FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

U.S. Wheat Exports in 1969/70 Showed First Upturn Since 1965/66 (see p. 8). U.S. exports of wheat grain rose to 14.4 million metric tons (531 million bushels) in 1969/70, nearly 13 percent higher than a year earlier. Exports of wheat and products gained 12 percent to 16.5 million tons (606 million bushels), but did not regain the volume maintained during most of the 1960's. However, due to lower world prices, the value of wheat grain exports rose only 5 percent to \$831 million and wheat and products advanced 4 percent to \$965 million. U.S. exports shared in expanding world wheat trade, which showed an upturn for the first time since 1965/66. Shipments of wheat and flour by the major wheat exporters were 9 percent higher. World wheat output declined for the second consecutive year from the record crop of 1968.

U.S. commercial exports rose nearly 20 percent from 1968/69, while P.L. 480 exports were up only 5 percent. Shipments under supply-type barter contracts and the CCC credit sales program were substantially higher, making up over a fourth of U.S. dollar sales. Asia was the leading market for U.S. wheat, taking nearly three-fifths of the total.

* * * * *

Agricultural Trade of the European Community, Calendar Year 1969 (see p. 23). Agricultural imports of the EC totaled \$15.2 billion in 1969, up 16 percent from 1968. Intra-EC imports advanced to \$5.4 billion -- 29 percent above the year earlier -- while agricultural imports from third countries totaled \$9.8 billion, up 10 percent. EC farm imports from the United States in 1969 declined 3 percent to \$1.5 billion.

The EC's farm product exports in 1969 advanced 18 percent to nearly \$8.4 billion. Intra-EC exports accounted for 90 percent of the gain with a 28-percent increase to \$5.4 billion. Exports to other countries increased about 4 percent.

* * * * *

Recent U.S. Agricultural Trade with LAFTA (see p. 50). U.S. agricultural exports to the 11 LAFTA countries in 1969 were \$358.9 million, about 10 percent less than the annual shipments during 1966-68. Exports were 19 percent below the 1964 peak year of \$444 million but higher than the annual average from 1956-60. Exports under Government programs accounted for most of the recent decline. Dollar sales rose from an average

of \$215 million from 1956-60 to \$300 million in 1966 and 1967, then dropped to about \$276 million in the next 2 years. Principal commodities exported include wheat (one-third of the total), fats and oils, dairy products, cattle, and corn. Several P.L. 480 importers, such as Brazil, Peru, and Colombia, have increased their dollar sales while importing less under P.L. 480.

During the 1963-68 period, intra-LAFTA trade in wheat, fresh fruit, vegetable oils, tallow, and corn increased, but cattle and cotton remained fairly constant. During the same period, LAFTA imports of wheat from the United States fluctuated considerably, its imports of U.S. cotton and tobacco declined drastically, and its imports of U.S. cattle, tallow, and vegetable oils increased.

* * * * *

International Price Highlights (see p. 62). Wheat, soybean, and cotton prices generally increased in October. Feed grain prices decreased from their high September levels.

* * * * *

World Trade Highlights (see p. 65). Agricultural imports of both Australia and New Zealand in 1969 were up about 6 percent from a year earlier: Australia imported more tobacco (mainly from the United States) and rubber (from Malaysia). New Zealand bought more sugar, fruits, rubber, and wool. The U.S. share to Australia advanced slightly to 17.6 percent; to New Zealand, it dropped 2 points to 10.7 percent.

* * * * *

U.S. Agricultural Exports, July-October 1970 (see p. 73). Exports of farm products in July-October advanced 15 percent to \$2.4 billion in 1970 from \$2.1 billion in 1969. The increase was concentrated in soybeans and soybean products and wheat. Gains also occurred for tallow, lard, dairy products, nuts, and feed grains. Offsetting were declines in rice, cotton, tobacco, meats, and hides and skins.

U.S. agricultural exports to the European Community rose in July-October to \$543 million in 1970 from \$426 million in 1969. Nonvariable-levy items, totaling \$366 million, accounted for \$75 million or nearly two-thirds of the overall increase. Over 90 percent of the gain in nonvariable-levy items resulted from larger shipments of soybeans and soybean products. Increases in wheat and feed grains brought the variable-levy items to \$177 million, 30 percent above a year earlier, despite sharply reduced rice shipments to the Community.

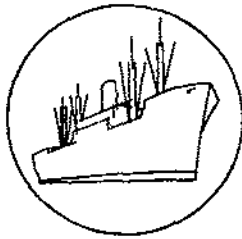

* * * * *

U.S. Agricultural Imports, July-October 1970 (see p. 78). During the first 4 months of the current fiscal year, U.S. agricultural imports advanced 8 percent over the same period last year. Both competitive and noncompetitive products contributed to the expansion. Among the competitive commodities, import values rose for cattle, horses, meat, dairy products, eggs, grain products, edible nuts, oilbearing materials, sugar, vegetables, and wines. Higher prices accounted for part of the expansion. Gains in noncompetitive imports included coffee (due to higher prices), bananas, and cocoa.

Table 1.--U.S. exports: Value of total and agricultural exports, including specified Government-financed programs and commercial (dollar) sales by selected commodities and commodity groups, averages 1955-59, 1960-64, and 1965-69; annual 1969/70, July 1969 to date 1/ 2/

1/ Government-financed programs include exports under Public Law 480 programs (sales for foreign currency, long-term dollar and convertible local currency credit sales, barter for strategic materials, and donations) and under AID programs. 2/ Commercial sales (exports outside Government-financed programs) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies, which benefit the U.S. balance of payments and rely primarily upon authority other than P.L. 480; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash or in kind. 3/ Commodity group totals for Feed grains, oilseeds and products, and animals and products include for years noted, in addition to the value reported by the Bureau of the Census, the estimated value of certain commodities donated through voluntary relief agencies, which are included by Census in "Other food for relief and charity." 4/ Preliminary data. 5/ Commodities may not add to total, due to rounding.

U.S. WHEAT EXPORTS IN 1969/70 SHOWED FIRST UPTURN SINCE 1965/66

by

Eleanor N. DeBlois ^{1/}

Larger commercial sales raised U.S. exports of wheat grain to \$831 million in 1969/70 from \$788 million a year earlier. Volume rose from 12.8 million tons (471 million bushels) to 14.4 million tons (531 million bushels). Exports of wheat grain were up nearly 13 percent, but did not regain the volume maintained during most of the 1960's (tables 2 through 6).

World wheat trade rose by 13 percent to 53 million metric tons, the first increase since 1965/66. After a record of 62 million tons in 1965/66, world trade declined for 3 successive years to 47 million tons in 1968/69. Much of the gain in 1969/70 was in exports to the Soviet-East European area and Mainland China. Larger sales of feed wheat also contributed to the rise.

Shipments of wheat and flour by the 5 major exporters -- the United States, Canada, Australia, Argentina, and France -- amounted to 41 million metric tons in 1969/70, an increase of 9 percent from 1968/69. U.S. shipments rose 12 percent to 16.5 million tons (606 million bushels). Shipments by Canada were up nearly 3 percent, and Australian exports rose over a third. Shipments by France increased a little as a decline in wheat grain exports was offset by a rise in shipments of flour. Exports by Argentina declined nearly 30 percent due to a scarcity of supplies. Most of the increase in Canadian exports was to the U.S.S.R. The principal markets for Australian wheat were Mainland China, the United Kingdom, and Japan. France exported less to other EC countries and to Eastern Europe, but considerably more to Mainland China.

World wheat output declined further from the record crop of 1968. Production in 1970 is estimated at 280 million tons, 3 percent below the 1969 harvest, but 1 percent above the 1964-68 average. Actions taken by the major wheat exporters to reduce production or limit marketings account for practically all of the crop reduction. Output in developing countries continued at high levels with the successful introduction and increased use of high-yielding varieties.

Over four-fifths of the gain in U.S. exports was in dollar sales. Half the gain in commercial exports was to Asia. Sales to Japan rose to a record high, recovering from the low level of 1968/69. Shipments of wheat grain under P.L. 480 were up 5 percent.

^{1/} International Economist, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service. The author gratefully acknowledges the assistance of M. Louise Perkins and Annette D. Smith in developing sources and improving methodology.

Table 2.--U.S. exports of wheat and grain equivalent of wheat products, under specified Government-financed programs, and commercial exports, fiscal years 1955-70

Year	Exports under Government-financed programs	Commercial	Total
-- Million metric tons --			
1955	4	3	7
1956	7	2	9
1957	10	5	15
1958	7	4	11
1959	8	4	12
1960	10	4	14
1961	13	5	18
1962	14	6	20
1963	14	3	17
1964	13	10	23
1965	15	5	20
1966	15	9	24
1967	8	12	20
1968	11	10	21
1969	7	8	15
1970	7	10	17
Total	163	100	263

A 13-percent increase in exports under Title I was partly offset by a decline in donations under Title II. Shipments under barter contracts for overseas procurement for U.S. agencies rose 17 percent and exports under the CCC credit sales program were nearly 2-1/2 times the year-earlier volume. Over a fourth of U.S. dollar sales moved under the barter and credit sales programs in 1969/70 (tables 7 and 8).

Asia.--Nearly three-fifths of U.S. wheat exports went to Asia. Nearly half the shipments were financed under P.L. 480. P.L. 480 shipments to Pakistan were considerably larger. Exports to India, which received more than half the Asian P.L. 480 shipments, increased a little. Total Indian wheat imports dropped 20 percent in 1969/70 as production of wheat continued to rise. The United States supplied about four-fifths of the 3.0-million-ton total. The Republic of Korea took less wheat under P.L. 480.

U.S. exports to Japan rose to a record 2.4 million tons, topping exports to India, which had been the leading market for U.S. wheat for some years. The United States supplied more than half of Japan's wheat imports. Substantial dollar exports to Israel and the Republic of China moved under supply-type barter contracts. The Republic of Korea, the Philippines, India, and Lebanon received wheat under the CCC credit sales program.

Latin America.--Nearly a fifth of U.S. wheat exports went to this area in 1969/70. Brazil was the largest market, taking less under Title I, but more for dollars than a year earlier. Venezuela was the principal dollar market. Because of a shortage of supplies, Argentina purchased wheat to meet domestic needs and fulfill export commitments. U.S. exports to Chile were considerably reduced from 1968/69. More than 70 percent of the wheat under barter transactions went to Latin America. Major recipients included Brazil, Colombia, Peru, and Argentina.

Europe.--A near-doubling of P.L. 480 exports to Turkey brought a rise of 12 percent in shipments to Europe. Exports for dollars were 6 percent less than a year earlier. Shipments to the EC were considerably lower. The United Kingdom took nearly three times as much wheat from the United States as a year earlier. Portugal took 105,000 tons in 1969/70, compared with 12,000 tons a year earlier. Import needs in Portugal were higher because of reduced crops in 1969 and 1970. A part of the larger volume of exports to Norway moved under the CCC credit sales program.

Africa.--This area accounted for 6 percent of U.S. wheat exports with two-fifths of the total moving under P.L. 480. Tunisia was the principal African destination for wheat under Titles I and II. Tunisia also received wheat under the CCC credit sales program. Morocco took more U.S. wheat, including larger donations, as well as purchases under the CCC credit sales program. Shipments to Nigeria were nearly two-thirds higher. Algeria and Sierre Leone received wheat under supply-type barter transactions.

Canada.--As may be noted from table 9, wheat recorded by the Bureau of the Census as exported to Canada consisted of transshipments through St. Lawrence ports, mostly to European countries.

Transshipments through Canada and the Netherlands.--As part of the effort to improve U.S. trade data, transshipments by country of destination are published periodically in Foreign Agricultural Trade of the United States and its annual supplements. Transshipments through Canadian ports on the St. Lawrence and through the Netherlands are shown in table 9. Transshipment information for these countries is compiled from Government reports in volume only. Values are computed from export unit values (f.o.b. U.S. ports) during the applicable time period. These reports supply additional data on wheat exports to a given country and help explain apparent discrepancies between program data and exports as reported by the Bureau of the Census. Most of the transshipments through Canada and all of the transshipments through the Netherlands were destined for European countries.

Discrepancies between shipping data derived from program reports and Census reports.--The use of data prepared in various operating agencies for P.L. 480 shipments as compared with total exports tabulated by Census produces discrepancies which become more apparent when reporting on a more specific basis, such as commodity-by-country, than when reporting on a more general basis, such as totals by commodity or by country. The tabulation of exports under P.L. 480 programs has been considerably improved in recent years and is being integrated into a data processing system maintained in the Foreign Agricultural Service. However, shipments at the end of a reporting period, because of late receipt of documents, may be cut off in one report and included in another. Reports by quantity are more accurate than reports in terms of value, since values shown for Government-financed shipments involve some degree of estimation. Through 1969, Title I values were estimated in preliminary reports and later revised after receipt of invoices. Beginning in 1970, Title I shipments are included at actual invoice value.

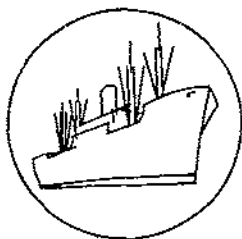

In 1968/69, five countries -- the Dominican Republic, Turkey, Afghanistan, Morocco, and Tunisia -- showed apparent excesses of Government-financed exports over total exports as reported by the Bureau of the Census. The addition of transshipments through Canadian ports to total exports to Turkey accounts for the excess of P.L. 480 exports over total exports to that country. Exports to land-locked Afghanistan are often recorded as destined for the country through which transshipment is made. In 1969/70, Afghanistan was the only country to which shipments of wheat under P.L. 480 appeared to exceed exports reported by Census.

1/ Less than 500 metric tons.

In a number of instances, shipments under barter transactions and CCC credit sales -- as shown in tables 7 and 8 -- exceeded commercial exports -- as shown in tables 3 through 6 -- of which they are a part. The excess of barter transactions over commercial exports to India in 1968/69 is accounted for by transshipments through Canada. Part of the excess of exports under the CCC credit sales program over commercial exports to Lebanon in 1969/70 is also explained by transshipments through Canadian ports. Lags in reporting or transshipments through other countries for which reports are not available may account for discrepancies in other countries. No adjustments have been made in the data from the various sources.

SPECIAL in this issue

AGRICULTURAL TRADE OF THE EUROPEAN COMMUNITY, CALENDAR YEAR 1969

Trade is important to the members of the Economic Community. It exports about 18 percent of its gross national product, compared with 4 percent for the United States. Total exports of the European Community advanced to \$75.7 billion in 1969, 18 percent above 1968. Imports of \$75.6 billion were up 22 percent. West Germany led the Community's foreign trade with exports valued at \$29.1 billion and imports worth \$24.9 billion. France was next with exports totaling \$14.9 billion and imports of \$17.2 billion.

Sustained economic growth, at a compound rate of 7 percent the past 3 years, is the basis for the rapid advance in foreign trade.

Agricultural imports of the European Community have generally advanced in the past decade. A substantial part of this increase occurred in intra-EC agricultural imports which totaled \$5.4 billion in 1969, compared with \$4.2 billion in 1968, and only \$1.4 billion in 1959 (table 10). Agricultural imports accounted for one-fifth of total imports in 1969.

In the decade from 1959 to 1969, EC agricultural imports increased 94 percent in value. Intra-EC imports of farm products advanced 297 percent while those from third countries gained only 51 percent. The United States, with a 75-percent increase, fared somewhat better than the average gain for third countries, but its showing was weak compared with intra-EC gains.

Agricultural imports from third countries have increased but at a much slower rate than intra-EC imports. Agricultural imports from third countries totaled \$9.8 billion in 1969, up from \$8.9 billion in 1968 and about the same as in 1966 before the unification of prices in the EC. However, they were above the \$6.5 billion in 1959. Of the third country suppliers, the United States was the most important. Imports from the United States totaled \$1.50 billion in 1969, down slightly from \$1.54 billion in 1968 and sharply below the \$1.8 billion in 1966. It is apparent that the United States did not benefit from EC's gain in imports in 1969. The EC imported larger values of coffee, cocoa, and meats, but imports of grains from third countries declined. EC imports increased from Western Europe, LAFTA, Asia, Latin America, and Oceania.

Cereals and preparations.--Total imports of cereals and preparations, including intra-EC trade, advanced to \$1.81 billion in 1969 from \$1.68 billion in 1968 and \$1.14 billion in 1961. However, since the unification of EC prices in 1966, the increase has come from intra-EC trade. Trade from third countries, including the United States, has generally showed a downward trend since 1967. Imports from third countries prior to that time were gaining at an annual rate of approximately 4 percent. The EC is by far the largest supplier of grains to Community members, providing \$829 million worth in 1969 -- up sharply from the \$534 million in 1968.

Table 10.--European Community: Agricultural imports, total, intra imports, third countries, and the United States, calendar years 1959-69

Year	Total	Intra	Third countries		
			Total	United States	Other
-- Million dollars --					
1959	7,822	1,353	6,469	856	5,613
1960	8,805	1,543	7,262	1,134	6,128
1961	8,937	1,755	7,182	1,247	5,935
1962	9,804	1,980	7,824	1,253	6,571
1963	10,443	2,230	8,213	1,300	6,913
1964	11,296	2,534	8,762	1,559	7,203
1965	12,184	3,032	9,152	1,641	7,511
1966	13,080	3,275	9,805	1,803	8,002
1967	12,702	3,510	9,192	1,549	7,643
1968	13,068	4,166	8,902	1,542	7,360
1969	15,159	5,365	9,794	1,495	8,299

The United States is the largest supplier of grains from sources other than the EC. In 1969, U.S. exports of grains to the EC totaled \$438 million, down from \$551 million in 1968. Grain shipments from the United States hit a record high in 1966 of \$715 million. Since then, EC production has increased, stimulated by high price supports and protected by the EC system of variable levies.

Feed grain's share of the EC's total 1969 imports of cereals and preparations declined from 61 percent in 1968 to 54 percent in 1969. Intra-EC trade of \$359 million accounted for over a third of total EC trade. The United States was the largest third country supplier with \$307 million. This fell short of the \$397 million in 1968 and the record of \$569 million in 1966. Currently the EC is about 85 percent self-sufficient in coarse grain production. Because of EC's high prices for coarse grains, feed manufacturers have substituted heavily such products as manioca, tapioca, beet pulp, and other carbohydrate feeds in livestock rations and added high-protein rations.

Wheat imports of the European Community totaled \$600 million in 1969. Intra-EC trade accounted for more than half of the total. The United States was the largest third country supplier with a total of \$100 million in 1969, compared with \$118 million in 1968 and \$185 million in 1961. The Common Market countries are about self-sufficient in wheat production. However, production is mainly soft wheat and they must import hard wheat for blending with indigenous wheat to obtain the desired baking qualities. As a result, the EC is both a large exporter and importer of wheat.

The European Community purchased \$70 million worth of rice in 1969. Intra trade accounted for \$18.6 million of this total. The United States, supplying \$29.3 million, was the largest third country supplier. However, the EC also purchased sizable quantities of rice from Asia, Africa, and Latin America. Italy and France produce approximately 700,000 tons of rice annually. This is mainly short grain rice. The EC has a substantial demand for the long grain rice produced in the United States.

EC imports of oilseeds totaled \$767 million in 1969, about the same as the previous year. Third countries supplied over 95 percent of the oilseeds in 1969 and 1968. The United States is by far the largest supplier with \$335 million worth of oilseeds in 1969. Oilseed imports have gained significantly from the 1961 total of \$550 million.

They peaked at \$833 million in 1966. Nearly all of the U.S. shipments were soybeans. Since the EC grows only a relatively small part of its needs, oilseeds are not subject to variable levies and are duty-free. The European Community purchases large quantities of peanuts from Africa and Asia and copra from Asia. Demand for soybeans has been gaining because of the substantial rise in protein needs in the European Community. Soybeans have a meal extraction rate of about 79 percent, compared with 60 percent for shelled peanuts, 35 percent for sunflower seeds, and 35 percent for copra.

Total imports of animal and vegetable fats and oils rose to \$601 million in 1969 from \$495 million in 1968. Imports of these oils have been gaining since 1961 when they totaled \$401 million. European Community members supplied \$192 million worth of the 1969 import total. Vegetable oils accounted for about three-fourths of the total in 1969. The United States provided \$35 million worth of animal and vegetable oils in 1969. Other important suppliers included Eastern Europe, sunflower oil; Africa, peanut and palm kernel oils; Asia, coconut oil; and Latin America, sunflower, soybean, and linseed oils. Oils extracted from imported oilseeds account for a large part of vegetable oils used in the European Community.

Unmanufactured tobacco.--Tobacco imports reached an alltime high of \$389 million in 1969, up sharply from \$313 million in 1968. Tobacco imports rose for each member. West German imports of \$226 million were 17 percent above the year before and 58 percent of the EC total. The Netherlands ranked second with \$59 million or 15 percent. The United States, Greece, and Turkey were the principal EC tobacco sources in 1969. However, the European Community bought substantially more tobacco from Mainland China and Korea, which have not been traditional suppliers. Rhodesia shipped 27,000 metric tons to the Community in 1964 but U.N. sanctions have eliminated tobacco imports from Rhodesia.

Cotton.--European Community cotton imports totaled \$573 million in 1969, 2 percent below 1968. Principal suppliers were Latin America (\$247 million) and Africa (\$167 million). The U.S. share (\$33 million) has declined in recent years because of strong competition from African and Latin American producers, smaller U.S. production of types demanded in the Community, and gains in synthetic fiber production. Imports from the EC overseas associates totaled \$57 million in 1969, up from \$54 million in 1968. Chad, Central African Republic, and Cameroon were the principal suppliers.

Vegetables.--Imports of vegetables by the EC totaled \$1.05 billion in 1969, 27 percent above a year earlier. Intra-EC trade accounted for over half of total vegetable imports of the Community with Italy and the Netherlands contributing the largest part. The Netherlands' vegetable shipments to other Community members totaled \$291 million in 1969, while Italy's shipments were \$108 million. U.S. shipments of \$15.7 million -- less than 2 percent of EC's vegetable imports -- consisted mainly of dried pulses. African and Asian countries supplied \$242 million worth of vegetables. Spain was a principal supplier of fresh vegetables, primarily tomatoes, totaling \$185 million.

Sugar.--Imports of sugar and honey by the European Community totaled \$251 million in 1969, over one-fourth larger than in 1968. Intra trade of \$141 million accounted for over half. EC associate areas provided \$60 million worth of sugar. France was a major importer receiving about one-third of the EC's raw sugar imports. Principal sources of French imports were the Reunion Islands and Guadeloupe, overseas departments of France which receive special preference. West Germany was also a large importer of sugar, especially refined sugar. West Germany's main suppliers were France, Reunion Islands, and Guadeloupe.

Coffee, tea, and cocoa.--EC imports of coffee, tea, and cocoa were valued at \$1.4 billion in 1969, up from \$1.2 billion in 1968 and \$789 million in 1961. West Germany was the largest importer with total receipts valued at \$524 million. Africa, the top source, supplied \$556 million. Latin America was next with \$520 million.

Coffee purchases by the EC rose 6 percent to \$786 million in 1969. Tea imports of \$44 million were about the same as a year earlier. The Netherlands and West Germany bought most of the \$418 million worth of the cocoa the Community imported in 1969.

Meats and preparations.--EC imports of meats and preparations rose to \$1.4 billion in 1969 from \$1.2 billion in 1968. Over half of EC imports of meats were accounted for by intra trade, totaling \$802 million. The other important suppliers include EFTA (principally Denmark), Eastern Europe, and Latin America. U.S. shipments of \$52 million consisted primarily of variety meats. Most meats are subject to the EC's variable levies. However, most variety meats are bound in GATT and are not subject to the variable levies. Although meat production in the European Community has increased rapidly, it has not kept up with the demand fueled largely by substantial gains in per capita disposable income. EC per capita meat consumption has gained about 16 pounds in the past 10 years.

Poultry meat imports totaled \$173 million in 1969, compared with \$155 million in 1968. The United States used to supply a very large share of EC's poultry imports. However, the imposition of variable levies in 1962 all but eliminated the United States from this once important market. Now intra-EC trade of \$139 million accounts for the bulk of the EC's poultry trade.

The European Community is a large purchaser of hides and skins. In 1969, it took \$616 million worth. Intra trade of \$97 million accounted for nearly one-sixth of the total. Important suppliers include Oceania, Africa, and EFTA.

Dairy products and eggs.--EC imports of dairy products and eggs totaled \$772 million in 1969, up sharply from \$647 million in 1968 and \$414 million in 1961. Intra-EC imports accounted for 86 percent of EC imports of these commodities. High variable levies on both dairy products and eggs discouraged shipments from third countries. In fact, high price supports resulted in a considerable surplus of certain dairy products last year. The butter surplus in the Community was approximately 300,000 tons in 1969, annual consumption averages about 1.1 million tons. The other important suppliers of these products were EFTA members, primarily Denmark.

Fruits and nuts.--Imports of fruits and nuts by the European Community totaled \$1.57 billion in 1969, about 12 percent above a year earlier. West Germany bought \$843 million worth, followed by France with \$391 million. These countries account for more than three-fourths of EC imports of fruits and nuts. In 1969, the United States supplied about 4½ percent, mostly preserved fruit preparations and fresh citrus fruits. Canned peaches were also purchased in volume from the United States. Spain was the other major supplier, with citrus accounting for the largest amount. Intra-EC imports totaled \$489 million, up from \$413 million in 1968. Italy supplied about three-fifths. France also showed a volume trade.

Agricultural Exports of the EC

Agricultural exports of the European Community rose 18 percent to \$8.37 billion in 1969. Intra trade, with about 90 percent of this gain, rose to \$5.4 billion in 1969 from \$1.3 billion in 1959 (table 11). Exports to third countries increased but less dramatically to \$3 billion in 1969, compared with \$1.7 billion in 1959.

Shipments to the United States totaled \$364 million the same as in 1968 but up from \$198 million in 1959. Shipments to other third countries increased to \$2.6 billion from \$1.5 billion.

A substantial amount of the gain in agricultural exports has been accomplished by heavy subsidization. The EC commodities receiving subsidy payments include poultry, dairy products, sugar, wheat, barley, and animal fats.

Table 11.--European Community: Agricultural exports, total, intra exports, third countries, and the United States, calendar years 1959-69

Year	Total	Intra	Third countries		
			Total	United States	Other
-- Million dollars --					
1959	3,068	1,336	1,732	198	1,534
1960	3,432	1,527	1,905	206	1,699
1961	3,800	1,746	2,054	227	1,827
1962	4,045	1,951	2,094	231	1,863
1963	4,503	2,220	2,283	244	2,039
1964	4,946	2,491	2,455	260	2,195
1965	5,663	3,030	2,633	279	2,354
1966	5,860	3,237	2,623	312	2,311
1967	6,268	3,545	2,723	334	2,389
1968	7,079	4,224	2,855	364	2,491
1969	8,372	5,389	2,983	364	2,619

Grain shipments totaled \$1.4 billion in 1969, up sharply from the \$1.1 billion in 1968 and \$423 million in 1961. France is the principal exporter with a total of \$940 million worth in 1969. From one-half to two-thirds of French grain exports in 1961-69 were intra trade.

Increased EC farm exports to third countries also have resulted from large wheat and barley subsidies. The \$500 million increase in exports of dairy products and eggs occurred primarily in intra trade. The big intra-trade suppliers were the Netherlands and France. Exports of fruits, vegetables, and nuts also have shown significant increases since 1961. Fruits, nuts, and preparations totaled \$729 million in 1969, up from \$617 million in 1968 and \$424 million in 1961. Vegetables rose to \$834 million from \$421 million in 1961. Considerable emphasis has been placed upon increased production of fruits and vegetables since the inception of the Common Agricultural Policy. Shipments of animal fats and oils have continued at a low level, although exports of vegetable oils and oilseeds have gained sharply.

Combined meat trade in the Community increased to over \$1 billion in 1969 from only \$343 million in 1961. High level of production and use of variable levies caused a substantial rise in meat trade among Community members, although the EC is a deficit producer of meats.

EXPLANATORY NOTE FOR TABLES

The EC-Associated Overseas Countries (AOC) shown in the tables include: Algeria, Burundi and Rwanda, Caledonia, Cameroon, Central African Republic, Chad, Comoro Islands, Congo (Brazzaville), Congo (Leopoldville), Dahomey, French Guyana, French Somaliland, Gabon, Guadeloupe, Ivory Coast, Malagasy Republic, Mali, Martinique, Mauritania, Netherland Antilles, Niger, Reunion, Senegal, Somali Republic, Surinam, Togo, and Upper Volta.

RECENT U.S. AGRICULTURAL TRADE WITH LAFTA ^{1/}

904112

by
Susan A. Libbin

World trade of the 11 members of the Latin American Free Trade Association (LAFTA) increased 32 percent from 1962 to 1968, while trade among the LAFTA countries themselves rose by 75 percent (table 34). Agricultural commodities account for over half the intra-LAFTA trade.

The United States has generally provided about one-third of LAFTA's total agricultural imports and LAFTA countries have provided over half. U.S. agricultural exports to LAFTA countries were \$358.9 million in 1969, about 10 percent less than the 1966-68 average, and well below the 1964 peak of \$444 million (table 35). However, 1969 exports were \$56 million higher than the annual average in 1956-60. About two-thirds of all U.S. farm exports to Latin America have gone to LAFTA countries.

Exports under Government programs (mainly Public Law 480) accounted for most of the decline in total U.S. farm shipments to LAFTA in 1969. They were \$82.6 million, slightly less than the 1956-60 average and considerably below the high years of the early 1960's.

Commercial sales rose from over half of all farm exports to LAFTA from 1961-64 to about three-fourths since then. Dollar sales reached a high of \$300 million in 1966 and 1967 and then dropped to about \$276 million in the next 2 years. Two major P.L. 480 importers -- Brazil and Peru -- have considerably increased their dollar sales from the United States while importing less under P.L. 480. Dollar sales to Brazil rose from \$7.8 million annually in 1956-60 to a peak of \$53 million in 1967 and then dropped to \$44 million in 1968. Dollar sales to Peru rose from \$10 million in 1956-60 to over \$30 million in 1966 and 1967, but declined to \$12 million in 1969 (table 36). Dollar sales to Colombia, another P.L. 480 importer, also increased during most of the years since 1963. Commercial sales to our main LAFTA dollar markets -- Mexico and Venezuela -- have risen some since 1965.

Principal commodities exported to LAFTA include wheat, fats and oils, dairy products, cattle, and feed grains (mainly corn). Wheat exports, which accounted for one-third of all farm exports to LAFTA in 1969, were 28 percent below 1967-68 and 33 percent below 1963-66 average (table 37). Data in the table exclude Venezuela and Bolivia, which have only been in LAFTA for the last few years). The decline was mainly in P.L. 480 exports, which dropped from \$90 million during 1959-62, to \$75 million during 1963-66, to \$21 million in 1969. During the same period, dollar sales of wheat rose from \$14 million to \$45 million, to \$78 million in 1967, then slid back to \$60 million in the next 2 years.

^{1/} For more detail on LAFTA-U.S. trade and the effects of LAFTA on U.S. agricultural exports, see "Effects of LAFTA on U.S. Agricultural Exports," Foreign Agricultural Trade of the United States, Oct. 1968.

- 55 -

1/ Excludes Bolivia and Venezuela.

2/ Mostly wheat.

3/ P.L. 480 includes mostly corn.

4/ Mainly lard and tallow.

5/ Has been revised beginning with 1963 to include offshore procurement as commercial.

6/ Includes small amounts under the Mutual Security, AID programs.

7/ About half under Mutual Security, AID programs.

The most notable increases in recent years were in exports of animal fats (mainly tallow), rising from \$8.5 million in 1967 to \$19.7 million in 1969, and cattle, rising from \$7.4 million to \$17.8 million.

Table 38 compares LAFTA's imports (excluding those of Bolivia and Venezuela) of principal farm commodities from LAFTA members and from the United States. During the 1963-68 period, intra-LAFTA trade increased in wheat, fresh fruit, vegetable oils, tallow and corn, while intra-LAFTA trade in cattle and cotton remained fairly stable. During the same period, LAFTA's imports of wheat from the United States fluctuated considerably, its imports of U.S. cotton and tobacco declined drastically and its imports of cattle, tallow, and vegetable oils increased. Imports of vegetable oils from member countries rose much more than imports from the United States. An unpublished manuscript has extensively analyzed the effects of LAFTA on U.S. trade. ^{2/}

LAFTA's imports of wheat, the main farm import, reached a peak of \$295 million in 1968, rising 10 percent above 1967 (table 39). These data again exclude Bolivia and Venezuela. Brazil accounts for about two-thirds of the total wheat imports. Since 1962, Brazil's imports from LAFTA have increased. Its imports from the United States rose until 1965 when they dropped sharply and then picked up again in 1966-68, but at a level below the early 1960's. A drop in P.L. 480 shipments accounted for most of the decline since the early 1960's (table 40). U.S. commercial wheat sales to Brazil rose from an annual average of \$4 million in 1956-60 to \$14 million in 1963 and over \$40 million in 1967 and 1968, but declined to \$33 million in 1969. In 1967 and 1968, Brazil imported large amounts of wheat from the Soviet Bloc.

Other principal wheat importers are Peru, Chile, Colombia, and Venezuela. Peru's imports from both LAFTA and the United States have increased in recent years, while Colombian and Chilean imports increased from LAFTA but declined from the United States. Venezuela imports practically no wheat from LAFTA and its U.S. imports have risen considerably since the mid-1960's. Most of the decline in U.S. shipments to Colombia was in P.L. 480 sales. Dollar sales rose from \$1.5 million in 1962 to a high of \$13.2 million in 1966 and then dropped to \$10.2 million in 1969. While P.L. 480 wheat sales to Peru practically phased out, dollar sales increased from \$2.4 million in 1962 to a high of \$17.5 million in 1967, then dropped to \$4.6 million in 1969.

International Price Highlights

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

During October, wheat prices showed continued, if somewhat spotty, strength (table 43). Canadian No. 1 Northern wheat, in store Fort William-Port Arthur, was selling at \$64.62 a metric ton, 2 percent higher than a month earlier and 4 percent higher than a year earlier. Canadian Northern Manitoba No. 2 wheat, c.i.f. U.K., was quoted at \$84.89. This was 4 percent over September and 12 percent over a year earlier. These increases reflect both strong demand and reduced production. Recent estimates of the 1970 Canadian wheat crop put total production at a level 50 percent lower than the 1969 crop.

U.S. wheat, after showing considerable price strength during September, displayed some weakness during October. The buyer's price of U.S. No. 1 wheat, Hard Winter, ordinary protein, f.o.b. Gulf ports, rose 5 percent to \$59.16 a ton and at that level was 13 percent above a year earlier. The seller's price of this wheat was \$63.57 a ton, slightly higher than the prior month and 12 percent higher than a year earlier. U.S. No. 2 Hard Winter wheat, c.i.f. U.K., was quoted slightly lower at \$77.92, but at that level was still 9 percent higher than a year earlier. Despite continued forecasts of a smaller crop, Australian wheat, c.i.f. U.K., was selling at \$71.01 a ton, only a slight increase over September and 9 percent above a year ago.

Feed grain prices fell during October, in contrast to generally rising wheat prices. For U.S. and Argentine corn, this was the first monthly price decline of 1970. U.S. corn, c.i.f. U.K., was selling at \$74.04 a ton, 3 percent lower than September, but 19 percent higher than a year earlier. Argentine corn, c.i.f. U.K., was quoted 2 percent lower at \$81.30 a ton. Thus, the premium at which Argentine corn is selling over U.S. corn, c.i.f. U.K., was \$7.26 a ton. In Rotterdam, however, this premium was only \$6.70 a metric ton (17 cents a bushel).

Sorghum grain, c.i.f. U.K., declined slightly to \$71.95 a ton. This price quotation, 14 percent higher than a year earlier, reflected continued strong demand for sorghum as a substitute for corn in feed mixtures. The premium at which U.S. corn was selling over sorghum during October was only \$2.09 a ton (5 cents a bushel), as compared with \$4.48 for September, \$10.90 for August and an average of \$6.40 for January-August 1970.

U.S. No. 2 soybeans, c.i.f. U.K., were quoted at \$131.17, 7 percent higher than a month earlier and 28 percent higher than a year ago.

The export price of Thai rice increased to \$142.50 a metric ton, but at that level was 23 percent lower than a year earlier.

The price of cotton, Memphis Territory, strict middling 1-1/16", c.i.f. U.K., increased slightly to \$682.14 a metric ton and at that level was 9 percent higher than a year ago.

World Trade Highlights

AGRICULTURAL IMPORTS OF AUSTRALIA AND NEW ZEALAND

Australia.--Food and related farm products entering Australia in calendar 1969 reached \$227 million, up 42 percent from 1962 (table .44). Contributing most to the increase were incoming rubber, tobacco, fruits and vegetables, cocoa, coffee, feeds, and oilseeds. There were moderate gains for dairy products, cereal preparations, sugar, and beverages. Imports of meats, fats and oils, cotton, and hides and skins all moved to lower levels.

Heading Australia's import list throughout the 8-year period was the coffee-tea-cocoa-spice category. That group represented nearly a fourth of the country's agricultural imports in 1969. Ceylon supplied about a fourth of the value, Ghana a sixth, and Papua a seventh.

Unmanufactured tobacco accounted for an eighth of agricultural imports, natural rubber a tenth, and natural fibers a twelfth. The United States supplied three-fourths of the imported tobacco with sizable quantities coming from South Africa and Greece. Malaysia supplied five-sixths of the rubber and Papua furnished most of the remainder. Most of Australia's cotton purchases in 1969 came from Uganda and the wool came mainly from New Zealand. Australia's cotton imports declined steadily to \$4 million in 1969 from \$19 million in 1964.

Imports from the United States, the leading overall source of agricultural imports in 1969, neared \$40 million or 18 percent of the total. This was slightly above 1968 but lower than the 24 percent in 1962. Of the total value of agricultural imports from the United States in 1969, tobacco accounted for 53 percent; animal feeds, 8 percent; and oilseeds, vegetables, and fruits, about 5 percent each. U.S. shipments to Australia since 1962 show a decline in cotton from \$9.9 million to \$27,000, roughly offset by sizable gains in tobacco, animal feeds, fruits, and vegetables.

A 40-percent advance in rubber shipments in 1969 boosted Malaysia into second place over New Zealand -- 1968's runner-up. New Zealand was a major source of wool, vegetables, fruits, cereal preparations, sugar, and dairy products. Sharp gains in Australia's imports of all these items increased the value of farm imports from New Zealand to \$17.3 million in 1969 from \$10.2 million in 1966.

New Zealand.--New Zealand's agricultural imports of \$75 million in 1969 were 7 percent above the 1968 pace, but near the 1962-69 average. Three commodity groups -- fruits and nuts; coffee, tea, cocoa, and spices; and sugar -- accounted for about three-fifths of New Zealand's agricultural imports in 1969. Principal sources were Australia, United States, and Ecuador for fruits; Ceylon, Ghana, and the Netherlands for the coffee group; and Australia, Colombia, and Fiji for sugar (table 45).

Australia provided about one-fourth (\$18.3 million) of New Zealand's farm product imports in 1969. Major commodities were sugar (\$8.6 million) and fruits and nuts (\$5.4 million).

The United States followed Australia, supplying 10.7 percent of agricultural imports to New Zealand in 1969 and ranking first in tobacco and vegetables, second in fruits and cereals, and third in fats and oils and live animals.

Exports to New Zealand totaling \$6½ million from Ceylon, mostly in the coffee-tea-cocoa-spice category, ranked third. Malaysia was the fourth ranking source, supplying \$5.6 million worth of farm products, mainly rubber and fruits.

Export Highlights

U.S. AGRICULTURAL EXPORTS, JULY-OCTOBER 1970

U.S. agricultural exports, totaling \$2,372 million in July-October 1970, were 15 percent above the year-earlier level. The increase was concentrated in soybeans, soybean products, and wheat. Other gains occurred for tallow, lard, dairy products, nuts, and feed grains. These gains more than offset declines in rice, cotton, tobacco, meats, and hides and skins (table 48).

Nonagricultural exports were about 8 percent above the \$10.82 billion in July-October 1969, with the increase concentrated in machinery, office machinery, and computers.

October's agricultural exports of \$724 million were an alltime high and 12 percent above the \$645 million for October 1969. This is the first time exports in one month surpassed the \$700 million level. Gains in wheat, feed grains, rice, tallow, soybean oil, nuts, and cotton more than offset smaller exports of soybeans, tobacco, meats, fruits, and vegetables.

Increased exports of animal fats and dairy products pushed exports of livestock products 8 percent above the \$251 million in 1969. Higher prices for inedible tallow and lard contributed significantly to the higher exports of animal fats. Some increase in quantity reflected the continued world shortage of fats and oils as well as increased consumption. Exports of dairy products advanced significantly with sharp gains in sales of nonfat dry milk, primarily under Government-financed programs. A 15-percent decline in meat exports is attributed mainly to substantially reduced pork shipments to Japan. Cattle hides were also down, with Japan and Western Europe taking fewer this July-October.

Cotton exports in July-October were 540,000 bales, over one-fourth below the same 4 months a year earlier. Relatively tight U.S. cotton supplies and continued gains in manmade fibers have limited U.S. exports early the current fiscal year. However, they are expected to advance in coming months because of increased world demand, lower foreign free world production, and some improvement in U.S. supplies of types of cotton demanded in foreign markets. The principal markets in July-October were Japan, India, Korea, Canada, Thailand, Taiwan, Indonesia, South Vietnam, United Kingdom, and the Philippines. Exports to the European Community were down sharply from the previous year.

Fruit and vegetable outgo in July-October was slightly below a year earlier. Smaller shipments of canned fruits, primarily peaches, more than offset the gains in dried fruits, and canned citrus juices. Smaller exports of pulses and fresh and canned vegetables more than offset slight gains in soups and dehydrated vegetables.

^{1/} Preliminary

Exports of grains and preparations rose 21 percent to \$932 million in July-October 1970. A 74-million-bushel increase in exports of wheat grain contributed most. The big markets for U.S. wheat were Japan, India, the European Community, European Free Trade Association, Rumania, Turkey, Israel, Lebanon, Venezuela, Brazil, Pakistan, Chile, Colombia, South Korea, Taiwan, Philippines, Nigeria, Algeria, and Morocco. In addition, substantially more wheat went to other Latin American countries.

Feed grain exports advanced 12 percent to 7.9 million tons in July-October. This increase was accounted for by exports of 70 million bushels of grain sorghums, two-fifths above the year-earlier level. Japan, the top market for U.S. feed grains, purchased 2.8 million tons in the first third of 1970/71. Other important buyers were the European Community, Mexico, United Kingdom, Greece, South Korea, and Israel.

Rice exports of 11.7 million bags in July-October were 8 percent below the 1969 rate. A 9.4-million-ton increase in free world production has reduced the need for U.S. rice in many importing countries and increased competition in many other major dollar markets. Shipments declined primarily to the European Community and other developed areas although movement to Asia was also somewhat lower.

The outgo of oilseeds and products in July-October advanced by over two-fifths to \$592 million. Movement of soybeans to the foreign market advanced to 128 million bushels from 96 million a year earlier. Western Europe significantly increased its purchases of soybeans and Japan's purchase of 37 million bushels was over one-fourth higher than a year earlier. Gains in livestock production, continued small competition from other major exporting countries, and reduced grain production in some major areas have encouraged U.S. soybean exports. Soybean unit value averaged \$2.84 per bushel in July-October 1970, compared with \$2.65 a year earlier. Soybean meal exports (1.3 million tons) were up over one-fourth.

Combined exports of cottonseed and soybean oil, at 630 million pounds in July-October, were 83 percent above the level a year earlier. Most of the increase occurred in shipments to developing nations of Asia and Africa, but substantial quantities also moved to Latin America.

Tobacco exports in July-October, totaling 165 million pounds, were about one-fifth below those of the comparable period a year earlier. The decline occurred primarily in shipments to the United Kingdom and the European Community. These markets have been purchasing more tobacco from nontraditional suppliers such as Korea and Mainland China. The average unit value of U.S. tobacco was 98 cents a pound -- substantially above the 95 cents a year ago.

U.S. Agricultural Exports to the EC, July-October 1970

U.S. agricultural exports to the European Community advanced to \$543 million from \$426 million. A \$75 million increase in nonvariable-levy items -- mainly soybeans and soybean meal -- accounted for about two-thirds of the gain (table 49). Tallow, variety meats, nuts, and corn byproducts also gained, while shipments of cotton, tobacco, canned peaches, and hides and skins declined in July-October.

Variable-levy items advanced \$41 million to \$177 million. Exports of wheat and feed grains reversed a 3-year downward trend for variable-levy items despite the precipitous \$6 million drop in July-October rice exports to \$5 million.

^{1/} Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. ^{2/} Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. ^{3/} Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. ^{4/} Variable levy on sugar-added content. ^{5/} Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

Import Highlights

U.S. AGRICULTURAL IMPORTS, JULY-OCTOBER 1970

U.S. agricultural imports during July-October gained 8 percent over the corresponding months last year. Value rose to \$1.85 billion from \$1.71 billion (table 50). Both supplementary and complementary items contributed to the expansion. October imports totaled \$471 million, compared with \$461 million in September and \$469 million last October.

Among supplementary imports, July-October gains were recorded in cattle, horses, meats, dairy products, eggs, grain products, edible nuts, oilbearing materials, sugar, vegetables, and wines. The value of dutiable cattle entries rose 6 percent; for horses it more than doubled. Purchases of high-valued racehorse stock, chiefly from Ireland, reached \$6.1 million in September, and pushed the July-October total to \$9.4 million, compared with \$4 million in the same months last year. Higher prices accounted for most of the increase in meat imports. Beef and veal volume dropped 4 percent to 508 million pounds, while value rose 2 percent to \$261 million. Total pork imports were 8 percent above last year at 110 million pounds, but value rose 9 percent to \$85 million.

Cane sugar imports continued their long-term growth as volume rose 9 percent to 1.94 million short tons. Higher prices accounted for about one-third of the 15-percent value increase to \$271 million. Most of the additional sugar purchases came from the Philippines, with smaller gains from Brazil, Peru, Costa Rica, Nicaragua, Haiti, and India.

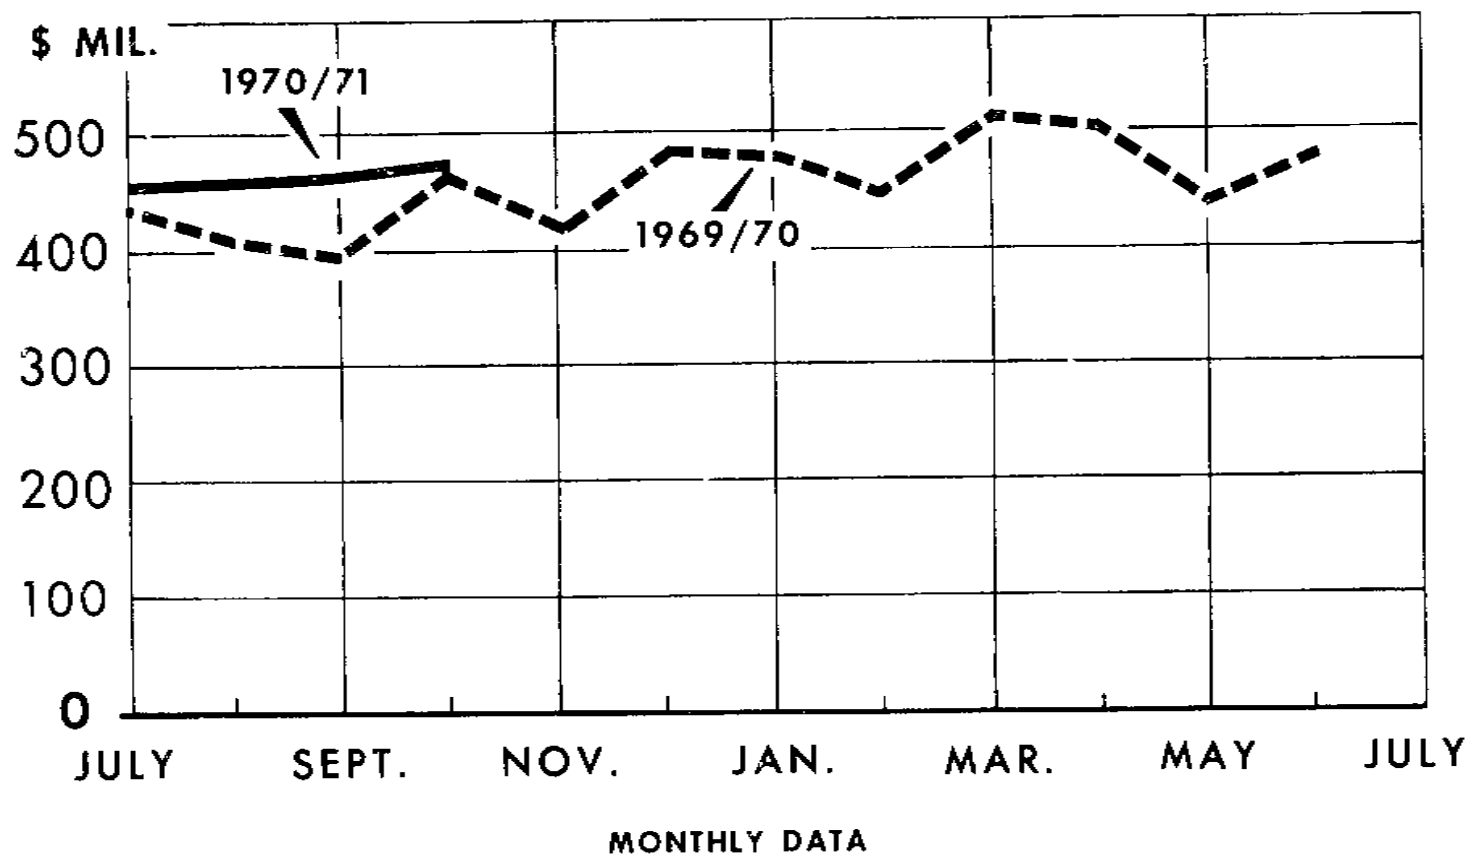

U.S. wine imports totaling 9.6 million gallons were valued at \$47.6 million, 15 percent above July-October 1969. Still table wines accounted for 6.5 million gallons and \$30.6 million, a 25-percent value increase over the same 4 months a year earlier. Larger imports were recorded from France, Italy, West Germany, Portugal, and Spain, and unit values rose. The average price went up 16 cents per gallon to \$4.70.

French still wines averaged \$6.76 per gallon, compared with \$6.38 in July-October 1969. France was the principal source, providing 2.1 million gallons worth \$14.3 million. Italy, second largest U.S. source, supplied 1.3 million gallons worth \$5.4 million. Prices averaged \$4.02 per gallon in July-October, compared with \$3.79 a year ago. Unit prices on still table wines from Portugal declined 27 cents to \$3.46 per gallon; imports from Portugal rose sharply to 1.1 million gallons (\$3.7 million) from 598,000 gallons (\$2.2 million) in similar months last year. West German still wines averaged \$4.80 per gallon against \$4.03 last year. West Germany sent nearly 1 million gallons worth \$4.7 million.

Noncompetitive (complementary) imports grew 6 percent from like months last year. Significantly higher prices on coffee pushed value 22 percent higher while volume dropped 15 percent to 825 million pounds. Banana and cocoa imports rose, while declines occurred for crude rubber, silk, and carpet wools (table 51).

^{1/} Based on 359 classifications in 1970. ^{2/} The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

^{1/} Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers. ^{2/} Based on 425 classifications in 1970. ^{3/} The seasonal adjustment series has been revised to incorporate the Bureau of Census Method X-11. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the adjustment procedures, see U.S. Department of Commerce, Bureau of Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
