin American markets have improved, while exports under food-aid programs to countries such as Pakistan continued below last year's level (table 23). Feed grain exports totaling \$361 million were about one-fifth above those of July-October 1968. Pacing the expansion in feed grain exports, corn shipments reached \$300 million, more than one-fourth above those of July-October 1968. Rice exports were also up substantially, with the July-October 1969 value reaching \$108 million, compared with \$80 million in the same period a year earlier. In total, exports of grains and preparations reached \$770 million, 10 percent above those of July-October 1968.

Due to the sharp advance in the export of oilseeds and products during October, the total export value of oilseeds and products in July-October 1969 closed out 13 percent above those of July-October 1968. This contrasts with the July-September 1969 total, which was 7 percent below July-September 1968. Protein meal (1.1 million short tons valued at \$87 million) was 16 percent higher than July-October 1968. Soybeans export value showed a substantial increase during October, rising 15 percent above the corresponding period in 1968. This compares much more favorably than did the total in July-September 1969, when export value of soybeans was 12 percent below those of first quarter 1968. The sharp upsurge in soybean exports during October reflected the substantially larger shipments to Western Europe, as well as the larger purchases made by the Japanese. However, exports of flaxseed continued at a substantially lower level. Flaxseed exports in the fall of 1968 were at a high level, because of poor production in Argentina, which normally supplies flaxseed to the major West European markets. As a result, the U.S. exports rose to meet the world deficit.

Exports of cottonseed and soybean oil, totaling \$39 million in July-October 1969, were up 22 percent from those of July-October 1968. Higher vegetable oil prices accounted for most of this increase compared with those of July-October 1968. The quantity of soybean oil exports declined from last year's level while exports of cottonseed oil rose sharply. The value of cottonseed oil exports was five times greater than that of July-October 1968, while the increase in the value of soybean oil exports was down 6 percent.

U.S. exports of tobacco during July-October 1969 totaled \$198 million, 5 percent higher than last year's like period. There were substantially larger shipments of flue-cured tobacco, with October exports up 67 percent from the year earlier month.

U.S. Agricultural Exports to the EC, July-October 1969

Agricultural exports to the EC totaled \$426 million in July-October 1969, 6 percent lower than those of the corresponding months in 1968 (table 24). Sales of variable-levy commodities dropped 16 percent to \$151 million, while commodities not subject to the EC variable import levies increased slightly to \$276 million.

The decline of \$28 million in U.S. exports of variable-levy commodities to the EC resulted primarily from the continuing decline in feed grain exports. Corn, totaling \$97 million for July-October, was 8 percent below July-October 1968. It contributed to much of the decline in feed grain exports as well as total variable-levy commodity exports. Wheat exports during the first 4 months of 1969/70 declined primarily because of the increased production of soft wheat varieties in several EC countries. On the positive side, shipments of rice, pork, and corn byproducts for feed increased. Rice exports increased substantially, rising by 24 percent over a year earlier to \$11 million. Exports of poultry and eggs remained near the July-October 1968 level.

Table 23.--U.S. wheat and wheat flour exports, by selected destinations, July-October 1968/69 and 1969/70

Country	1968/69	1969/70	Percentage change

Other	69,991	72,443	+4
Total	292,947	277,987	-5

Smaller shipments of live poultry, broilers, fryers, and stewing chickens were offset by larger sales of turkeys and eggs.

Non-variable-levy commodities increased to \$276 million, from the \$275 million in July-October 1968. Cotton exports totaled \$6 million, compared with \$11 million in the same months of 1968. Soybean exports, which were sharply down for the July-September period, showed a substantial recovery as a result of increased exports during October. Soybean oil cake and meal also gained substantially, 19 percent to \$51 million. Exports of tallow continued at a considerably lower level than during the 1968/69 period. Increased exports of fruits and preparations rose 51 percent to \$30 million. Among the fresh fruit exports, oranges and tangerines rose sharply. Nuts and preparations reached \$5 million, up from \$1.5 million in July-October 1968. Variety meat exports were up 29 percent, reaching nearly \$12 million.

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. The variable-levy classification is designed to show overall changes in exports rather than to measure the impact of the variable levies. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content only.

Import Highlights

U.S. AGRICULTURAL IMPORTS, JULY-OCTOBER 1969

During the current fiscal year's opening quarter, U.S. imports of farm products fell 2 percent to \$1,710 million. Comparable imports in July-October 1968 were \$1,737 million (table 26). Reduced purchases of several noncompetitive (complementary) items, particularly green coffee, accounted for most of the decline. Although some other complementary commodities showed gains, such as natural rubber, soluble coffee, and cocoa beans, they did not counteract the 22-percent value decline in green coffee entries. As a group, complementary imports totaled \$641 million against \$680 million during the same months a year ago. The threat of a strike last year coupled with ample supplies of coffee at relatively low prices resulted in inventory accumulation.

Imports of competitive, or supplementary, agricultural commodities were slightly above a year earlier at \$1,069 million. Within this category, declines occurred for dutiable cattle, hides, wool, cotton, cheese, edible nuts, most oilbearing materials, and sugar. Meat imports continued to gain as they have for many months, more than offsetting the reductions. Strong growth took place in entries of fresh, chilled, boneless beef, mutton, and lamb. Table 25 shows monthly entries of meat subject to P.L. 88-482, which stipulates a ceiling on the volume imported. This law has not been invoked because major exporting countries have voluntarily restrained their shipments.

October imports of agricultural products totaled \$469 million, 18 percent above September 1969 and last October's levels.

<u>Not adjusted for seasonal variation</u>							
1/ Based on 332 classifications.							
2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, <u>The X-11 variant of the seasonal Method II seasonal adjustment program</u> , Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all other, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers. 2/ Based on 417 classifications.

3/ The seasonal adjustment series has been revised to incorporate the Bureau of Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C. 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in transit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$250 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural exports statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 8 -195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$250-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$250-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
