Digest

Almond Sales Boost U.S. Nut Exports to New High (see p. 8). Exports of almonds totaled \$41 million in 1969/70, more than tripling the 1968/69 value and boosting total U.S. edible nut exports to more than \$60 million. West Germany, Japan, and Sweden were our top customers. Heavy rains during pollination and late frost were responsible for the smallest foreign almond harvest in 8 years. A near-record U.S. crop -- up two-thirds from 1968/69 -- combined with scarce foreign supplies to elevate U.S. almond exports to a record 28;000 tons in 1969/70.

In 1969/70, U.S. exports of walnuts doubled, and filberts gained about two-thirds, while pecan sales abroad were off slightly.

Cashew nut imports, 54 percent of total U.S. edible nut inshipments, were down 5 percent from the previous year. U.S. imports of pistachio nuts and chestnuts advanced, but purchases of coconut meat, Brazil nuts, filberts, pignolia nuts, almonds, and pecans declined.

* * * * *

U.S. Agricultural Trade with CARIFTA (see p.19). Jamaica, Trinidad-Tobago, Guyana, and the British Leeward and Windward Islands form the Caribbean Free Trade Area (CARIFTA). U.S. agricultural exports to the area have risen steadily from pre-CARIFTA treaty Levels and in 1970 reached \$63 million. Growth in exports was primarily in live animals, meat, prepared food products, oils, and fats. Most CARIFTA members increased their agricultural imports from the United States; Guyana's remained about the same. U.S. agricultural imports from CARIFTA have trended downward slightly from a peak of \$43 million in 1968.

* * * * *

First-Quarter Agricultural Export Price Index Gains (see p. 23). Export prices were 10.5 percent above year-earlier levels for the first quarter and 7.0 percent for the year ended March. Import prices for the quarter were down 0.9 percent, but up 6.5 percent for the year.

* * * * *

<u>International Price Highlights (see p. 27)</u>. Wheat prices were mixed in April. All other prices were weak. Canadian wheat and Argentine corn were unusually low-priced relative to American wheat and corn.

* * * *

U.S. Agricultural Exports, July-April 1970/71 (see p.31). April 1971 exports of U.S. farm goods were valued at \$634 million. Although this was \$82 million less than in March, it established an April record, 5 percent above the former record of \$602 million in April 1969. In July-April, farm exports were \$6.5 billion, up 17 percent from the same period a year earlier. This new 10-month record stammed mainly from larger wheat and soybean movement. Also, exports of cotton, inadible tallow, feed grains, soybean oil, protein meal, edible nuts, slaughter cattle, and nonfat dry milk aided significantly.

Exports of U.S. farm products to the European Community (EC) in July-April, valued at \$1.5 billion, were nearly a third higher than those a year earlier. Value gains were about equally divided between nonvariable-and variable-levy goods. Increased U.S. agricultural exports to the EC resulted from sharply larger shipments of wheat, feed grains, cotton, tallow, soybeans, and soybean meal. EC purchases of U.S. rice and hides declined.

* * * * *

<u>U.S. Agricultural Imports, July-April 1970/71 (see p. 38)</u>. Imports of agricultural products in July-April rose 4 percent above similar months last year to \$4.8 billion. Certain supplementary commodities accounted for the increase, notably dairy products, meat, fruits, edible nuts, vegetables, sugar, and wines. Supplementary imports amounted to \$3.1 billion, rising from nearly \$2.9 billion a year earlier. Complementary imports were fractionally lower as reductions in cocoa bean values, rubber, and carpet wool more than offset increases for bananas, coffee, essential oils, and spices.

Table 1.--U.S. exports: Value of total and agricultural exports, including specified Government-financed programs and commercial (dollar) sales by selected commodities and commedity groups, averages 1955-59, 1960-64, and 1965-69; annual 1969/70, July 1969 to date 1/2/

^{1/} Government-financed programs include exports under Public Law 480 programs (sales for foreign currency, long-term dollar and convertible local currency credit sales, barter for strategic materials, and donations) and under AID programs. 2/ Commercial sales (exports outside Government-financed programs) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies, which benefit the U.S. balance of payments and rely primarily upon authority other than P.L. 480; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash or in kind. 3/ Commodity group totals for feed grains, oilseeds and products, and animals and products include for years noted, in addition to the value reported by the Bureau of the Genaus, the estimated value of certain commodities donated through voluntary relief agencies, which are included by census in "Other food for relief and charity." 4/ Preliminary data. 5/ Less than \$500,000. 6/ Commodities may not add to total due to rounding.

SPECIAL in this issue

ALMOND SALES BOOST U.S. NUT EXPORTS TO NEW HIGH

U.S. almond exports gained spectacularly in 1969/70, rising to a total value of \$41 million (table 2). The volume totaled nearly 28,000 short tons. This amount, more than triple year-earlier sales, boosted total U.S. nut exports over \$60 million. 1/West Germany took \$10.8 million worth or 29 percent of U.S. foreign shipments, more than 10 times the purchases of the previous year. Germany replaced Japan, which had purchased \$4 million worth the year before, as the largest market for U.S. almonds. Another fourth of U.S. almond exports in 1969/70 was about equally divided between Japan and Sweden.

Heavy rains during pollination and late frost in Italy and Spain, the major producing areas, were responsible for the smallest foreign almond harvest since 1962. The U.S. crop, however, was up two-thirds from 1968/69 for a near-record harvest. Plentiful supplies in the United States were available to fill the unusually heavy foreign demand. Edible tree nuts (cashews, pistachios, Brazil nuts, filberts, chestnuts, walnuts, almonds, pecans, pignolias, whole coconuts, and coconut meat) in 1969/70 represented about 1.6 percent of total U.S. agricultural imports. Althougn edible nut imports have traditionally exceeded exports, the trade pattern has shown significant changes in recent years. Between July 1947 and June 1970, U.S. imports of edible nuts (excluding peanuts) ranged in value from \$48 million in 1949/50 to \$110.6 million in 1968/69, averaging \$66 million a year. U.S. nut exports, on the other hand, moved from just below \$3.6 million in 1950/51 to last year's record \$60.1 million. Exports since 1947 have averaged \$14 million, leaving an average nut trade deficit of about \$52 million.

In the early 1960's, the excess of nut imports over exports ran about \$50 million a year -- approximately the same level as in the late 1940's and early 1950's. A sharp increase in 1968 imports brought the nut trade deficit to \$65 million. Stable exports accompanied by another spurt in imports the following season pushed the deficit to a record \$85 million. In 1969/70, however, U.S. nut exports jumped to \$60 million from \$25 million in the prior year, while imports fell to \$91 million, reducing the U.S. deficit to \$31 million -- just over one-third of the 1968/69 amount.

Other Nut Exports

Walnuts. -- The value of U.S. walnut exports advanced to \$4 million in 1969/70 from \$2 million a year earlier. Since 1960, exports had ranged from \$830,000 in 1961/62 to \$3.19 million in 1965/66. In 1969/70, Canada was the leading market, taking three-fifths of the total; Brazil bought 6 percent and Norway took 4 percent. Australia, Venezuela, West Germany, the Netherlands, and Denmark were the next best customers --each buying between 3 and 4 percent of total U.S. walnut outshipments.

^{1/} Peanuts, which are now classified as oilseeds, are excluded from this tabulation of edible nut exports.

Table 2 .-- U.S. exports of edible nuts: Value by type and country of destination, fiscal years 1961-70

California harvested nearly 98 percent of the 105,500 tons produced in the United States in 1969, and Oregon the remainder. Exports in 1969/70 amounted to approximately 7,100 tons (in-shell basis).

Pecans. -- Exports of U.S. pecans in 1969/70 were valued at \$2.24 million, down 7 percent from the record in 1968/69. Canada, as usual, was the dominant foreign market, taking 77 percent of U.S. outshipments. Sweden and the United Kingdom each accounted for 3-4 percent. Pecan exports amounted to approximately 2 percent of the 112,550-ton U.S. production in 1969, Georgia produced two-fifths of the crop, and Alabama, Louisiana, and Texas together produced another two-fifths.

Filberts.--U.S filbert exports valued at \$511,000 in 1969/70 were up two-thirds from a year earlier and 6 percent above the 1966/67 record. Canada, the leading foreign outlet, took four-fifths of U.S. filberts exported in 1969/70. Venezuela and West Germany each bought about 5 percent. Australia, which took a sixth of our filbert exports in 1968/69, dropped out of the market last year. Approximately 10 percent of the 1969 U.S. filbert harvest of 7,400 tons was exported. Oregon produced 96 percent and Washington the rest.

Other edible nuts. -- Exports of edible nuts not classified by type (the "Not elsewhere classified" category) were valued at \$9.75 million in 1969/70, up 12 percent from a year earlier. It is probable that many nuts in this group were almonds, walnuts, pecans, or filberts, but failure to designate the specific type of nut being shipped would move them into this basket category with small quantities of miscellaneous edible nuts.

Imports by Type

Cashews.--U.S. imports of cashew nuts in 1969/70, valued at \$48.9 million, represented 54 percent of total edible nut imports. Imports of cashews were down 5 percent from a year earlier, but total value of U.S. nut imports dropped nearly 18 percent (table 4). India supplied 63 percent, Mozambique 23 percent, and Brazil 10 percent. India's share was somewhat lower than in previous years: Shipments fell to 50 million pounds from 64 million the year before. Meanwhile, U.S. imports from Brazil nearly doubled and those from Mozambique rose.

Pistachio nuts. -- Next to cashews in import valua, pistachio imports were valued at \$13.7 million, up from \$12 million a year earlier. They accounted for just over 15 percent of total U.S. nut imports in 1969/70. Iran, the dominant source of U.S. imports since 1964/65, supplied 88 percent in 1969/70, up from 63 percent the previous year. Turkey, the former major supplier, furnished 10 percent, down from a 42-percent share in 1967/68, and 52 percent in 1962/63. Imports from Afghanistan peaked at \$2.8 million in 1965/66 but dropped to \$1 million in 1968/69 and to \$228,000 a year later.

Coconuts and coconut meat. --Virtually all of our imports of coconut meat come from the Philippines. U.S. imports ranged between \$13 million and \$17 million between 1959/60 and 1967/68. In 1968/69, however, they peaked at \$24 million, then declined to less than \$12 million last fiscal year. Imports of coconuts, valued at \$881,000 in 1969/70, came mainly from the Dominican Republic, although Honduras supplied nearly one-fifth of the total.

Brazil nuts.--Valued at \$8.3 million in 1969/70, U.S. imports of Brazil nuts were about average for the 1960's, but were down nearly a fourth from the previous year's peak. Brazil supplied 85 percent and Bolivia 8 percent of 1969/70 U.S. imports, approximately the same shares they contributed a year earlier.

Filberts.--U.S. filbert imports, nearly all from Turkey, fell to \$3 million in 1969/70 from the \$4.9 million peak the year before. From 1961 through 1968, U.S. filbert imports averaged \$2.5 million annually.

^{1/} Less than 500.

Chestnuts. -- Imports reached a high of \$2.9 million in 1969/70, up 35 percent from the previous year and about a fourth above the average during the 1960's. Italy usually supplies well over 90 percent of the total.

Other edible nuts.--Imports of pignolia nuts advanced to \$708,000 in 1968/69 from \$388,000 in 1960/61, but declined slightly to \$676,000 in 1969/70. Spain supplied more than four-fifths of the total last year, with most of the remainder coming from Portugal and Italy. Italian pignolia nut exports to the United States have declined steadily as those from Spain have increased. Italy supplied \$24,000 worth in 1969/70 compared with \$352,000 in 1960/61. Meanwhile, U.S. imports from Spain totaled \$550,000 in 1969/70 in contrast to only \$18,000 in 1960/61. Walnut imports, mainly from Turkey and India, totaled \$356,000 in 1969/70, down from nearly \$2 million the 2 previous years. Walnut shipments from abroad have fluctuated widely in other recent years -- from \$3.5 million in 1960/61 to \$637,000 in 1965/66. We import very few almonds and pecans, as the United States is a major producer of these nuts. In 1969/70, our almond imports were valued at \$224,000, down somewhat from the previous year's peak but about average for other recent years. Spain, the major foreign source, supplied more than half of the total. Pecan imports, nearly all from Mexico, totaled \$165,000 in 1969/70, down sharply from the year before, but not far from the average for the past decade.

SPECIAL in this issue

U.S. AGRICULTURAL TRADE WITH CARIFTA

U.S. agricultural exports to the Caribbean Free Trade Area -- CARIFTA -- have grown steadily since its formation in 1968. Shipments to the area amounted to \$63 million during 1970, compared with \$53 million in 1968 (table 6). A steady growth in U.S. agricultural exports to CARIFTA took place throughout the 1960's. Average value moved up from \$31 million in 1960-64 to \$51 million by 1967. Main factors in this expansion were increased tourism and the development of livestock industries within CARIFTA.

During 1960-70, U.S. agricultural exports to CARIFTA increased to all members except Guyana. Shipments to Guyana fluctuated between \$3.5 million and \$4.8 million annually. Commercial shipments of meat, hatching eggs, wheat, rice, corn, prepared fruits and vegetables, miscellaneous food preparations, vegetable oil, tallow, cattle, and baby chicks accounted for most of the expansion in U.S. farm exports to all of CARIFTA. Declines occurred for wheat flour, prepared animal feeds, and food donations such as wheat flour, skim milk powder, and soybean oil (table 7).

In contrast to exports, U.S. agricultural imports from CARIFTA members have trended downward since 1968. The value fell to less than \$41 million in 1970 from \$43 million in 1968. Prior to the CARIFTA treaty, U.S. imports from the area had been rising slightly. CARIFTA's agricultural exports to the United States averaged \$31 million during 1960-64, dropped to \$29 million in 1965, then rose 2 successive years to \$36 million in 1967. The fluctuations and recent downtrend in U.S. imports from CARIFTA were due mainly to sugar, which is the principal export from most members. Sugar production in the area is adversely affected by variations in rainfall, hurricane demage, and shortages in agricultural labor.

U.S. sugar imports from the area peaked in 1968 at 201,000 metric tons (\$29 million), compared with 175,000 tons (\$25 million) the preceding year, and 162,000 tons (\$22 million) in 1966. Subsequently, imports turned down in volume to 198,000 tons while valur rose slightly to \$30 million in 1969, and further dropped to 170,000 tons (\$28 million) in 1970. Most of the decline occurred in shipments from Jamaica, which fell steadily to 58,000 tons in 1970 from 98,000 in 1966 and 1967. Conversely, shipments from Guyana increased steadily to 92,000 tons in 1970 from 53,000 in 1967. Sugar shipments from Trinidad to the United States reached a high in 1969 of 51,000 tons against 13,000 for 1967 and then dropped to less than 20,000 tons in 1970.

The foregoing data were obtained from the U.S. Bureau of the Census and do not agree with statistics published by USDA's Agricultural Stabilization and Conservation Service, which administers Sugar Act quotas. For 1970, imports of sugar under quotas from the British West Indies (Guyana, Jamaica, and Trinidad-Tobago) totaled 215,000 short tons (195,000 metric tons), raw value (97 degrees polarity). 1/ Differences between the two sets of data are now being investigated. The figures will be revised.

^{1/} Mostly skim milk powder, wheat flour, cereal products, vegetable oil, and miscellaneous food preparations.

Other agricultural exports from CARIFTA to the United States such as cocoa, coffee, spices, and essential oils have increased as shifts from sugar to other drops took place. Arrowroot, a crop grown commercially on St. Vincent, has faced a decline in international demand. A low-cost synthetic substitute for arrowroot was developed in the mid-1960's which depressed demand, leaving St. Vincent with unmarketable stocks. Attempts have been made to shift that acreage to other vegetables.

The Caribbean Free Trade Area and the Eastern Caribbean Common Market are the most recent regional trade groups to be formed. Members of the ECCM -- Antigua-Barbuda-Redonda, Dominica, Grenada, St. Kitts-Nevis-Anguilla, St. Lucia, and St. Vincent -are associate members of CARIFTA, which include Barbados, Guyana, Jamaica, Montserrat, and Trinidad-Tobago. The CARIFTA treaty was signed in May 1968 by Antigua, Barbados, Guyana, and Trinidad-Tobago. In July 1968, the associate members joined, and Jamaica acceded in August. Trade restrictions such as tariffs and quotas on imports from other CARIFTA members were eliminated except for a reserve commodity list. CARIFTA members maintain their individual restrictions on imports from nonmember countries. Since all CARIFTA members are former British Commonwealth states, they allow imports from other Commonwealth members at lower tariff rates than from non-Commonwealth areas. Eastern Caribbean Common Market members agreed to free trade within their area and a common external tariff on goods from nonmembers. A common currency, the Eastern Caribbean dollar was also adopted. On May 1, 1971, British Honduras joined CARIFTA. The trade statistics in this report cover a period ending in 1970 and do not include British Honduras.

Two bilateral commodity agreements among CARIFTA members have been in effect for many years: The Caribbean Oils and Fats Agreement and the Caribbean Rice Agreement. These agreements prohibit imports from outside sources until internally produced stocks are depleted. Most members grow and market coconut products (copra and coconut oil) within the area, and five islands -- Antigua, Carriacou (Grenada), Montserrat, Nevis, and St. Vincent -- produce cottonseed. Rice is grown in Guyana and Jamaica.

An agricultural marketing protocol to the CARIFTA agreement similarly limits imports until internally produced stocks are sold. Included in the protocol are fresh vegetables (cabbage, carrots, garlic, okra, onions, peppers, potatoes, sweet potatoes, tomatoes, red beans, string beans, and pigeon peas), fruits (oranges, pineapples, and plantains), pork, poultry meat, eggs, peanuts, cinnamon, cloves, and black pepper.

The CARIFTA area probably remains a net importer. In 1968, the last year published statistics are available for all members, CARIFTA members imported about \$1.1 billion in goods. Agricultural imports made up approximately \$164 million or 15 percent. Between 1965 and 1968, total CARIFTA imports rose slightly, averaging 2½ percent annually. Agricultural imports showed little change. Principal suppliers of agricultural products are the United States, Canada, other CARIFTA members, the United Kingdom, and New Zealand.

During the same period, CARIFTA's exports increased more than 3 percent annually, from \$776 million in 1965 to \$850 million in 1968. Agricultural exports, which account for a fourth of the total, gained at a slightly lower rate to \$221 million from \$204 million. Jamaica, Guyana, and Trinidad, the major exporters, are large producers of raw materials such as bauxite, alumina, and petroleum. Raw material exports from the area have shown strong growth trends.

SPECIAL in this issue

FIRST-QUARTER AGRICULTURAL EXPORT PRICE INDEX GAINS

Hans. G. Hirsch 1/

Prices (unit values) of 13 leading U.S. agricultural export commodities averaged 10.5 percent higher during January-March 1971 than a year earlier (table 8). This is approximately the same rate of increase as that observed during the last quarter of 1970. Thus, prices during the half year, October 1970-March 1971, were about 10-1/2 percent above a year earlier. By contrast, April-September 1970 prices averaged only about 3 percent above a year earlier. For the entire 12-month period, April 1970-March 1971, prices were up 7.0 percent.

Import prices moved differently. They averaged 99.1 percent of a year earlier during the first quarter. This was the first decline in the import price index in 10 quarters. The rise in the import price index had been sharpest during spring 1970 --14.6 percent. Subsequently, the rate of increase dropped to 10.0 percent in the summer and to 4.7 percent in the fall quarter. For the entire 12-months ended March 1971, the import price index was 106.5, little different from the export price index of 107.0; but the quarterly import price indexes were dropping while the quarterly export price indexes were rising.

The terms of trade index (export index divided by import index) was 100.5, and thus reflected the similarity in the magnitude of the annual export and import price indexes. It was above 100 for the first time in 3-1/2 years. The first-quarter terms of trade index was 111.5. The figure means that 11.5 percent more U.S. agricultural imports could be bought with U.S. agricultural exports in January-March 1971 than a year earlier.

Prices of 5 of the 13 leading export commodities rose more than the 10.5 percent first-quarter average: Soybean oil (up 29 percent), corn (up 21 percent), soybeans (up 17 percent), sorghum grain, and inedible tallow (both up 12 percent). Cotton and wheat prices were up 10 and 9 percent, respectively. In contrast to the sharp increases in soybean and soybean oil prices, soybean meal was exported at a price only 4 percent above a year earlier and, at \$86.58 a short ton, the January-March 1971 price was 10 percent below the record price during the last quarter of 1970. Export prices of nonfat dry milk, wheat flour, milled rice, and flue-cured tobacco changed little from a year earlier. The stability of the unit value of U.S. milled rice exports contrasts with the sharp decline in the export price of Thai rice from \$149.48 a metric ton during January-March 1970 to \$126.70 a year later. Hides and skins alone among export commodities registered a significant price decline -- 15 percent. This decline is in

^{1/} Unit values were computed from the value and quantity figures published in Foreign Agricultural Trade of the United States. Cotton poundages were obtained from U.S. Bureau of the Census Reports, Supplement to EM 522.

2/ The index numbers are of "Fisher's Ideal" type.

part the result of a different product mix in this heterogeneous category. However, whole cattle hides, by far the most important constituent, suffered an 8-percent price decline, from \$8.77 a hide in January-March 1970 to \$8.03 a year later. For the year ended March 1971, the export price of whole cattle hides was down 7 percent.

Export prices moved up between the year ended March 1970 and the year ended March 1971. The increases were similar to those from the first quarter of 1970 to the first quarter of 1971, except for wheat and nonfat dry milk. In contrast to the sharp rise in the quarterly wheat price, the yearly average price was up only fractionally. The wheat price averaged \$1.61 a bushel for the 2 years ended March 1971. The price was above this average during April-September 1969, fell to only \$1.55 during October 1969-September 1970, then rose above average from October 1970-March 1971. Nonfat dry milk exports were valued at 25.8 cents a pound during July-December 1970, but their price declined to 23.6 cents in early 1971, little more than before the summer 1970 price rise. Thus the yearly average was 12 percent above a year earlier.

Among the import commodities, only the prices of dutiable cattle (those not for breeding), coffee, and beef and veal increased significantly. The quarterly coffee price declined for the third successive quarter but was still 7 percent above the first quarter of 1970. The annual coffee price, on the other hand, at 45 cents a pound, was the highest for any 12-month period and exceeded the year-earlier price by 10 cents or 28 percent. Unit values of dutiable cattle are subject to sharp seasonal variations. Thus, a decline from October-December to January-March can be expected; but the first-quarter price was 8 percent above a year earlier and so was the 12-month average price. The beef and veal price, which had declined for 2 quarters, resumed its upward trend. The first-quarter price of 51 cents a pound was 5 percent above a year earlier and the annual price, also 51 cents, was up 6 percent.

The import unit value of sugar averaged 6.98 cents a pound during the first quarter, 1.41 cents less than the c.i.f. New York raw sugar price, duty-paid. A year earlier, the import unit value was 6.86 cents, only 1.13 cents less than the c.i.f., New York, raw sugar price. Higher freight rates and more skillful raw sugar buying by importers may account for the rather large spread between the c.i.f. price, duty-paid, and the import unit value which is really the export value in the countries of origin. According to the published data on the polarization 2/ of sugar imports during the first quarter of 1971 as compared with a year earlier, lower average polarization was not a factor in the increased price spread.

Prices of clothing wool, cocoa beans, and rubber were significantly below year-earlier levels, both in the quarterly and in the annual series. Rubber and cocoa prices are both characterized by severe fluctuations. The rubber price uninterruptedly dropped from a maximum of 23.2 cents a pound during the last quarter of 1969 to 16.3 cents during the first quarter of 1971. The present price level stands out as depressed in any time series. The cocoa bean price of 29 cents a pound is 25 percent below a year earlier, but slightly above the average price for fiscal years 1966/67-1969/70, and well above any longer time average.

The tobacco import unit value was on a downward trend for over 5 years. Analyses in <u>Foreign Agriculture</u> magazine, April 12 and 19, 1971, confirm the continuation of this trend. However, during the first quarter of 1971, the import unit value was 66.0 cents a pound, the highest since the second quarter of 1967. For the year ended March 1971, the unit value was 58.9 cents, 5 percent below the preceding year.

^{2/} Raw sugar is measured in degrees of polarization and paid for accordingly. Most sugar imports polarize between 97 and 98 degrees; between 1.0350 and 1.525 pounds of such sugar make 1 pound of refined sugar.

The quantity indexes obtained as byproducts of the price indexes were up for exports, down for imports. The quarterly export quantity index was 111.4 and the similar annual index 108.5. The latter index averages quarterly indexes of 102.0, 115.3, 106.2, and 111.4. It is the first 12-month quantity index not affected by the dock strike of December 1968-February 1969. The quarterly import quantity index was 94.7 and the similar annual index 97.4. Import quantities were near or slightly below that level during 3 quarters, but were 101.3 percent of a year earlier during the July-September quarter.

International Price Highlights

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

In April, prices were weak for commodities other than wheat. Most of them were about 3 percent lower than in March. Wheat prices were mixed (table 9).

The c.i.f. U.K. price of Northern Manitoba No. 2 wheat was down a steep 7 percent, that of U.S. No. 2 Hard Winter wheat was 3 percent below March, while that of Australian wheat was up 3 percent. The price alignment of these 3 types of wheat was unusual. The Manitoba No. 2 price, at \$76.83 a metric ton, exceeded that of U.S. No. 2 Hard Winter by only \$1.31 and that of Australian wheat by only \$7.60. During the preceding 12 months, April 1970-March 1971, the Manitoba No. 2 price averaged \$5.76 above U.S. No. 2 and \$13.07 above Australian wheat. Moreover, the April prices of U.S. No. 2 and Australian wheats were near their preceding 12-month averages; but "he Manitoba No. 2 price was \$4.69 or 5.8 percent below that average and was also 2 percent below a year earlier, while all other wheat prices ranged from 7 to 21 percent above a year earlier.

The drop in the Manitoba No. 2 price was foreshadowed in March. During that month the "nearest forward shipment" quotation was \$3.68 above the average quotation for shipment in April. Thus quotations for April shipment dropped only by 2.7 percent, to \$76.83 in April. A 5-man team of U.S. wheat experts that returned from Europe early in May also observed a series of reductions in the prices at which Canadian wheat was offered.

On the North American Continent, wheat quotations remained virtually unchanged. The export price of Canadian No. I Northern wheat, in store Fort William-Port Arthur, and the seller's price for U.S. No. I Hard Winter wheat, ordinary protein, f.o.b. vessel, Gulf Ports, were up fractionally. The buyer's price for the latter was unchanged and export payments at the low rate of I and 2 cents a bushel during part of the month accounted for the I cent difference for the month as a whole between seller's and buyer's prices.

In view of the short Argentine wheat crop, wheat of that origin has not been quoted in the United Kingdom since last August. Therefore, table 9 shows the export price for U.S. No. 2 yellow corn, f.o.b. vessel, Gulf Ports, in the price table column previously used for Argentine wheat. The U.S. corn price was down 2.5 percent on an export basis and 2.8 percent on a c.i.f. U.K. basis. The c.i.f. U.K. sorghum grain price was similarly down 2.9 percent. But Argentine corn, c.i.f. U.K., was quoted 5.4 percent below March and, at \$69.68 a metric ton, that price was \$1.68 below that for U.S. No. 3 yellow corn. While Argentine corn was quoted slightly below U.S. No. 3 yellow corn last February and also in early 1970, the magnitude of that discount in April was unprecedented. During 1965-69 the Argentine corn price averaged \$5 above the U.S. No. 3 yellow corn price. The current price alignment reflects the availability of huge supplies just harvested in Argentina.

^{1/} Buyer's price equals seller's price minus export payment, except for rounding errors.
2/ Due to a mail strike in the United Kingdom, monthly averages of c.i.f. U.K. prices had to be computed from incomplete weekly or semiweekly price series.

^{3/} U.S. /Argentine sorghums transshipped from Continental European ports.

U.S. No. 3 yellow corn was high-priced not only compared with Argentine corn but its price continued 24 cents a bushel (\$9.38 a ton) above that of sorghum grain.

The export price of Thai rice continued its month-to-month decline but weekly quotations have held at \$111.60 a metric ton since the end of March.

Soybeans joined in the general price weakness. However, at \$123.11 a metric ton, their price was still 7 percent above a year earlier.

After several months of strength, the price of Memphis Territory cotton, strict middling, 1-1/16", c.i.f. Liverpool, dropped to 30.67 cents a pound. Thus the gains so far made in 1971 were lost.

The outstanding feature of price developments in April was the unusual attractiveness of Canadian Manitoba No. 2 wheat relative to U.S. No. 2 Hard Winter wheat and of Argentine corn relative to U.S. No. 3 yellow corn. This was so not only on a c.i.f. U.K. basis but also on a c.i.f. Rotterdam basis. At Rotterdam, Manitoba No. 2 was quoted at \$72.84 a metric ton, only 82 cents higher than U.S. No. 2 Hard Winter. However, during July 1970-March 1971, U.S. wheat exports to the United Kingdom and the European Community were 2.1 million metric tons compared to 0.7 million tons a year earlier. Argentine corn, c.i.f. Rotterdam, was quoted at \$66.34, 20 cents over U.S. No. 3 yellow corn. Thus Argentine corn in Rotterdam was at least at a very small permium over U.S. No. 3 yellow corn, in contrast to U.K. ports where Argentine corn was sold at an unusual discount below U.S. No. 3 yellow corn, while the Manitoba No. 2 - U.S. No. 2 Hard Winter wheat differential was even less c.i.f. Rotterdam than c.i.f. United Kingdom.

Export Highlights

U.S. AGRICULTURAL EXPORTS, JULY-APRIL 1970/71

April exports of farm products had a value of \$634 million, up 14 percent from year-earlier movements and a record high for the month. Important gains occurred for cotton, rice, inedible tallow, nuts, hides and skins, tobacco, vegetable oils, and nonfat dry milk. Exports of wheat, fresh and canned meats, fruits, and vegetables also contributed, while feed grain and soybean movements declined slightly from the high levels of April 1970.

During July-April 1970/71, agricultural exports advanced to \$6.5 billion, 17 percent above the year-ago period (table '10). Expanded exports of wheat, soybeans, feed grains, cotton, vegetable oils, inedible tallow, and protein meal contributed most. Exports of rice, flaxseed, and hides were down slightly.

U.S. exports of wheat and wheat products, totaling just over \$1 billion, were running 27 percent above the level of July-April 1969/70. Larger exports were noted to Japan, the United Kingdom, the Republic of China (Taiwan), Algeria, Korea, Yugoslavia, Rumania, and Morocco. Exports to India and Brazil were smaller. U.S. wheat exports to the European Community (EC), at \$75 million, were nearly double the year-ago level.

Feed grain exports, valued at \$980 million, were 16 percent above July-April 1969/70. Sharply larger shipments to the EC were partly offset by smaller sales to Japan, our top country market for feed grains. A slight decline in corn exports was more than compensated by sharply higher shipments of sorghum grains, barley, and oats. Substantially higher prices for most feed grains loosted the export value, but greater purchases of lower-priced grains have limited the feed grain average unit value increase.

U.S. rice exports fell to \$234 million from \$255 million. The EC accounted for much of the decline as exports of rice to that area dropped to about half the year-earlier level. Lower prices accounted for part of the decrease in value of rice exports.

Led by lofty soybean sales, shipments of oilseeds and their products rose more than one-fourth to a 10-month record of \$1.7 billion. Soybean exports advanced to \$1.06 billion from \$0.87 billion, soybean and cottonseed oil shipments mounted to \$236 million from \$143 million, a gain of 65 percent, and protein meal (mainly soybean) sales bounded to \$331 million from \$269 million a year earlier. Japan and the EC countries continued taking large quantities of U.S. soybeans. High grain prices are encouraging livestock feeders in the EC to feed more and more soybean meal, accounting for the bulk of our increased soybean meal exports.

Through April of 1970/71, U.S. cotton exports had surged to \$403 million; this was nearly one-half above the level at this date last year. Despite limited supplies of the preferred staple lengths, U.S. exports continue strong because of reduced foreign free world production and some gains in mill consumption. Japan, our largest cotton market, continued taking large shipments. Cotton exports to the EC doubled from last year's low level.

^{1/} Beginning July 1970 export values include small amounts of commodities formerly classified as non-agricultural.

^{2/} Preliminary.

Continuing their gains of recent months, July-April tobacco exports of \$484 million were slightly above the value in 1969/70. Beginning in December 1970, bulk smoking tobacco has been included in agricultural exports since this type of tobacco generally is given additional processing by importing countries.

Animal fat and oil (mainly inedible tallow) exports of \$231 million (up 43 percent) led animal and animal product exports to a \$761 million total in July-April. This was a 14-percent gain. Dairy products (mainly nonfat dry milk) were up 13 percent, meats and poultry products were unchanged, and exports of hides and skins were off 10 percent for July-April despite export gains during April for all of these items except meats and products and poultry. Somewhat reduced pork shipments failed to offset larger exports of beef. Large shipments of slaughter cattle to Canada boosted the export total for animals and animal products in July-April.

Export gains for dried fruits and fruit juices about offset the declines for canned fruits, leaving the total virtually unchanged. Exports of vegetables were up about 4 percent, reflecting larger shipments of beans and lentils. Nut exports rose about 9 percent in value. Shipments of other feeds, principally alfalfa meal and corn byproducts, advanced to \$121 million, a gain of nearly one-fifth from a year earlier.

U.S. Agricultural Exports to EC, July-April 1970/71

In the first 10 months of 1970/71, U.S. exports of farm goods to the EC totaled \$1.5 billion (table 12). This was 26 percent above the year-earlier rate. Value gains were about equally divided between variable- and nonvariable-levy commodities. Heavy shipments of wheat and feed grains, particularly in the early part of the year, boosted exports of variable-levy items to \$436 million, about one-half larger than a year ago. Strong competition from Latin America sharply reduced our rice shipments to the EC in July-April. Exports of U.S. farm products not subject to the EC variable levies rose to \$1.06 billion, up one-fifth from a year earlier. Soybeans, soybean oil, and soybean meal accounted for about two-thirds of the increase. Recent gains in tobacco and cotton shipments also boosted U.S. sales to the EC. Lower shipments to Italy reduced U.S. hide exports to the Community. Exports of animal fats, primarily tallow for use in feed and food preparations, were up sharply from a year earlier. Competition from record Australian and South African fruit crops coupled with smaller U.S. canned fruit production to reduce our fruit shipments to the EC.

^{1/} Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

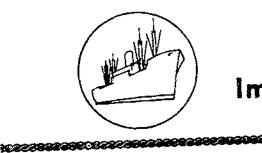

4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

Import Highlights

U.S. AGRICULTURAL IMPORTS, JULY-APRIL 1970/71

U.S. imports of agricultural products in the first 10 months of the current fiscal year totaled \$4.8 billion or 4 percent more than during similar months a year earlier. April agricultural imports amounted to \$554 million, compared with \$515 million in April 1970 and \$500 million in March 1971.

Supplementary or competitive imports accounted for all the gain, rising to \$3.06 billion from \$2.88 billion in July-April 1969/70. Complementary purchases fell slightly to \$1.77 billion.

Import performance was marked by gains for dairy products, meat, fruits, nuts, vegetables, wines, sugar, tobacco, vegetable oils, grains, and feeds, while declines took place for cattle, hides and skins, eggs, cotton, and wool. Overall fruit imports increased 16 percent, primarily because of larger entries of apples, pears, blueberries, oranges, grapes, cantaloupes, apple juice, and canned pineapples. Smaller Mexican supplies accounted for a reduction in frozen strawberry imports.

Vegetable imports expanded at a slower than average rate because fresh tomato purchases from Mexico fell sharply. Cool, damp spring weather in Mexico's principal West Coast producing region retarded tomato plant growth and caused substantial mold damage. Fresh tomato imports from Mexico, which account for nearly all of U.S. purchases, fell 10 percent behind last year's level to 436 million pounds (\$65 million). Most other fresh and processed vegetable imports maintained levels well above a year earlier.

Short domestic grain supplies and high prices attracted additional corn imports this year. Corn purchases from South Africa and Brazil accounted for most of the gain. South Africa shipped nearly 2 million bushels valued at \$4.1 million. Bra.il's shipments amounted to 789,000 bushels (\$1.1 million) against 184,000 bushels (\$298,000) last year. Certified seed corn entries rose to 765,000 bushels (\$5.7 million), compared with 60,000 bushels (\$745,000) a year earlier.

U.S. wine imports gained 15 percent over the same period last year. Table wines accounted for nearly all of the expansion. Foreign shipments of still table wines in July-April moved up to 18.3 million gallons (\$79.3 million) from 14.5 million gallons (\$62 million) in similar months a year earlier. Each of the five principal supplying countries increased their exports to the United States, but Spain and Portugal boosted shipments sharply to \$4.4 million and \$12.8 million, respectively, from \$2.7 million and \$7.8 million a year earlier. West German wine exports to the United States increased about 30 percent to 2.6 million gallons from slightly less than 2.0 million gallons last year. Value rose 48 percent to \$11.7 million.

The import value of complementary agricultural products totaled slightly less in July-April than a year ago. Gains in bananas, coffee, prepared cocoa items, essential oils, and spices were more than offset by declines for cocoa beans, rubber, hard fibers, silk, and wool. A 15-percent volume increase in fresh banana imports was mainly due to larger exports from Panama and Honduras.

Higher coffee values were accounted for by increased prices. Brazil shipped 479 million pounds of crude coffee, 22 percent less than last year, while value amounted to \$243 million or 3 percent more. Most other countries exported less coffee to the United States, while prices accelerated. U.S. crude coffee imports from the Ivory Coast jumped 40 percent to 140 million pounds, and value rose 71 percent to \$53 million.

Roasted or ground coffee purchases nearly doubled to 13 million pounds (\$6.2 million) from just under 7 million pounds (\$2.6 million) a year earlier. Shipments from Mexico accounted for most of the increase. Soluble coffee imports remained near last year's volume at 32.6 million pounds, but price increases pushed value 30 percent higher to \$48 million. Switzerland, the United Kingdom, the Netherlands, West Germany, and France stepped up exports to the United States sharply.

^{1/} Based o. 359 classifications in 1970. 2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Gensus Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Nethod II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hices and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
