## SPECIAL IN THIS ISSUE

CURRENT EDITIONS

- U.S. Agricultural Trade With Eastern Europe
- U.S. Commercial Wheat Exports in 1968/69 Held up Well
- U.S. Imports of Fruits and Vegetables Under Quarantine,  
Fiscal Year 1969
- Ocean Freight Rate Highlights
- Trade Statistics, July-November

PUBLISHED MONTHLY BY ECONOMIC RESEARCH SERVICE, U.S. DEPARTMENT OF AGRICULTURE

Selected Price Series of International Significance (see page 71). The spread between the c.i.f. U.K. price and the Gulf ports buyer's price for U.S. Hard Winter wheat continued to widen to \$19.47 a metric ton, compared with \$11.01 in November 1968. Since the c.i.f. U.K. price series tends to be based on higher protein wheat than the Gulf ports series, the increase in the price spread is probably attributable to strong demand for wheat with good protein content in the United Kingdom market. Feed grain, rice, soybean, and cotton prices changed little from October to November. Sorghum grain prices remained unattractive compared with corn prices.

\* \* \* \* \*

Ocean Freight Rate Highlights (see page 75). The decline in ocean freight rates for shipping heavy grain (wheat, corn, sorghum grain, and soybeans) continued during the third quarter of 1969. Declines were relatively small, however, and rates from U.S. Atlantic and Gulf ports showed small average increases. Much the same behavior was evident at the St. Lawrence River ports. At the Pacific Coast ports, only a single trade -- Pacific Coast ports to Japan -- showed activity for the third quarter of 1969. Heavy grain rates for this trade increased 27 cents per ton.

\* \* \* \* \*

U.S. Agricultural Exports, July-November 1969/70 (see page 77). Agricultural exports during the first 5 months of fiscal 1970 totaled \$2,713 million, 9 percent above those of July-November 1968/69. Animals and animal products, grains and preparations, oilseeds and products, tobacco, and fruits and vegetables all contributed to the increase. While exports to North American, Asian, and African countries, and Australia and Oceania increased from those of July-November 1968/69, shipments to Latin American and European countries remained about the same. Among the Asian countries, exports to Japan were up 27 percent to \$459 million, while those to India rose 49 percent, reaching \$97 million. Shipments to the EEC were down 4 percent to \$574 million, but were partially offset by an 8-percent rise in exports to EFTA and a 25-percent increase to other European countries, excluding Eastern Europe. November exports of agricultural products totaled \$658 million, 8 percent higher than those of November 1968.

\* \* \* \* \*

U.S. Agricultural Imports, July-November 1969/70 (see page 85). Imports of agricultural products during the first 5 months of the current fiscal year totaled \$2,121 million, 2 percent below comparable months last year. Purchases of supplementary goods fell 1 percent in value, reflecting lower imports of most items. A drop in the value of complementary products was primarily due to reduced coffee imports.

Table 1.--U.S. exports: Value of total and agricultural exports, including specified Government-financed programs 1/ and commercial (dollar) sales 2/ by selected commodities and commodity groups, averages 1955-59, 1960-64, and

<sup>1/</sup> Includes exports under Public Law 480 programs (sales for foreign currency, long-term dollar and convertible local currency credit sales, barter for strategic materials, and donations) and under AID programs. <sup>2/</sup> Commercial sales (exports outside Government-financed programs) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies, which benefit the U.S. balance of payments and rely primarily upon authority other than P.L. 480; extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash or in kind. <sup>3/</sup> Commodity group totals for feed grains, oilseeds and products, and animal and products include for years noted, in addition to the value reported by the Bureau of the Census, the estimated value of certain commodities donated through voluntary relief agencies, which are included by Census in "Other food for relief and charity." <sup>4/</sup> Preliminary data.

## SPECIAL in this issue

### U.S. AGRICULTURAL TRADE WITH EASTERN EUROPE

Trade in agricultural products between the United States and Eastern Europe continued fluctuating sharply in 1968, as in past years. U.S. agricultural exports to the Committee on Economic Cooperation (COMECON) area -- which includes Bulgaria, Czechoslovakia, the Soviet Zone of East Germany, Hungary, Poland, Rumania, and the U.S.S.R. -- jumped to \$121 million from \$109 million in 1967. U.S. imports of farm products from COMECON have shown a more stable pattern, rising steadily to \$60 million in 1967, then slipping to \$57 million during 1968.

Shipments of agricultural items between the United States and COMECON represent a small fraction of total agricultural trade. U.S. agricultural exports to COMECON accounted for less than 2 percent of such exports to all countries. Similarly, U.S. agricultural imports from COMECON made up about 1 percent of total agricultural imports (table 2).

Farm products are an important part of U.S. exports to the COMECON area. The value of agricultural shipments accounted for 56 percent of total U.S. domestic exports to COMECON in 1968, about the same as in 1967. Total exports to the area amounted to \$216 million in 1968 and \$195 million in 1967. In contrast, agricultural imports from COMECON accounted for 29 percent of total imports for consumption from the area, down from 35 percent in 1967. Total imports (for consumption) from COMECON grossed \$196 million in 1968 and \$171 million the previous year.

U.S. agricultural shipments to the COMECON area are limited to a small number of commodities. Six items made up more than three-fourths of total agricultural exports in 1968: feed corn (\$38 million), raw cotton (\$18 million), soybean meal (\$16 million), grain sorghums (\$9 million), cattle hides (\$7 million), and soybeans (\$6 million). The remaining \$12 million in commercial sales consisted of hides and skins other than cattle (\$3.5 million), industrial tallow (\$2.4 million), wheat (\$1.7 million), unmanufactured tobacco (\$1.6 million), oil cake other than soybean (\$0.7 million), flaxseed (\$0.7 million), fresh-frozen livers (\$0.6 million), seeds (\$0.4 million), and citrus products (\$0.2 million). Noncommercial shipments to the area all went to Poland through private charity channels. These amounted to about \$14 million, mostly butteroil (\$6.2 million), nonfat dry milk (\$2.2 million), soybean oil (\$1.8 million), shortening (\$1.5 million), and butter and wheat flour (about \$1.0 million each) (table 3).

More than two-thirds of U.S. agricultural imports from COMECON consist of canned pork, chiefly from Poland. The remainder is made up of diverse specialty commodities such as cheese, casein, berries, feathers, spices (especially paprika, caraway, and poppy seed), bristles, crude drugs, and essential oils.

Poland was COMECON's principal agricultural trading partner of the United States during 1968. Exports of farm products to Poland rebounded in 1968 to nearly \$72 million after reaching low levels in the 3 preceding years following a drop in P.L. 480 shipments. Poland's exports of agricultural goods to the United States fell below \$47 million in 1968 from the 1967 high of \$49 million (table 4).

Table 2.--U.S. agricultural trade with COMECON and all countries,  
average 1955-59, and annual 1960-68

Year	Exports to--			Imports from--		
	All countries		COMECON share	COMECON		All countries
	Mil. dol.	Mil. dol.	Pct.	Mil. dol.	Mil. dol.	Pct.

1966 .....	137	6,881	2.0	53	4,491	1.2
1967 .....	109	6,380	1.7	60	4,452	1.3
1968 .....	121	6,228	1.9	57	5,028	1.1

Direct exports of U.S. farm products to East Germany rose to \$24 million from less than \$11 million 3 years earlier (table 5). In addition, an estimated \$22 million of U.S. corn, grain sorghums, and soybeans were transshipped to East Germany via the Elbe River through Hamburg, West Germany, in 1968 (see table 7, page 17, Foreign Agricultural Trade of the United States, August 1969).

U.S. agricultural exports to Yugoslavia, considered part of Eastern Europe by some but not a member of COMECON, dropped sharply to less than \$19 million in 1968 from nearly \$59 million a year earlier and \$119 million during 1966. Most commodities showed rapid declines, including grains, cotton, and vegetable oils. Imports, however, continued to trend upward, reaching \$24 million. Unmanufactured oriental cigarette leaf provided the main impetus to Yugoslav exports to the United States, supplemented by canned pork plus some crude animal products such as feathers and sausage casings (tables 7 and 8).

Table 3.--U.S. exports to Poland of food for relief or charity donated by private organizations: Value by commodity, calendar years 1964-68

## SPECIAL in this issue

U.S. WHEAT EXPORTS LOWER IN 1968/69, BUT COMMERCIAL EXPORTS HELD UP WELL  
IN FACE OF MOUNTING WORLD SUPPLIES AND DECLINING WORLD TRADE

by  
Elesnor N. DeBlois 1/

U.S. exports of wheat grain in 1968/69 declined for the third successive year to \$788 million (471 million bushels). Large and well distributed world stocks held world trade to the lowest level since 1962/63. An additional factor was the strike at Atlantic and Gulf ports. U.S. shipments to Japan, the leading dollar market, were reduced largely because of a quality issue. Two-thirds of the decline from a year earlier was in P.L. 480 shipments, which reflected smaller import requirements by India and Pakistan.

This is the first of a series of reports on commercial sales for dollars and exports under Government-financed programs on a commodity-by-country basis for the major U.S. export commodities. The report shows exports of wheat grain for 1967/68 and 1968/69 in quantity and value by country and geographic area (tables 9 through 12). Shipments under barter and credit sales programs are shown in tables 13 and 14. Transshipments through Canadian ports on the St. Lawrence are presented in table 15 for both years. Transshipments through the Netherlands are shown in the same table for 1968/69 only; data for the prior year are not available.

Although U.S. commercial wheat trade has declined, it has done rather well in the face of a world wheat market characterized by rising exportable supplies and a declining volume of trade. While the volume of U.S. commercial exports was lower than in the 3 prior years, the U.S. share of world commercial trade rose to 32 percent from an average of 27 percent in the mid-1960's. At the same time, the U.S. share of world non-commercial trade, which amounted to over 94 percent in the mid-1960's, fell to nearly 75 percent in 1968/69. 2/

The EC grain policy of increasing wheat production, while providing protection from outside sources, accompanied by a vigorous promotion drive, vaulted the EC to a position as one of the five leading wheat exporters, along with the United States, Canada, Australia, and Argentina. The EC has been importing a declining volume of wheat from other countries for several years.

Fears of world wheat shortages brought on by bad crops in a number of countries in the mid-1960's led to significant technological advances, increased yields, and production

1/ International Economist, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

2/ For further discussion of U.S. and world wheat trade, see: "The Story of the 1960's: U.S. Wheat in World Trade" by Clancy V. Jean and "Competition Keen in Overseas Wheat Markets" by James P. Rudbeck, Foreign Agriculture, November 24, 1969. "Study Group on Grains: Review of World Outlook and Policies," Monthly Bulletin of Agricultural Economics and Statistics, F.A.O., June 1969.

1/ Authorized by Title I, P.L. 480.

2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808.

3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808.

4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation.

5/ Includes expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195. For fiscal year 1969 includes July-December 1968 only because of a delay in the preparation of the report for January-June 1969.

6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; and (3) export payments in cash.

1/ Less than \$500.

6/ The apparent excess of Government-financed exports over total exports may be due to lags in reporting, differences in valuation procedures, or the recording of the export as destined for the country through which transhipment was made.

								471,295

1/ Authorized by Title I, P.L. 480.

2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808.

3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808.

4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation.

5/ Includes expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195. For fiscal 1969 includes July-December 1968 only because of a delay in the preparation of the report for January-June 1969.

6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; and (3) export payments in cash.

7/ Less than 500 bushels.

8/ The apparent excess of Government-financed exports over total exports may be due to lags in reporting or the recording of the export as destined for the country through which transhipment was made.

1/ Authorized by Title I, P.L. 480.

2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808.

3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808.

4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation.

5/ Includes expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195.

6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; and (3) export payments in cash.

7/ Less than \$500.

8/ The apparent excess of Government-financed exports over total exports may be due to lags in reporting, differences in valuation procedures, or the recording of the export as destined for the country through which transshipment was made.

3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808.

4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation.

5/ Includes expenditures under commodity (non-project) programs, project programs, and economic development loans, authorized by P.L. 87-195.

6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; and (3) export payments in cash.

7/ Less than 500 bushels.

8/ The apparent excess of Government-financed exports over total exports may be due to lags in reporting or the recording of the export as destined for the country through which transshipment was made.

in India and Pakistan, as well as in other developing countries. The traditional exporters also stepped up their wheat production. By 1968/69, the U.S.S.R. had again become a net exporter and a number of other countries also joined the ranks of exporters. Lower import requirements brought a decline in shipments by most exporting countries and a drop in world trade for 3 consecutive years following the record of 62 million tons in 1965/66.

The drop in U.S. exports to Asia in 1968/69, mostly under P.L. 480, made up over four-fifths of the \$405 million (229 million bushel) decline from a year earlier. Smaller commercial exports mainly accounted for reductions in shipments to Latin America and Europe. Less wheat under Government programs was responsible for the decline in shipments to Africa.

Asia.--Asia took 57 percent of U.S. wheat exports in 1968/69, down from 65 percent a year earlier. Because of bumper wheat crops for 2 successive years, food-aid exports to India were reduced to 76 million bushels from over 200 million and those to Pakistan fell to 14 million bushels from 72 million. P.L. 480 shipments to the Republic of Korea and to Israel rose considerably. Due to a sprout damage problem, as well as to increased competition from other sources, U.S. exports to Japan fell to 67 million bushels from 82 million and the U.S. share of the Japanese market fell to 43 percent, lowest since 1962/63. Other important Asian markets were the Philippines and the Republics of China and Korea. In 1968/69, the United States faced increased competition from other suppliers in Asian markets.

Latin America.--Although Latin America imports less wheat than Western Europe, it accounted for nearly a fifth of U.S. wheat shipments compared with Europe's 15-percent share. Brazil was the largest U.S. market, receiving over three-fifths of its U.S. imports under Title I, P.L. 480, as well as a large quantity under barter contracts for overseas procurement. Venezuela and Colombia were also important markets. Other exporters, including the U.S.S.R., East European countries, Australia, Mexico, France, and Canada, are providing strong competition in the Latin American wheat market.

Europe.--U.S. exports of wheat grain to Europe totaled 69 million bushels in 1968/69, down from 75 million in 1967/68. Western Europe has been taking a smaller volume of wheat from outside sources in recent years. U.S. hard winter wheat was especially noncompetitive in this market in 1968/69 because of available wheat of similar quality from other sources and the pricing provisions of the International Grains Arrangement. U.S. sales of durum wheat increased because of larger import requirements and less wheat of this class from competing sources.

Africa.--Smaller P.L. 480 exports, especially to Morocco, accounted for the decline in U.S. shipments to Africa to 25 million bushels from 39 million in 1967/68. Import needs in this area were reduced by better wheat crops.

Canada.--As may be noted from table 15, the nearly 20 million bushels of wheat recorded by the Bureau of the Census as exported to Canada consisted of transshipments to other countries through St. Lawrence ports.

Barter shipments for overseas procurement for U.S. agencies.--Shipments under supply-type barter contracts are included in "Exports outside specified Government programs" in tables 9 through 12, but are shown separately in table 13. These shipments amounted to 51 million bushels in 1968/69, compared with 82 million in 1967/68. Over half of the total went to Latin America. Brazil was the leading destination, followed by Colombia, Peru, and Costa Rica. Just under half went to Asia, including sizable shipments to the Republic of China and India.

Exports under CCC Credit Sales Program.--Exports under the CCC credit sales program are included in commercial sales in tables 9 through 12, but are shown separately in

table 14. Exports under the CCC program totaled 12 million bushels in 1968/69, compared with 30 million a year earlier. The Republic of Korea was the leading destination in 1968/69. Yugoslavia, Brazil, and Pakistan took substantial quantities in 1967/68.

Transshipments through Canada and the Netherlands.--As part of the effort to improve U.S. trade data, transshipments by country of destination are published periodically in Foreign Agricultural Trade of the United States and its annual supplements. These tables indicate transshipments through Canada, the Netherlands, Belgium, and Hamburg, West Germany, for years for which data are available. Transshipments for 1967/68 and 1968/69 through Canadian ports on the St. Lawrence are shown in this report. Transshipments through the Netherlands are shown for 1968/69 only since information for 1967/68 is not available. Transshipments through Belgium and Hamburg are available for certain calendar years only.

Transshipment information is compiled from Government sources for all countries except West Germany. These shipments are reported in volume only. Values are computed from export unit values (f.o.b. U.S. ports) during the applicable time period. They supply additional data on wheat exports to a given country and help explain apparent discrepancies between program data and total exports as reported by the Census Bureau.

Discrepancies between total Government-financed exports and total exports and between commercial exports and barter exports and credit sales shipments.--The use of reports prepared in various operating agencies as compared with total exports reported by the Census results in discrepancies which become more apparent when reporting on a more specific basis, such as commodity-by-country, than when reporting on a more general basis, such as totals by commodity or by country. The tabulation of exports under P.L. 480 programs has been considerably improved in recent years and is being integrated into a data processing system maintained in the Foreign Agricultural Service. However, shipments at the end of a reporting period, because of late receipt of documents, may be cut off in one report and included in another. Reports by quantity are more accurate than reports in terms of value, since values shown for Government-financed exports involve some degree of estimation. Title I values are estimated in preliminary reports and later revised after receipt of invoices.

In the reports for 1967/68 and 1968/69 a few countries showed an excess of the quantity received via Government-financed exports over total wheat exports as reported in official trade statistics. The excess of program shipments to Turkey in 1968/69 and to Morocco in 1967/68 is accounted for by transshipments through Canadian ports. Shipments to land-locked Afghanistan are often recorded as exported to the country through which transshipment is made. Lags in reporting or transshipments through other countries may account for discrepancies in other countries.

In a few instances, exports of wheat under barter contracts as shown in table 13 and under the credit sales program in table 14, exceed commercial exports, as shown in tables 9 through 12, of which they are a part. Since commercial sales are a residual derived by the deduction of reported program exports from total exports, any overstatement of a Government-financed shipment to a given country would in effect reduce commercial exports. Transshipments through Canadian ports explain the excess of barter shipments over commercial exports to India in 1967/68. The overage of barter shipments to land-locked Bolivia may be due to the recording of shipments to the transshipment country. Excesses of shipments under the credit sales program may be due partly to the use of sales data rather than export data. No adjustments have been made in the data from the various sources.

## SPECIAL in this issue

### U.S. IMPORTS OF FRUITS AND VEGETABLES UNDER QUARANTINE, FISCAL YEAR 1969

Under provisions of the Plant Quarantine Act of 1912, as amended, fresh and frozen fruits, vegetables, and certain kinds of nuts entering the United States from all foreign areas except Canada require inspection for plant pests. The Plant Quarantine Division, Agricultural Research Service, administers this Act through inspectors stationed throughout the continental United States, Puerto Rico, the U.S. Virgin Islands, and Guam. Tables 16 and 17 were compiled from monthly reports based on notices of arrival at the first port of entry. Table 17 shows entries into the continental United States and Puerto Rico by commodity and country of origin; table 17 indicates the commodity by customs districts or port of entry. Supplementary data at the end of table 17 show entries by commodity for transportation and exportation (transshipment) to other countries and for entries into the U.S. Virgin Islands and Guam.

This report is a source of specific information not published elsewhere in such format and scope. There are several differences between these data and those of the U.S. Census Bureau. The most important differences are: (1) plant quarantine data include informal entries valued less than \$250, (2) these data do not include entries from Canada, and (3) commodity classifications for many products are not identical. In some instances, Census Bureau data include specific items in "basket" or broad categories.

These tables have been published since 1924. For the first 5 years, they were included in annual reports of the Federal Horticultural Board; from 1929 to 1932, they were published in the annual reports of the Plant Quarantine and Control Administration; from 1932 to 1934, they appeared in annual reports of the Bureau of Plant Quarantine; and in 1935 and 1936, they were published in the annual report of the Bureau of Entomology and Plant Quarantine. From 1937 to 1952 tables were published by the Office of Foreign Agricultural Relations; from 1953 to 1960, by the Foreign Agricultural Service; and since 1960, by the Economic Research Service.

Fruits.--Fresh fruit inspections in 1968/69 totaled nearly 4.8 billion pounds, about 300 million pounds greater than the preceding fiscal year. 1/ Banana imports made up more than 4 million pounds; melon entries were the second largest component at 280 million pounds, and berries third at 157 million pounds. Increases over last year were recorded for apples, bananas, berries, most citrus, mangoes, melons, and pineapples. Reductions were noted for oranges, grapes, pears, plantains, and plums.

Many fruits entered the United States through the New York Customs District. Chief among these fruits were bananas, blueberries, cherries, grapes, mangoes, Spanish melons, plantains, peaches, pears, and plums. Strawberries, grapefruits, oranges, tangerines, cantaloupes, watermelons, and pineapples entered primarily from Mexico through Laredo and McAllen (Hidalgo), Tex.

1/ Data for 1967/68 appeared in the February 1969 issue of Foreign Agricultural Trade of the United States.

Vegetables.--Inspections of fresh vegetables amounted to more than 929 million pounds in 1968/69, about 180 million pounds above the previous year. Tomatoes made up the bulk of vegetable entries at 555 million pounds; cucumbers totaled 129 million pounds; green peppers, 53 million pounds; and onions 49 million pounds. Most vegetable inspections increased. The bulk of U.S. vegetable imports originated in Mexico and entered through border ports. Nogales, Ariz., handled most of the entries, particularly tomatoes, cucumbers, eggplant, green beans, peas, peppers, and squash.

A higher proportion of U.S. fruit and vegetable entries in 1968/69 was frozen, a trend which will likely continue. About 120 million pounds of frozen fruits and vegetables were inspected in the last fiscal year, compared with 76 million pounds in 1967/68. In both years, more than 90 percent of frozen fruits and vegetables imported consisted of frozen strawberries, 70 million pounds and 110 million pounds, respectively. But many other frozen items are increasing in importance. More fruits and vegetables are receiving cold treatment en route to the United States as well. Remote recorders in ships' holds allow constant monitoring of temperature and humidity over specified periods, assuring pest-free produce on arrival. When improvements in container reefers are developed, expanded trade will undoubtedly result. In addition, increased use of fumigation procedures in exporting countries will speed the inspection process when shipments enter U.S. ports.

## SPECIAL in this issue

### SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

A further increase in the spread between the c.i.f. U.K. price and the Gulf ports buyer's price for U.S. Hard Winter wheat was the most noteworthy price development during November. That spread widened to \$19.47 a metric ton, compared with \$19.05 in October and \$18.11 in November 1968 (table 18). The spread between the c.i.f. U.K. price and the Fort William-Port Arthur in store price of Canadian Northern wheat also widened -- but over the year much less so than the corresponding spread for U.S. wheat. The spread for Canadian wheat was \$15.12 a metric ton, compared with \$13.50 in October and \$12.71 in November 1968. Spreads for both U.S. and Canadian wheat reflect not only freight costs but also other elements, particularly differences in protein content and in grade.

The c.i.f. U.K. quotations, in both instances, refer to No. 2 grade wheat. The export quotations refer to No. 1 grade. Grade, however, is no indication of protein content. To the contrary, the U.S. No. 2 Hard Winter wheat which is priced in the c.i.f. U.K. series typically contains more protein than the U.S. No. 1 Hard Winter wheat, ordinary protein, priced in the f.o.b. Gulf port series. There is no shortage of cargo space. Thus, the failure of the drastic decline in the f.o.b. Gulf ports buyer's price to be reflected in the c.i.f. U.K. price may be attributed to strong demand for wheat with good protein content.

The premium of Canadian wheat over U.S. wheat at their respective export locations was \$10.02 a ton in October and November, compared with only \$3.00 in November 1968. In the U.K. market, however, the comparable premium increased only slightly: It was \$5.67 in November, compared with \$4.48 in October and \$4.70 in November 1968.

Wheat prices changing the most from October to November -- both increased 2 percent -- were the seller's price of U.S. No. 1 Hard Winter wheat, f.o.b. Gulf ports, and the price of Northern Manitoba No. 2 wheat, c.i.f. U.K. Quotations in the other wheat price series changed little, if at all, from October to November. Compared with a year ago, however, the decline in all series other than the stable seller's price, f.o.b. Gulf ports, was substantial: The buyer's price, f.o.b. Gulf ports, was down 18 percent, with an export payment of \$5.51 a metric ton last November extant instead of an export certificate cost of like amount a year earlier. Canadian No. 1 Northern wheat, in store, Fort William-Port Arthur, declined 7 percent over the year. The c.i.f. U.K. prices of both U.S. No. 2 Hard Winter and Australian wheat were down 4 percent, and that of Northern Manitoba No. 2 wheat declined 2½ percent.

Argentine wheat continued unquoted, even as the harvest season in that country was beginning. The continued absence of quotations for Argentine wheat in the U.K. market is an indication of the 7-percent reduction in wheat acreage sown, the outlook for only slightly larger production than last year, and Brazil's predominance as a buyer of Argentina's limited export supplies.

In contrast to wheat, a quotation for Argentine corn, c.i.f. U.K., from the crop to be harvested next April was recorded on November 26, 1969. It was 6 percent higher than

1/ Buyer's price equals seller's price plus cost of export certificate or minus export payment, except for rounding errors.

2/ December 1968-February 1969 and May-September 1969, Argentine granifero; March-April and October-November 1969, U.S./Argentine sorghums transshipped from Continental European ports.

Source: Monthly Bulletin of Agricultural Economics and Statistics, FAO; The Public Ledger, London; Grain Market News, USDA, C&MS;Bangkok Board of Trade; and Cotton and General Economic Review, Liverpool.

the average November 1968 price, but it commanded an unusually small premium over U.S. No. 3 yellow corn for November arrival. The latter was priced \$61.86 a metric ton, about the same as the rather stable average price for the preceding 3 months, but up 10 percent from a year ago. In the meantime, USDA's Annual Summary of Crop Production, released December 19, reported a U.S. corn crop of 4,578 million bushels, up 133 million bushels from the November estimate and up 185 million from the corresponding 1968 figure, which was also adjusted upward, by 0.4 percent.

Sorghum grain, c.i.f. U.K., was quoted in terms of U.S. and/or Argentine transshipments from the Continent at a slightly lower price than in October and about equal to the U.S. corn price; this implies a continued lack of attractiveness to buyers.

The export price of Thai rice continued relatively stable for the fourth successive month, but 6 percent below the year's record in July and 6 percent above November 1968. The price of U.S. No. 2 soybeans, c.i.f. U.K., advanced to \$104.15 a metric ton, 2 percent above October but 4 percent below November 1968. In the meantime, U.S. soybean production in 1969 of 1,117 million bushels was reported, up 22 million bushels from the November estimate and up 14 million bushels from the adjusted 1968 figure. Record production is matched by record exports. The latter exceeded 300 million bushels during the 12 months ended last November despite the dock strike last winter.

The price of American cotton, Memphis Territory, strict middling, 1-1/16 inches, c.i.f. Liverpool, advanced slightly for the second successive month, but it remained 6 percent below the November 1968 price. U.S. cotton production was also shown somewhat larger than the November estimate; the slight upward adjustment (from 10,036,000 to 10,080,000 bales) only served to confirm how small the crop actually was compared with the 1968 crop (10,948,000 bales) and with the estimate at the beginning of this crop year (11,779,000 bales).

## Ocean Freight Rate Highlights

### FREIGHT RATE DECLINE SHOWS SIGNS OF ABATEMENT

by  
T. Q. Hutchinson 1/

During the third quarter of 1969, ocean freight rates for heavy grain (wheat, corn, sorghum grain, and soybeans) generally continued the decline that has now spanned 21 months. The most recent declines were relatively small, however, and rates from U.S. Atlantic and Gulf ports showed small average increases over the previous quarter (table 19).

Although the rate to Antwerp-Rotterdam-Amsterdam from Great Lakes ports increased 35 cents per ton, the average rate from the Great Lakes ports decreased 10 cents (1.6 percent).

Much the same behavior can be seen at the St. Lawrence River ports. Here the rate to Antwerp-Rotterdam-Amsterdam increased 65 cents from the previous quarter, but the average rate from these ports declined 11 cents.

Average rates for shipments to Antwerp-Rotterdam-Amsterdam from Atlantic ports increased from the previous quarter to the level of rates during January-March. In this trade, the average third quarter rate for heavy grain increased 33 cents (12.5 percent) from the second quarter's average of \$2.81 per ton.

The rate for heavy grain cargoes carried by U.S.-flag vessels from U.S. Gulf ports increased less than 2 percent from the second quarter of 1968. Rates for foreign-flag vessels from these ports decreased \$1.27 per ton (18.0 percent).

At the Pacific Coast ports, only a single trade (Pacific Coast ports to Japan) showed activity for the third quarter of 1969. Heavy grain rates for this trade increased 27 cents per ton.

Compared with the same quarter of the previous year, rates from Great Lakes and U.S. North Atlantic ports averaged about 3 and 7 percent higher, respectively, during the third quarter of 1969.

For the U.S. Gulf ports, U.S.-flag vessel rates averaged 28 percent below the third quarter of 1968 and foreign-flag vessel rates averaged nearly 6 percent above those for the third quarter of 1968.

The rate from Pacific Coast ports to Japan increased during the second and third quarters of 1969. These increases during a time of general rate declines reflected Japan's substantial demand for grain from Pacific Coast locations.

## Export Highlights

### U.S. AGRICULTURAL EXPORTS, JULY-NOVEMBER 1969/70

November exports of agricultural products totaled \$658 million, 8 percent higher than those of November 1968. There was a substantial increase in shipments of animals and animal products, fruits and vegetables, grains and preparations, oilseeds and products, and tobacco. Corn exports were up nearly two-thirds, and shipments of oilseeds and oilseed products, boosted by larger exports of cottonseed and soybean oil, soybeans, and protein meal rose by 10 percent to \$197 million. These increases helped to boost the total value of agricultural exports for July-November 1969/70 to \$2,713 million, 9 percent above a year earlier (table 20).

The overall rise in agricultural exports thus far in 1969/70 resulted mainly from an 8-percent increase in shipments of animals and animal products, an 11-percent increase in grains and preparations, a 12-percent increase in oilseeds and products, and a 5-percent rise in tobacco exports.

Among the animals and animal products, exports of animal fats and oils, meats and meat products, and hides and skins were up a fifth or more. While quantity of these products improved substantially over July-November 1968/69, increased unit values contributed additionally to the overall total value increase (table 21). The average unit value of hides and skins in July-November 1969/70 was \$7.26, compared with \$6.13 in July-November 1968/69. The average per pound price of meat and products in July-November 1969/70 was 39 cents, 15 percent higher than July-November 1968/69.

Cotton exports continued to lag those of July-November 1968/69, with value down 25 percent and quantity down 27 percent. The decline in cotton exports in July-November 1969/70 generally reflects an overall decrease in cotton buying by most foreign countries. Among the Asian countries, U.S. exports to India totaled \$24 million in July-November 1969/70, compared with \$6 million in July-November 1968/69. Shipments to Japan, Republic of Korea, and Taiwan were down.

Exports of feed grains, excluding products, and rice contributed to the larger exports of grains and preparations. Corn, totaling \$402 million, was up more than one-third from July-November 1968/69. Total value of feed grains was up 28 percent to \$478 million. Exports of rice increased one-fourth to \$137 million.

Soybean exports, totaling \$392 million, were 10 percent above those of July-November 1968 and contributed largely to the increase in exports of oilseeds and products. The sharp rise in the value of cottonseed and soybean oil exports to \$57 million resulted from the larger exports of cottonseed oil. In July-November 1969/70, they were valued at \$17 million, compared with \$4 million a year earlier. Protein meal exports, valued at \$118 million, were up 16 percent.

Tobacco exports advanced 5 percent in July-November 1969, resulting primarily from a sharp increase in price. Average export prices of flue-cured varieties were up substantially, reaching \$1.07 per pound, compared with 98 cents in July-November 1968/69. The quantity of tobacco exports dropped to 284 million pounds, down about 3 percent.

In addition to the improved export value, the distribution of U.S. agricultural exports has changed somewhat (table 29). Reported exports to Canada were up nearly a fourth, resulting in Canada's overall share rising to 13 percent, compared with 12 percent a year earlier. Exports to European countries were about the same, although fewer exports went to the European Community. While total agricultural exports valued at \$313 million in July-November 1969/70 to the European Free Trade Association were up 2 percent, their share of total U.S. exports of farm products was about the same. Overall, the share of U.S. agricultural products exported to European countries dropped to 38 percent from 41 percent in July-November 1968/69.

Larger shipments to Japan, Indonesia, South Vietnam, and India accounted for the increased share of farm products exported to Asian countries. Japan's receipts totaled \$459 million in July-November 1969/70, 27 percent above the same period last year. India's receipts were up 49 percent, reaching \$97 million. However, these sharp increases were nearly offset by smaller exports to Pakistan, Republic of Korea, Taiwan, and the Philippines. Overall, exports to Asia accounted for 35 percent of U.S. agricultural exports, compared with 33 percent for the same period of last year. Agricultural exports to African countries were up 31 percent. Although agricultural exports to Australia and Oceania were up 23 percent, their share of total U.S. agricultural exports remained about the same.

Among the exports to Japan during July-November 1969/70, shipments of wheat rose to \$62 million, compared with \$53 million a year earlier (table 22). Tobacco exports reached \$21 million and accounted for a substantial part of the total agricultural export increase during the current fiscal year. Last year, tobacco exports were only \$7 million. Soybean exports rose to \$97 million, compared with \$88 million in July-November 1968/69. Feed grain exports were up about 60 percent. Among the animal product

exports to Japan, fresh pork continued at a high level, totaling \$13 million in July-November 1969/70, nearly twice the year-earlier level. In addition, shipments of hides and skins improved substantially -- due partly to the price rise -- and amounted to \$25 million in July-November 1969/70.

Exports to the United Kingdom, valued at \$198 million, were up 6 percent from July-November 1968/69 (table 23). This increase represents a reversal in the direction of U.S. agricultural exports to the United Kingdom. For the past 2 years, they declined as a result of the devaluation of the pound, and Britain's efforts to improve its balance-of-payments position by increasing exports and decreasing imports. Principal commodities in the increased U.S. agricultural exports to the United Kingdom were tobacco, soybeans, lard, and feed grains. Tobacco exports rose to \$91 million, compared with \$87 million in July-November 1968/69. Soybean exports reached over \$9 million, up more than \$4 million. The increases in feed grains and lard were also substantial.

1/ Less than 500.

India's receipts of U.S. agricultural exports thus far in 1969/70 reflect larger shipments of cotton, rice, and feed grains. In addition, movement of soybean oil has advanced sharply (table 24). U.S. exports to Spain rose 31 percent from last year, because of larger feed grain shipments. However, this increase was partly offset by smaller soybean shipments.

Agricultural exports to the European Economic Community totaled \$574 million in July-November 1969, down 4 percent from July-November 1968/69 (table 25). Smaller exports of commodities subject to the variable import levies contributed to the decline, and reflected substantial reductions in exports of wheat and feed grains. Wheat shipments were off over 50 percent, while feed grain exports slipped to \$116 million from \$136

million a year earlier. Exports of commodities not subject to the EC's variable import levies showed a moderate increase over those of July-November 1968 as a result of the substantial increase in soybean shipments, protein meal, and variety meats. Tobacco exports, a large export item to West Germany, were down slightly from July-November 1968/69. Overall, the exports of non-variable-levy commodities to the EC increased slightly to \$393 million.

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

4/ Variable levy on sugar-added content only.

## Import Highlights

### U.S. AGRICULTURAL IMPORTS, JULY-NOVEMBER 1969/70

U.S. agricultural imports at \$2,121 million during July-November were 2 percent below the corresponding period a year earlier. November imports were \$411 million, \$58 million less than October, and \$8 million higher than November 1968 (figs. 1 and 2 and table 26).

In the first 5 months of the current fiscal year, supplementary (competitive) imports fell 1 percent from the same months a year ago, amounting to \$1,206 million (table 27). Expanded purchases of meats nearly offset reduced imports of most other commodities. At the same time, complementary (noncompetitive) entries were generally lower, especially for such key items as green coffee, bananas, tea, and carpet wool. However, within this grouping were sharp increases for crude rubber, cocoa beans, and soluble coffee -- mostly due to higher prices.

The volume of cocoa beans rose 25 percent from last year, while value jumped nearly 68 percent. The average price (unit value) of cocoa beans in November was 39 cents per pound against 28 cents in November 1968. For July through November, the cocoa bean unit value was more than 35 cents per pound, compared with 26 cents in July-November 1968. Similarly, crude rubber (dry form) unit values jumped to 24 cents per pound in November 1969 from 16 cents the previous November. Thus, all but about 7 percent of the gain for crude rubber in dry form was the result of higher prices. Soluble coffee unit values in November averaged \$1.36 per pound against \$1.00 in November 1968. During July-November 1969/70, the unit value of soluble coffee was \$1.10, compared with 97 cents in similar months of 1968.

Nonagricultural imports, which include minerals, ores, manufactured goods, and fishery products, were 12½ percent above the same 5 months of 1968/69 at \$13,429 million (table 28).

FATUS/FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES, 1970 JANUARY. Washington, DC:  
USDA/FATUS- Economic Research Service.

JAN 70

(NAL Call No. A286.9/Ag8)

2 OF 2  
USDA  
FAT US  
JAN 70

### Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

**EXPORTS** The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$250 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural exports statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$250-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$250-\$1,999 are sampled.

**IMPORTS** Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
