### U.S. Agricultural Exports to EC Peak at \$1.8 Billion in Fiscal 1971 (see p. 5).

U.S. exports of farm products to the European Community (EC) totaled a record \$1.77 billion -- 25 percent above a year earlier. The EC import requirement for feeds increased substantially in 1970/71 because overall EC grain production was down about 4 million tons and stocks were down an additional 4 million tons. About one-third of the increased purchases from the United States in 1970/71 came from commodities subject to EC variable levies. These commodities totaled \$480 million, substantially above the \$356 million a year earlier, but considerably below the previous peak of \$718 million in 1965/66. A 41-percent increase for feed grains exported to the EC and a 74-percent increase in wheat exported caused the variable-levy gain. Exports of non-variable-levy commodities went up by one-fifth to \$1.29 billion, with nearly all of the increase in shipments of soybeans and soybean meal. Exports of tobacco, variety meats, nuts, and hops also showed substantial gains, and cotton exports of \$35 million were nearly double the level of 1969/70. Exports of hides and skins and fruits declined.

\* \* \* \* \*

U.S. Imports of Fruits and Vegetables Under Quarantine (see p. 24). Inspections of fresh or frozen fruits and vegetables under the Plant Quarantine Act totaled 6.4 billion pounds during 1970/71, rising from 5.7 billion pounds a year earlier. These entries originated in over 100 different countries. Tables included in this report show 140 commodities by country of origin and port of entry and inspections for the U.S. Virgin Islands and Guam by commodity.

\* \* \* \* \*

"Terms of Trade" Continue Sharp Rise in Spring (see p. 45). The export price index was 10 percent above a year earlier in April-June but the import price index was down 5 percent; terms of trade were thus up 15 percent. Almost all quarterly export prices were up and 9 of the 12 import prices were down.

\* \* \* \* \*

International Price Highlights (see p. 49). During July, wheat and feed grain prices declined, while soybean, rice, and cotton prices advanced. The price of U.S. corn, f.o.b. Gulf Ports, was down 7 percent

1/ Government-financed programs include exports under Public Law 480 programs (sales for foreign currency, long-term dollar and convertible local currency credit sales, barter for strategic materials, and donations) and under AID programs. 2/ Commercial sales (exports outside Government-financed programs) include in addition to unassisted commercial transactions, shipments of some commodities with governmental assistance in the form of (1) barter shipments for overseas procurement for U.S. agencies, which benefit the U.S. balance of payments and rely primarily upon authority other than P.L. 480; (2) extension of credit and credit guarantees for relatively short periods; (3) sales of Government-owned commodities at less than domestic market prices; and (4) export payments in cash or in kind. 3/ Commodity group totals for feed grains, oilseeds and products, and animals and products include for years noted, in addition to the value reported by the Bureau of the Census, the estimated value of certain commodities donated through voluntary relief agencies, which are included by Census in "Other food for relief and charity." 4/ Preliminary data. 5/ Less than \$500,000. 6/ Commodities may not add to total due to rounding.

## SPECIAL in this issue

U.S. AGRICULTURAL EXPORTS TO EC PEAK  
AT \$1.8 BILLION IN FISCAL 1971

by  
Dawain H. Rahe <sup>1/</sup>

U.S. agricultural exports to the [European Community] (EC) advanced sharply to a record \$1.77 billion -- 25 percent above the previous year (see fig. 1). The gain in 1970/71 marked further improvement of the small gain in 1969/70 from the low export total of \$1.30 billion in 1968/69.

U.S. exports of farm products to the EC have varied considerably since the mid-1950's. In 1957, the year of the Rome treaty, U.S. agricultural exports to the EC totaled \$1.25 billion. Because of very favorable weather in Europe, the total dropped off sharply to \$791 million in 1958/59. During fiscal years 1960-62, agricultural exports averaged slightly over \$1.1 billion, but fell slightly after the beginning of the Common Agricultural Policy (CAP) in August 1962. Exports showed a general rise during the transitional period of the CAP and reached the previous record of \$1.59 billion in 1965/66, but fell sharply after the 1967 unification of prices, until 1969/70.

The decline was primarily concentrated in grains. EC grain production jumped 18 percent after the unification of grain prices, with higher yields resulting from larger inputs of fertilizers and improved seeds. But weather conditions were ideal for grain production during 1967-69. The precipitous decline in U.S. exports in 1968/69 also partly reflected the adverse effect of a longshoremen's strike at Atlantic and Gulf ports in January-March 1969.

The major instrument of CAP used to maintain high internal agricultural prices is the variable-levy system. The decline in our agricultural exports to the EC prior to 1969/70 stemmed from the sharp drop in grain and other exports subject to the CAP's variable-levy system. Basically, the variable levy is the difference between the high EC target prices and the lower world prices of the principal commodities that the EC both produces and imports. The target price is normally about 8-10 percent above the intervention (support) price. The difference between target and intervention prices represents the preference given to EC products. High intervention prices coupled with the variable-levy system have stimulated the production of wheat, feed grains, dairy products, poultry, and sugar.

The growth rate for exports of nonvariable-levy commodities to the EC between 1954/55 and 1970/71 was 6 percent annually, twice that of variable-levy commodities. In fact, from 1965/66 to 1970/71, variable-levy items actually showed an annual drop of nearly 8 percent. The gain in the nonvariable items offset some of the drop in the variable items, but the loss in variable-levy exports to the EC was still very significant to

<sup>1/</sup> Assistant Chief, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

Figure 1

total U.S. agricultural exports. If the amount of subsidized grain shipments by EC to third countries is taken into consideration, the loss to American agriculture is further magnified.

The pattern of total U.S. agricultural exports to the EC has been closely associated with the movement of total exports to all countries (see fig. 2). From 1954/55 to 1970/71, exports to the Community grew an average of 5 percent a year, while the growth rate in total exports to all countries was about 6 percent. However, the annual growth rate in exports to Japan was nearly 10 percent.

Tables 2 through 7 show U.S. agricultural exports, not adjusted for transshipments, as reported by the U.S. Bureau of the Census.

#### U.S. Exports of Variable-Levy Commodities

U.S. exports of variable-levy items averaged about \$340 million for the 3 years prior to the inception of the CAP in 1962. Shipments of the variable-levy commodities declined the first year after the CAP went into effect, gained substantially to the record \$718 million in 1965/66, and then declined sharply in 1966/67, following unification of CAP prices. A low of \$356 million was reached by 1969/70. In 1970/71, however, U.S. exports of variable-levy commodities rose to \$480 million because of gains in wheat and feed grains (see fig. 3).

Feed grains.--Except for the gain in 1970/71, U.S. exports of feed grains to the EC have deteriorated rapidly since the unification of prices in 1967. Prior to unification, U.S. feed grain exports to EC showed a rapid growth to \$537 million (10 million metric tons). From the record in 1965/66, feed grain exports fell steadily to \$247 million (4.7 million tons) in 1969/70.

The EC increased self-sufficiency in production of feed grains from about 80 percent in 1955/56 to 85 percent in 1970. Meanwhile, domestic utilization of feed grains, primarily for the expanding EC livestock industry, increased 53 percent (15.8 million tons). After 1966, the United States did not share in this expanding use of feed grains.

The gain in U.S. exports of feed grains in 1970/71 stemmed from sharply reduced production and stocks in the EC -- overall grain supplies were down by over 7 million tons. Production, primarily wheat, dropped over 3 million tons, and beginning stocks were down by another 4 million. The stocks reduction stemmed from heavy subsidization of wheat for export and for feeding in 1969/70. In addition, production of pork is expected to show a gain of over 7 percent and poultry 3 percent, in 1971.

High feed grain prices in the Community and the variable levies on these products from third countries have encouraged EC feed manufacturers to substitute for feed grains cheaper products not subject to the variable levies. The most important substitutes include beet pulp, manioc, gluten feed, corn byproducts, and protein meal. The Dutch have pioneered the use of these low-priced products. Grain, which accounted for about two-thirds of the Dutch total mixed feed production in 1958-62, declined to 43 percent by 1967/68 with the unification of grain prices under the CAP. By 1969/70, grain represented less than a third of ingredients in the total mixed feed output. U.S. corn byproduct shipments to EC totaled \$34 million in 1970/71, about the same as in the previous year, but substantially above the \$2 million worth exported in 1961/62. U.S. exports of inedible tallow and beet pulp also have shown rapid gains during this period.

Wheat.--U.S. exports of wheat to the EC have fluctuated widely from year to year, ranging from \$188 million in 1956/57 to only \$35 million in 1964/65. They rebounded to \$102 million in 1965/66, but declined steadily to \$47 million 4 years later. In 1970/71, however, exports totaled \$82 million (1.3 million tons) because of the small EC wheat harvest. Between 1961 and 1969, EC wheat production increased from 23.1 million tons to 31.5 million tons. Intra-EC trade increased sharply, while imports from third countries generally fell. In this period, the EC changed from net importer of 3.5 million tons in 1961/62 to a net exporter of 3.8 million tons in 1969/70. Although the EC was a net importer of 400,000 tons of wheat in 1970/71, if this year's prospective record crop has materialized, EC will be a net exporter of wheat again in 1971/72.

Figure 2

# U.S. AGRICULTURAL EXPORTS TO THE EC, BY PRINCIPAL COMMODITIES

Figure 3

-8-

YEAR ENDING JUNE 30. <sup>o</sup> EXCLUDES CANNED POULTRY. COMMODITIES SHOWN MADE UP OVER 3/4 OF TOTAL RECENTLY. VERTICAL SCALE IS LOGARITHMIC.

The EC has emphasized the improvement of the protein level of soft wheat, but continues to import large quantities of U.S. high-protein wheat for blending to obtain desirable baking qualities. Large quantities of durum wheat are exported to France and Italy for the manufacture of pasta products. But the high variable levy, which averaged nearly \$50 per ton in 1970/71, has encouraged EC millers to use a larger proportion of homegrown wheat.

Rice.—U.S. exports of rice in 1970/71 were down sharply from \$32 million worth in 1969/70. Even though U.S. rice supplies were plentiful, Brazil, Uruguay, and Argentina supplied a somewhat larger share of the EC rice market because of their very competitive export prices. West Germany, the largest market for U.S. rice in the EC, took around a third of the total, followed by the Netherlands, which bought \$6 million worth in 1970/71. Prior to last year, U.S. exports of long-grain rice had shown moderate gains. Northern Europeans prefer U.S. long-grain rice. Both France and Italy produce short-grain rice, most of which is consumed locally or exported to third countries.

Poultry.—U.S. exports of poultry meat to the EC have shown substantial declines since the inception of the variable levies in 1962. From \$65 million in 1961/62, our shipments of poultry and eggs dropped steadily to less than \$12 million in 1970/71. The total for 1961/62 was somewhat inflated by large shipments near the end of the year to avoid the variable levies which started on August 1, 1962. Prior to the variable-levy system, U.S. exports had gained rapidly from \$436,000 in 1955/56, and the United States was competitive with the EC, primarily West Germany, because import duties and the U.S. cost of production were both relatively low. Exports to the EC advanced rapidly with substantial gains in consumer income and favorable prices of poultry meats in relation to red meats. The stimulation of high prices and the protection of the variable levies have trebled EC poultry production since the beginning of the CAP, and the Community is now self-sufficient in poultry meat, except turkeys. The variable levy is relatively low on dressed turkeys, and the United States has continued to export sizable quantities to the EC, mainly turkey parts. Total import charges on parts, however, are now at such a high level that U.S. exports are being reduced.

Exports of pork, beef, lard, and dairy products have generally shown a downward trend since the inception of the variable levies in 1962. Higher import prices, because of the effective levies, have shifted more of the consumption, except for beef, to internal EC production. The EC has imported more beef from other third countries.

#### Exports of Nonvariable-Levy Commodities

In contrast to the overall downward movement of variable-levy commodities since 1965/66, U.S. exports of nonvariable-levy commodities have generally shown an uptrend since the inception of the CAP, increasing about 5 percent a year since 1955/56. But the composition of the nonvariable-levy grouping has shifted significantly in this period. For example, after reaching a high of \$402 million in 1956/57, cotton exports trended downward to only \$18 million in 1969/70. The decline in cotton was more than offset by the rapid advance in exports of soybeans and products (see fig. 3). Exports of tobacco, variety meats, and nuts also have gained substantially.

Oilseeds and Products.—Exports of oilseeds and products advanced to a record \$760 million in 1970/71 from \$595 million a year earlier. The rapid growth in exports of soybeans and products has been the brightest part of the export picture, with U.S. exports of these products to the EC expanding at an annual rate of about 10 percent since 1955/56. Higher per capita income during the 1960's lifted the demand for meat and other livestock products. To meet this increased demand, EC producers acquired improved production methods, including the feeding of high-protein rations. High grain prices after 1962 stimulated the substitution of protein meal for relatively expensive feed grains, and alternate protein sources, mainly fish meal and peanut meal, were in short supply. The EC now imports nearly all protein supplements for the mixed feed industry. The United States supplies about one-half of total imports.

The EC is the top foreign market for U.S. protein meal, primarily soybean meal. Shipments rose to a record \$255 million (2.9 million tons) in 1970/71, from \$205 million (2.3 million tons) a year earlier, and \$32 million (0.5 million tons) in 1961/62. U.S. exports of protein meal continued to advance despite the substantial expansion of oilseed crushing capacity in the EC, as the demand for meal outpaced the production of meal from imported oilseeds. Since its meal requirement is considerably larger than that for vegetable oils, the EC normally exports a large part of the oil extracted from U.S. soybeans.

U.S. exports of vegetable oils to the EC increased to \$22 million in 1970/71 from only \$18 million in the previous year. A large part of this value increase stemmed from higher prices. About half of the vegetable oil exports were cottonseed oil, preferred by EC customers. Most of the demand for vegetable oil is met by the oil extracted from imported U.S. soybeans. Cottonseed oil exports totaled \$42 million in 1956/57, but have declined since because of smaller U.S. production and higher prices.

Tobacco--The value of U.S. tobacco exports including cut tobacco in bulk increased by one-fifth to \$171 million in 1970/71 -- a new high in shipments to the EC. The increase was accounted for by larger exports to West Germany, the Netherlands, and Italy. West Germany, the largest purchaser, took \$101 million in 1970/71, compared with \$80 million in 1969/70. The Netherlands took \$27 million worth -- \$6 million more than a year earlier. Exports to Italy advanced to \$19 million from \$17 million. These gains reflected the reduced availabilities of top quality tobaccos from other areas, and the European preference for the taste and aroma of U.S. tobaccos. In addition, United Nations economic sanctions against Rhodesia caused the EC to use more U.S. tobacco in their products. The future of EC as a major growth market for U.S. tobacco is uncertain. The expanded tobacco program of the CAP in 1970 raised the support prices and provided for buyer's premium -- a discount for the purchase of domestically grown leaf.

Cotton--U.S. cotton exports advanced in 1970/71 for the first time in 4 years. They totaled \$35 million, nearly double the previous year. The downtrend in U.S. production, increased use of manmade fiber in the EC, and a general uptrend in cotton production in the foreign free world all contributed to the decline in U.S. exports in the past decade. In 1970/71, U.S. exports benefited from adequate U.S. supplies and competitive prices coupled with sharp production decreases in a number of major foreign countries.

Other--U.S. exports of fruits declined to \$65 million in 1970/71 from \$70 million in 1969/70 because of smaller exports of fresh citrus and canned fruits. But exports of dried fruits and fruit juices gained slightly. U.S. fruit exports to EC have trended up slowly since the mid-1950's. Australia and South Africa have been very competitive. Last year, reduced U.S. production of canned peaches and fruit cocktail along with higher U.S. prices discouraged U.S. exports. EC preference to citrus producers in the Mediterranean area also affected U.S. exports.

The EC has been a small but expanding market for U.S. vegetables. Exports totaled \$20 million in 1970/71, about the same as a year earlier, and have ranged from \$7 million in 1955/56 to \$30 million in 1962/63. In recent years, about half of the vegetable exports have been dry peas and beans. Demand continues strong in the EC for these foods because most are used in the food processing industry. Canned vegetables have generally shown a downward trend, reflecting increased competition from developing countries.

Exports of nuts and preparations totaled \$21 million in 1970/71, up from \$19 million in 1969/70. Expanded U.S. production, primarily almonds, and small European production contributed to the gains in nut exports in recent years.

Exports of hides and skins fell sharply to \$29 million from \$41 million a year earlier. Increased stocks and lower prices in Europe and uncertainty in exports of leather goods pushed U.S. exports down in the past year. This group includes furskins, which have declined in recent years with expansion in European production.

U.S. exports of inedible tallow increased to \$37 million in 1970/71 from only \$21 million in 1969/70. This gain is generally associated with the rapid rise in world demand for fats and oils, but higher prices accounted for much of the value advance in 1970/71. Some tallow shipped to the EC is transshipped to other countries. However, the EC is an important outlet for U.S. tallow for use in soap and livestock feeds. Exports of corn byproducts, chiefly corn gluten feed, have shown rapid gains since 1965. Shipments in 1970/71 of \$34 million were about the same as a year earlier -- but sharply above the levels exported in the late 1950's. Corn gluten feed, a byproduct of the starch industry, is not subject to EC variable levies

Table 4.--U.S. agricultural exports to Belgium-Luxembourg: Value by commodity, fiscal years 1958-71

4/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

5/ Variable levy on sugar-added content.

6/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

1/ Preliminary.  
 2/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.  
 3/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

<sup>1/</sup> Preliminary.

<sup>2/</sup> Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964.

<sup>3/</sup> Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use.

## SPECIAL in this issue

---

### U.S. IMPORTS OF FRUITS AND VEGETABLES UNDER QUARANTINE

Inspections of fruits and vegetables under the Plant Quarantine Act provisions showed a substantial gain in the fiscal year ended June 30, 1971. The volume entering U.S. ports rose 12 percent to nearly 6.4 billion pounds from 5.7 billion pounds a year earlier. Fruit and vegetable imports originated in more than 100 countries; Mexico was the principal source for most items.

The Plant Quarantine Act of 1912, as amended, requires that U.S. imports of fresh and frozen fruits, vegetables, and certain edible nuts be inspected for harmful pests and diseases. Entries from all countries of origin except Canada are inspected. This Act is administered by the Agricultural Quarantine Inspection Division, Agricultural Research Service, USDA, through inspectors at 76 ports of entry. Tables 8 and 9 contain summaries of monthly reports based on notices of arrival at the initial entry port. Table 8 indicates U.S. and Puerto Rican inspections by commodity and country of origin; table 9 shows inspections by commodity and port of entry. Inspections by commodity for the U.S. Virgin Islands, Guam, and entries for subsequent exportation (transshipment) are shown at the end of table 8.

Reports by the Agricultural Quarantine Inspection Division provide detailed commodity information not readily available from U.S. Department of Commerce import data. However, quarantine inspection statistics differ from U.S. Department of Commerce data in several respects. Quarantine inspections do not include imports from Canada, but they do reflect low-valued entries of less than \$250 which are excluded from Commerce Department reports. Also, quarantine statistics may differ from Commerce Department data in a particular month due to reporting times and revisions.

Inspections of fresh fruit, including melons, totaled 5 billion pounds in 1970/71, 9 percent larger than last year (See Foreign Agricultural Trade of the United States, November 1970, pp. 42-62). Fresh bananas accounted for 4.2 billion pounds compared with 3.8 billion pounds in 1969/70. Other fresh fruit entries showing increases over the previous year include apples, avocados, breadfruit, gooseberries, genips, grapes, grapefruit, mangoes, oranges, papayas, pears, pineapples, plantains, strawberries, tangerines, ugli, cantaloupes, and watermelon. Some fresh fruit entries were below year-earlier levels — lemons, limes, certain melons, nectarines, and raspberries. Peaches and plums remained about the same. Frozen fruit entries amounted to 90 million pounds compared with 153 million pounds in 1969/70; frozen strawberries, which accounted for the bulk of frozen fruits, fell to 86 million pounds from 111 million pounds last year.

Fresh vegetable entries grossed more than 1.2 billion pounds in 1970/71, about the same volume as a year ago. While most vegetable entries were above-earlier levels, reductions for tomatoes, and some other items (cabbage, cassava, cauliflower, endive, garlic, onions, radishes, yams, and turnips) offset that expansion. Poor crops in northwest Mexico contributed to the decline in imports from that area. Among the

increases in fresh vegetables were beets, broccoli, brussels sprouts, carrots, chayotes, corn, dasheens, eggplants, okra, parsley, peppers, pigeon peas, pumpkins, spinach, and squash. Frozen vegetable inspections in 1970/71 amounted to 15 million pounds compared with 12 million pounds last year. Larger entries of asparagus, brussel sprouts, and peapods accounted for the increase.

Sharp increases were evident in the amount of fruits and vegetables inspected at U.S. Virgin Islands' ports during 1970/71. The decline in farming activity in those islands has been accompanied by an expansion in tourist arrivals, foreign workers, and larger imports from other Caribbean suppliers. St. Croix inspections were nearly 200 percent higher than a year earlier at 3.8 million pounds. Most fruits and vegetables were more than double their 1969/70 volumes.

"TERMS OF TRADE" OF U.S. AGRICULTURE CONTINUE SHARP RISE IN SPRING . .

by  
Hans G. Hirsch 1/

Prices of the 13 leading U.S. agricultural export commodities averaged 10 percent higher during the spring quarter, April-June 1971, than a year earlier (table 10). At the same time, prices of 12 leading import commodities were down 5 percent on the average. Thus, the terms of trade (export prices divided by import prices) were up a record 15.5 percent. This means, leading export products bought 15.5 percent more leading import products this April-June than a year earlier.

Export prices rose about 10 percent over a year earlier for the third consecutive quarter. During July-September 1970, export prices were up to a lesser extent, so that the increase for fiscal year 1971 averaged 8.8 percent above 1970. The import price index, on the other hand, declined steadily from 110 during July-September 1970, to 105, 99, and 95 in subsequent quarters and averaged 102.2 for fiscal year 1971. The terms of trade for fiscal year 1971 were thus 6.5 percent above a year earlier.

The prices of most of the leading export products increased for the quarter and for the year ended in June. Soybeans and corn, which together amounted to more than one-fourth of all agricultural exports, were both up 14 percent in price for the fiscal year. April-June prices of these commodities were also about one-seventh above a year earlier. Soybean prices had risen steadily for 6 quarters. Fiscal-year and spring-quarter prices were near record levels. The quantity exported was 4 percent more than the large amount exported in 1969/70, and total soybean utilization exceeded 1970 production and led to a minimal carryover at the end of August.

The soybean meal price was up 7 percent during the fiscal year and 8 percent in spring. The soybean oil price was up 15 percent for the fiscal year, rising during most of the year, but dropping from 15.1 cents a pound in January-March to 13.3 cents in the spring, the same price as a year earlier.

Like the soybean price, the corn export price had also risen quarter after quarter since the winter of 1970; but it declined 5 percent to \$1.57 a bushel in the spring. Unlike soybeans, fiscal-year corn exports were down 18 percent, a reflection of the short, corn-blight-reduced 1970 crop. In importing countries, the shortage was offset in part by the record Argentine corn crop. Exports from that crop began in April. Moreover, U.S. exports of sorghum grain expanded greatly. For the fiscal year, the price of that feed grain was up 11 percent, but for the spring quarter it was 26 percent above a year earlier,

---

<sup>1/</sup> Unit values were computed from the value and quantity figures published in Foreign Agricultural Trade of the United States. Cotton poundages were obtained from U.S. Bureau of the Census Reports, Supplement to EM 522. Unit values of hides, cattle, whole, from U.S. Bureau of the Census printout.

<sup>2/</sup> The index numbers are of "Fisher's Ideal" type.

and slightly above that of corn. As of mid-August, bumper corn and grain sorghum crops were forecast, each 30 percent above last year and both together expected to yield 6-1/4 billion bushels (159 million metric tons) compared with last year's 4.8 billion bushels (122 million tons). Europe is also harvesting large crops of wheat and feed grains. The plentiful supply outlook is reflected in sharply lower cash and still lower futures prices for corn. In mid-August, No. 2 yellow corn was quoted \$1.32 a bushel in Chicago compared with \$1.54 a year earlier, and the December futures price for corn was \$1.22. The season's high for that contract had been \$1.63.

The wheat price averaged \$1.65 a bushel in fiscal year 1971, 5.3 percent above 1970 and within 1.3 percent of the 1969 price. It rose consistently since the winter of 1970, and in the spring of 1971, amounted to \$1.70, 9 percent above a year earlier. Prices of wheat flour rose less than those of wheat.

Increases in the price of rice were somewhat paradoxical against the background of a world rice surplus and sharply lower exports. The fiscal-year rice price was up 2 percent and the price of "milled, long-grain rice less than 75 percent broken kernels", the most important kind of rice, making up more than one-third of all milled rice exports by value, rose 3.4 percent. The spring-quarter rice price was a record 9.6 cents a pound, 14 percent above a year earlier. These upward movements contrast sharply with the downward movement of the export price of Thai rice, averaging 6.03 cents a pound in fiscal year 1971, 20 percent less than a year earlier, and 5.48 cents during April-June, 14 percent less than a year earlier. The possibility seems to exist that U.S. rice exporters erroneously include export assistance payments in their export valuation.

The cotton export price was at a record level -- 27 cents a pound for the fiscal year and 28 cents during spring, up 9 and 10 percent, respectively, from a year earlier. The price of flue-cured tobacco continued its long-time climb, rising 3 percent above a year earlier to \$1.09 a pound in the fiscal year and to \$1.05 during April-June, but the quarterly price was seasonally below the winter quarter price. However, the 1-cent-a-pound seasonal decline this year was the smallest in 6 years. The inedible tallow price was also a record, at 9 cents a pound for the year and the quarter. Nonfat dry milk sold at record prices, 28 cents a pound in April-June, one-fifth above a year earlier, and 26 cents during the year, up one-seventh.

Only the unit values of whole cattle hides were down -- 10.5 percent for the year and, at \$7.81 a hide, 12.7 percent for the quarter.

The decline in quarterly import prices was almost as prevalent as the rise in export prices. The quarterly coffee price declined 9 percent to 41 cents a pound. The fiscal-year price, however, was still largely determined by the higher prices prevailing through the winter quarter. It averaged 44 cents, up 15 percent from fiscal-year 1970. The quarterly cocoa bean price, which had rallied in the fall, dropped to the lowest level since the summer of 1968. At 27 cents a pound, cocoa beans sold 12 percent below a year earlier, and the fiscal-year price of 28 cents was a fifth below the record price of 1970. The rubber price declined by one-fourth to a depressed level -- 16 cents a pound for the fiscal year and 15 cents for the spring quarter. The banana price, ordinarily quite stable, dropped to its lowest level in many years, down 6 percent for the year and 10 percent for the quarter.

The unit value of tobacco imports resumed its long-term slide after a rally to 66 cents a pound during the winter quarter. Tobacco was 60 cents a pound, down 6 percent from a year earlier for the quarter and 4 percent for the year. The price of clothing wool was 48 cents a pound, down 6 percent on a quarterly basis and down 15 percent for the fiscal year, but continuing a modest recovery from the fall's record-low level.

Also down were the unit values of wine, 8 percent for the quarter and 3 percent for the fiscal year. However, the spring quarter unit value was 3 percent above the winter

quarter price. The quarterly ham price was down 7 percent to 83 cents a pound, but the fiscal-year price declined only fractionally. Similarly, tomato prices were down only fractionally.

Only cattle displayed decisive price strength -- up 15 percent for the year and 17 percent during spring. Instead of the considerable winter-to-spring decline shown in 1969 and 1970, the cattle price was about \$1 a head or 1 percent higher in the spring of 1971 than in winter.

More moderate price increases of 3-4 percent were shown by sugar as well as beef and veal. The 0.25 cent-a-pound, 4-percent rise, of the sugar price from winter to spring marked a change from the virtual stability during 4 preceding quarters, when quarterly prices ranged between 99.8 and 100.2 percent of the 12-month average. The price of foreign sugar destined for export to the United States rose to a level only 1.20 cents less than the domestic or duty-paid New York raw sugar price. That difference was 1.41 cents during the first quarter of 1971, but only 1.14 cents in the second quarter of 1970. The fiscal-year price of sugar destined for the United States was 7.04 cents and compared with 8.25 cents at New York.

The unit value of beef and veal continued its long-term steady rise, averaging 51 cents a pound for the year and 54 cents in spring.

The quantity indexes which are obtained as byproducts of the price indexes present a mixed picture. The quantity of fiscal-year exports was 106.7 percent of a year earlier, that of imports 99.3 percent. The quantity of spring quarter exports was 95.2 percent of a year earlier, that of imports 106.7 percent.

## International Price Highlights

### SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

The most outstanding price development of July was the sharp decline of feed grain prices. The price level had remained relatively high because of great uncertainty over the size of the U.S. corn crop, which constitutes 40-50 percent of total world corn production. The uncertainty, however, diminished in early July with reports of increased acreage estimates, which were followed by blight damage reports showing increased infection but few instances of severe spreading. Finally, the crop report as of August 1 forecast U.S. corn production to be 5.3 billion bushels (135.8 million metric tons). This forecast is a 30-percent increase over last year's final harvest figure, and 12 percent higher than the previous record high of 4.7 billion bushels in 1967. The export price of U.S. corn reacted strongly, as U.S. No. 2 yellow f.o.b. Gulf declined 7 percent to 61.10 a metric ton. At this level, however, it was 3 percent higher than a year earlier. U.S. No 3 yellow corn, c.i.f. U.K., was quoted at \$69.77, down 5 percent from June, and slightly below the level of a year ago. This was the lowest c.i.f. price for U.S. corn in 13 months, 5 percent below the average price of \$73.65 for July-June 1970/71. Argentine corn, c.i.f. U.K., was quoted at \$74.41 a metric ton, down slightly from June and unchanged from a year ago. Sorghum grain, c.i.f. U.K., was quoted down slightly at \$64.72 a metric ton, but this level was still 8 percent higher than a year ago. This decrease from June to July is due partly to a forecast 30-percent increase in U.S. sorghum production, which would put the crop at 908 million bushels (23 million metric tons), and also due to the forecast increased production of U.S. corn, for which sorghum was in demand last year as a substitute in feed mixtures.

Wheat prices also declined during July, with the exception of Canadian No. 1 northern wheat, in store Fort William-Port Arthur, which was quoted up 2 percent to \$65.68 a metric ton. This price level was 7 percent higher than a year ago. On the other hand, Canadian Northern Manitoba No. 2, c.i.f. U.K., declined slightly to \$76.47, and at this level was 3 percent below a year earlier. The price of Australian wheat also displayed weakness during July, declining 2 percent to \$67.44 a metric ton. This level was 2 percent above a year ago. The current price decline may be due to a currently plentiful supply indicated by sharp increases in Australian wheat exports. For the 6 months ended in May 1971, Australian wheat exports totaled 4.52 million metric tons, a 44-percent increase over 3.14 million exported during the same period a year earlier. More significantly, however, Australian wheat exports to the U.K. more than doubled during the same time period to 1.02 million metric tons. In addition, a recent report estimates the acreage of the Australian wheat crop to be harvested next December and January at 18 million acres, 14 percent higher than last year, which at average yields would put production at 8.7 million metric tons. Thus, although carryover stocks of wheat in Australia through this coming November are an estimated 17 percent below last year, a plentiful supply in the U.K., indicated by increased exports from Australia, may cause continued price weakness of this product in the U.K.

All U.S. wheat prices declined during July, perhaps reflecting the forecast 16-percent increase in wheat production to 1.6 billion bushels. U.S. wheat exports

<sup>1/</sup> Buyer's price equals seller's price minus export payment, except for rounding errors.

<sup>2/</sup> U.S./Argentine sorghums transshipped from Continental European ports.

Source: Monthly Bulletin of Agricultural Economics and Statistics, FAO; The Public Ledger, London; Grain Market News, USDA, C&MS; Bangkok Board of Trade; and Cotton and General Economic Review, Liverpool.

have also risen, reaching a level for the year ended June 30, 1971, 27 percent higher than the same period a year ago. The buyer's price of U.S. No. 2 hard winter wheat, f.o.b. Gulf ports, was quoted at \$61.51, a slight decline from a month earlier, but 16 percent higher than a year earlier. The seller's price of this wheat declined 3 percent to \$62.46 a metric ton, but at this level was 11 percent higher than a year ago. U.S. No. 2 hard winter wheat, c.i.f. U.K., was quoted at \$75.00, a level that was slightly below June, but 7 percent higher than a year earlier.

The price of U.S. No. 2 soybeans, c.i.f. U.K., unlike wheat and feed grains, continued to display strength -- quoted 4 percent above June and 6 percent above a year ago at \$135.35 a metric ton. This rise, the fourth consecutive monthly increase, was due largely to strong world demand despite soybean production forecasts of a record 33.6 million metric tons. This estimate puts soybean production 9 percent higher than the record output of last year.

American cotton, Memphis territory, strict middling 1-1/16 inches, c.i.f. Liverpool, was quoted at 34.6 cents per pound, a 3-percent rise over last month and a 15-percent rise over a year ago. Although tight supplies of cotton remain from diminished world production last year, the U.S. crop will be an estimated 8 percent larger than last year.

The price of Thai rice, f.o.b. Bangkok, was quoted at \$129.00 a metric ton, a slight increase from last month, but 10 percent below a year ago.

<sup>1/</sup> Based on 359 classifications in 1971. <sup>2/</sup> The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 variant of the seasonal Method II seasonal adjustment program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers. 2/ Based on 430 classifications in 1971. 3/ The seasonal adjustment series has been revised to incorporate the Bureau of Census Method X-11. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the adjustment procedures, see U.S. Department of Commerce, Bureau of Census, The X-11 variant of the Seasonal Method II seasonal adjustments program. Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965

## Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

**EXPORTS** The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

**IMPORTS** Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
