FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

Transshipments of U.S. Farm Products (see p. 7). U.S. agricultural exports to Canada, the Netherlands, and Belgium-Luxembourg are overstated by several million dollars annually because of transshipments. Between 20 and 30 percent of U.S. farm-product shipments to these countries move intransit to other countries. Our farm exports are similarly understated for several countries which ultimately receive transshipped products. Adjustments in agricultural exports by country are shown in a series of statistical tables.

* * * * *

More EC Farm Products Purchased Since 1960 (see p. 39). U.S. imports of agricultural products from the European Community (EC) totaled \$423 million in 1971, slightly less than a year earlier. Since the signing of the Rome Treaty in 1957, U.S. agricultural imports from the EC have increased twofold, maintaining a 10-percent annual uptrend.

In contrast with our agricultural exports to the EC, of primarily raw materials, most of the farm products purchased from the EC are high-value processed products, principally wines, canned meats, cheeses, and malt liquors. Other important items include flower bulbs, olive oil, canned tomato products, bakery products, prepared chocolate, and coffee products.

* * * * *

U.S. Farm Imports Up 30 Percent in 5 Years; Larger Share From Europe (see p. 43). Rapid gains in U.S. agricultural imports took place in 1966-71; over half of the increase was due to higher prices. The sharpest import rise was recorded between 1969 and 1970, when value jumped 16 percent. Value gained only 1 percent for 1971. Among the largest sources, South America's share declined over the last 5 years to 27 percent, while European suppliers increased. Statistical tables in this report include imports from all countries during 1966-71 and the main commodity groups from the 50 largest suppliers.

* * * * *

Selected Price Series of International Significance (see p. 62). The Liverpool quotation for Memphis Territory cotton shifted from the 1971 to the 1972 crop as of April with a resultant price drop of 10 percent to 37.56 cents a pound -- still 16 percent

above a year ago. The price of Argentine corn, c.i.f. U.K., rose 14 percent in April reflecting the harvest of a very short 6-million-ton crop. The U.S. corn price, c.i.f. U.K. and also f.o.b. Gulf ports, rose more moderately. Most wheat prices were slightly up; but the price of U.S. No. 2 Hard Winter wheat, c.i.f. U.K., dropped 3 percent from March, and it was 20 percent below a year ago. The price of U.S. No. 2 soybeans, c.i.f. U.K., was up 3 percent to an alltime high, while the export price of Thai rice dropped slightly below its 1971 average.

* * * * *

July-April U.S. Agricultural Exports Up 1 Percent (see p. 66). July-April U.S. agricultural exports totaled \$6.60 billion, 1 percent above the same period in 1970/71. Value increases in cotton, tobacco, soybeans, soybean meal, dairy products, cattle hides, fruits, nuts, and vegetables were nearly offset by reduced shipments of grains, flaxseed, alfalfa meal, and lard. Higher prices accounted for all of the July-April increase; total volume dropped slightly.

U.S. agricultural exports to the EC advanced 5 percent. Nonvariable-levy commodities, especially soybeans, cotton, cottonseed oil, soybean meal, cattle hides, and hops, accounted for the sharp advance. Shipments of commodities subject to variable levies declined 13 percent. Wheat, rice, grain sorghum, and turkey shipments were down from a year earlier.

* * * * *

U.S. Farm Imports 4 Percent Higher Through April (see p. 72). Larger imports of supplementary agricultural items raised total farm-product purchases to \$5 billion in July-April 1971/72. Supplementary imports advanced 7 percent to \$3.24 billion, while complementary imports declined 1 percent to \$1.76 billion. At \$486 million, April imports were \$68 million less than in April 1971. Higher supplementary commodity values in July-April included dutiable cattle, casein, most meat, cotton, fruit juices, cashew nuts, palm oil, sugar, vegetables, wines, and tobacco. Price increases accounted for the gain in dutiable cattle, beef, and casein. Among complementary imports, green coffee, cocoa, and bananas showed value declines.

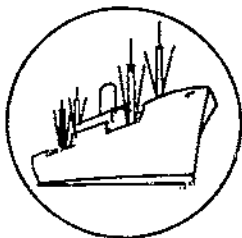

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International

Continued on back cover--

SPECIAL in this issue

TRANSSHIPMENTS OF U.S. FARM PRODUCTS

U.S. farm commodities shipped through intermediate countries, primarily Canada, the Netherlands, and Belgium, affect the pattern of U.S. exports by destination. Exports to intermediate countries reported in U.S. foreign trade publications may be overstated by several million dollars annually, while shipments to about 25 other countries are understated by the amount of transshipments.

Bulk commodities, including grains, oilseeds, and protein meals, account for most of the agricultural transshipments through intermediate countries. Final destinations for intransit shipments are frequently not known to exporters at the time a shipment leaves port. Subsequent reports on destination countries by grain inspectors and foreign governments provide information to adjust U.S. export statistics for transshipments.

Growth in transshipments followed increased foreign demand for agricultural products, especially raw materials for animal feed. Larger bulk carriers and expansion in port handling facilities at St. Lawrence river and European locations added to transit capacity. Modern storage elevators were constructed in the 1960's at Baie Comeau and Port Cartier, Canada, and also in Rotterdam and Amsterdam to accommodate the new bulk ocean vessels.

Adjusted U.S. agricultural exports to the principal countries affected by transshipments are shown in table 1. Comparisons between U.S. exports by commodity and intermediate countries' imports indicate the volume transshipped. Since most foreign countries report import values on a cost, insurance, and freight (c.i.f.) basis, and U.S. exports are valued free on board (f.o.b.) or free alongside (f.a.s.) vessel at the port of export, export unit values were applied to transshipment tonnages.

Transshipments of U.S. agricultural products expanded sharply between 1960 and 1970. The total transshipment value through Canada, the Netherlands, and Belgium in 1970 amounted to \$455 million compared with \$116 million in 1960. Rapid growth in transshipments through Canada followed the opening of the St. Lawrence Seaway in 1959. Shipments by "laker" vessels to storage elevators on the lower St. Lawrence for transshipment rose steadily to \$176 million in 1965 from \$3 million the first year of Seaway operation. A strike by Seaway workers reduced transshipments in 1967, but by 1970 the total reached \$250 million. Transshipments through Canada then dropped to about \$153 million in 1971, due mainly to a record number of direct shipments from Great Lakes ports during the Atlantic and Gulf Coast longshoremen's strikes.

Adjustments in U.S. export data to correct for transshipments reduces sales to Canada by as much as 30 percent in some years. For 1967-70, transshipments accounted for 28-30 percent, and in 1971, exports were overstated by 20 percent. Virtually all of the U.S. wheat, rye, barley, oats, and flaxseed shown as exports to Canada are transshipments to other countries. Large U.S. wheat shipments to Canada, for example, 21 million bushels valued at \$34.4 million in 1971, subsequently were exported from Canadian storage to 19 destinations.

1/ Adjusted for transshipment through Canada, the Netherlands, and Belgium. 1965-70 data revised.

Monthly reports published by the Agricultural Marketing Service in the Grain Market News show movements of U.S. grains through Canada by volume and country of destination. Export unit values are applied to the volume and distribution. Unadjusted U.S. export data reported in foreign trade publications of the Bureau of the Census, U.S. Department of Commerce, can then be corrected for country of destination. For corn and soybeans, Canadian imports were subtracted from U.S. export volume. A summary table for transshipments through Canada for 1959-71 is on page 10. Transshipments through Canada for 1969 through 1971 are shown in table 4. For detailed data prior to 1969, see Foreign Agricultural Trade of the United States, April 1970, pp. 33-42.

Part of the U.S. agricultural transshipments through Canada subsequently move to the Netherlands and Belgium, where they may be transshipped once more to their final destination. Transshipments through Canada to the Netherlands were added to direct U.S. exports to the Netherlands; Dutch imports from the United States were then subtracted from the total to obtain total transshipments from that country.

U.S. grain movements through Netherlands ports are published by the Dutch Central Bureau of Statistics (CBS) in Statistics of International Goods Traffic, Transit Trade with Transshipment by Commodities. Based on the list of countries shown in that report, the transshipment volume was distributed to various destinations, and U.S. export unit values applied.

During the 1960's, transshipments of U.S. farm products through Dutch ports rose steadily to a peak \$170 million in 1967 (table 5); since 1967 they have fluctuated between \$115 million and \$156 million, and have accounted for 25-30 percent of direct U.S. agricultural exports to the Netherlands. Detailed data by commodity and country of destination for 1960-71 are shown in table 6. West Germany, the United Kingdom, Belgium, and France were the main destinations for transshipments through Rotterdam and Amsterdam.

Although transshipments through Antwerp are relatively small compared with Canada and the Netherlands, they account for a substantial proportion of U.S. agricultural exports to Belgium (30 percent in 1970). With port improvements and increased European demand for agricultural products, these transshipments grew to a high of \$48 million in 1970 after steady expansion during the 1960's. In 1971, transshipments fell, possibly due to the opening of a deep-water port at Tilbury, England, and construction of a soybean crushing facility at St. Nazaire, France. Direct shipments to the United Kingdom and France could have diverted some transshipments formerly moving through Antwerp. A summary of transshipments through Belgium and detailed destination data by commodity can be found in tables 10 through 12.

SPECIAL in this issue

MORE EC FARM PRODUCTS PURCHASED SINCE 1960

The European Community (EC) has supplied more agricultural products to the United States since 1960. However, our agricultural imports from the EC totaled \$423 million in 1971, below 1970's total of \$436 million. Since the signing of the Rome Treaty in 1957, U.S. agricultural imports from the EC have doubled, growing an average of 10 percent a year.

In contrast with U.S. agricultural exports of primarily raw products, most of the farm products purchased from the EC are high-value processed products. These include wines, canned meats, cheeses, malted liquors, and specialized delicatessen foods. Around 90 percent of the agricultural imports from the members of the EC are supplementary products -- items partially competitive with American agriculture. Because of the higher levels of living in the United States, demand for exotic and specialty products has gained sharply in recent years. Demand is particularly strong for many specialized products from Western Europe. Value of meat and meat product imports from the EC fell by \$5 million to \$75 million in 1971, but was substantially above the \$55 million total of 1967. Canned hams and shoulders from the Netherlands accounted for over 90 percent of the meat and meat product imports. Many of the imported meat products are high quality, and sell for higher prices than similar U.S. domestic products. Canned meat imports are not subject to any quotas and the import duty is only 2-3 cents per pound. U.S. canned hams and shoulders shipped to the EC were subject to a variable levy amounting to 34 cents per pound in 1971.

Imports of EC dairy products also fell slightly in 1971 since more products were included under Section 22 quota. Dairy product imports totaled \$31 million compared with \$36 million in 1970 and \$38 million in 1967. These products also are specialized high-priced products. Italy was the largest supplier, accounting for about two-fifths of the total dairy products we imported from the EC. France, with a total of \$10 million followed closely, ahead of the Netherlands and Germany.

Wine is the most important agricultural import from the EC. Wine imports in 1971 totaled \$112 million, up from \$107 million a year earlier. Since 1960 wine imports increased at an annual rate of 13 percent. France was the largest supplier, sending a total of \$61 million in 1971. Italy followed with \$35 million and West Germany accounted for most of the rest.

Imports of vegetables, fruits, and nuts have shown a slow but steady upward trend since the early 1960's. Fruit, vegetable, and nut imports totaled over \$32 million in 1971, down slightly from 1970. Most of the decline reflected smaller shipments of hops which were in short supply in the EC in late 1971 after a poor harvest. Principal items included canned tomato paste and sauces, olives in brine, candied cherries, cherries in brine, chestnuts, and onions in brine. Hop imports from the EC totaled \$6 million in 1971, down from \$10 million in 1970. This group also includes prepared specialty products: Garlic, onions, tomato sauce, sauerkraut, pimentoes, and citron. The

United States purchased a wide variety of other agricultural products, with nursery and greenhouse stock most important. Imports of nursery and greenhouse stock totaled \$14 million in 1971, mainly from the Netherlands. Major items included tulip, hyacinth, lily, and narcissus bulbs. Large quantities of olives and olive oil were imported from Italy, while the Netherlands supplied most of the \$6 million of palm and palm kernel oils imported from the EC. Imports of grains -- mostly bakery products -- also increased sharply in recent years. France was the leading supplier. Fast jet liners have created a small but growing U.S. market for imported specialized bakery products.

Imports of complementary products have also grown slowly since 1967. Coffee extracts and concentrates increased to \$8 million from slightly over \$3 million in 1967; prepared cocoa products increased to \$12 million from slightly over \$8 million. Other important complementary items that are not competitive with U.S. agricultural exports are primarily items further processed in the Netherlands, including silk, essential oils, wool, tea, and a wide variety of exotic products.

The Netherlands was the top 1971 EC supplier of agricultural products to the United States, shipping a total of \$148 million. Besides the \$70 million worth of canned hams and shoulders, the Netherlands supplied principally bulbs, unsweetened chocolate, cheese, malt liquors, cocoa butter, instant coffee, tea, and palm and palm kernel oil. France followed with a total of \$107 million, and supplied wines, cheese, casein, essential oils, prepared fruits and vegetables, vermouth, and feathers. U.S. purchases from Italy, the third largest supplier, declined slightly to \$80 million in 1971. Italy is the source of wine, vermouth, olive oil, and canned vegetables, primarily tomato paste and sauce. West Germany took fourth place with a total of \$74 million, supplying large quantities of wine, beer, and hops, and small amounts of rennet, cheese, rice, and sausage casings. Belgium and Luxembourg supplied relatively small amounts of agricultural products to the United States. Chocolate preparations, prepared vegetables, and specialty food items were the most important.

SPECIAL in this issue

U.S. FARM IMPORTS UP 30 PERCENT IN 5 YEARS; LARGER SHARE FROM EUROPE

U.S. agricultural imports gained only 1 percent in 1971. Demand for imported food products and raw agricultural commodities leveled off, while monetary changes and longshoremen's strikes curtailed incoming shipments. However, since U.S. farm imports had been rising sharply in preceding years, they rose 30 percent between 1966 and 1971.

The proportional roles of major trade blocs supplying us with agricultural products shifted only modestly during the 5-year period, with the largest supplier, the Latin American Free Trade Area (LAFTA) supplying a relatively smaller share, and Europe, including the European Community (EC) and the European Free Trade Area (EFTA), supplying somewhat larger shares. In absolute terms, however, each regional bloc sold us more in 1971 than in 1966, and most regions registered substantial gains.

U.S. agricultural imports gained 1 percent in value during 1971, reaching \$5.83 billion. Imports of competitive farm products advanced 2.2 percent to nearly \$3.7 billion, while noncompetitive items slipped 1 percent to \$2.1 billion. U.S. demand for imported food and agricultural raw materials leveled off along with a decline in domestic industrial production. Longshoremen's strikes on both coasts depressed imports during the last half of 1971, and the import surcharge -- effective between August 15 and December 20 -- cut back entries of some items. Foreign currency revaluation in Western Europe and Japan made purchases from those areas more expensive in terms of U.S. dollars.

The quantity index of agricultural imports, measuring volume, reached 112.9 (1967 = 100), about 2 percent above 1970. Supplementary items, led by meat, dairy products, wool, and hides, declined nearly 2 percent to 116.6, but the volume of complementary products moved up 10 percent, with gains for coffee, cocoa, tea, and rubber.

In terms of regional U.S. suppliers, LAFTA ranked first with 27 percent, the EC and CACM each supplied 7 percent, and EFTA 5 percent. All Asian countries shipped 17 percent, African countries 11 percent, and Oceania 10 percent.

Latin America.--LAFTA supplies more agricultural products to the United States than any other region. In 1971, more than 27 percent of U.S. agricultural imports came from LAFTA members, down slightly from 29 percent in 1966. Brazil and Mexico, the 2 largest sources, increased their exports to the United States over the 5-year period, while other LAFTA countries' shipments were about the same or less (see table 15). Brazil's agricultural exports to the United States gained a fifth, and Mexico's jumped by more than half. Sugar, beef, fruits, and vegetables accounted for most of the increase from these 2 countries. Uruguay's agricultural exports dropped sharply during the period.

Central America.--Members of the Central American Common Market (CACM) provided 6.7 percent of U.S. agricultural imports in 1971 compared with 6 percent in 1966, but value was up by more than 40 percent. Gains consisted largely of beef and sugar from Costa Rica, Honduras, Guatemala, and Nicaragua (table 16).

Caribbean.--The principal Caribbean supplier of U.S. agricultural products is the Dominican Republic. U.S. imports from that country expanded 43 percent to \$166 million between 1966 and 1970, although prices for coffee and cocoa resulted in a downturn in 1971. Dominican sugar exports leveled while vegetable shipments continued upward.

The Caribbean Free Trade Association (CARIFTA), formed in 1968, exported about \$41 million of agricultural products to the United States in 1971. Since 1968, U.S. agricultural imports from CARIFTA, consisting mainly of sugar, have remained level. Imports from Guyana have risen, while those from other CARIFTA members declined (table 17). U.S. agricultural imports from British Honduras -- which joined CARIFTA in May 1971 -- amounted to \$6.4 million in 1971 and \$3.3 million in 1970, consisting chiefly of sugar, fruits, and vegetables. Haiti sold us \$16.4 million in agricultural products in 1971 compared with \$12.5 million a year earlier. Coffee, sugar, and beef increases accounted for the gain.

A drop in sugar exports reduced U.S. imports from the French West Indies \$1.2 million to \$7.5 million in 1971.

Europe.--The EC's share of U.S. agricultural imports ranged from 6.8 percent to 7.5 percent but expanded more than 40 percent during 1966-70. EC agricultural exports to us, however, decreased slightly from \$435 million to \$423 million in 1971. Entries were reduced last year from all members except West Germany; the reductions were concentrated in ham and cheese.

U.S. agricultural imports from EFTA in 1971 totaled more than \$315 million, 5.4 percent of all U.S. agricultural imports. Furskins, included in the 1970 and 1971 data, added to \$25.4 million and \$31.5 million, respectively, and included mainly mink skins from Scandinavia. Deducting furskins, U.S. agricultural imports from EFTA rose by half in value in 1966-71. Increases took place primarily for pork from Denmark, bakery products from the United Kingdom, wine from Portugal, and apple juice and other processed fruits and vegetables from Switzerland.

Imports of agricultural products from the Council of Mutual Economic Assistance (COMECON) have remained relatively static except for an increase in canned hams from Hungary.

Led by shipments of wine, Spanish agricultural exports to the United States rose steadily in 1966-71. Larger tobacco exports raised U.S. agricultural imports from Turkey and Yugoslavia to \$74 million and \$31 million, respectively, in 1971 (table 21).

Asia.--Asian agricultural exports to the United States grew steadily to \$978 million in 1971, accounting for 17 percent of U.S. agricultural imports. The west Asian countries of Iran, Iraq, Lebanon, Syria, and Israel exported more in 1971. Iran, the largest west Asian source, exported more hides and pistachio nuts. On the subcontinent, India stepped up shipments of cashew nuts, sugar, and tea and Ceylon exported more tea. U.S. agricultural imports from east Asian countries were higher, particularly from the Philippines, Indonesia, Malaysia, Singapore, Taiwan, Japan, and China.

Oceania.--U.S. agricultural imports from Oceania moved up 30 percent between 1966 and 1971 to \$595 million, representing 10 percent of entries from all countries. Australian meat shipments leveled in 1971 after steady increases between 1966 and 1970. Wool exports dropped sharply. New Zealand's agricultural exports continued to climb. Substantial gains in coffee and cocoa shipments raised U.S. agricultural imports from New Guinea to almost \$16 million in 1971 compared with \$3 million 5 years earlier.

Africa.--African countries raised their agricultural exports to the United States by more than one-fourth during 1966-71 to \$622 million. Africa's share of U.S. agricultural imports was about 11 percent throughout the period. Larger imports from Ethiopia, Nigeria, Kenya, Angola, Zaire, Mozambique, Malagasy Republic, Ivory Coast, and Ghana accounted for most of the increase (table 22). Additional coffee, cocoa, tea, cashew nuts, and spices entered from African countries.

CONT JUDER--

International Price Highlights

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Quotations for American cotton, Memphis Territory, strict middling, 1-1/16 inches, c.i.f. Liverpool, changed to a 1972 crop basis in April. This changeover from 1971 to 1972 crop cotton caused a 10-percent break in the price, from 41.95 cents a pound which had been quoted constantly for 8 weeks in February and March, to 37.56 cents in April and to even slightly less in early May. The decline from March to April reflects U.S. farmers' intentions to increase 1972 cotton acreage by 10 percent over 1971. It also reflects the knowledge that world cotton production during the year that began last August has been much larger than estimated as recently as in February. The current estimate amounts to 56.0 million bales, up 4.55 million bales or 9.0 percent from 1970. Most of the increase occurred in Brazil, India, and Pakistan. Due to favorable weather, yields averaged one-fourth over 1970 in these 3 countries. Demand for cotton remains strong and the 37.56 cent April price is 16 percent above a year earlier.

Corn prices were buoyed as the progress of the Argentine corn harvest during April seemed to confirm the official estimate of a 6.0-million-metric-ton crop, down 40 percent from last year's 9.93 million tons. Argentine corn, c.i.f. U.K., was quoted at 29.59 pound sterling a long ton in April, up 14 percent from March and about the same as a year earlier, when Argentine corn was plentiful and American corn was scarce. U.S. No. 3 yellow corn, c.i.f. U.K., which is in plentiful supply, nevertheless rose 2 percent in price. But it was quoted at an unusually steep discount of \$17.02 a metric ton or 22.4 percent below Argentine corn. The Rotterdam quotation for U.S. No. 3 yellow corn was also up 2 percent, and the export price, f.o.b. Gulf ports, was 3 percent above March. The Gulf-U.K. differential continued to narrow to \$5.12 a metric ton. It was more than twice as high during last October-December. The relative firmness of the corn price, which continued into May, was gratifying considering the outlook for increased South African corn exports. The South African crop just harvested is estimated at 10.27 million metric tons, 1.7 million tons larger than that of 1971, and export availability is estimated at 5.93 million tons, about 3.5 million tons more than estimated exports for the marketing year ended April 30, 1972. The sorghum grain price, c.i.f. U.K., was virtually unchanged in April. The Argentine crop recently harvested was only 2.6 million tons compared with the preceding crop of 4.66 million tons, while South African production declined but slightly from 0.65 to 0.64 million tons.

Most wheat prices were somewhat higher in April than in March. Only U.S. No. 2 Hard Winter wheat, c.i.f. U.K., was down 3 percent to 25.67 pound sterling a long ton, and was thus about 1 pound or 4 percent below the price of Australian wheat. In March, these wheats were about equal in price. With No. 1 Canadian Western Red Spring wheat, fractionally higher priced, its premium over U.S. No. 2 Hard Winter wheat was markedly up. In North America, the price of No. 1 Canadian Western Red Spring wheat, in store Fort William-Port Arthur-Thunder Bay, and the seller's price of U.S. No. 2 Hard Winter wheat, f.o.b. Gulf ports, were up by almost 2 percent. The buyer's price rose only fractionally. So the export payment was raised to 15 cents a bushel, the highest level since September 1970. The buyer's price of U.S. export wheat and all wheat price quotations abroad were well below a year ago with the c.i.f. U.K. price for U.S. wheat,

expressed in pounds sterling, down by far the most -- 20 percent -- and reflecting the devaluation of the dollar. The seller's price, f.o.b. Gulf ports, however, was 5 percent higher than a year ago.

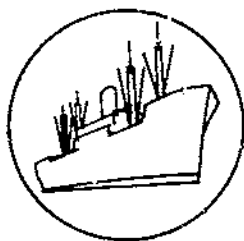

The price of soybeans, U.S. No. 2, c.i.f. U.K., rose 3 percent to 57.43 pound sterling a long ton or \$4.01 a bushel, slightly exceeding the previous record quotation last July. The export price of Thai rice, on the other hand, dropped 1 percent to \$128.96 a metric ton, slightly below the 1971 average.

Export Highlights

JULY-APRIL U.S. AGRICULTURAL EXPORTS UP 1 PERCENT

U.S. agricultural exports in April 1971 totaled \$628 million, down slightly from the \$633 million in April 1970, and below all the months since December. April exports held up despite increased competition from foreign suppliers, sharply reduced U.S. stocks of cotton and soybeans available for export, and smaller seasonal shipments of tobacco. While cotton and tobacco declined from April a year ago, grain shipments have picked up slightly. The reduced coarse grain production in Argentina caused many importers to purchase from the United States. In addition, poor crop prospects in Eastern Europe and the USSR are also turning foreign buyers to the United States. Soybean exports were also up in April. Export prices of agricultural products gained an average of 3 percent in July-April, while volume dropped slightly. Value totaled \$6.60 billion, 1 percent above 1970/71. Value increases in cotton, tobacco, soybeans, soybean meal, dairy products, cattle hides, fruits, nuts, and vegetables were nearly offset by reduced shipments of grains, flaxseed, alfalfa meal, and lard.

Total grain exports in July-April continued to trail last year's level. They totaled \$2 billion, down 12 percent. Wheat and wheat product exports fell a fifth to 491 million bushels. U.S. wheat exports this year met increased competition because of the large world wheat crop and the longshoremen's strikes on the West Coast impeding shipments during July-September and January 17-February 20. Wheat shipments from the West Coast totaled 122 million in July-April 1971/72 compared with 183 million for this period a year earlier.

Feed grain exports excluding products totaled 16.4 million metric tons, down from 17.1 million a year earlier.

The main reason for the decline this fiscal year has been Japan, which bought 2.7 million tons less U.S. feed grains because it purchased more from Australia, Brazil, Canada, South Africa, and Thailand. At the same time, it used about 1.5 million tons of surplus rice for mixed feeds. Feed grain exports to EC, however, were slightly above the year earlier level of 5.9 million tons, although value was down by 5 percent because of lower prices. The gap between last year's level and the current cumulative total has been narrowing in recent months with increased shipments, primarily because of the reduced grain harvest in Argentina and reduced grain prospects in Eastern Europe.

Rice exports of 28.5 million bags were down 7 percent. Developing countries, particularly Korea, accounted for most of the decline, although increases were registered for Indonesia and Vietnam.

The export value of oilseeds and products advanced by 7 percent in July-April mainly because of higher prices of soybeans, soybean oil, and soybean meal. Soybean exports totaled 369 million bushels in July-April 1971/72 compared with 359 million a year earlier, soybean meal exports of 3.6 million tons were the same, and soybean oil shipments were off slightly. Offsetting the decline in soybean oil shipments was a substantial increase of 125 million pounds of cottonseed oil. Europe and Japan accounted

Total exports	6,526	6,595	+1

1/ Preliminary.

for nearly all of the increase in soybean exports, and soybean meal exports advanced to the EC. The decline in exports of soybean oil reflected reduced shipments to India and Pakistan.

Cotton exports during July-April totaled 3.1 million bales, about the same as a year earlier. However, value was up sharply because of higher prices. Because of limited U.S. supplies, exports in coming months will probably be sharply below those of a year earlier. Exports will probably total about 300,000 bales below last year's 3.7 million.

Tobacco exports in July-April totaled 476 million pounds, unmanufactured tobacco and bulk smoking tobacco slightly above the same period a year earlier. The decrease this year reflects reduced shipments in March and April. Shipments are expected to be below the seasonal average for the remainder of the year. Burley, dark-fired, and Maryland tobacco exports have increased but flue-cured tobacco exports of 315 million pounds were somewhat below the level of a year earlier. Exports to the United Kingdom, the top market for U.S. tobacco, fell 19 million pounds. Uncertainty as to Rhodesia's future as an exporter has caused many foreign buyers to purchase only current needs.

Exports of fruits and vegetables expanded 9 percent to \$489 million in July-April 1971/72. Gains occurred primarily in fresh products. The recent liberalization of Japan's restrictions on receipts of foreign grapefruit has sharply expanded its buying of U.S. fruit. Canada also has been purchasing increased U.S. fresh vegetables. Fruit juice exports have expanded. Hop exports have risen substantially because of sharply lower production in Western Europe accounting for most of the gain in vegetable exports.

Exports of animals and animal products advanced 9 percent in July-April 1971/72 from a year earlier. The increase was concentrated in dairy products and hides and skins. Exports of beef, variety meats, pork, and baby chicks also rose. Hide and skin exports have benefited from relatively short world supplies. Cattle hide shipments from Argentina have dropped sharply. In addition to the volume gain, prices rose to \$9.02 a hide in July-April 1971/72 from \$7.92 a year earlier. Because drought reduced butter production in New Zealand, U.S. exports have increased sharply in the past year. Reduced supplies and limited production of butter in Europe also boosted U.S. exports. Exports of beef have increased to the tourist areas of Asia, Europe, and the Caribbean. These are cuts used primarily in the restaurant and hotel trade. Exports of variety meats increased slightly to Western Europe. Poultry product shipments of \$47 million were also up slightly. Exports of slaughter cattle fell sharply. Canada had purchased large quantities of slaughter cattle in the previous year because of the scarcity of Canadian cattle for slaughter due to herd expansion.

Exports of nuts and preparations advanced \$15 million to a record \$72 million. Almonds accounted for the bulk of this increase. Increased U.S. production and lower prices, brought on by innovations in the production and harvesting of almonds, have increased the competitive position of U.S. almonds.

Exports to the EC

U.S. agricultural exports to the EC in July-April 1971/72 advanced 5 percent to \$1.57 billion. Nonvariable-levy commodities, especially soybeans, cotton, cottonseed oil, soybean meal, cattle hides, and hops accounted for the sharp advance. There was a 13-percent decline in exports of commodities subject to the variable levies. Wheat, rice, grain sorghum, and turkey shipments were lower. The value of feed grain exports to the EC was down 5 percent, although the volume, 6.1 million tons, was slightly ahead of a year earlier.

Grain imports from third countries including the United States were down substantially from a year earlier. In 1970 a reduced harvest caused the EC to import large quantities of wheat, but last year EC grain production advanced to a record. U.S. wheat exports

to the EC totaled only \$47 million in July-April 1971/72 compared with about \$75 million a year earlier. But continued expansion in the EC livestock industry, combined with small root and forage crops caused the EC to step up purchases of U.S. feed grains. In addition, some feed grains were imported for transshipment to other countries, including Eastern Europe.

U.S. rice exports to the EC in July-April totaled \$11 million, down from \$19 million in 1970/71. This marks the second year of decline because of increased competition from other rice suppliers, especially Asia and Latin America. Exports of beef, dairy products, broilers and fryers, and eggs increased from a year earlier. Turkey exports declined about \$2 million because of higher EC levies applied to turkeys and turkey products.

Despite the substantial increase in soybean prices, the EC demand for U.S. soybeans, stimulated by increasing livestock production, rose further during 1971/72. Slightly increased foreign supplies of other oilseeds were insufficient to meet this rising demand. U.S. exports of cottonseed oil advanced as prices were more competitive. Europeans prefer cottonseed oil to soybean oil. Tobacco exports to the EC totaled \$119 million in July-April 1971/72, down about \$8 million from a year earlier. West Germany, Belgium, and the Netherlands accounted for the decrease. West Germany was the top market, taking 69 million pounds.

Fruit exports were down slightly in July-April from a year earlier. Fresh lemons and limes, grapefruits, and dried fruits gained while canned fruit exports fell sharply, curtailed by limited U.S. supplies and higher prices combined with larger supplies in South Africa and Australia. Exports of vegetables and preparations gained \$4 million, with hops accounting for nearly all of the increase. While exports of tallow fell, exports of hides and skins and variety meats increased. Exports of corn byproducts fell by about \$6 million.

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry, tallow, and variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

Import Highlights

U.S. FARM IMPORTS 4 PERCENT HIGHER THROUGH APRIL

An advance in competitive commodity purchases during July-April raised U.S. agricultural imports 4 percent above a year earlier to slightly under \$5 billion. Supplementary or competitive items rose 7 percent to \$3.24 billion while complementary or noncompetitive products slipped 1 percent to \$1.76 billion. April imports of farm products totaled \$486 million compared with \$554 million in April 1971 and \$507 million in March 1972.

During the July-April period, strong advances in feeder cattle and calves, casein, beef, pork, cotton, fruit juices, edible nuts, palm oil, sugar, most vegetables, wines, and tobacco more than offset reductions for hides and skins, apparel wool, coconut products, and most fruits. Price increases accounted for the rise in some imported commodities, especially cattle, calves, beef, and casein. Calf numbers, included in "cattle weighing less than 200 pounds," rose 18,000 to 124,000 head, while value rose \$2 million to \$7 million. Average unit prices advanced \$9 per head to \$57. Feeder cattle entries went up 112,000 head to 780,000 and value gained \$24 million to \$85 million; average unit prices gained \$18 to \$109.

Sharply higher casein prices followed reduced output in the principal producing countries and resulted in a value gain for dairy product imports. The volume of casein entries fell to 86 million pounds during July-April from 105 million pounds in similar months a year before, while import unit values, based on free on board (f.o.b.) prices at the port of export, averaged 38 cents per pound compared with 23 cents. New Zealand, Australia, and France shipped less but values rose above last year's levels. Argentine and Polish exports to the United States went up sharply.

Imported beef prices were also higher, especially for canned, prepared, and preserved beef. Canned beef purchases rose 8 percent in tonnage and 50 percent in value. The volume of prepared beef (mostly cooked and in brine) fell 13 percent, while value remained steady at \$45 million.

Extending their current expansion due to freeze damage in Florida, citrus juice imports gained rapidly. Orange juice concentrate purchases in July-April totaled 33 million gallons valued at \$12.5 million against only 3 million gallons and \$1.5 million a year earlier. Other citrus juice imports were also higher at \$1.9 million. Apple juice imports jumped to 30 million gallons and \$8.3 million in July-April from 21 million gallons and \$5 million in similar months a year earlier. Switzerland, France, and Argentina were the principal sources of apple juice.

Edible tree nut consumption in the United States has continued to expand. The import value for nuts rose 7 percent over last year to nearly \$93 million, chiefly because of additional cashew purchases.

The overall import value of oilbearing materials fell 10 percent below the previous year's level, as copra, coconut oil, and tung oil declined. Lower prices for coconut oil reduced

the import value; volume expanded 6 percent to 519 million pounds. Largely offsetting the value declines were sharp advances in palm oil purchases to 262 million pounds and \$27 million, representing a 50-percent increase over last year.

Most vegetable imports were higher in 1971/72, including beans, onions, peas, squash, canned mushrooms, and olives. Fewer cucumber and pepper entries offset some of the gain.

The value of complementary agricultural imports declined during July-April, mainly because of lower prices for coffee and cocoa beans. Green coffee volume was 10 percent larger at 2.4 million pounds, but value fell 3 percent to \$938 million. Green coffee prices averaged 40 cents per pound for the July-April period compared with 45 cents in similar months a year earlier. Brazilian green coffee unit values dropped to 38 cents per pound from nearly 51 cents in July-April 1970/71 when freeze damage drove prices up. Brazil shipped one-third of U.S. green coffee imports in July-April compared with 22 percent during the same months last year. African countries, primarily Ethiopia, Uganda, Kenya, Tanzania, Cameroon, Guinea, and the Ivory Coast, shipped less.

U.S. imports of roasted or ground coffee nearly doubled in volume and value to 23 million pounds and \$11 million. Mexico, Brazil, Canada, Angola, West Germany, Spain, the United Kingdom, and Malaysia increased their shipments over last fiscal year. Soluble coffee imports gained 3 million pounds to 36 million, but value remained at about last year's level at \$48 million. Brazil, Spain, the United Kingdom, and Canada raised sales of soluble coffee to the United States in 1971/72.

Among the complementary imports showing advances were spices and essential oils. China replaced Indonesia as the chief source of cassia. Cassia imports advanced to \$6.2 million from \$2.8 million in July-April 1970/71. Clove imports, mostly from Madagascar, amounted to \$3.9 million against \$2.5 million a year earlier. Unground white pepper, chiefly from Indonesia, went up to \$2.4 million from \$1.7 million. Imports of unground black pepper declined mainly as a result of a poor Brazilian crop; India and Malaysia also shipped less.

Essential oil imports gained in value during 1971/72, largely because of price increases and accelerated entries for some higher valued types. Clove oil imports rose to \$1.7 million from \$1.3 million in July-April 1970/71; geranium oil purchases jumped to \$2.9 million from \$1 million. Sandalwood, vetiver, and petitgrain were also up. Cassia oil entries totaled \$512,000 against less than \$2,000 in similar months a year earlier. Clove oil was shipped by Malagasy, Tanzania, and Indonesia; the geranium oil was chiefly from France. Scandalwood, vetiver, and petitgrain originated mainly in India, Haiti, and Paraguay.

Cotton, raw, excluding linters	5	10	+100
Feeds and fodders, excluding oil cake	26	28	+8
Fruits and preparations	127	130	+2
Grains and preparations	61	63	+3
Nuts and preparations, edible	88	93	+6
Oilseeds, oilnuts, and products:			
Coconut oil	64	58	-9
Copra	38	20	-47
Olive oil	17	18	+6
Other oilseeds and products ^{2/}	66	71	+8
Seeds and nursery stock, excluding oilseeds	38	33	-13
Sugar and molasses:			
Sugar, cane or beet	616	681	+11
Molasses, inedible	38	40	+5
Tobacco, unmanufactured	116	135	+16
Vegetables and preparations	252	266	+6
Wines and malt beverages:			
Wines	124	148	+19
Malt beverages	27	28	+4
Other supplementary vegetable products ^{3/}	64	69	+8
Total supplementary products	3,037	3,237	+7
<u>Complementary</u>			
Bananas and plantains, fresh	163	148	-9
Cocoa and chocolate:			
Cocoa beans	165	144	-13
Cocoa butter	19	15	-21
Cocoa and chocolate prepared	50	47	-6
Coffee:			
Coffee, green or crude	964	938	-3
Coffee, soluble	48	48	0
Drugs, crude	21	25	+19
Essential oils	26	29	+11
Fibers, unmanufactured	16	16	0
Rubber, crude:			
Rubber, crude, dry form	142	151	+6
Rubber, latex	22	25	+14
Silk, raw	3	3	0
Spices	46	51	+11
Tea, crude	48	57	+19
Wool, carpet	26	34	+31
Other complementary products ^{4/}	23	30	+30
Total complementary products	1,783	1,761	-1
Total agricultural imports	4,820	4,997	+4

^{1/} Horses, \$23.7 million in 1970/71 and \$11.5 million in 1971/72.

^{2/} Palm oil, \$18.4 million in 1970/71 and \$26.7 million in 1971/72.

^{3/} Confectionery products, \$19.4 million in 1970/71 and \$20.3 million in 1971/72.

^{4/} Roasted and ground coffee, \$6.2 million in 1970/71 and \$11.1 million in 1971/72.

^{1/} Based on 359 classifications in 1971.

^{2/} The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 Variant of the Seasonal Method II Seasonal Adjustment Program, Technical Paper No. 15. U.S. Government Printing Office, Washington, D.C., 1965.

Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
