## Digest

---

Record Dollar Trade Boosted U.S. Exports of Farm Products to Near-Record Value in 1969/70 (see p. 7). A sharp rise in commercial exports to a high of nearly \$5.7 billion brought about a reversal of the 2-year downtrend in U.S. farm product exports. They totaled over \$6.6 billion, only \$125 million less than in the peak year of 1966/67 and \$30 million below the 1965/66 total. Nearly three-quarters of the \$905 million gain from a year earlier was in oilseeds and products and feed grains. Commodities registering smaller increases were animals and products (except dairy products), wheat, tobacco, fruits, and vegetables. Shipments of rice were only a little higher in value than a year earlier, but the volume was up 6 percent.

Exports under P.L. 480 -- based on preliminary reports -- amounted to nearly \$1 billion, slightly less than in 1968/69. Most of the decline was in sales for local currency under Title I, but foreign donations were also lower. The volume of wheat shipments under P.L. 480 was higher, but lower prices resulted in a value decline. About 12 percent less soybean oil moved under Government-financed programs, but higher prices brought a rise in value. Less tobacco, rice, dairy products, and tallow, but more feed grains and cotton were exported under food-for-peace programs.

Larger commercial sales brought exports to all world areas to a higher level. The greatest rise, \$347 million, was to Asia. Exports to Japan rose \$250 million to \$1,089 million, the first time farm product exports to a single market exceeded \$1 billion. Most of the rise in shipments to Asia was in grains and preparations, oilseeds and products, and cotton. Over half of the \$310 million advance in exports to Europe was in oilseeds and products.

\* \* \* \* \*

Record U.S. Agricultural Exports in Prospect (see p. 29). U.S. agricultural exports in the fiscal year to end June 30, 1971, will likely top \$7 billion. This would be record large and would compare with last year's \$6.6 billion. An estimated one-fifth increase in the value of exports of soybeans and soybean products will account for the bulk of the increase. Exports of wheat should also rise substantially. Prices for most exported products are likely to increase and contribute materially to the overall rise in value. Somewhat offsetting these gains are expected declines in exports of tobacco, rice, corn, meats, and canned fruits. Commercial sales for dollars, including barter for offshore procurement and short-term credit sales, should account for close to 90 percent of U.S. agricultural exports in 1970/71, up considerably from the year-earlier record of \$5.7 billion.

\* \* \* \* \*

U.S. Agricultural Trade With Mexico Grows Rapidly (see p.33). Shipments of farm products to Mexico expanded to \$139 million during the last fiscal year from \$86 million in 1968/69. There were larger sales of corn, soybeans, cottonseed, vegetable oils, hides, prepared fruits and vegetables, nursery stock, evaporated milk, and edible offals. Agricultural imports from Mexico were sharply higher at \$527 million. Accelerated purchases of cattle, beef, vegetables, sugar, and fruit accounted for most of the advance from previous years.

\* \* \* \* \*

U.S. Imports of Fruits and Vegetables Under Quarantine (see p. 42). The annual summary of Plant Quarantine inspectors' reports from entry ports throughout the United States shows details of fiscal year 1970 fresh fruit and vegetable imports. Fruit and vegetable entries are arranged to show countries of origin and ports of entry by commodity volume. Entries into the U.S. Virgin Islands and Guam, and intransit movements are tabulated by commodity.

\* \* \* \* \*

International Price Highlights (see p. 63). Feed grain and wheat prices increased in September. Soybean and rice prices declined, while the price of cotton rose slightly.

\* \* \* \* \*

World Trade Highlights (see p. 67). Paced by a \$51 million gain in meat imports, Canadian purchases of agricultural products in 1969 soared to a record \$1,149 million, up 15 percent from 1968. Canada spent more in 1969 for all major farm imports except cotton, coffee, and feed grains. The U.S. share, at \$587 million (51 percent), was up 13 percent from 1968; meats, fruits, and oilseeds accounted for most of the U.S. gain.

Israel's agricultural imports reached a high of \$188 million in 1969, up 5 percent from the previous year. Except for feed grains and oilseeds, imports of major commodities increased. Imports from the United States, the chief supplier, declined some, and the U.S. share of the market dropped from 55 percent in 1967 to 49 percent in 1969. The United States maintained its 1967 share of the market for feed grains and oilseeds at about 90 percent, but dropped its market shares from virtually 100 percent to 82 percent for wheat and from 67 percent to 52 percent for fats and oils.

Australian farm exports advanced 12 percent in 1969 to \$2,245 million. Exports of meats, wheat, and wool recorded large gains, while shipments of fruits and sugar were somewhat lower.

New Zealand's farm product exports topped \$1 billion in 1969 for the first time since 1964. Sharply larger shipments of meats, wool, and hides advanced total exports to \$1,032 million -- nearly a fifth above the 1968 level. Shares purchased by the United Kingdom and the United States each declined 2 points, the former's to 44 percent and latter's to 17 percent.

\* \* \* \* \*

U.S. Agricultural Exports, July-September 1970 (see p. 80). Spurred by sharp increases in exports of soybeans and soybean products, U.S. exports of farm products in the first quarter of fiscal year 1971 totaled \$1,648 million, nearly 17 percent above those of a year earlier. Besides the increase for soybeans, a one-fourth increase in U.S. wheat exports contributed significantly to the gain. Other gains occurred for feed grains, prepared feeds, vegetables, dairy products, lard, and tallow. Somewhat offsetting were declines for cotton, tobacco, hides and skins, pork, and rice.

European Community purchases advanced to \$358 million in July-September 1970 from \$282 million for the same months a year earlier. The two-fifths gain in exports of commodities not subject to the EC's variable levies accounted for most of the increase. Most of the gain in the nonvariable-levy group came from larger shipments of soybeans and soybean meal. For variable-levy items, the increases in wheat and feed grain exports to the Community more than offset a sharp drop in rice.

\* \* \* \* \*

U.S. Agricultural Imports, July-September 1970 (see p. 85). During the first quarter of fiscal year 1971, U.S. agricultural imports totaled \$1,374 million, 11 percent above the level in similar months last year. Purchases of complementary (noncompetitive) products accounted for nearly half the gain; increasing coffee prices were responsible for a substantial part. Larger imports of cattle, dairy products, meats, grain products, vegetable oils, sugar, edible nuts, wine, and animal feed pushed supplementary (competitive) imports 11 percent higher than a year ago. July-September imports are generally lower than imports in the other three quarters of the year.

### RECORD DOLLAR TRADE BOOSTED U.S. EXPORTS OF FARM PRODUCTS TO NEAR-RECORD VALUE IN 1969/70

by  
Eleanor N. DeBlois <sup>1/</sup>

A sharp rise in commercial exports to a high of nearly \$5.7 billion brought about a reversal of the 2-year downtrend in U.S. farm product exports. They totaled \$6.6 billion in 1969/70, only \$125 million less than in the peak year of 1966/67 and \$30 million below the 1965/66 total. Nearly three-quarters of the \$905 million gain from a year earlier was in oilseeds and products and feed grains. Commodities registering smaller increases were animals and products (except dairy products), wheat, tobacco, fruits, and vegetables. Shipments of rice, were only a little higher in value than a year earlier, but the volume was up 6 percent.

Exports under P.L. 480 amounted to \$980 million -- based on preliminary data -- slightly less than in 1968/69. The continued shift toward the goal of dollar financing lowered shipments in exchange for local currency to \$299 from \$344 million and raised long-term credits to a high of \$440 million. Donations under Title II declined \$24 million. The volume of wheat shipments under P.L. 480 was higher, but lower prices resulted in a value loss. On the other hand, program shipments of soybean oil were down about 12 percent, but higher prices brought a rise in value. Less tobacco, rice, dairy products, and tallow, but more feed grains and cotton moved under food-for-peace programs (tables 2 and 3).

Larger commercial sales brought exports to all world areas to a higher level in 1969/70. Asia showed the greatest rise in receipts, \$347 million, to a total of \$2,449 million, only \$56 million below those by Europe. Exports to Japan rose to \$1,089 million, the first time farm product exports to a single market exceeded the \$1 billion mark. Most of the rise in shipments to Asia was in grains and preparations, oilseeds and products, and cotton. Over half of the \$310 million gain in shipments to Europe was in oilseeds and products.

A number of countries whose imports of U.S. farm products during some years were predominantly financed under P.L. 480, made valuable contributions to 1969/70's record commercial exports. Japan, Italy, and Spain were among the 10 leading dollar markets. The Republic of China purchased \$114 million of U.S. farm products for dollars. Other countries continued to receive food-for-peace exports, but also purchased more for dollars.

#### Commodity Developments

Grains.--Larger commercial sales of wheat brought U.S. exports to \$831 million (531 million bushels) from \$788 million (471 million bushels) a year earlier.

1/ Includes sales for foreign currency, long-term dollar and convertible local currency credit sales, Government-to-government donations, donations through voluntary relief agencies, and barter for strategic materials (1969) under the authority of P.L. 480, and exports under Mutual Security (AID) programs, authorized by P.L. 87-195. Exports under AID programs for 1969 include July-December 1968 only. Reports for January-June 1969 and fiscal year 1970 are not included because of a delay in the preparation of the reports for these periods. 2/ "Exports outside specified Government-financed programs" or "Commercial sales for dollars" include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter transactions involving overseas procurement for U.S. agencies, which benefit the balance of payments and rely primarily on authority other than P.L. 480; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash. 3/ Total exports of feed grains, excluding products, include the estimated value of donations of grain sorghums through voluntary relief agencies under P.L. 480, not separately reported by the Bureau of the Census: 1969, 0.6 million and 1970, 0.2 million. 4/ Based on preliminary reports.

Lower prices held the rise in value to 6 percent, while volume was up 13 percent. Most of the increase was to Asia. Japan's takings were up a fifth, amounting to \$136 million (87.5 million bushels) and topping the \$134 million (85.0 million bushels) to India, the leading market for some years. Shipments to Western Europe were about the same as last year's, with a substantial increase in shipments to EFTA countries but a sharp drop in shipments to the EC. Major markets for Title I wheat were India, Pakistan, Korea, Turkey, Brazil, and Israel. In addition to receiving shipments under P.L. 480, several of these countries bought wheat for dollars, including purchases under the CCC credit sales program and supply-type barter contracts. World wheat trade was up about 12 percent in 1969/70, the first increase since 1965/66. However, much of the gain was in larger purchases by the Soviet-East European area and Mainland China, markets not supplied by the United States. Increases in world noncommercial trade and larger feed wheat sales accounted for a large part of the increase.

U.S. exports of feed grains rose \$220 million to \$996 million (19.5 million metric tons), with most of the increase in dollar sales. Exports of corn rose 32 percent to \$834 million and grain sorghums advanced 17 percent to \$150 million. Movement of feed grains to Asia was up over 50 percent, with most of the gain to Japan, which took \$336 million of U.S. feed grains, a third of the total. Shipments to Europe were up nearly 10 percent. P.L. 480 exports were higher, but made up only 6 percent of total feed grain exports. Chile, Korea, Israel, South Vietnam, and Tunisia received corn under Title I. Grain sorghums went to India and Israel under this title.

U.S. exports of rice rose 6 percent in volume, but lower prices held the value to \$322 million, less than 1 percent above the year-earlier value. Two-thirds of the total went to Asia, including substantial shipments to South Vietnam, Indonesia, the Republic of Korea, and India under P.L. 480. Most of the small value increase from 1968/69 was to Europe, which accounted for 15 percent of total U.S. rice marketings. West Germany, the Netherlands, France, and the United Kingdom purchased more U.S. rice than a year earlier. The Republic of South Africa and Liberia were the leading markets in Africa, which took about 10 percent of the total. In 1969/70, the United States faced strong competition from Thailand and other exporting countries which increased their production in response to the world rice shortage and high prices of 1967.

Cotton.--Larger food-for-peace exports accounted for nearly all of the small gain in U.S. cotton exports, which totaled \$347 million (2.9 million bales) in 1969/70. Most of the rise was to Asia, which took \$271 million of U.S. cotton. Japan was the No. 1 market, purchasing \$74 million, up from \$68 million in 1968/69. India was in second place taking more than four times the 1968/69 total. Exports to Indonesia nearly doubled. Shipments to the Republic of Korea, dropped 5 percent to \$49 million, but the Republic was the third largest U.S. cotton market. The latter 3 countries and South Vietnam were the principal destinations for cotton under Title I. Shipments to Western Europe were three-fifths of last year's total; there was increased competition from developing countries and a small expansion in cotton use in this area due to rising textile imports and expanded use of manmade fibers.

Tobacco.--Larger exports of higher priced stemmed tobacco and the high quality of the 1969 flue-cured crop brought U.S. exports of tobacco to \$540 million from \$507 million in 1968/69. Shipment volume changed little as rising U.S. export prices held down exports. The United Kingdom, Italy, Denmark, and Switzerland took more U.S. tobacco. West Germany and the Netherlands took less. Purchases by Japan, the Republic of China, and Australia were larger. South Vietnam, the Philippines, the Congo, Pakistan, and Chile were major destinations for the smaller volume of tobacco shipped under Title I. USDA shifted emphasis from Title I to overseas procurement barter and CCC credit sales. Supply-type barter shipments represent a dollar saving in the U.S. balance of payments. CCC credit sales are credits for relatively short periods, repayable in dollars. Shipments of tobacco under these programs set new records.

Oilseeds and products.--U.S. exports of oilseeds and products rose 35 percent to \$1,671 million in 1969/70. Over 90 percent of the unprecedented \$434 million rise was in soybeans and products. Exports of cottonseed oil advanced \$39 million to \$54 million. Most of the gain in this commodity group was to Europe, which took \$880 million of U.S. oilseeds and products, compared with \$702 million a year earlier. The largest gains in soybean exports to Europe were to the EC, the United Kingdom, Denmark, Poland, and Spain. Shipments to Japan, the No. 1 market, made the largest single-country gain, rising \$61 million to \$251 million. Exports of soybean oil for dollars, which were about 12 percent of the total in the 2 previous years, rose to 40 percent in 1969/70. India and Pakistan purchased soybean oil for dollars as well as under P.L. 480. Reduced world supplies of sunflower, fish, and peanut oils, as well as fish and peanut meals; smaller production of rapeseed in Europe; and the continuing strong demand for high protein meals for livestock and poultry feeds spurred U.S. oilseed exports.

Dairy products.--Smaller P.L. 480 shipments brought U.S. exports of dairy products to \$109 million, over a fifth lower than a year earlier. Most of the reduction in Government-financed shipments was in donations of butter and anhydrous milk fat and in condensed milk to South Vietnam for local currency. With this report, donations of blended food products have been excluded from "Dairy products" and included under "Grains and preparations," in agreement with the classification employed by the Bureau of the Census. Both corn-soya-milk and wheat-soya blend, the principal products donated as blended food products, are preparations whose principal ingredients are grain and soybean products.

Animals and products, except dairy products.--Exports in this group climbed \$72 million to \$664 million from 1968/69. Shipments of animal fats and oils, stimulated by the world shortage of oilseeds and vegetable oils, rose \$53 million to \$213 million. Hides and skins added \$21 million to the increase, due to higher prices and increased volume. Shipments of meats and preparations fell 5 percent. A drop in exports of pork to Canada and Japan more than offset larger shipments of variety meats to Europe. Exports of poultry and products were off 6 percent. India, Korea, Turkey, and Ghana were the principal markets for the smaller volume of tallow exported under Title I. Cattle hides went to Tunisia and lard to Korea under this title.

Fruits and vegetables and preparations.--U.S. exports of fruits and vegetables rose over \$75 million to \$550 million in 1969/70 from a year earlier. Over two-thirds of the increase was in fruits and preparations, which totaled \$341 million, \$52 million higher than a year earlier. Larger exports of fruits to Canada, Western Europe, and Japan reflected increased U.S. production, and higher incomes and consumer demand in these markets. Larger shipments of oranges, lemons, and grapes contributed most to the \$23 million gain in exports of fresh fruits. Canned peaches, cherries, and fruit cocktail accounted for most of the \$16 million rise in canned fruits. Fruit juices were up \$11 million and dried fruits, \$4 million.

U.S. exports of vegetables and preparations amounted to \$209 million, a gain of \$23 million from 1968/69. A sharp rise in exports of dried beans, which benefited from improved U.S. production and attractive prices, brought exports of dried pulses to over \$63 million from \$48 million. Fresh onions and potatoes, canned corn and tomatoes, frozen vegetables, and dehydrated soups and vegetables also gained. Canada, Europe, Latin America, and Japan increased their purchases of U.S. vegetables and preparations in 1969/70. All shipments of fruits and vegetables were dollar sales except potatoes under long-term credits and donations of dry edible beans, each amounting to \$0.2 million.

#### Exports Under Supply-Type Barter Contracts for U.S. Agencies and Credit Sales Programs

"Commercial exports" or "exports outside Government-financed programs" include shipments under barter contracts involving overseas procurement for U.S. agencies and

shipments under credit sales programs. Exports under supply-type barter transactions amounted to a record \$468 million in 1969/70, 75 percent higher than a year earlier. Shipments under credit sales programs rose sharply to \$279 million from \$167 million (tables 4 through 7).

Barter for overseas procurement for U.S. agencies.--Shipments under supply-type barter contracts totaled a record \$468 million in 1969/70, \$67 million higher than the previous record of \$401 million in 1956/57, when the program emphasis was on the barter of agricultural commodities for strategic materials for stockpiling. The objective of the program since 1963 has been the strengthening of the U.S. balance of payments position by the barter of U.S. farm products to supply U.S. agency needs abroad. During 1969/70, exports of tobacco reached a high of \$140 million and accounted for 30 percent of the program value. Other commodities exported were wheat and flour, cotton, feed grains, inedible tallow and grease, vegetable oils, and rice. Over 90 percent of the tobacco went to Europe and Asia. Principal countries of destination were the United Kingdom, Japan, West Germany, the Republic of China, and Denmark. Latin America and Asia were the largest markets for wheat, including sizable shipments to Brazil, the Republic of China, Colombia, Peru, and Argentina. More than three-fifths of the corn went to Europe. The principal European markets were Spain and Portugal. Latin America, Asia, and Africa were the principal destinations for tallow. Most of the soybean oil was purchased by Asian and Latin American countries.

Exports under credit sales programs.--Shipments under the CCC credit sales program rose \$95 million to \$211 million, second only to the 1966/67 record level of \$339 million. This program makes credit available for up to 3 years and helps bridge the gap between normal commercial trade terms and the longer credit periods and other concessional terms extended under the export programs of P.L. 480. It helps U.S. exports meet stiffer competition in world markets from credit terms and other arrangements being made by trade competitors of the United States. The largest gains from 1968/69 were in tobacco (which set a record), wheat, and corn. Although only a little higher than in 1968/69, shipments of cotton reached a record \$48 million. Cotton and tobacco were the principal exports under the program. The program in 1969/70 helped sales of five commodities never financed before. Sales were financed to 36 countries, eight of which were new to the program. Major markets under the CCC program were the Republic of Korea, Rumania, the Philippines, and Poland-Danzig (cotton); the United Kingdom-North Ireland, West Germany, Ireland, and the Netherlands (tobacco); Korea, the Philippines, India, Morocco, and Lebanon (wheat); Greece and Poland-Danzig (corn); and the Republic of South Africa, Liberia, and West Germany (rice).

More cotton to Japan was largely responsible for the rise in disbursements under Export-Import Bank loans and guarantees to \$67 million from \$51 million. Additional exports under this program were livestock and baby chicks to Mexico.

#### Government Program Developments

Exports under food-for-peace programs amounted to \$980 million -- based on preliminary reports -- slightly less than in 1968/69. Most of the indicated decline was in sales for foreign currency, which have been progressively lower since Congress directed a shift toward dollar financing in credit or convertible currency. Long-term credit sales have increased each year, reaching a high of \$440 million in 1969/70. Donations under Title II were lower. Although the volume of wheat shipped under P.L. 480 was higher, lower prices brought a value decline, which contributed to the drop in the program total. Shipments of soybean oil were about 12 percent lower, but higher prices brought a rise in value. Less tobacco, rice, dairy products, and tallow, but more feed grains and cotton moved under food-aid programs (tables 8 and 9).

All P.L. 480 Title I agreements signed since 1967 have included certain measures that the recipient countries agree to undertake to improve their own agriculture. These "self-help" provisions set forth practical steps which these countries are taking

Table 4.--Barter: Shipments under contracts for overseas procurement for U.S. agencies, fiscal year 1970 1/

Commodity	Unit	Quantity	Value
		<u>Thousands</u>	<u>Million dollars</u>

1/ Authorized by Title I, P.L. 480. 2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808. 3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808. 4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation. Shipments made only under supply-type barter contracts during period. 5/ Shipments under programs authorized by P.L. 87-195 were omitted because of a delay in the preparation of the report for this program. 6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash. 7/ The value for total exports includes the value reported by Census plus the value of foreign donations through voluntary relief agencies. Relief shipments of these commodities are not separately reported by Census. 8/ Less than \$50,000. 9/ Corn-soya-milk, \$4.1 million, and wheat-soya-blend, \$0.4 million, under Government-to-government donations; and corn-soya-milk, \$19.9 million, and wheat-soya-blend, \$0.3 million, through voluntary relief agencies. 10/ The excess of the Government program portion over total agricultural exports may be attributed to lags in reporting or to differences in classification or valuation procedures. 11/ The value for total exports includes the value reported by Census for fiscal year 1970 plus the value of foreign donations through voluntary relief agencies for July-December 1969. Beginning January 1, 1970, corn-soya and wheat-soya blended foods are separately reported in relief categories by the Bureau of the Census. 12/ Cotton products. 13/ Based on preliminary reports.

<sup>1/</sup> Authorized by Title I, P.L. 480. Data based on preliminary reports.

<sup>2/</sup> Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808. Data based on preliminary reports.

<sup>3/</sup> Authorized by Title II, P.L. 480, as amended by P.L. 89-808.

<sup>4/</sup> Authorized by Sec. 303, Title III, P.L. 480, and other legislation. Shipments made only under supply-type barter contracts during period.

<sup>5/</sup> Shipments under programs authorized by P.L. 87-195 were omitted because of a delay in the preparation of the report for this program.

<sup>6/</sup> "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash.

<sup>7/</sup> The quantity shown for total exports includes the quantity reported by Census plus the quantity shown for foreign donations through voluntary relief agencies. Relief shipments of these commodities are not separately reported by Census.

<sup>8/</sup> Corn-soya-milk, 54,855,000 pounds, and wheat-soya-blend, 6,466,000 pounds, under Government-to-government donations; and corn-soya-milk, 262,912,000 pounds, and wheat-soya-blend, 4,882,000 pounds, through voluntary relief agencies.

<sup>9/</sup> The excess of the Government program portion over total exports may be attributed to lags in reporting or to differences in classification procedures.

<sup>10/</sup> The quantity shown for total exports includes the quantity reported by Census for fiscal year 1970 plus the quantity under foreign donations through voluntary relief agencies for July-December 1969. Beginning January 1, 1970, corn-soya and wheat-soya blended foods are separately reported in relief categories by the Bureau of the Census.

toward economic development. The emphasis in the Title II donations programs is on improvement of child nutrition and developmental programs in which food pays part of the wage cost.

A number of countries whose imports of U.S. farm products during some years were predominantly financed under P.L. 480, made substantial contributions toward the dollar high of nearly \$5.7 billion. Japan, Italy, and Spain were in first, sixth, and seventh place as U.S. dollar markets. The Republic of China took \$114 million of U.S. farm products, nearly all for dollars. Israel and the Republic of Korea received shipments under Title I, but also made sizable dollar purchases. Poland, which received food aid during earlier years, has increased its commercial purchases in recent years. India and Pakistan, among the leading destinations for Title I shipments, took more for dollars in 1969/70.

Sales for local currency and long-term credit sales. -- Exports under Title I, P.L. 480, amounted to \$740 million. This appears to be 4 percent less than a year earlier, but shipments which will be recorded as documents are received, are expected to narrow the difference between Title I shipments in 1968/69 and 1969/70. Most of the indicated decline was in sales for foreign currency. Shipments under long-term credits for dollars and convertible local currency were record-high. Of the 26 countries receiving commodities under Title I, exports to only one country, South Vietnam, were financed entirely for local currency; 20 countries received shipments only under long-term credits; and 5 received exports under both programs. More wheat was exported under this program but the value dropped because of lower prices. Less soybean oil was exported but higher prices brought a rise in value. Less tobacco, rice, tallow, and condensed milk, but more cotton, corn, and grain sorghums moved in 1969/70.

India received more cotton and a little more wheat, but less rice and soybean oil under Title I. India had good crops of wheat and rice for several years. In addition to receiving commodities under P.L. 480, India purchased more for dollars, including wheat and soybean oil. Rice continued as the most important Title I export to Indonesia. This country has a program underway to increase rice production with the aim of self-sufficiency by 1973 and had good crops in 1968 and 1969, but large imports are still needed to meet domestic requirements. Indonesia increased its Title I takings of cotton and cotton yarn in 1969/70.

Rice, cotton, wheat flour, corn, and milk were among the products shipped to South Vietnam. A program to increase rice production is being carried on in South Vietnam, including the use of high-yielding varieties, the training of technicians and farmers in modern rice production methods, and the setting up of a rice reporting system. The Government is also encouraging a rapid increase in swine and poultry production. This program includes the establishment of a livestock-feed industry producing mixed feed based on Title I corn.

The Republic of Korea and Israel were important Title I markets, but also made substantial dollar purchases. Turkey, which has suffered from severe drought for 2 years, took more wheat under long-term credits.

Foreign donations. -- Donations under Title II amounted to \$241 million, down \$24 million from a year earlier. In 1969/70, donations of butter and anhydrous milk fat amounted to \$25 million. These products did not move in 1969/70. In the foreign donations programs, the United States gave high priority to providing food to undernourished children and to offsetting dietary deficiencies by the use of high protein foods. Also emphasized were donations of types of food that can eventually be processed locally with native resources, either in whole or in part. Another major objective was the use of donated food as part payment of wages in self-help economic development projects, in which the United States cooperates with the Government of the recipient country.

Principal commodities donated during 1969/70 included nonfat dry milk, wheat, flour, bulgur, cornmeal, vegetable oil, and two high-protein, low-cost formulated foods -- corn-soya-milk and wheat-soya blend. These foods, developed through the combined efforts of U.S. industry and Government, have significantly contributed to reducing protein deficiencies, especially in the diets of children in developing countries. Donations under Title II went to needy people throughout the world, especially in Asia, Africa, and Latin America. The major recipients of donations through voluntary relief agencies were India, Morocco, Colombia, Brazil, the Dominican Republic, and Turkey. Indonesia, the Republic of Korea, South Vietnam, Tunisia, UNRWA (for the relief of Palestinian refugees), Morocco, Brazil, and Nigeria were principal destinations for donations under the Government-level program.

Barter for strategic materials.--There were no shipments under barter contracts for strategic materials in 1969/70.

#### Area Review

Larger commercial sales brought exports to all world areas to a higher level than a year earlier. The greatest rise was to Asia, where dollar exports were up \$390 million, while Government-financed exports declined \$43 million. Most of the increase to Asia was in grains and preparations, oilseeds and products, and cotton. Exports to Europe were up \$310 million, with over half of the gain in oilseeds and products (tables 10 through 12).

Europe.--U.S. exports of farm products to Europe, nearly all dollar sales, climbed \$310 million to \$2,506 million from 1968/69. Over half the rise was in oilseeds and products, with soybeans, oil cake and meal, and vegetable oils contributing most to the increase. The EC, Spain, the United Kingdom, Denmark, and Poland sharply increased their purchases of U.S. soybeans. More oilcake and vegetable oils also moved to the EC. Reduced fishmeal production in Peru and a smaller output of sunflower seed in the Soviet Union; high grain prices in the EC, which encouraged the use of lower priced oilseeds and products; and increased livestock production spurred the demand for U.S. oilseeds and products. Exports of corn; rice; fruits, nuts, and preparations; animal fats and oils; hides and skins; and variety meats also gained. Exports to six of the seven leading dollar markets included in Europe were higher, with the largest gains to the United Kingdom and Spain.

Asia.--U.S. exports of agricultural commodities to Asia amounted to \$2,449 million in 1969/70, compared with \$2,102 million a year earlier. A \$390 million rise in commercial exports was partly offset by smaller exports under P.L. 480. The greatest gains by commodity were in feed grains, wheat, oilseeds and products, and cotton. Shipments of hides and skins, tobacco, fruits, and vegetables were also higher. The greatest increase, \$250 million, was to Japan, which purchased \$1,089 million for dollars. With higher incomes, the Japanese are buying more meat and other livestock products, fruits, nuts, and vegetables. Also, Japan needs increased imports of feed grains and soybeans to support the growing livestock and poultry industries. Japan was the top market for U.S. wheat, feed grains, soybeans, cotton, and hides and skins, as well as an important buyer of tobacco, fruits, and vegetables. A number of other countries which received imports of U.S. farm products under P.L. 480, increased their dollar purchases, including India, Pakistan, and Israel. Government-financed exports made up the greatest part of U.S. exports to the Republic of China until 1965/66, when commercial exports made up \$41 million of the \$65 million total. Dollar sales to China advanced to \$90 million in 1968/69 and \$114 million in 1969/70.

Government-financed exports to Asia -- based on preliminary reports -- declined to \$733 million in 1969/70 from \$776 million a year earlier. This area accounted for three-quarters of total food-aid exports and included the top six recipients of P.L. 480 shipments.

1/ Authorized by Title I, P.L. 480.

2/ Shipments under dollar credit sales agreements signed through Dec. 31, 1966, authorized by Title IV, P.L. 480. Shipments under dollar credit and convertible foreign currency credit sales agreements signed from Jan. 1, 1967, authorized by Title I, P.L. 480, as amended by P.L. 89-808.

3/ Authorized by Title II, P.L. 480, as amended by P.L. 89-808.

4/ Authorized by Sec. 303, Title III, P.L. 480, and other legislation. Shipments made only under supply-type barter contracts during period.

5/ Expenditures under commodity (nonproject) programs, project programs and economic development loans, authorized by P.L. 87-195, are not included because of a delay in the preparation of the report.

6/ "Total agricultural exports outside specified Government programs" (sales for dollars) include, in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash.

7/ The apparent excess of Government-financed exports over total exports may be due to lags in reporting, differences in valuation procedures, or the recording of the export as destined for the country through which transshipment was made.

8/ Donations through the United Nations Relief and Works Agency (UNRWA) for the relief of Palestine refugees.

9/ Based on preliminary reports.

Northern Area of North America.--Exports to this area, nearly all to Canada, amounted to \$766 million in 1969/70, including \$238 million in transshipments of grains, soybeans, and flaxseed through ports on the St. Lawrence. During 1968/69, exports to the area totaled \$643 million, including \$149 million of transshipments -- a net gain in 1969/70 of \$34 million in exports for consumption in Canada. Exports of fruits, nuts, and vegetables amounted to \$231 million, \$23 million higher than a year earlier. They accounted for nearly two-fifths of total exports of these products. Shipments of cotton rose \$8 million to \$21 million. Although taking less pork than in 1968/69, Canada was also an important market for U.S. meats and products, oil cake and meal, hides and skins, and rice. Even though transshipments through St. Lawrence ports are excluded, Canada ranks second after Japan as a dollar market for U.S. farm products.

Latin America.--Exports to this area amounted to \$643 million, a 14-percent increase from 1968/69. The \$81 million gain was due to an advance of \$108 million in sales for dollars, partly offset by an indicated \$27 million drop in Government-financed exports. Most of the rise was in feed grains, especially corn, soybeans, vegetable oils, and animal fats and oils. Wheat was the most important export to the area, making up nearly a fourth of the total export value, but was only a little higher than a year earlier. Brazil, Venezuela, Colombia and Peru were important Latin American markets for U.S. wheat. Mexico ranked ninth as a dollar market for U.S. farm products, only slightly below France, in eighth place. Brazil and Colombia ranked eighth and tenth as destinations for P.L. 480 exports.

Africa.--A rise of over 10 percent in P.L. 480 exports, plus an increase of more than a fourth in commercial sales, brought U.S. exports of farm products to Africa to \$229 million in 1969/70 from \$192 million the previous year. More vegetable oils, wheat, corn, and animal fats and oils moved to this area than a year earlier. Africa took 4 percent more U.S. rice, but lower prices brought a small drop in value. This commodity was an important export to the area. Tunisia was in ninth place as a destination for P.L. 480 exports, receiving exports under Title I, as well as substantial donations. Title I shipments were principally wheat -- a staple food in Tunisia -- and soybean oil. Tunisia also received wheat under Title II, to be used for wages-in-kind in a self-help economic development work program which has been operating through the cooperation of Tunisia and the United States for 11 years.

Australia and Oceania.--Larger exports to Australia brought shipments to this area to \$54 million from \$47 million in 1968/69. Small gains occurred in a number of commodities, including fruit juices, meats and products, vegetable oils, oil cake and meal, and flue-cured tobacco. Tobacco shipments totaled \$22 million, two-fifths of the total value of exports to the area.

### RECORD U.S. AGRICULTURAL EXPORTS IN PROSPECT

by  
Dewain H. Rahe <sup>1/</sup>

Exports of U.S. farm products in the fiscal year ending June 30, 1971, are expected to reach an alltime high of over \$7 billion. This would be substantially above last year's level of \$6.6 billion and the previous record of \$6.8 billion in 1966/67. All of the gain is expected in commercial sales for dollars (including offshore barter for procurement and short-term credit sales) which will account for around 90 percent of the 1970/71 export value.

Sustained economic growth by countries that are the principal importers of agricultural products, especially Western Europe and Japan, provides the base for increased foreign demand for our agricultural products. Economic activity as measured by industrial production in 1970 is expected to increase by about 19 percent for Japan, 7 percent for Western Europe, and 3 percent for Canada. Major economic indicators suggest these gains will continue in 1971 although at a somewhat lower rate.

Prices for the major commodities exported are expected to be higher than the relatively low levels of the past year. Many of these prospective price gains stem largely from increased demand; contributing also are the reduced U.S. supplies of feed grains and world supplies of cotton.

Grains and preparations.--The value of U.S. grain exports is expected to increase about 10 percent from last year's \$2,348 million. Contributing materially will be higher prices for grain products. Wheat export prices will probably average 10 percent more than the average for 1969/70. Corn will probably average around 10-15 percent above the 1969/70 level.

The increase in grains and preparations will be concentrated in wheat exports, which may total well over 700 million bushels, compared with last year's 606 million bushels. Most of the increase in wheat exports may be in commercial sales for dollars. The current decline in European wheat production will cause a drop in that area's exports while increasing imports. In 1970/71, Japan will likely exceed its 1969/70 purchase of 4.0 million metric tons from all areas. The United States supplied over half of Japan's wheat imports the past season. India and Pakistan wheat crops have increased again. For Canada, production has declined substantially, although stocks of wheat available for export remain at a high level. Australian and Argentine production estimates, based upon planting and weather conditions, are lower than last season.

Feed grain exports may fall somewhat below the 19 million tons of 1969/70. The 9-percent reduction in the U.S. corn crop because of the leaf blight and some unfavorable

<sup>1/</sup> Assistant Chief, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

weather reduces U.S. feed grain supplies 13 million tons from last season's level. Demand in many importing countries has gained because of increased livestock and lower forage production in some countries. In the European Community, coarse grain production is expected to be about the same as a year earlier. The 20-percent increase in corn production in the European Community is about offset by smaller production of barley and oats. Thus, EC imports will probably increase, considering its expected 11-percent gain in pork production and 10-percent gain in poultry production. Corn production in Argentina reached an alltime high 9.4 million metric tons in the past season. Production was also up substantially in South Africa. However, because of severe drought conditions in the past year, South Africa may be required to feed considerably more grain to its livestock. With increased acreage expected, it appears that Argentina will again have large corn and sorghum crops. Canadian barley and Brazilian and Thai corn also are notable among increasing feed grain exports. The rising competition is aggravated by the fact that unusually high prices for corn and other feed grains have allowed lower quality wheat to displace traditional grain in some markets.

World feed grain exports totaled about 42 million tons in 1969/70, with the United States accounting for over two-fifths. Japan's grain purchases worldwide totaled over 10 million tons, and with continued increases in livestock production, purchases should gain further. The United States supplied around two-thirds of Japan's total grain takings in 1969/70. Because of increased competition from other major suppliers, U.S. exports to Japan may not equal last season's record volume.

Rice exports may be somewhat below the 38.3 million bags exported in 1969/70. Foreign free world rice production in the past year increased by 9.5 million tons, thus reducing import requirements in many countries while increasing competition in some major dollar markets.

Oilseeds and products.--The growth in exports of oilseeds and products in 1969/70 is expected to continue at a somewhat reduced rate in 1970/71. Exports of this group are expected to total around \$2 billion, about one-fifth higher than 1969/70's record level. Much of this prospective increase reflects higher prices; the volume gain will probably be around a tenth. This group has shown an annual compounded growth rate of over 10 percent since 1960.

Soybean exports may total around 460 million bushels, about two-fifths of U.S. production. The European Community is expected to take substantially more than the 137 million bushels purchased in 1969/70. European livestock producers are increasing their production and also stressing efficiency, which requires the feeding of high-protein concentrates. Exports to Japan are expected to exceed the 95 million bushels exported in 1969/70, reflecting increased livestock production and little expected change in Japan's imports from China.

Exports of cottonseed and soybean oil, which totaled 1.6 billion pounds in 1969/70, are expected to be appreciably larger. Larger exports of soybean oil will more than offset somewhat smaller shipments of cottonseed oil. Again, a significant amount of these oils will move under Government-financed programs, primarily to the developing countries. Foreign export availabilities declined between 1968 and 1970, while foreign demand continued to grow. Thus, the United States was able to capture a larger share of the vegetable oil market.

Exports of oil cake and meal may slightly exceed the 3.9 million tons shipped in 1969/70. With expanding livestock production, demand continues strong for U.S. soybeans in the European market. However, more competition is expected from Peruvian fish meal and Indian peanut meal.

Tobacco.--The volume of tobacco exported may drop below last year's 571 million pounds. But an expected 10-percent increase in unit value will largely offset. Exports to the European Community are expected to fall by around 20 million pounds. Also, many countries are maintaining their tobacco stocks at minimum because of the high cost of carrying large stocks with the relatively high interest rates. U.S. exports this year will benefit from the high quality of this year's flue-cured crop and the continuation of the export payment programs. The United States will ship more to many countries because of the continued U.N. economic sanctions against Rhodesia. However, the substantial competition in major U.S. markets such as the United Kingdom and West Germany from nontraditional areas such as Korea, Mainland China, and others is a major factor in the expected drop in U.S. tobacco exports. Commercial sales for dollars (including barter for overseas procurement and CCC credit sales) are expected to account for more than 95 percent of 1970/71's tobacco exports from the United States.

Cotton.--Cotton exports are expected to pick up slightly from 2.9 million bales exported in 1969/70, with the gain limited by stocks available for export. The 1970 U.S. cotton crop estimate of 10.6 million bales is only slightly above last year's small crop. With little change in domestic mill use of 8.0 million bales, and carry-in stocks down about 1 million bales, supplies available for export will be tight. But demand is up substantially with increased consumption in several textile manufacturing countries and somewhat smaller production in the foreign free world. Offsetting the foreign free world's decline in output is a substantial increase in U.S.S.R. production.

Cotton continues to face increasing worldwide competition from manmade fibers. Manmade fiber output in the foreign free world in 1969 was equivalent to about 31 million bales -- a 13-percent increase over 1968. With several additional plants being built, production is expected to continue upward in 1970 and 1971. The United States is a large producer of manmade fibers, and production has been expanding rapidly in Japan, the EC, United Kingdom, and many communist countries.

Animals and products.--Export values of animals and animal products in 1970/71 are expected to expand mainly because of higher prices for animal fats and increased volume of cattle hides. Shipments of inedible tallow may show relatively little change from the 1,850 million pounds in 1969/70. Lard exports may show some gain from the 302 million pounds a year earlier. Exports of hides and skins should total around 25 million pieces in 1970/71, compared with 21.8 million pieces in 1969/70. Demand remains strong for leather products in the developed countries. However, leather substitutes have cut into the demand for hides and skins from the United States.

Exports of meats and products will probably decline from the \$140 million level of 1969/70, primarily because of reduced pork import requirements in Japan. In 1969/70, Japan bought 29 million pounds of pork.

Exports of dairy products should show a slight gain from the \$109 million worth exported in 1969/70. Nonfat dry milk, under Government programs to developing countries, will account for most of the gain. Because of the relatively large world supply of milk, little change is expected in U.S. commercial exports. Exports of poultry meat may show some gain from the \$55 million worth exported in 1969/70.

Fruits and vegetables.--The outlook for fruit and vegetable exports in 1970/71 is favorable for most items. The expected sharp rise in citrus production should boost U.S. exports of oranges and grapefruits. However, exports of canned peaches may be down from the \$20 million worth exported in 1969/70, because of the 20-percent reduction in California's clingstone crop. Overall, fruit exports may gain slightly from the \$341 million worth exported in 1969/70.

Vegetable exports will vary little from the record \$209 million worth exported in 1969/70. Canada is the best customer for U.S. fresh vegetables and fruits, but the Caribbean area is taking more U.S. fruits and vegetables to meet the tourist demand for high-quality fruits and vegetables. Expanding Caribbean production will supply some of this increased demand. Smaller U.S. production of dried beans and peas, coupled with lower quality for some beans, weakens the export prospects for these products. At the same time, increasing European production is resulting in more competition for U.S. processed vegetables and fruits.

### U.S. AGRICULTURAL TRADE WITH MEXICO GROWS RAPIDLY

Trade between the United States and Mexico has continued to advance. Economic expansion in both countries has increased the demand for domestic and foreign-produced goods. Total U.S. exports to Mexico in 1969/70 amounted to \$1.56 billion, compared with \$1.31 billion during the preceding year and \$1.06 billion 5 years earlier. More than 90 percent of U.S. exports to Mexico are nonagricultural goods such as vehicles, machinery, replacement parts, chemicals, and fuels. U.S. imports from Mexico also showed strong growth, rising to \$1.15 billion in 1969/70 from \$955 million a year earlier and \$758 million 5 years ago (table 13).

Part of the increased U.S. exports to Mexico consisted of agricultural products. A record-high value -- \$139 million -- was recorded for shipments to Mexico in 1969/70. The previous record for agricultural items was \$120 million in 1957/58.

The United States supplies most of Mexico's limited market for agricultural imports. This market totaled \$118 million in calendar year 1968, and the U.S. share was \$71 million, or 60 percent. Virtually all of this market is commercial dollar sales; only about \$500,000 in 1969/70 was noncommercial aid by private groups to recipients in Mexico. Mexico is a major agricultural producer with relatively severe import restrictions. In addition to imposing high tariffs, consisting of specific, ad valorem, and compound duty rates, Mexico controls import prices through official valuation on many commodities.

Adverse weather in Mexico caused production losses and increased import demand during 1969/70. Extremely dry conditions in the north-central and northeast sections, along with heavy rains in the south, affected corn and cotton crops. As a result, U.S. agricultural exports to Mexico rose sharply to \$139 million from \$86 million last year and an average of \$79 million in the 5-year period 1965-69. Larger shipments of feed corn, soybeans, cottonseed, and vegetable oils accounted for most of the expansion over last year (table 14). Exports of the four commodities fluctuate widely depending on Mexican crop conditions. Agricultural products which show more stability and growth include cattle hides; fruits, nuts, and vegetable preparations; seeds and nursery stock; condensed and evaporated milk; lard; and fresh or frozen edible offals.

In contrast to exports, U.S. agricultural imports from Mexico make up nearly half of our total purchases from that country (table 15). The import value for agricultural products grew over the past decade at an average rate of 18 percent per year; most of this growth occurred in the last 5 years. During 1969/70, U.S. agricultural imports from Mexico advanced 21 percent over the previous year's level. Similarly, 1968/69's imports were 23 percent above the 1967/68's.

Table 13.--U.S. exports to Mexico: Total value and agricultural share, average 1956-59 and fiscal years 1960-70

Year	Total exports	Agricultural exports	Agricultural exports as percentage of total
	1,000 dollars	1,000 dollars	Percent
1956-59 average .....	833,617	83,320	10.0
1959/60 .....	780,123	59,064	7.6
1960/61 .....	776,798	62,417	8.0
1961/62 .....	748,611	56,624	7.6

1963/64 .....	907,207	75,455	8.3
1964/65 .....	1,062,736	79,144	7.4
1965/66 .....	1,092,741	84,469	7.7
1966/67 .....	1,176,286	74,412	6.3
1967/68 .....	1,274,324	71,125	5.6
1968/69 .....	1,313,735	86,260	6.6
1969/70 .....	1,562,285	138,932	8.9

Most of Mexico's farm products shared in the export growth. Commodity groups showing the strongest expansion included live animals, meats, vegetables, sugar, and fruits. Table 16 shows a detailed listing of U.S. agricultural imports from Mexico between 1964/65 and 1969/70.

Contributing factors to the growth in imports from Mexico are increased U.S. demand, expanded Mexican crop production, and relatively low production costs in Mexico. U.S. consumption of agricultural commodities similar to those grown in Mexico has grown faster than production in many cases. Moreover, seasonal production in the United States reaches a low point during the winter months when imports from Mexico peak; fresh vegetables and fruits enter principally between the months of November and May. Capital outlays in Mexico for irrigation projects, transportation equipment, and food processing facilities have led to production and distribution efficiencies.

Mexico supplied nearly 10 percent of total U.S. agricultural imports in 1969/70, up from 9 percent a year earlier and 7 percent 5 years ago. Thus, Mexico moved from second place to equal Brazil as the principal source. If U.S. demand and Mexican output continue to rise, Mexico will replace Brazil as the leading supplier of agricultural products in 1970/71.

For competitive (supplementary) agricultural products, Mexico is by far the primary source, accounting for \$439 million, or 13 percent, of the \$3,373 million total in 1969/70. During 1968/69, Mexico sent \$362 million (nearly 12 percent) of all competitive agricultural products, which totaled \$3,072 million.

Import market value shares held chiefly by Mexico include feeder cattle (97 percent), fresh vegetables (86 percent), fresh and frozen strawberries (93 percent), melons (95 percent), fresh citrus (54 percent), molasses (25 percent), cotton (29 percent), and lintens (80 percent).

### U.S. IMPORTS OF FRUITS AND VEGETABLES UNDER QUARANTINE

Under provisions of the Plant Quarantine Act of 1912, as amended, fresh and frozen fruits, vegetables, and certain edible nuts entering the United States from all foreign areas except Canada require inspection for plant pests. The Plant Quarantine Division, Agricultural Research Service, U.S.D.A., administers this Act through its inspectors stationed in the United States, Hawaii, Puerto Rico, the U.S. Virgin Islands, and Guam. Tables 17 and 18 were assembled from monthly reports based on notices of arrival at the initial entry port. Table 17 shows entries into the United States and Puerto Rico by commodity and country of origin; table 18 indicates entries by commodity and port of entry. Transportation and exportation (transshipment) entries by commodity and inspections for the U.S. Virgin Islands and Guam are listed by commodity at the end of table 17.

Fruits and melons.--Fresh and frozen fruit inspections during 1969/70 totaled nearly 4.6 billion pounds, about 200 million pounds less than in the previous year. Banana entries were 3.8 billion pounds in 1969/70, compared with 4 billion pounds a year earlier (see Foreign Agricultural Trade of the United States, January 1970, for 1968/69 data). Melon entries amounted to 343 million pounds against 280 million pounds in 1968/69. Imports of berries rose to 188 million pounds in 1969/70, including 137 million pounds of frozen strawberries; entries of all types of berries totaled 157 million pounds in 1968/69, of which 111 million pounds were frozen strawberries. Imports of fresh strawberries also increased to 49 million pounds from 45 million pounds. Advances in fruit imports occurred for apples, avocados, citrons, currants, kiwi, grapefruit, lemons, limes, guavas, mangoes, nectarines, peaches, and plantains.

New York was the principal entry port for most fruits, notably bananas, grapes, Spanish melons, nectarines, peaches, pears, plantains, and plums. Mexican border ports accounted for most of the remaining fruit entries.

Vegetables.--Fresh and frozen vegetable inspections reached 1.2 billion pounds in 1969/70, up from 929 million pounds the previous year. Tomatoes made up the bulk of U.S. vegetable imports at 718 million pounds (versus 555 million pounds in 1968/69), followed by cucumbers (139 million pounds against 129 million pounds last year), onions (79 million pounds versus 49 million pounds in 1968/69), and peppers (74 million pounds against 53 million pounds a year earlier). Mexican border locations, especially Nogales, handled most of the vegetable entries.

Although the proportion of imported frozen products is small in relation to total fruit and vegetable imports, the volume rises each year. Inspections of frozen fruits and vegetables amounted to 153 million pounds in 1969/70, compared with 120 million pounds in 1968/69 and 76 million pounds in 1967/68. Frozen fruit entries totaled 141 million pounds in 1969/70.

## International Price Highlights

### SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

During September, continued uncertainty over the size of the U.S. corn crop pushed all feed grain prices higher (table 19). The special forecast on corn production released October 2, 1970, put the crop 5 percent less than the forecast on September 1. The regular monthly crop report, released October 12, essentially confirmed the special forecast and estimated a crop of 106.4 million metric tons. This would be the smallest production since 1966; but it would be only 4.4 percent less than average 1965-69 production.

Although feed grain prices rose during September, the American corn price rose less than the prices of sorghum grain and Argentine corn. U.S. No. 3 yellow corn, c.i.f. U.K., was quoted at \$76.59 a ton (\$1.95 a bushel). This price level was only 4 percent higher than a month earlier, but was 25 percent higher than a year earlier. Argentine corn, c.i.f. U.K., was selling at \$82.60 (\$2.10 a bushel), and at this level was 8 percent above a month earlier and 11 percent above a year earlier. Thus, the premium at which Argentine corn was selling over U.S. corn, c.i.f. U.K., increased from \$2.29 a ton (5.8 cents a bushel) in August to \$6.01 a ton (15.3 cents a bushel) in September. In Rotterdam, the premium averaged \$5.12 a ton during September. There is some indication that the inflated prices of feed grains are starting to be felt in related overseas agricultural markets. The National Association of Poultry Packers of the U.K. predicted that since 60 percent of the production cost of broilers is accounted for by feed, an increase in retail poultry prices would be inevitable in the near future. Increased demand for sorghum grain, c.i.f. U.K., as a substitute for corn in feed mixtures pushed the September price up to \$72.11 a metric ton, a 14-percent increase over a month earlier and a 11-percent increase over a year earlier. The premium at which U.S. corn was selling above sorghum grains during September was \$4.48 a ton, compared with \$10.90 for August and an average of \$6.40 for January-August 1970.

All wheat prices were higher in September because of decreasing world production. The seller's price of U.S. No. 1 Hard Winter wheat, ordinary protein, f.o.b. Gulf ports, posted the strongest gain, up 7 percent to \$63.02 a ton (\$1.72/bu.). The buyer's price of this wheat was quoted at \$56.31 a ton (\$1.53/bu.), a 4-percent increase from a month earlier. U.S. No. 2 Hard Winter wheat, c.i.f. U.K., was quoted at \$78.16 a ton, 5 percent higher than a month earlier and 8 percent above a year earlier.

Canadian No. 1 Northern wheat, in store Fort William-Port Arthur, was quoted at \$63.44 a ton, 2 percent higher than in August. This price also represented a 2-percent increase over a year earlier. Canadian Northern Manitoba No. 2 wheat, c.i.f. U.K., posted a 4-percent increase to \$81.37 a ton and was 8-percent higher than a year earlier. Australian wheat, c.i.f. U.K., was quoted at \$70.42 a ton, a 4-percent increase over a month earlier and a 6-percent increase over a year earlier. Argentine wheat was not quoted during August.

U.S. No. 2 soybeans, c.i.f. U.K., were quoted at \$122.86 a ton, reflecting the second consecutive monthly price decline. At that level, however, the price was 23 percent above a year earlier.

1/ Buyer's price equals seller's price plus cost of export certificate or minus export payment, except for rounding errors.

2/ October 1969-September 1970, U.S./Argentine sorghums transhipped from Continental European ports; September 1969, Argentine granifero.

Source: Monthly Bulletin of Agricultural Economics and Statistics, FAO; The Public Ledger, London; Grain Market News, USDA, G&NS; Bangkok Board of Trade; and Cotton and General Economic Review, Liverpool.

The export price of Thai rice declined 3 percent to \$141.45 a ton, the first such decline in 3 months. That price, however, was still 24 percent below the year-earlier price. The price of cotton, Memphis Territory, strict middling 1-1/16", c.i.f. U.K., unchanged from May to August, rose during September to 30½ cents a pound and at this level was 8 percent above the year earlier level.

## World Trade Highlights

---

### AGRICULTURAL IMPORTS OF CANADA AND ISRAEL

Canada.--Agricultural imports of Canada in calendar 1969, paced by a \$51 million gain in meat purchases, soared to a record \$1,149 million, 15 percent above the previous high the year before. For the first time, the value of Canada's annual farm product imports exceeded \$1 billion. Except for minor import declines for cotton, feed grains, and coffee, Canada spent substantially more in 1969 for each of the major farm commodities shown in table 20.

At \$246 million, fruits, nuts, and preparations accounted for more than a fifth of Canada's farm imports in 1969. This was an 8-percent increase over the previous year. Canada's vegetable and sugar imports, continuing their upward trends of recent years, reached \$119 million and \$82 million, respectively. Oilseed imports reversed the downward movement of the 2 preceding years to total nearly \$56 million, up 34 percent from 1968's \$41 million.

Canada in 1969 was runner-up to Japan as the leading customer for U.S. farm products. Despite a 13-percent increase in Canadian purchases of U.S. agricultural commodities, the U.S. share of their total farm imports dropped a point to 51 percent in 1969. U.S. shipments of fruits, vegetables, and meats have advanced every year since 1966. Last year Canada also spent more for U.S. hides, cotton, livestock, feeds, oilseeds, fats and oils, coffee, and dairy products. The United States supplied virtually all of Canada's imports of rice, feed grains, animal feeds, and live animals; five-sixths of the oilseeds; three-fourth of the vegetables and tobacco; two-thirds of the hides and skins; three-fifths of the fruits and other cereal preparations; half of the fats and oils; and two-fifths of the cotton, meats, and dairy products.

Other major sources of Canada's farm imports are shown in table 20. Australia was runner-up to the United States as leading supplier of meats and fruits. Mexico led in cotton exports to Canada, followed by the United States and the Soviet Union. Sugar came mainly from South Africa, Australia, and Mauritius, in that order, while Brazil and the United States continued to provide most of Canada's coffee, tea, cocoa, and spice imports.

Israel 1/.--Israel's agricultural imports reached a high of \$188 million in 1969, up 5 percent from the previous year. Feed grains, wheat and flour, oilseeds, and meats accounted for over half the total. Imports of feed grains and oilseeds, which have declined since 1967, continued to fall in 1969. Israel has decreased its imports of corn and barley, but has increased its imports of grain sorghum. Imports of other major commodities rose in 1969.

Imports from the United States, Israel's chief supplier, declined some in 1969, and the U.S. share of the market dropped from 55 percent in 1967 to 49 percent in 1969 (table 21). Feed grains, oilseeds, and wheat and flour accounted for about four-fifths

---

1/ For data covering 1962-67, see the Feb. 1969 issue of this publication and for 1967-68 data, see the Dec. 1969 issue.

of total farm purchases from the United States. The United States maintained its 1967 share of the market for feed grains and oilseeds at about 90 percent, but dropped its share of the wheat market from almost 100 percent to 82 percent as Israel imported small quantities from EFTA and Canada. The U.S. share of Israel's imports of fats and oils also dropped, from 67 percent in 1967 to 52 percent in 1969.

Israel's imports from several other major suppliers, such as LAFTA and EFTA, increased in 1969. LAFTA supplied mainly meats and EFTA mostly wheat, sugar and honey, and tea. Imports from the EC, the third major supplier in 1969, were down slightly from the previous year.

#### AGRICULTURAL EXPORTS OF AUSTRALIA AND NEW ZEALAND <sup>2/</sup>

Australia.--Substantial advances in Australia's exports of meats, wool, wheat, hides and skins, feed grains, and fats and oils more than offset moderate export declines for fruits, sugar, and other cereal preparations. At \$2,245 million, Australia's farm exports were up 12 percent from a year-earlier and approximately equal to the 1967 level. Export gains of \$84 million for meats, \$70 million for wheat and flour, and \$56 million for wool accounted for five-sixths of the overall increase (table 24).

In 1969, Australian exports of farm products to the United States, valued at \$349 million, were 16 percent above the year-earlier level. Meats (\$259 million), wool (\$42 million), and sugar (\$27 million) accounted for 74 percent, 12 percent, and 8 percent, respectively. The U.S. shares of Australia's major farm exports were: Meats and preparations, 65 percent; sugar and preparations, 20 percent; and wool, 5 percent. For all farm commodity exports, the U.S. share was 15.5 percent in 1969, compared with 15.1 percent the previous year and 12.3 percent in 1967.

Japan remains Australia's best agricultural market, purchasing approximately one-half billion dollars worth in 1969. Shipments to Japan (\$498 million), up 17 percent from 1968, represented close to a fourth of Australia's total farm exports. As a customer for Australian farm commodities, Japan ranked first for wool (\$303 million), feed grains (\$12 million), and fats and oils (\$6 million); second for wheat and flour (\$75 million), sugar (\$31 million), and dairy products (\$9 million); and third for meats (\$30 million) and hides and skins (\$13 million).

Exports to China (Mainland) valued at \$115 million were still considerably below the 1967 total but 29 percent above the 1968 level. Wheat and flour accounted for 93 percent of Australia's farm product sales to China last year -- about the same as in 1968.

The United Kingdom, Australia's third ranking farm market, took \$317 million worth in 1969 for a slight advance over the previous year. The United Kingdom was Australia's best customer for fruits (\$41 million), dairy products and eggs (\$39 million), and sugar (\$37 million); runner-up for meats (\$40 million) and feed grains (\$10 million); and third-ranking buyer of wool (\$76 million) and wheat and flour (\$59 million).

Other important markets for Australian farm products were: France, wool and hides; Italy, wool and hides; West Germany, fruits, wool, and hides; Canada, meats, sugar, and fruits; Netherlands, wheat and feed grains; and Malaya, wheat, sugar, and dairy products.

New Zealand.--Shipments of farm products from New Zealand in 1969 topped \$1 billion for the first time since 1964, reaching \$1,032 million -- nearly a fifth above 1968 (table 25). Sharp to moderate gains were recorded for all major commodity groups except live animals, which declined slightly.

<sup>2/</sup> For data beginning in 1962, see Foreign Agricultural Trade of the United States, Dec. 1968.

Compiled from United Nations data.

An \$80 million (25 percent) advance in meat sales pushed this category to nearly two-fifths of total farm exports. Wool exports gained a fifth to top \$246 million, while shipments of hides and skins, valued at \$65 million, were up a fourth from a year earlier. Dairy products and eggs accounted for 21 percent of New Zealand's 1969 farm exports with \$218 million worth. This was 6 percent above the 1968 level but a slightly smaller share of total agricultural exports.

The United States received nearly 17 percent of New Zealand's farm exports in 1969, compared with 19 percent a year earlier. The U.S. share reached \$172 million as moderate gains in meats and dairy products more than offset a sizable decline in hides and skins for an overall advance of 6 percent.

The United Kingdom was New Zealand's leading market in 1969, ranking first in purchases of meats (\$202 million), dairy products (\$168 million), wool (\$50 million), and fruits (\$5 million); and runner-up to the United States for hides and skins (\$12 million).

Sales to Canada totaled \$37 million, up from \$15 million the year before as meat shipments rose to \$31 million from 1968's \$7 million. Japan was a good customer for New Zealand's meat, wool, and dairy products. The European Community was an important outlet for wool and hides and skins.

## Export Highlights

---

### U.S. AGRICULTURAL EXPORTS, JULY-SEPTEMBER 1970

U.S. agricultural exports totaled \$1,648 million in July-September 1970, 17 percent above the year-earlier level. This represents an acceleration of the 16-percent advance in agricultural exports during 1969/70, to a near-record value. Soybean exports were nearly double those of a year earlier and accounted for much of the overall gain. Wheat exports, up a fourth, also contributed significantly. Other gains occurred for soybean meal, feed grains, prepared feeds, nuts, vegetables, dairy products, lard, tallow, and soybean oil. Somewhat offsetting were declines for cotton, tobacco, hides and skins, pork, and rice (table 28).

Exports of nonagricultural products were 7 percent above the \$7,891 million in July-September 1969. Most of the increase in the nonagricultural sector occurred for aircraft.

Agricultural exports in September, \$561 million, were one-fifth above those of a year earlier. The improvement stemmed from substantial gains in soybeans and soybean products, wheat, inedible tallow, vegetables, and nuts.

Exports of animals and animal products totaled \$199 million in July-September 1970 -- 13 percent above the same months of 1969. Higher prices for inedible tallow and lard contributed significantly. Overall, shipments of animal fats and oils were about two-fifths above those of the year-earlier quarter. Exports of dairy products also advanced, with a substantial gain in sales of nonfat milk, primarily under Government-financed programs. Meats and meat products were down 3 percent, because of reduced takings of pork by Japan. Cattle hides were also down, because of smaller exports to Japan and Western Europe.

Cotton exports in July-September were 359,000 bales, down somewhat from 366,000 bales, in the same quarter a year earlier. Small stocks of U.S. cotton, large world production, and increased use of manmade fibers are limiting U.S. cotton exports. In July-September, most of the cotton was shipped to the Far East and Canada. The European Community continues to take small amounts of U.S. cotton, because of reduced supplies of the type they need.

Combined shipments of fruits and vegetables in July-September 1970 were slightly above the level of a year earlier. Most of the gain resulted from increased shipments of fresh vegetables and dried beans and peas. Gains for fresh, dried, and juice items were more than offset by a two-fifths decline in canned peaches.

A 45-million-bushel increase in wheat exports accounted for most of the 11-percent rise in grains and preparations in July-September. Wheat exports rose to 154 million bushels from 109 million a year earlier. The two-fifths increase was accounted for by Japan,

<sup>1/</sup> Preliminary.

Korea, Taiwan, India, European Community, United Kingdom, Venezuela, Philippines, Brazil, Israel, Turkey, Colombia, and Nigeria. Feed grain exports of 5.7 million metric tons in July-September were up slightly. Japan remains the top market for U.S. feed grains, purchasing a total of 2 million tons in these months. Other principal outlets were the Netherlands, France, Mexico, Italy, and Canada. Rice exports were nearly one-fifth below the 9 million bags exported in July-September 1969 because of reduced commercial sales to the European Community and other developed countries. Foreign demand for grains this year is expected to strengthen with somewhat lower wheat production in some major importing areas, especially the European Community and Eastern Europe; increased livestock production; and reduced forage output in much of Western Europe. U.S. corn production is expected to be down about 9 percent because of the southern-leaf blight and unfavorable growing conditions in some areas. In addition, large quantities of wheat are available from other major exporters.

Exports of oilseeds and products were 84 percent above the July-September 1969 level. Exports of soybeans leaped to 84 million bushels from only 44 million as both Japan and Western Europe took more soybeans during the first quarter of 1970/71 than in the same period in 1969/70. Japan's purchases of 25 million bushels were one-half higher. The European Community's purchases of 24 million bushels were up sharply from 10 million in July-September 1969. Increased livestock production and little competition from other major exporting countries strengthened U.S. soybean exports. Exports of soybean meal, totaling 1 million tons, were up nearly one-half. The European Community continues to use a relatively high proportion of soybean meal in their mixed feeds.

Tobacco exports in July-September totaled 111 million pounds, one-fourth below those of the comparable period in 1969. Most of the decline occurred in flue-cured tobacco. Because of higher prices, the value was down only one-fifth. The average unit value was 97 cents a pound this July-September, compared with 92 cents a pound a year earlier. The higher quality crops in both 1969 and 1970 and a large proportion of high-priced stemmed tobacco accounted for the gain in unit value.

#### Agricultural Exports to the EC, July-September 1970

U.S. agricultural exports to the European Community advanced to \$358 million in July-September 1970, from \$282 million for the same months in 1969. Most of the increase occurred for nonvariable-levy items, which gained nearly two-fifths to reach \$241 million. Over 90 percent of the gain is from substantially larger shipments of soybeans and soybean meal. Other advances occurred for tallow, variety meats, nuts, and corn byproducts. Shipments of cotton, tobacco, canned peaches, and hides and skins all declined in July-September. Exports of variable-levy items, totaling \$116 million, were 12 percent above those for the comparable period in 1969. Wheat and feed grain increases of 58 and 14 percent, respectively, reversed the downward trend in variable-levy commodities. Rice exports, however, dropped precipitously in July-September to \$3 million in 1970, from \$9 million in 1969 (table 29).

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

## Import Highlights

---

### U.S. AGRICULTURAL IMPORTS, JULY-SEPTEMBER 1970

U.S. imports of agricultural products are generally lowest in the July-September quarter. Except in 1968, when prestrike stock accumulation took place, July-September imports have been relatively low in every year since 1964 (table 30). Purchases of cattle, fruits, vegetables, wool, rubber, and spices tend to be smallest during this quarter.

The inflow of agricultural products into the United States amounted to \$1,374 million during the first quarter of fiscal year 1971. This represented an 11-percent increase over the same quarter a year earlier (table 31). Imports of noncompetitive (complementary) agricultural commodities accounted for about half of the growth increment, primarily because higher prices were paid for coffee.

Supplementary (competitive) farm products as a group registered an 11-percent rise in value over the level of the first quarter a year ago. Gains took place for cattle, dairy products, meats, grain products, vegetable oils, sugar, edible nuts, wine, and animal feed.

Higher coffee prices pushed the value of green coffee imports 33 percent above the July-September 1969 level to \$278 million, while volume fell 9 percent to 598 million pounds (table 32). Banana imports were also higher than in July-September 1969 by 18 percent. But there were marked reductions for imports of crude rubber, soluble coffee, carpet wools, and silk.

<sup>1/</sup> Based on 359 classifications in 1970. <sup>2/</sup> The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, *The X-11 variant of the seasonal Method II seasonal adjustment program*, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers. 2/ Based on 425 classifications in 1970. 3/ The seasonal adjustment series has been revised to incorporate the Bureau of Census Method X-II. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. The previous adjustments were based on the seasonal factors developed from the base period 1957-59. For detailed explanation of the adjustment procedures, see U.S. Department of Commerce, Bureau of Census, The X-II variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

## Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

**EXPORTS** The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination, or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

**IMPORTS** Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
