FOREIGN AGRICULTURAL TRADE

OF THE UNITED STATES

Digest

Lower Commercial and Food-for-Peace Shipments Bring Moderate Decline in U.S. Farm Product Exports in Calendar Year 1968 (see page 7). U.S. exports of farm products totaled \$6.2 billion in 1968, down \$152 million from a year earlier. Contributing most to the decrease were reduced movements to Europe. Dollar sales advanced for oilseeds and products, milled rice, unmanufactured tobacco, dairy products, and vegetables and preparations. More than offsetting were declines in commercial shipments of wheat and flour, feed grains, cotton, fruits and preparations, and animals and products except dairy products. The loss in commercial exports totaled \$64 million. Food-for-Peace exports amounted to \$1.2 billion, \$87 million less than the 1967 total. Sales for foreign currency were down while long-term credit sales gained sizably. This marks progress in the transitional shift from sales for foreign currency to long-term dollar credits as directed by Congress in 1966.

A number of world situations affected demand for U.S. farm products in 1968. Large grain crops were produced in the industrial nations, and in the developing countries, particularly Asia. Priced exceptionally low, sunflower seed from the USSR and E-stern Europe is taking a large share of the West European vegetable oil market. Import savings undertaken by the United Kingdom to improve its trade imbalance reduced U.S. exports there. To help correct its unfavorable balance of trade and as a part of its aid program to developing countries, Japan sought to diversify its supply sources. Japan's balance of payments improved substantially and registered a sizable surplus for 1968.

* * * * *

U.S. Agricultural Trade With Canada (see page 37). Farm goods traded between the United States and Canada totaled \$710 million in 1968, \$686 million a year earlier, and \$726 million in 1966. During that span, agricultural exports to Canada remained about the same at \$484-\$486 million, while imports from Canada fluctuated from \$201 million to \$240 million. Principal U.S. farm goods exported to Canada were fruits, vegetables, certain grains, oilseeds, cotton, animal feeds, meats, hides, and fats and oils. Our leading agricultural imports from Canada included cattle, beef, pork, grain products, certain fruits and vegetables, animal feeds, crude drugs, grass seed, and maple sugar products. A special table shows U.S. farm commodities transshipped through Canadian ports.

* * * * *

U.S. Agricultural Export Price Index at 100.0; Import Price Index at 105.3 for First Quarter 1969 (see page 45). Quarterly prices of soybeans and products as well as of imported tobacco were substantially below a year earlier. All other commodities either increased in price -- some import items significantly -- or changed little. For the year ended March 31, 1969, the export price index was 96.3 percent and the import price index 101.4 percent of a year earlier. The terms-of-trade index, for both the quarter and the year, was 95.0.

* * * * *

Selected Price Series of International Significance (see page 48). Corn prices, c.i.f. U.X., rose 3 percent from March to April. The relationship of U.S. to Canadian wheat prices, c.i.f. U.K., improved considerably due to a 4-percent drop in the Canadian quotation. Other price changes were small or nil.

* * * * *

U.S. Agricultural Exports: July-April 1968/69 (see page 51). U.S. exports of farm products through April this fiscal year came to \$4,645 million, about 13 percent below a year ago. April exports improved considerably over March 1969, rising 16 percent to \$602 million. Shipments of animals and animal products during July-April 1968/69 rose 14 percent above a year ago. Exports of oilseeds and products rose 4 percent. Lower export values for cotton, fruits and preparations, grains and preparations, and tobacco resulted in an overall decline during July-April 1968/69.

During July-March 1968/69, each EEC country imported less than a year earlier. Exports to Italy fell 20-percent below the first three quarters of 1967/68. The Netherlands' receipts of U.S. agricultural products were down 18 percent.

Farm product exports to the EEC totaled \$1,078 million, 10 percent below July-April 1967/68. Exports of variable-levy commodities were down a fourth, with feed grain exports accounting for most of the decline. Non-variable-levy items increased slightly, rising less than 1 percent. Cotton dropped nearly two-thirds below the \$61 million in July-April 1967/68. But exports of hides and skins, soybeans, oil cake and meal, and tobacco were larger.

4 + 4 4 4

U.S. Agricultural Imports: July-April 1968/69 (see page 62). Agricultural imports through April were 6 percent above a year earlier and reached \$4,067 million. Competitive goods were up 8 percent because of gains for cattle, beef, cheese, fruits, nuts, vegetable oils, and vegetables. Noncompetitive imports showed a 3-percent rise as reduced coffee purchases nearly offset higher entries for almost all other products. April imports of agricultural products were \$488 million, compared with \$475 million in March and with \$439 million last April.

Table 1.--U.S. exports: Value of total and agricultural exports, including specified Government-financed programs 1/ and commercial (dollar) sales by selected commodities and commodity groups, averages 1955-59 and 1960-64; annual 1965-68 and July-April 1968/69

1/ Includes programs authorized under Public Law 480 (Including all batter), and Matual Security (AID) programs 1955-64. Since 1963, the emphasis in the batter program has been on oversees procurement for U.S. agencies, which has a favorable effect on the U.S. balance of payments and is not primarily authorized by P.L. 480. Barter shipments are being reclassified from 1963 to include in "Programs" shipments under contracts for strategic materials and in "Commercial" shipments under contracts for procurement for U.S. agencies. For 1964-68, pending completion of the reclassification, batter exports are shown separately. For July December 1967 and 1968, barter exports are shown under the new classification, i.e., shipments for strategic materials under "Programs" and shipments for U.S. agency procurement under "Commercial." 2/ Includes donations through voluntary relief agencie not separately reported by the Eureau of the Census. 3/ Less than \$500,000. 4/ Preliminary data (unrevised). 5/ Exports under Mutual Security (AID) programs were omitted from "Program" totals for July-December 1968 because of a delay in the preparation of the report for these programs.

SPECIAL in this issue

LOWER COMMERCIAL AND FOOD-FOR-PEACE SHIPMENTS BRING MODERATE DECLINE IN U.S. FARM PRODUCT EXPORTS IN CALENDAR YEAR 1968

> by Eleanor N. DeBlois 1/

The value of U.S. farm products exported last year was down \$152 million from the 1967 level. Farm goods moving abroad reached a record \$6.9 billion in 1966, but dropped to \$6.4 billion a year later and to \$6.2 billion in 1968 -- the same level as 1965 (table 2). Most of the reduction was in shipments to Europe; deliveries to other world areas except Africa rose moderately.

The value loss in commercial exports in 1968 amounted to \$65 million, over two-fifths of the total reduction. Gains were recorded in dollar exports of soybeans, rice, tobacco, protein meal, dairy products, and vegetables and preparations. More than offsetting were declines in commercial exports of wheat and flour, fruits and preparations, feed grains, animals and products except dairy products, and cotton.

Food-for-Peace exports declined \$87 million from a year earlier to total \$1.2 billion. Lower sales for foreign currency and a jump in long-term credit sales marked progress in the trade shift from foreign currency to long-term dollar credits as directed by Congress in 1966. The largest commodity declines were in feed grains, especially grain sorghums, and in soybean oil. Despite large grain crops in India and Pakistan, the major wheat recipients under Government programs for some years, program shipments of wheat grain amounted to \$486 million, compared with \$457 million a year earlier.

A number of world situations affected demand for U.S. farm products in 1968. Large grain crops were produced in industrial nations and in developing countries, particularly in Asia. A large volume of wheat harvested in Western Europe and Canada was of low quality due to wet weather. Cheaper substitutes for feed grains are being used in animal feeds in the EEC, especially for imported grains which are subject to variable levies. Measures to reduce surplus butter stocks in Europe are depressing world trade in oil-seeds. Exceptionally low-priced sunflower seed from the USSR and Eastern Europe is taking a large share of the West European vegetable oil market.

Import savings to help correct the U.K.'s unfavorable balance of payments reduced U.S. agricultural exports to the lowest level since 1954. Partly to help to eliminate its trade imbalance, and partly to aid developing countries, Japan diversified its supply sources and purchased more farm products from Thailand, Indonesia, Cambodia, and several African countries. Japan's balance-of-payments position improved substantially and registered a sizable surplus for 1968.

E/ Authorized by Little 1, P.L. 480.

2/ Shipments under agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480 as amended by P.L. 89-808.

3/ Authorized by Title II, P.L. 480.
4/ Authorized by Sec. 416 of the Agricultural Act of 1949 and Sec. 302, Title III, P.L. 480 through Dec. 31, 1965. Authorized by Title II, P.L. 460 as amended by P.L.

89-808, effective Jan. 1, 1967.

9-805, effective Jan. 1, 1967.

5/ Authorized by Sec. 303, Title III, F.L. 480, and other legislation. Includes some shipments in exchange for goods and services for U.S. agencies before 1963.

6/ Sales for foreign currency, economic aid, and expenditures under development loans authorized by P.L.'s 165, 665, and 87-195.

7/ "Total agricultural exports outside specified Government programs" (sales for collars) include in addition to unassisted commercial transactions, shipments of some

If lotal agricultural exports outside specified Government programs (sales for collars) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash or in kind.

8/ Includes shipments for Jamary-June 1968 only.

9/ Less than one-half percent.

The categories "Government-financed programs" and "Commercial exports" or "Exports outside Government-financed programs" have been revised beginning with reports for 1968/69 quarters because of the barter export reclassification. The category "Government-financed programs" for calendar year 1968 includes shipments under Mutual Security (AID) programs for January-June 1968 only. Revisions in the reporting system delayed the report for July-December.

Before 1963, the emphasis in the barter program was on the barter of agricultural commodities for strategic and other materials for Government stockpiling needs. In 1963, USDA began using the program to offset some of the dollar outflow for foreign purchases by U.S. agencies with an inflow of dollars for agricultural commodities. By then, most of the Government's stockpiling needs had been met, CCC commodity inventories were becoming substantially less burdensome, and the U.S. balance-of-payments problem was a matter of continuing concern.

Overseas procurements for U.S. agencies involving barter of agricultural commodities are authorized under the CCC Charter Act, largely using private stocks to fulfill barter contracts. These transactions are essentially equivalent to dollar sales since they offset the dollar outgo that would otherwise impair the U.S. balance of payments.

Because of balance-of-payments effects, and with the approval of the USDA Statistical Review Board, it was decided to classify as "Government-financed" barter exports under contracts for strategic materials and as "Commercial (dollar) exports" barter shipments under overseas supply-type contracts.

Commodity Developments

Grains. -- U.S. exports of wheat grain dropped to \$993 million in 1968 from \$1,120 million a year earlier. Exports of wheat have totaled over \$1 billion in all but one of the previous 7 years (table 3).

Though India and Pakistan imported less, particularly during the last half of 1968 because of large wheat crops, exports under Government-financed programs reached \$486 million, \$30 million higher than the 1967 total. The sizable drop in shipments in exchange for foreign currency was nearly offset by the rise in exports under long-term credit sales. Donations, especially under Government-to-government arrangements, were also higher. All of the rise in food-aid exports of wheat took place during January-June as exports during July-December were sharply reduced.

Commercial exports of wheat amounted to \$506 million, compared with \$663 million in 1967. World supplies well in excess of potential requirements limited U.S. wheat exports, especially during the latter half of the year.

A 60-percent rise in shipments of wheat flour under Government programs, partly offset by a 25-percent drop in commercial exports, brought U.S. exports of wheat flour to \$107 million, compared with \$86 million in 1967. Long-term credit sales led the rise in Food-for-Peace shipments, but all program exports advanced except donations through voluntary relief agencies.

A reduction of nearly \$100 million in program shipments and a considerably smaller drop in dollar exports brought U.S. exports of feed grains to \$927 million, 12 percent less than in 1967. Shipments of barley, oats, and grain sorghums were substantially reduced, but exports of corn increased. Because prices were lower, the value of exports of feed grains dropped more than the volume. Reductions in program exports were mostly in corn to Pakistan and grain sorghums to India. Commercial shipments of corn to Japan, Italy, West Germany, and France were higher, but the United Kingdom, the Netherlands, Belgium, and Spain took less.

^{1/} Includes sales for foreign currency, long-term dollar and convertible local currency credit sales, Government to-government donations, donations through voluntary relief agencies, and barter for strategic materials under the authority of P.L. 480, and exports under Mutual Security (AID) programs, authorized by P.L. 87-195. Exports under AID programs for 1968, include only January-June because of a delay in the preparation of the report for July-December. 2/ "Exports outside specified Government-financed programs" or "Commercial sales for dollars" include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter transactions involving overseas procurement for U.S. agencies, which benefit the balance of payments and rely primarily on authority other than P.L. 480; (2) extension of credits and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash. 3/ Total exports of feed grains, excluding products, include the estimated value of donations of grain sorghums through voluntary relief agencies under P.L. 480, not separately reported by the Bureau of the Census: 1967, \$1.4 million and 1968, \$0.7 million. 4/ Total exports of dairy products include the estimated value of donations of blended food products through voluntary relief agencies under P.L. 480, not separately reported by the Bureau of the Census: 1967, \$25.8 million; and 1968, \$20.6 million.

10-

Larger commercial and food-aid shipments brought U.S. exports of milled rice to \$346 million, 10 percent above a year earlier. Much of the rise was due to higher prices as volume was up only 4 percent. Rice under Government programs went mostly to South Vietnam for local currency and to Indonesia under long-term credits. The Republic of Korea purchased over \$40 million of U.S. rice in 1968 because its rice production was down. Shipments were larger to the United Kingdom, the Nansei-Nanpo Islands, Canada, the Republic of South Africa, Ghana, Liberia, and Saudi Arabia. Exports to Japan, the Philippines, Hong Kong, and Peru were considerably smaller.

Cotton.--U.S. exports of cotton amounted to \$459 million in 1968, only I percent less than in 1967. A small rise in shipments under Government programs was offset by a larger decline in commercial shipments. The principal recipients in exchange for local currency were the Republic of Korea, India, the Republic of China, and South Vietnam. Indonesia, the Philippines, and Ethiopia were major destinations under long-term credit sales. Although U.S. exports of longer staples were lower in 1968, shipments of short staples increased substantially. Large quantities of short-staple cotton went to Asian markets, including Japan, the Republic of China, and Hong Kong.

Tobacco, unmanufactured.--A rise in both Food-for-Peace and commercial exports brought U.S. exports of unmanufactured tobacco to \$524 million, \$26 million higher than a year earlier. Continuing UN sanctions against Rhodesian tobacco, increased world cigarette consumption, better quality of U.S. tobacco in recent years, and the export-payment program helped improve the demand for U.S. tobacco. South Vietnam, the Republic of China, and Pakistan were the largest recipients in exchange for foreign currency. Shipments to the Philippines, the Congo, Ghana, Chile, and Colombia made up nearly 90 percent of the tobacco under long-term credits. In 1968, the United Kingdom, the principal market for U.S. tobacco, took 7 percent more than in 1967 as manufacturers rebuilt their stocks. The second ranking U.S. market, West Germany, took over one-fifth less. Japan was in third place, taking four-fifths more than a year earlier. Other major markets, the Netherlands, Switzerland, Belgium, Denmark, Australia, and Thailand also took larger quantities.

Oilseeds and products. -- U.S. exports of oilseeds and products rose 2 percent to \$1,270 million, reflecting larger commercial shipments of soybeans, flaxseed, linseed oil, and protein meal, with partly orfsetting reductions in shipments of vegetable oils. Commercial shipments were up \$69 million, but shipments of soybean oil under Government programs were down \$42 million from 1967. Japan, the Netherlands, Spain, Canada, and the Republic of China took larger quantities of soybeans. West Germany and Italy reduced their takings slightly. Shipments of flaxseed to West Germany more than tripled in 1968, accounting for most of the 50-percent increase in flaxseed exports. Exports of linseed oil were about 22 times the year-earlier total. Sharply increased exports to the Netherlands and the United Kingdom accounted for most of the increase. U.S. linseed oil prices were competitive in world markets and supplies from South America were down. Despite a price drop, the export value of protein meal rose 7 percent. The Netherlands, West Germany, France, Italy, Canada, and Yugoslavia were the leading markets for U.S. soybean meal in 1968. The volume of exports of soybean oil dropped 16 percent and the value over 30 percent. Larger supplies of animal fats and oils in Western Europe and competition from sunflower oil from the USSR and Eastern Europe reduced the demand for U.S. oils. About 85 percent of the soybean oil moved under P.L. 480. Principal recipients were Pakistan and India in exchange for local currency.

Bairy products.--A sharp rise in donations of butter, butteroil, and ghee, larger shipments of condensed milk to South Vietnam in exchange for local currency, sales of nonfat dry milk from CCC stocks at reduced prices, mostly for school lunch and welfare programs, and larger commercial shipments of cheese accounted for the 12-percent rise in U.S. exports of dairy products to \$164 million. While U.S. milk production has fallen in recent years, output in many other major milk-producing countries has

increased sharply, particularly in Europe. Surplus European dairy stocks, mainly butter and nonfat dry milk, are moving in world trade at heavily subsidized prices, depressing dairy product prices in world markets. Although world trade in dairy products has expanded in recent years, the U.S. share has declined.

Animals and products (except dairy products).--U.S. exports of animals and products, except dairy products, dropped \$22 million to \$532 million in 1968. Animal fats, oils, and greases, principally lard and tallow, were \$27 million lower; live animals, nearly \$5 million; and hides and skins, over \$5 million due to lower prices for cattle hides, as the quantity of all hides and skins was up 3 percent from 1967. Total meats and products surpassed 1967's total by \$10 million with a substantial rise in shipments of pork, particularly to Japan, partly offset by relatively small reductions in beef, variety meats, and poultry. Shipments of wool were over \$4 million higher.

U.S. exports of lard dropped from \$70 million in 1964 to only \$14 million in 1968. Last December, USDA announced an export-payment program for American lard to the United Kingdom to recapture our traditional share in that market. This share has been 70 to 80 percent. As a result of subsidized competition begun in 1964 by France and the Netherlands and in 1967 by the EEC, the U.S. share dropped to between 30 and 40 percent.

The entire \$21 million decline in shipments of tallow was due to lower prices as the quantity was slightly higher. Government-financed program exports in this commodity group were principally tallow to Pakistan and the Republics of Korea and China for foreign currency and to Ghana and Guatemala under long-term credits.

Fruits and vegetables and preparations. -- U.S. exports of fruits and vegetables and preparations declined \$25 million in 1968 to \$450 million with all of the drop in fruits and preparations. Poorer U.S. crops of peaches, oranges, and apples in 1967 resulted in shorter supplies in early 1968 and higher prices. Prices for all categories of fruits and preparations averaged higher in 1968. The largest value decline was in fresh fruits, which dropped 18 percent in value and 27 percent in volume. Larger crops of apples and pears in Western Europe increased competition for U.S. fruits.

Exports of vegetables and preparations rose 5 percent to \$173 million. Most of the rise was in fresh vegetables, particularly tomatoes, potatoes, asparagus, and carrots. Shipments of canned vegetables were 8 percent lower. Shipments of dried beans and peas amounted to \$44 million during both years. All shipments of fruits and vegetables were dollar sales in 1968.

Exports Under Supply-type Barter Contracts for U.S. Agencies and Gredit Sales Programs

"Commercial exports" or "Exports outside Government-financed programs" include shipments under barter contracts involving overseas procurement for U.S. agencies. The reclassification of barter exports (see page 9) was initiated in "Commercial and Government Program Export Highlights" for July-September 1968, Foreign Agricultural Trade of the United States, March 1969. Exports under supply-type barter contracts totaled \$282 million in 1968, compared with \$304 million a year earlier. Shipments under credit sales programs dropped to \$188 million from \$225 million in 1967 (tables 4 and 5).

Barter for Overseas Procurement for U.S. Agencies.—Shipments of U.S. farm products for U.S. agency needs abroad amounted to \$282 million in 1968, 7 percent less than the 1967 total. These shipments made up 99 percent of total barter exports in 1968, compared with 96 percent in 1967. Since placing barter program emphasis on supplying goods and services for U.S. agencies, this type of barter has become a progressively larger proportion of total barter exports.

1/ Credits for relatively short periods repayable in dollars plus interest (covering the financing costs of the lending agency). 2/ Includes disbursements by the Export-Import Bank and disbursements by U.S. commercial banks under Export-Import Bank medium-term guarantees against political and/or financial risk. 3/ Purchases during the period.

Shipments of wheat under this program in 1968 were about two-thirds of the 1967 quantity. Corn, cotton, and tobacco tonnage was higher. Most of the wheat went to Asia and Latin America, including sizable quantities to India, Brazil, Israel, Peru, and the Republic of Korea. Europe and Asia received nearly 95 percent of the tobacco, with large quantities going to the United Kingdom and Japan. Nearly 70 percent of the corn was destined for Europe and Latin America with Poland the leading individual market. Exports to Asia accounted for nearly 90 percent of the cotton. The Republic of China and the Philippines were the largest cotton markets (tables 4 and 6).

Exports Under Credit Sales Programs. -- Purchases under the CCC credit sales program peaked at \$386 million in 1966, then dropped to \$154 million the following year and to \$114 million in 1968. Smaller purchases of wheat, corn, and grain sorghums were responsible for most of the decline from 1967. Japan, Poland, and the Republic of Korea were destinations for 85 percent of the cotton shipped under this program in 1968. Over half the wheat went to Brazil. Other principal markets were West Germany for tobacco and Greece for corn.

Disbursements under Export-Import Bank credits and guarantees rose 5 percent to \$74 million. There were small increases in disbursements for cotton to Japan, soybean meal to Hungary, and breeding stock to Mexico. All of the corn went to Korea (tables 5 and 7).

Government Program Developments

Exports under Food-for-Peace programs amounted to \$1.2 billion in calendar year 1968, \$87 million less than a year earlier. The nearly \$200 million reduction in sales for foreign currency indicates further success in phasing out local currency sales and selling agricultural commodities on dollar credit terms only. Of the 25 P.L. 480 sales agreements signed in 1968, 18 were signed on solely dollar credit terms. All but South Vietnam contracted to pay for the commodities at least partially in dollars. The reduction in sales for foreign currency was nearly offset by the rise in long-term credit sales. Donations through voluntary relief agencies were 16 percent less than in 1967 and barter shipments for strategic materials continued downward. No barter contracts for procuring strategic materials were signed in 1968. Shipments under AID programs for 1968 include only those in January-June as a revision of the reporting system delayed the report for July-December.

Last year was the second in which P.L. 480 recipient countries were required to carry out specific self-help programs designed to assist them in achieving agricultural development. By direction of Congress in 1966, these countries must set aside for agricultural development at least 20 percent of the foreign currencies financed by P.L. 480 agreements. Donation programs under Title II are also helping the recipient countries work toward agricultural development (tables 8, 9, 10, and 11).

Sales for foreign currency. -- In line with the Congressional directive to phase out sales for local currency by the end of 1971, exports under this program fell to \$539 million from \$736 million a year earlier. The decline was principally in grains -- wheat, grain sorghums, corn, and rice -- and in soybean oil. Most of the reduction in shipments by country was to India and Pakistan. India took substantially less wheat, grain sorghums, cotton, and soybean oil. Pakistan took about a third less wheat, but maintained its purchases of soybean oil and tallow.

Record grain crops in India and Pakistan were largely responsible for the reduction in shipments of wheat to these countries. A supplemental P.L. 480 sales agreement with India, totaling \$167 million, was announced December 23, 1968; it provides for the sale of \$145 million of wheat or wheat flour, as well as inedible tallow, tobacco, and nonfat dry milk. About 40 percent of the commodities are to be sold on credit and the remainder for local currency. An additional supplemental agreement was announced

1/ Authorized by Title I, P.L. 480. 2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808. 3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808. 4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation. 5/ Expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195. Includes shipments for January-June only. Report for July-December delayed. 6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; (3 sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash. 7/ Wheat and wheat flour. 8/ Less than \$50,000. 9/ The value shown for total agricultural exports of grain sorghums; catmeal, groats, and rolled cast; and infants' and dietetic foods includes the value reported by the Bureau of the Census. 10/ The excess of the Government program portion over total agricultural exports maybe attributed to lags in reporting or to differences in classification or valuation procedures. 11/ Blended food products.

If Authorized by Title I, P.L. 480. 2/ Shipments under agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808. 3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808. 3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808. 3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808. 4/ Authorized by P.L. 81, P.L. 480, and other legislation. 5/ Includes expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195. 6/ "Total agricultural exports outside specified Government programs" (sales for shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government owned commodities at less than domestic market prices; and (4) export payments in cash. 7/ Wheat and wheat flour. 8/ The excess of the Government program portion over total agricultural exports may be attributed to lags in reporting or to differences in classification procedures. 9/ The quantity shown for total agricultural exports of grain sorghums; oatmeal, groats, and rolled oats; and infants' and dietetic foods includes the quantity reported by the Bureau of the Census. 10/ Quantity estimated. 11/ Not available, 12/ Blended food products (corn-soya-milk). 13/ Less than 500.

April 25, 1969. It provides for the sale of grain sorghums, upland cotton, rice, and soybean oil and/or cottonseed oil, totaling \$57 million. Over 60 percent of the commodities are to be sold on credit and the remainder in exchange for local currency. The supply period under both agreements is 1968/69.

Shipments in exchange for local currency went to only eight countries in 1968. Five Asian countries -- India, South Vietnam, Pakistan, the Republic of Korea, and the Republic of China -- received 94 percent of the total. Three African countries -- Morocco, Tunisia, and Ghana -- received the remaining 6 percent. India was the principal recipient of wheat, followed by Pakistan, the Republic of Korea, Morocco, and Tunisia. Cotton went to all countries receiving exports for foreign currency. The major destinations were the Republic of Korea, India, the Republic of China, Pakistan, and South Vietnam. India received all of the grain sorghums during the first 6 months of the year. Vietnam received all the wheat flour, most of the rice, a large part of the tobacco, and nearly all of the milk. Pakistan and India were the principal destinations for soybean oil. Exports of tallow were largely to Pakistan and the Republic of Korea and China.

Long-term credit sales. -- Long-term credit sales for dollars and convertible local currency rose to \$384 million from \$201 million in 1967, the rise compensating for over 90 percent of the drop in foreign currency sales. In terms of value of agreements signed during 1968, the transition from foreign currency sales to long-term credit sales is almost two-thirds complete. Of the 25 countries signing agreements in 1968, only one, South Vietnam, had no dollar payment requirement. Eighteen of the countries signed agreements providing for payment only on dollar credit terms. The proportion of dollar credit in agreement with Morocco, Tunisia, and Israel increased. In addition to increasing dollar sales of U.S. agricultural commodities, this program was designed to develop future foreign markets for U.S. agricultural commodities and to assist in the socioeconomic development of foreign nations by extending credit. Principal and interest repayments on dollar credit sales continue to contribute to the U.S. balance of payments, amounting to \$43 million in 1968.

Thirty countries received U.S. farm products under long-term credits in 1968. Nearly two-thirds of the total went to 11 Asian countries, nearly a fourth to eight Latin American Republics, over a tenth to nine African countries, and less than 1 percent to two European countries. Leading country recipients were Indonesia, India, Israel, Brazil, Uruguay, Ceylon, Morocco, Chile, Pakistan, and Colombia. Larger shipments of wheat and thour, bulgur wheat, rice, and cotton accounted for most of the increase from 1967. Of the 14 countries receiving wheat under long-term credits, India, Brazil, Israel, Pakistan, Morocco, Uruguay, Colombia, and Chile were the leading destinations. Shipments to Indonesia accounted for most of the rice. Major recipients of wheat flour were ceylon and Indonesia. Exports to Indonesia and the Philippines made up nearly three-quarters of the cotton. Soybean oil went to nine countries, principally Israel, the Dominican Republic, Tunisia, Chile, and Morocco.

Foreign donations. -- Donations under Government-to-government arrangements and through voluntary relief agencies amounted to \$251 million in 1968, a reduction of \$36 million from 1967. Most of the decline was in shipments through voluntary relief agencies. The emphasis in donation programs is being directed toward combating malnutrition and helping recipient countries work toward economic development. More and more food donations are going into community and other self-help projects. Food-for-work programs have been conducted on a Government-to-government basis for years. The voluntary agencies have now passed the halfway mark toward their goal to complete the shift from dole feeding to food-for-work before 1971. Over 50 million children benefit from food donations for school lunch and maternal-child feeding programs in over 100 countries. Recipient governments continue to increase their contributions toward these programs and to eventually continue the programs without U.S. help. The

United States also assists foreign governments in disaster and refugee relief. Voluntary agencies provide on-the-spot assistance from existing P.L. 480 stocks.

The U.S. Government, under Title II authority, contributes commodities to the World Food Program, established in 1962 by the United Nations and the Food and Agriculture Organization. Under the Food Aid Convention of the International Grains Arrangement, which came into force July 1, 1968, 4.2 million tons of food have been subscribed by 17 grain-trading countries. The United States makes its contribution directly to recipient countries under Title II of P.L. 480.

Larger donations of butter, butteroil, ghee, wheat, and flour in 1968 were more than offset by reductions in bulgur and rolled wheat, feed grains and products, soybean oil, blended food products, and nonfat dry milk. Donations to Asian countries made up nearly half of the total. India, the Republic of Korea, and South Vietnam were the principal Asian recipients. Leading destinations for the over a fifth which went to Latin America were Brazil, Colombia, Chile, and the Dominican Republic. Morocco, Tunisia, and Nigeria were the largest recipients of the 17 percent of the total going to Africa. Turkey and Poland were the major European destinations. U.S. food donations totaling over \$8 million were distributed to Palestinian refugees through the United Nations Relief and Works Agency (UNRWA).

Barter for Strategic Materials. --Shipments under barter contracts involving procurement of strategic materials for stockpiling amounted to \$38 million in 1963, when the emphasis in the barter program was placed on overseas procurement for U.S. agencies. The total dropped to \$5 million in 1965, rose to \$41 million in 1966, then resumed the decline to \$13 million in 1967 and \$3 million in 1968. A total of 123 countries have received agricultural commodities under barter contracts for strategic and other materials since 1954. The export market value total of these commodities is \$1,710 million.

Reflecting the shift in emphasis to transactions contributing to the balance of payments by procuring supplies and services needed abroad by U.S. Government agencies, no barter contracts for delivery of strategic materials were signed in 1968. Shipments in 1968 consisted of relatively small quantities of cotton and tobacco and in 1967 of wheat, grain sorghums, cotton, and tobacco.

Area Review

Europe.--U.S. exports of farm products to Europe in 1968 dropped \$206 million to \$2,352 million from 1967, the lowest total for this area since 1963. All other world areas with the exception of Africa showed moderate increases. Sizable reductions in U.S. exports to Europe took place in wheat, grain sorghums, barley, and soybean oil. Shipments of soybeans, cotton, and tobacco declined moderately. Exports of corn rose 7 percent in quantity, but lower prices reduced the value total about 3 percent from a year earlier. Exports of soybean meal were up 8 percent, rice about 9 percent, and shipments of flaxseed and linseed were roughly double 1967 exports.

A large volume of lower quality wheat was fed to livestock and poultry in Western Europe during the year. Cheaper substitutes for feed grains are being used in animal feeds, especially for imported grains which are subject to variable levies. Sunflower seed from the USSR and Eastern Europe is taking a large share of the West European market for vegetable oils. Measures aimed at reducing the European butter surplus are also affecting vegetable oil imports. Import saving measures aimed at correcting the unfavorable trade balance in the United Kingdom helped reduce U.S. exports to that country to \$374 million, the lowest since 1954. Shipments to the EEC -- especially Belgium, West Germany, and the Netherlands -- and to Spain were also lower. Exports to Italy showed a small increase. Commercial exports to Europe made up nearly half of total dollar shipments. Europe included seven of the leading dollar markets during the year (tables 12 through 16).

Asia.--U.S. agricultural exports to Asia rose to \$2,396 million from \$2,385 million in 1967, topping exports to Europe for the first calendar year. Exports of corn, rice, tobacco, soybeans, cotton, wheat flour, and hides and skins were higher, but shipments of wheat, grain sorghums, tallow, and soybean oil were substantially reduced. Asia accounted for nearly three-quarters of total Food-for-Peace exports, although program shipments to the area declined to \$880 million from \$989 million in 1967. Large grain crops in India and Pakistan reduced the import needs of these two major recipients of Food-for-Peace exports. Government-financed exports to India dropped \$150 million; program shipments to Pakistan were over \$50 million less, and shipments to South Vietnam dropped \$18 million from 1967. Food-aid exports to the Republics of Korea and China, Ceylon, and Indonesia were higher. Asia included seven of the leading destinations for Food-for-Peace exports.

Japan was the top dollar market for U.S. farm products for the sixth consecutive year, taking \$933 million, compared with \$865 million in 1967. Exports of wheat to Japan were less than a year earlier. Shipments of wheat were cut off for about 2 months because of a problem involving sprout damage in some exported U.S. wheat caused by unusually damp conditions at the time of harvest. Shipments of rice were drastically reduced as Japan had record rice crops during the past 2 years, which changed the Japanese rice supply situation from deficit to surplus. Shipments of feed grains, tobacco, cilseeds, protein meal, fruits, meats, and hides and skins were higher. The United States is facing increasing competition in Japanese markets for cotton, wheat, feed grains, and breeding cattle as Japan is expected to pursue a policy of greater diversification of sources for agricultural imports as part of its aid program to developing countries.

The Republic of Korea ranked among the 10 leading dollar markets for the first time, in addition to ranking third as a recipient of Food-for-Peace exports.

Latin America.—Larger Food-for-Peace shipments ranked Latin America in third place as a market for U.S. agricultural commodities. This area was in fourth place after North America, principally Canada, for the years 1962-66, but ranked third in 1967 and 1968. Although Brazil was seventh and the Dominican Republic tenth as recipients of food-aid shipments, program shipments to these two countries were considerably lower than a year earlier. Larger Government-financed shipments went to Chile, Colombia, and "uguay. Exports to Venezuela, the leading dollar market, were virtually the same as in 7, but shipments to Mexico rose \$11 million to \$81 million.

North America. -- Shipments to North America, almost entirely to Canada, amounted to \$595 million in 1968, compared with \$556 million in 1967. Shipments (including transshipments) of wheat, feed grains, and oilseeds showed substantial gains. Exports of oil cake and meal, fruits, vegetables, nuts, meats, and hides and skins were higher. Exports of cotton and tobacco from the United States were less than a year earlier. Included in the total of exports to Canada was \$111 million in grains and soybeans transshipped through Canadian ports for export through the St. Lawrence Seaway.

Africa.--U.S. exports of farm products to Africa amounted to \$224 million, \$32 million less than during the prior year. Commercial exports dropped about 30 percent and program shipments rose 13 percent. Morocco and Tunisia ranked sixth and tenth as destinations for Food-for-Peace exports. U.S. exports of wheat to Africa in 1968 amounted to \$66 million; rice, \$36 million; wheat flour, \$13 million; corn, \$5 million; tobacco, \$12 million; cotton, \$19 million; inedible tallow, \$15 million; and soybean oil, \$16 million. During 1967, wheat exports to this area amounted to \$70 million; rice, \$37 million; wheat flour, \$19 million; corn, \$11 million; tobacco, \$15 million; cotton, \$12 million; inedible tallow, \$17 million; and soybean oil, \$22 million.

Oceania. -- Larger shipments of tobacco accounted for the rise to \$51 million in U.S. agricultural commodities to Oceania from \$45 million in 1967. Donations through voluntary relief agencies to the British Western Pacific Islands amounted to about \$0.2 million. All other exports were commercial sales for dollars.

^{1/} Authorized by Title I, P.L. 480.

^{2/} Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 460, as amended by P.L. 89-808.

^{3/} Authorized by Title II, P.L. 480, as amended by P.L. 89-808. 4/ Auchorized by Sec. 303, Title III, P.L. 480, and other legislation.

^{5/} Shipments under programs authorized by P.L. 87:195 include only January-June because of a delay in the preparation of the report for July-December.
6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash.

^{2/} Net adjustment from a previous period.

^{8/} The apparent excess of Government-financed exports over total exports may be due to lags in reporting, differences in valuation procedures, or the recording of the export as destined for the country through which transshipment was made.

^{9/} Donations through the United Nations Relief and Works Agency (UNRWA) for the relief of Palastinian refugees.

2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808.

^{3/} Authorized by Title II, P.L. 480, as amended by P.L. 89-808.

^{4/} Authorized by Sec. 303, Title III, P.L. 480, and other legislation.
5/ Includes expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195.

^{6/ &}quot;Total aggicultural exports outside specified Covernment programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash.

^{7/} Net adjustment from a previous period.

^{8/} The apparent extess of Government-financed exports over total exports may be due to lags in reporting, differences in valuation procedures, or the recording of the export as destined for the country through which transshipment was made.

^{9/} Under a long-term dollar credit sales program agreement with Indonesia, raw cotton in the amount of \$5,574,000 was exported to China for processing. In exchange, China exports processed goods to Indonesia. The raw cotton exported to China for processing is shown as an export to the Republic of China and excluded from the value shown for Indonesia.

^{10/} Donations through the United Nations Relief and Works Agency (UNRWA) for the relief of Palestine refugees.

# SPECIAL in this issue

## U.S. AGRICULTURAL TRADE WITH CANADA

Trade in farm goods between the United States and Canada picked up during 1968. While U.S. farm exports to Canada held near the same level of the 2 preceding years, U.S. purchases from Canada recovered from the 1967 drop primarily because of stepped up imports of cattle and beef. Combined movements of farm products across the U.S.-Canadian border totaled \$710 million in 1968, compared with \$686 million a year earlier and with a high of \$726 million in calendar year 1966.  $\underline{1}/$ 

### Exports

The United States is the principal source for Canada's farm imports. About half of its external agricultural purchases during the 1960's came from the United States. In 1967, Canada's imports totaled \$965 million. Canada usually ranks third behind Japan and West Germany as the world's largest purchaser of U.S. agricultural exports. U.S. farm exports to Canada expanded 22 percent to \$486 million in 1966 from \$396 million in 1960 (table 17) and maintained that level through 1968. Leading U.S. farm commodities taken by Canada in order of value are fruits, vegetables, certain grains, oilseeds, cotton, animal feed, meat, hides, fats, and oils (table 18).

Restrictive measures on agricultural imports are generally minimal in Canada. Exceptions include stringent import licensing regulations on wheat, barley, oats, and dairy products. During 1968, the Canadian Government acted to impose a fee on U.S. corn when import prices drop below the U.S. loan rate of \$1.05 per bushel (C\$1.12). To compensate the United States, Canada accelerated duty reductions on several U.S. export commodities agreed to in the General Agreement on Tariffs and Trade "Kennedy Round" concessions. These products were fresh pork, prepared meats, lard and stearine, prepared animal feeds, grain byproducts, and clover and alfalfa seed. 2/

Several U.S. agricultural commodities move through Canadian waterways to other countries. Storage facilities along the lower St. Lawrence handle U.S. grains and oilseeds which are intransit to many destinations. Movements of these products are estimated from Canadian and U.S. data sources; table 19 shows quantity and value of transshipments from 1960 to 1968. An article in the December 1966 issue of this publication showed the destinations for transshipments through Canada to 1965. Data for 1966 appeared in September 1967, and for 1967 in the September 1968 issue.

#### Imports

Canada, the fifth largest source of U.S. agricultural imports, accounts for about 5 percent. For competitive (supplementary) imports, Canada is in fourth place after Mexico, the Philippine Republic, and Australia. In 1968, U.S. farm imports from

¹/ U.S. agricultural exports to Canada in this report exclude commodities shipped through bonded facilities on the St. Lawrence to other destinations. 2/ U.S. Dept. Agri., Press Release 3513-68, Nov. 7, 1968.

 $[\]frac{1}{2}$ / Adjusted for transshipments.  $\frac{2}{2}$ / Preliminary.

Canada amounted to \$226 million, 35 percent above the 1960 level and nearly as high as the \$240 million recorded in 1966 (table 20). U.S. farm imports from Canada dropped to \$201 million during 1967 as a result of reduced cattle and beef movements. Additional commodity imports from Canada include fresh pork, bakery products, animal feeds, crude drugs, apples, blueberries, carrots, grass seed, maple sugar, and sirup.

U.S. AGRICULTURAL EXPORT PRICE INDEX AT 100.0; IMPORT PRICE INDEX AT 105.3 FOR FIRST QUARTER 1969

Hans G. Hirsch 1/

Prices (unit values) of the leading U.S. agricultural export commodities during January March 1969 averaged 100.0 percent of a year earlier (table 21). Only the prices of soy beans and their products (oil and meal) were substantially down. Wheat, corn, cotton, and inedible tallow prices showed no substantial change, while rice, tobacco, grain sorghums, hides and skins, and wheat flour increased in price from 3 to 13 percent.

The sharpest increase, a 13.1-percent rise in the unit value of flour, contrasts with the relative stability of domestic flour prices at wholesale and must be explained in terms of changes in the relative shares of different kinds of flour exported. Other sharp changes took place in the product m. from which the index is calculated, some apparently affected by the recent longshoremen's strike but also by less ephemeral factors. Soybeans and products accounted for 32 percent of the value of the product mix during the first quarter of 1969, compared with only 21 percent a year earlier. By contrast, the relative combined importance of wheat and cotton dropped from 37 to 23 percent. Thus an index number made from the product mix applicable to January-March 1969 was 99.80, one made from the product mix applicable to January-March 1968 was 100.26, and an average of these two was 100.0.

In contrast to the relative stability of export prices, quarterly import prices registered marked increases averaging 5.3 percent and ranging up to 28.9 and 22.5 percent for rubber and cocoa beans. Prices of cocoa beans and hams were by far the highest since this series began nearly 5 years ago. The rubber price, similarly, was the highe in 4 years. The unit value of all wool imports, up 13.6 percent from a year earlier, was the highest since the second quarter of 1967; and that of beef and yeal, while 3.2 percent below the fourth-quarter-1968 record level, was higher than in any other quarte The sugar price was 3.4 percent above a year earlier and the same as during the fourth quarter of 1968. Ordinarily, the sugar price is lower during the first quarter than in the preceding fourth quarter. The banana price continued rather stable while coffee and tobacco prices declined somewhat.

The quarterly terms-of-trade index (export index divided by import index) was 95.0, the same as the terms-of-trade index for the year ending March 31, 1969.

^{1/} Agricultural Economist, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

^{1/} Unit values were computed from the value and quantity figures published in Foreign Agricultural Trade of the United States. Cotton poundages were obtained from U.S. Bureau of the Census Report, Supplement to EM 522.

2/ The index numbers are of "Fisher's Ideal" type.

The annual export and import indexes, while reflecting the same relationship to one another as the quarterly indexes, were both 3.7 percent less than the corresponding quarterly index. Export and import price indexes combined were 98.3 in the annual series and 102.3 in the quarterly series. The prices of nine of the 12 leading export commodities during the year declined more or increased less than during the quarter. Only the rice price increased more for the year than for the quarter; and the cotton price for the year was up, but showed no substantial change during the quarter. The rise in the annual unit value of cotton was due in part to the unusual supply, demand, and price relationships for various types of cotton which prevailed in world markets and in part to the time lag with which trade unit values tend to follow spot price quotations. Protein meal prices declined about as much in the annual as in the quarterly series.

Prices of most import commodities were up in the annual series, but less so than in the quarterly series. The annual wool price, 6.1 percent below a year earlier, still reflected the longer downtrend, in contrast to the sharp increase in the quarterly wool price.

Quantity indexes obtained as byproducts in calculating the price indexes showed the effect of the longshoremen's strike during most of the quarter. The quarterly export quantity index was 46.8. The strike affected imports less severely: the quarterly import quantity index was 75.4; and the combined export and import quantity index was 57.3. The annual export quantity index was 84.2; the corresponding import index 105.3; and the combined export and import index 92.0.

## SPECIAL in this issue

#### SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Corn prices, both American and Argentine, c.i.f. U.K., rose 3 percent from March to April (table 22). Moreover, throughout April each weekly quotation at both origins exceeded the preceding week's. During the last week, Argentine and U.S. corn prices were 5.5 and 4.1 percent above their April averages. The substantial April increases run counter to the declines in both price series from March to April 1967 and 1968. Two years ago, a record Argentine crop was pressed on the European market. Last year, the Argentine crop was small, but abundant supplies were available from the United States. This year another record Argentine crop follows a large U.S. crop.

Under these conditions the continued rise in c.i.f.-U.K. corn quotations might reflect European inventory depletion during the U.S. longshoremen's strike and the gradual pace at which shipping from the United States was resumed. U.S. corn was quoted 5.9 percent higher than a year ago, Argentine corn was 0.5 percent lower. The relative scarcity of U.S. corn relative to Argentine corn was also reflected in the small discount of the U.S. No. 3 yellow, c.i.f. U.K. quotation, relative to Argentine corn. During March-April 1969 that discount was only 2 percent, the same as in March-April 1967 but much less than usual.

Sorghum grain was quoted in April only 0.6 percent above March; but the price during the last week of April was 3.5 percent above the April average.

In contrast to the increases in feed grain prices, the other price series shown in table 22 declined from March to April or did not change. Most significant were 4.0- and 2.6-percent price declines in Canadian wheat, c.i.f. U.K., and in store, Fort William-Port Arthur. The c.i.f. U.K. quotation slid 3.4 percent below April 1968, while that for Fort William-Port Arthur was down 2.1 percent. The buyer's price of U.S. No. 1, Hard Winter wheat, f.o.b. Gulf ports, rose by 1 cent a bushel as a result of a like increase in the export-payment rate while the c.i.f. U.K. price for U.S. No. 2, Hard Winter wheat, declined 0.9 percent. The buyer's price, f.o.b. Gulf, and the c.i.f. U.K. price were both fractionally above April 1968. The price relationship of U.S. to Canadian wheat, c.i.f. U.K., improved to 94.1 percent in April, compared with 91.1 percent a month earlier and 90.1 percent a year earlier. Quotations for Argentine and Australian wheats, c.i.f. U.K., did not change from March to April.

The export price of Thai rice declined by 1.0 percent in April following its 3.6-percent February-to-March rise; but it was 14.8 percent below April 1968. U.S. No. 2 soybeans, c.i.f. U.K., were quoted very slightly below March. Their minimal price fluctuation during the last half year has been remarkable considering abundant U.S. supplies on the one hand and the longshoremen's strike on the other hand. Also, exports of U.S. soybeans are totaling higher this fiscal year, in contrast to declines for some other commodities. The c.i.f. Liverpool price of Memphis Territory cotton, strict middling, 1-1/16 inches, finally stabilized after seven consecutive declines in average monthly prices. At 28.95 cents a pound, it was 13.1 percent below the nominal April 1968 quotation.

# **Export Highlights**

U.S. AGRICULTURAL EXPORTS: JULY-APRIL 1968/69

April exports of farm products improved considerably over those of March 1969, rising 16 percent to \$602 million. All major agricultural port outlets were in operation during April and exports returned to a near-normal flow. The April export total reflected increases in most agricultural commodity groups. Shipments of animals and animal products were 17 percent above March 1969, and 32 percent above April 1968. Cotton exports were more than 4 times those of March 1969, and surpassed the \$46 million exported in April 1968 by 61 percent. Exports of fruits and vegetables were up moderately. Grains and preparations totaled \$204 million, reflecting primarily an increase in wheat and rice exports from March to April, since grains and preparations totaled about 10 percent below April 1968. Dominated by substantially larger exports of soybeans, oilseeds and products rose substantially from April 1968. Tobacco exports maintained the level near that of April 1968 -- slightly below the large shipments made in March 1969.

While the total value of agricultural exports in April 1969 was a record high for April, the total did not rise sufficiently to offset the losses in exports from the preceding quarter -- January-March 1969 -- when the longshoremen's strike was in effect (table 23). This failure to recover reflects partly the abundance of many agricultural products in various world markets. Demand for many agricultural products was fulfilled by abundant crops in importing countries as well as countries that compete with the United States in foreign markets. In India the current wheat crop reached 18 million tons, and is producing optimism for planners who anticipate that India may now be able to produce a good crop even in a year of relatively low moisture. While this second record crop does not make the country self-sufficient in wheat production, it is a giant step forward. However, the lack of production gains in India's second principal staple crop -- rice -- still leaves room for considerable improvement.

Changes in the value of U.S. exports of selected commodities to principal world markets reflect the effects of increased world production. Wheat shipments during July-December to India and Pakistan were down 62 percent and 66 percent, respectively (table 24). The additional decline through March resulted from a near standstill during the strike. But plentiful world supplies helped to offset the loss in world markets from the U.S. strike, and there was no large backlog of orders to boost April exports.

Agricultural exports in July-April 1968/69 totaled \$4,645 million. about 13 percent below a year earlier (table 25). In earlier months this fiscal year, total value of agricultural exports ran as much as 18 percent below the previous year's level.

Exports of animals and animal products increased this fiscal year, and for July-April 1968/69 were 14 percent above those of last fiscal year. Cotton exports remained sharply below those of 1967/68, and currently are down 33 percent to \$264 million. Although U.S. fruit supplies have been plentiful this fiscal year, plentiful supplies

^{1/} Preliminary.

in major foreign markets as well as in the countries competing with the United States in foreign markets have also been good. Large world supplies of grain have sharply reduced the demand for U.S. grains in foreign markets and as a result, the value of grain exports in July-April 1968/69 was 30 percent below those of July-April 1967/68. Exports of oilseeds and products, which in July-March 1968/69 were running 1 percent below a year earlier, increased so that the July-April 1968/69 period was 4 percent above a year ago. Tobacco exports were down about 4 percent to \$400 million.

Animals and animal products -- moving 14 percent above those of July-April 1967/68 -- were paced by substantially larger exports of dairy products, meats and meat products, and hides and skins. Poultry products dipped slightly but fats, oils, and greases fell 9 percent. Among the dairy products, shipments of anhydrous milk fat and butter jumped from \$2.6 million in July-April 1967/68 to nearly \$11 million in July-April 1968/69. In addition, shipments of condensed and evaporated milk rose nearly three-fourths and nonfat dry milk rose by nearly a third. Meats and meat products were up 39 percent to \$124 million, reflecting substantially larger shipments of fresh, chilled, or frozen pork. Exports of hides and skins were 16 percent higher reaching \$107 million. The EEC's larger takings of cattle hides along with Mexico and Japan accounted for much of this increase. While poultry products showed an overall decline of 4 percent from July-April 1967/68, fresh, chilled, or frozen chickens were up by 16 percent to \$20 million. More than offsetting was a decline in turkey exports.

Cotton proorts were valued at \$264 million in July-April 1968/69, down 33 percent from a year . D. Quantity was 2.3 million bales, compared with last years 3.4 million. The smaller U.S. crop last fall, along with the increased world cotton production, resulted in a larger portion of the cotton supply being used domestically. In addition,

^{1/} Preliminary

the larger world supplies in foreign markets, along with the price disparities between the U.S. and foreign produced cotton, reduced foreign demand. As a result, smaller quantities of U.S. cotton were shipped abroad.

Fruits and vegetables were slightly below the export level of July-April 1967/68. Although fruits and preparations edged down, a slight increase in vegetables and preparations exports was offsetting. Even with plentiful U.S. supplies of exportable fruits and preparations larger foreign demand has not materialized. Vegetables and preparations movements should countinue good through this fiscal year even though California's vegetable crop was hurt by heavy winter rains. Such damage was offset by good vegetable crops elsewhere. Among the various fruits and preparations, exports of canned fruits increased considerably above the export total for July-April 1967/68, rising 13 percent to \$39 million. Dried fruits and fresh fruits have dropped moderately. However, some increase may take place in dried fruit exports to the EEC, to supplement Europe's prune requirements. A recent tariff reduction temporarily improved the market for U.S. prunes in West Germany. On March 5, the EC Commission granted West Germany a 1969 tariff quota for importing 5,000 metric tons of dried prunes at a duty rate of 11.5 percent ad valorem. This represents a reduction from the normal EEC tariff rate of 16 percent.

The export value of other fruits and preparations, notably fruit juices, increased due to higher prices. The quantity of fruit juice exports declined 13 percent; this was offset by a 19-percent increase in the average export price. Among the vegetables and preparations, most of the increase has occurred for dried peas and beans, but a slight decline occurred in exports of canned vegetables along with a 4-percent drop in the export value of fresh vegetables.

Grains and preparations totaled \$1,648 million, through April 1969, down 30 percent from a year ago. The bulk of this decline occurred in exports of wheat and flour and feed grains. Wheat grain declined 40 percent to \$633 million for July-April 1968/69. Slightly offsetting was a 7-percent increase in wheat flour exports to \$77 million. Among the exports of feed grains, corn and grain sorghums accounted for the larger share. Thus far, in 1968/69, corn exports totaled \$511 million, off 19 percent from last year's pace. Grain sorghum exports declined 44 percent through April to \$114 million. Rice exports, down 15 percent this year to \$233 million were due to smaller shipments limited by the extended longshoremen's strike in January-March at Gulf ports.

Shipments of oilseeds and products to foreign markets totaled \$1,050 million in July-April 1968/69, 4 percent above last year. Soybeans, which account for the major share of oilseeds and products, were up 7 percent and totaled \$685 million in July-April 1968/69, compared with \$641 million for the same months last year. Besides the high level of soybean exports, flaxseed exports totaled \$23 million in July-1 il 1968/69, nearly twice the value a year ago. Larger shipments of linseed oil helped boost total exports of vegetable oils thus far in 1968/69. Argentina's flaxseed crop the past crop year was substantially below normal. This resulted in larger demand for U.S. flaxseed. In addition, the substantial drop in Mexico's production of flaxseed has resulted in a further increase in demand for U.S. linseed oil.

Oil cake and meal exports totaled \$213 million, about 2 percent above July-April 1967/68. This small increase reflected primarily the sharply reduced exports during January-March. A substantial April recovery raised the export value of oil cake and meal for the current fiscal year. Cottonseed and soybean oil exports running 20 percent below the \$103 million in July-April 1967/68, totaled \$82 million. Shipments to several Mideastern and Far Eastern countries have been below the 1967/68 level.

Exports of unmanufactured tobacco totaled \$400 million in July-April 1968/69, down 4 percent from last year's pace. Declines resulted primarily from a 6-percent drop in exports of flue-cured tobacco which fell to \$323 million through April 1969. Partly

offsetting were increased shipments of burley tobacco, which rose 17 percent to \$35 million, compared with \$29 million in July-April 1967/68. With more countries producing and exporting tobacco comparable to U.S. flue-cured varieties, U.S. tobacco exports are facing increased competition. However, as long as U.N. sanctions against Rhodesia remain in effect, U.S. tobacco exports should remain at the fairly high level.

Several other commodities have shown considerable improvement in the current fiscal year, compared with July-April 1967/68. For instance, coffee exports have risen to \$20 million, up 30 percent. Increases have also occurred for exports of essential oils, feeds and fodder, and flavoring sirups. A sizable increase in exports of feeds and fodder resulted from substantially larger shipments of corn byproducts.

## U.S. Agricultural Exports to the EEC: July-April 1968/69

U.S. farm products exported to the European Economic Community (EEC) were valued at \$1,078 million in July-April 1968/69, down 10 percent from last year (table 26). Several commodities exported in April gained considerably over the preceding month, but were somewhat below a year earlier. Export items subject to the EEC's variable import levies were 9 percent below March 1969, but up nearly 14 percent from a year earlier. Non-variable-levy commodities totaled \$99 million. They were about the same as in March 1969, but up nearly two-thirds from 1968.

For the first 10 months of 1968/69, variable-levy exports totaled \$371 million, down nearly a fourth from July-April 1967/68. Feed grain exports accounted for the bulk of this decline and were off one-third. Corn, which makes up the largest part of the feed grain exports, was 28 percent below the total for July-April 1967/68. Corn byproducts used in feed manufacture recovered from the export loss during the January-March strike months, and were up about 26 percent. Rice also made a good recovery during April, so that the total rice export value through April 1969 was near the year-earlier level. Wheat exports neared the level for the first 10 months last fiscal year. Poultry and egg exports to the EEC totaled \$12 million in July-April 1968/69, about 22 percent below the export value in the corresponding months of 1967/68. This decline resulted from smaller exports of fresh, chilled, or frozen turkeys, which declined about 31 percent. Some improvement was made in exports of live poultry -- mainly chicks -- registering a rise of 38 percent from July-April 1967/68.

Shipments of U.S. agricultural products not subject to the EEC's variable import levies increased less than 1 percent in July-April 1968/69. Rather sharp fluctuations took place among a number of the principal non-variable commodities exported to the EEC. For instance, hides and skins, notably cattle hides increased 35 percent above last year's. In addition, exports of soybeans rose substantially, followed closely by a considerable rise in exports of oil cake and meal. Combined, soybeans and oil cake and mean totaled \$389 million, compared with \$366 million in July-April 1967/68. Tobacco exports also increased -- to \$103 million -- 6 percent above July-April 1967/68. Nearly offsetting these increases was the sheep decline in cotton exports. In July-April 1968/69, cotton shipments to the EEC were valued at \$24 million, three-fifths below the \$61 million exported through April 1968. Relatively higher prices for U.S. cotton along with the EEC's plentiful stocks and favorable prices from other exporting countries greatly hindered exports of U.S. cotton to the EEC. Other declines in non-variable-levy exports to the EEC included a 14-percent drop in tallow exports, which fell to \$15 million in July-April 1968/69. In addition, variety meats dropped 9 percent to \$25 million.

## U.S. Agricultural Exports to the EEC by Country: July-March 1968/69

Declines in U.S. agricultural exports to the EEC through March 1969, from a year ago reflected reduced shipments to each EEC country (table 27). The decline in exports to

^{1/} Grains, poultry, and porkwere subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. The variable-levy classification is designed to show overall changes in exports rather than to measure the impact of the variable levies. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content only. Compiled from U.S. Bureau of the Census data.

^{1/} Due to rounding, total EEC, by country, does not equal total EEC by commodity, F.A.T. table 12, page 27, published June 1969. 2/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. The variable-levy classification is designed to show overall changes in exports value than to measure the impact of the variable levies. 3/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad values. 0.5, lard is for food use. 4/ Although cannot poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 5/ Variable levy on sugar-added content only.

Italy was the largest, dropping 20 percent to \$153 million in July-March 1,968/69, while the Netherlands' receipts of U.S. agricultural products were down 18 percent.  $\underline{1}$ /

Among the variable-levy exports to the EEC, feed grains showed the largest decline. Wheat exports to the EEC totaled \$65:illion in July-March 1968/69, down about \$8 million from a year earlier. Most of this decline occurred because of smaller shipments to the Netherlands and West Germany. Offsetting smaller exports to these countries were larger shipments to Italy and France, with Belgium-Luxembourg running about the same as the year-earlier level. Rice exports were nearly the same as in July-March 1967/68, reflecting larger rice takings by the Netherlands, Belgium-Luxembourg, and Italy. Shipments to France and West Germany declined about 12 percent from the July-April 1967/68 level.

Among the non-variable-levy commodities, cotton exports declined to \$18 million, compared with \$54 million in July-March 1967/68. This sharp drop was reflected in much smaller exports to France, West Germany, and Italy. These three countries accounted for about 79 percent of the EEC's total receipts of cotton from the United States through March 1969.

The European Economic Community is the largest market for U.S. soybeans. In July-March 1968/69, its total purchases reached \$217 million, up from \$213 million a year ago. Data show the Netherlands to be the largest receiver of U.S. soybeans among the EEC countries, followed closely by West Germany. However, the Netherlands is a major transshipping port for U.S. soybeans. Exports to both of these countries declined from those of July-March 1967/68.

Tobacco exports to the European Economic Community in Jul -March 1968/69 totaled \$89 million, about the same as last year. Shipments to be Netherlands increased about 10 per ent, rising to \$20 million. West Germany was the largest recipient of U.S. tobacco. A substantial decline occurred in tobacco exports to Italy. This decline reflects Italy's expanding tobacco acreage as well as increased receipts of tobacco from Greece and nearby tobacco-producing countries.

 $[\]underline{I}/$  Statistics of exports to the Netherlands, Belgium, and West Germany were not adjusted for tansshipments.

# Import Highlights

U.S. AGRICULTURAL IMPORTS: JULY-APRIL 1968/69

U.S. agricultural imports for consumption continued to enter at a faster than average pace in April. Farm goods imported that month were valued at \$488 million against \$475 million in March and \$439 million last April.

Cumulative imports of agricultural items this fiscal year (July through April) were 6 percent above last year's pace and reached \$4,067 million (table 28). Especially large increases among the competitive items were recorded for cattle, beef, cheese (primarily Gruyere, Swiss, and Parmesan), fruits (mainly olives, strawberries, concentrated orange juice, and canned pineapples), edible nuts (shredded coconut, cashews, brazil nuts, and filberts), vegetable oils (coconut oil, cocoa butter, palm, palm kernel, and castor oil), and vegetables. At \$55 million, fresh tomato imports were 83 percent above the value a year earlier; volume rose 34 percent. Most of these Lomatoes were from Mexico, which has had a crop of much higher quality than last year. Fresh cucumbers, peppers, eggplant, squash, and potatoes were also sharply higher.

Most noncompetitive imports gained during July-April, with lower coffee purchases nearly offsetting. Crude rubber entries have been notably brisk this year owing to high levels of demand, ample availability, and favorable prices. Sheet and crepe imports through April totaled 936 million pounds (\$160 million) against 810 million pounds (\$119 million) the same months last year. Malaysia and Indonesia together supplied nearly three-quarters of the total so far this year. Liquid rubber purchases came to 127 million pounds (\$25 million), compared with 97 million pounds (\$19 million) a year earlier. Malaysia and Liberia each supplied 48 million pounds in 1968/69.

One of the sharpest changes among noncompetitive imports this year has occurred in crude drugs. Larger imports of crude drugs in 1968/69 were accounted for chiefly by certain enzymes. Enzymes other than papain moved up to 4 million pounds (\$14 million) from 1.4 million pounds (\$3.3 million) a year earlier; Denmark was the principal supplier in 1968/69 with 3.4 million pounds (\$11.5 million).

Nonagricultural U.S. imports the first 10 months this fiscal year reached \$23,722 million, up 17 percent from the 1967/68 level (table 29).

^{1/} Based on 332 classifications.
2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

^{1/} Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all other, about 98 percent of which consist of rubber, coffee, raw silk, caean beans, wool for carpets, banamas, tea, and vegetable fibers. 2/ Based on 417 classifications. 3/ The seasonal adjustment series has been revised to incorporate the Bureau of the Leasus Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Consus, The X-11 variant of the seasonal Nethod II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U. S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Eureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wines. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in-transit through the United States From one foreign country to another when documented as such through U.S. Customs.

EMPORTS The export statistics also exclude shipments to the U.S. armed forces for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 87-195 (Act for International Development) principally sales for foreign currency; under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shippents are credited to the last country, as known to him at time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$100-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$100-\$1,999 are sampled.

IMPORTS Imports for consumption consist of commodities released from U. S. Customs custody upon arrival, or entered into bonded manufacturing wareh use, or withdrawn from bonded storage warehouse for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The <u>import value</u>, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The <u>country of origin</u> is defined as the country where the countries were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U. S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
