OF THE UNITED STATES

Digest

Agricultural Exports Reach a Record of \$12.9 Billion in Fiscal Year 1973 (see p. 5). U.S. agricultural exports rose to an alltime high of \$12.9 billion in fiscal 1973--up a remarkable 60 percent from the \$8.05 billion exported in fiscal 1972. Three major developments accounted for the surge: (1) the unfavorable weather conditions that reduced harvests sharply in the Soviet Union, Southeast Asia, Australia, and parts of Latin America and Africa, and reduced fishmeal production in Peru; (2) the improved U.S. competitive position from the realignment of currencies in the past 2 years; and (3) increased demand for farm products resulting from higher incomes in both developing and developed countries.

Grain exports alone accounted for over half the total value increase in fiscal year 1973, and soybeans and soybean products accounted for a fourth. Most other products—including cattle hides, cotton, meats, tobacco, poultry products, fruits, nuts, and vegetables—also made an important contribution in achieving the record level. Of the major commodities exported, only dairy products and vegetable oils were below the value of fiscal 1972 shipments.

Although the biggest gains in agricultural exports occurred to Japan, Western Europe, and the USSR, all major areas took more U.S. farm products than a year earlier. U.S. farm exports to Japan broke the \$2 billion mark, rising 94 percent to \$2.3 billion. Only 3 years ago, Japan became the first billion-dollar foreign customer for U.S. farm products. Exports to Western Europe rose 49 percent to a record \$4.4 billion. The USSR took over \$905 million worth of U.S. exports, compared with only \$135 million a year earlier. The People's Republic of China emerged as a market for \$200 million worth of U.S. farm products. Developing countries also became more important markets in the past year. Exports to developing countries in Asia totaled over \$2 billion, and shipments to Latin America topped the \$1 billion mark for the first time.

* * * * *

New Record for U.S. Agricultural Imports in Fiscal 1973 of \$7.3 Billion (see p. 26).

U.S. farm product imports advanced strongly in fiscal 1973 to \$7.32 billion, a 21-percent gain over fiscal 1972's level of \$6.04 billion. Price increases accounted for about 76 percent of this advance, as volume rose only 6 percent. Competitive agricultural imports reached \$4.7 billion—a 19-percent increase, three-fifths of which stemmed from higher prices. Noncompetitive items showed a 26-percent increase, primarily due to price.

Important factors contributing to the import expansion were uncertainties about exchange rates, weather-induced supply shortages, and relaxed import restrictions on dairy products and meat. Meat imports grew 8 percent in volume, while value climbed 24 percent. Dairy products advanced 39 percent in value, mainly because of a 50-percent increase in quotas on certain cow's milk cheeses and an increase in the nonfat dry milk quota. Imports of fruits, vegetables, edible nuts, and wines also increased.

Sharp price increases for coffee, cocoa, crude rubber, carpet wool, and sisal raised noncompetitive imports to more than \$2.6 billion. Volume was somewhat higher for green coffee, but declines occurred in imports of cocoa beans, crude rubber, tea, and carpet wool. Volume and value gains took place for bananas, processed coffee and cocoa products, essential oils, raw silk, and some spices.

* * * * * *

<u>Selected Price Series of International Significance</u> (see p. 41). Except for the price of imported cow meat, which continued to drop, all prices shown in table 17 rose from May to June just as they had risen from April to May. Most increases were substantial. Steeply rising freight rates were a factor in the increase of c.i.f. prices.

The prices of U.S. wheat for export, sugar, and coffee were the only ones to rise only 1 to 2 percent. Soybean meal spot prices in the United States and abroad diverged as a result of export controls. A similar differential, but less pronounced, developed for soybeans. There was also a marked difference between the spot price of soybeans and the price for the new crop.

SPECIAL in this issue

EXPORTS OF FARM PRODUCTS REACH \$12.9 BILLION RECORD IN FISCAL YEAR 1973

U.S. agricultural exports in fiscal year 1973 rose an astonishing three-fifths to a record \$12.9 billion. Many factors, some long term, some short term, contributed to the increase. First, and perhaps most important, were the unfavorable weather conditions in 1972 that reduced harvests in the Soviet Union, Southeast Asia, Australia, and parts of Latin America and Africa. Because of sharply reduced production in these areas, demand for agricultural imports exploded to unprecedented levels. With limited supplies in other major exporting countries, or supplies already committed, only the United States had the supplies and the facilities to fulfill much of the increased demand.

Demand for U.S. protein meal was particularly high in fiscal 1973 because of a sharp reduction in Peruvian fishmeal output. Peanut supplies in India and Senegal were also down sharply, putting greater demand on U.S. soybeans. At the same time, decreased supplies and higher prices of nongrain feeds expanded the import requirements for U.S. feed grains, especially in Western Europe and Japan.

In addition, the competitive position of U.S. agricultural exports has been enhanced by currency realignments over the past 2 years. The first realignment, which occurred in December 1971 and which is known as the Smithsonian Agreement, depreciated the dollar about 12 percent on the average for members of the Organization for Economic Cooperation and Development (OECD), excluding Canada, and between 6 and 7 percent globally. On February 12 of this year, the United States again devalued the dollar. Following that devaluation, the Japanese floated the year and the enlarged European Community (EC) countries floated their currencies.

On a longer term basis, foreign demand for U.S. agricultural products has been rising because of continued rising incomes, especially in Western Europe, Canada, and Japan. Demand for red meat and poultry in these and other developed countries has risen substantially, which, in turn, has contributed to increasing demand for U.S. feed grains and oilseeds.

Grains and grain products accounted for over half the total value increase in agricultural exports in fiscal 1973, and soybeans and products, for a fourth. Increases for cattle hides, cotton, meats, tobacco, poultry products, fruits, nuts, and vegetables were also important in achieving the record fiscal 1973 level. Of the major commodities exported, only dairy products and vegetable oils were below the value of fiscal 1972 shipments.

Export records were established for wheat, corn, rice, soybeans, cattle hides, lemons, grapefruits, oranges, fresh vegetables, soybean meal, corn byproducts, and live animals. Cotton exports were the highest since 1964, and tobacco exports had a record value, although quantity was below the record of fiscal 1967.

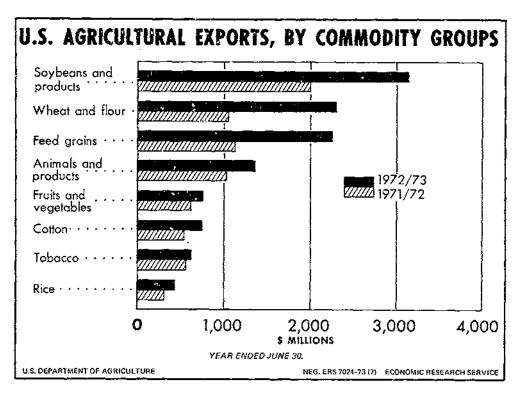

Figure 1

The volume of U.S. agricultural exports gained nearly one-third in fiscal 1973 and accounted for around 60 percent of the value gain. Higher prices accounted for the balance of the value increase, especially for soybeans, soybean meal, wheat, feed grains, most fruits and vegetables, cattle hides, meats, tobacco, and nuts.

Soaring agricultural exports boosted the U.S. agricultural trade balance by \$3.6 billion to a record \$5.6 billion, despite a one-fifth advance in agricultural imports to a record \$7.3 billion. This favorable agricultural trade balance helped to offset the country's trade deficit in nonagricultural products, which amounted to \$9.1 billion in fiscal 1973. Just 4 years ago, nonfarm exports had a trade surplus of \$1.7 billion.

Major Markets for U.S. Agricultural Exports

Although the biggest gains in U.S. agricultural exports occurred to Japan, Western Europe, and the USSR, all major areas took more U.S. farm products in fiscal 1973 than they did a year earlier. In fact, nearly all areas took record volumes of U.S. agricultural commodities in the past year.

U.S. agricultural exports to Japan broke the \$2 billion mark in fiscal 1973. They rose 94 percent to \$2.3 billion-an increase of over \$1.1 billion from fiscal 1972's level. Only 3 years ago, Japan became the first billion-dollar foreign customer for U.S. farm products. The increase to Japan in fiscal 1973 was concentrated in grains, soybeans, cotton, and hides and skins. Other gains included nearly all products, but especially for meats, soybean meal, and many fruits and vegetables. Exports of cotton increased to 1 million bales from 734,000 a year earlier. 1/ Of course, higher prices accounted for a considerable part of the value increase.

^{1/} Data for 1972/73 adjusted from trade reports.

^{1/} Not adjusted for transshipments. 2/ Includes Yugoslavia. 3/ Exports of cotton to Japan and People's Republic of China adjusted based on trade report.

Western Europe's imports of U.S. farm products rose 49 percent to a record \$4.4 billion, sharply above the \$3.0 billion level of fiscal 1972. Grains and soybeans accounted for most of the rise, primarily because increased livestock production in Western Europe generated demand for protein meal and supplies from sources other than the United States were down. Western Europe purchased more U.S. corn and grain sorghum in 1972/73 because production and supplies were down sharply from other major exporters. Countries in Western Europe also took more cotton, tobacco, cattle hides, fruits, and vegetables. However, shipments of both animal and vegetable fats and oils and dairy products were off sharply from a year earlier.

U.S. agricultural exports to the USSR during the late 1960's totaled only about \$10 million to \$12 million annually, but they have been increasing gradually over the past few years. But the increase in fiscal 1973 was particularly sharp: exports were valued at \$905 million, compared with \$135 million in fiscal 1972. Although this increase accounted for only 16 percent of the total rise in fiscal 1973 farm exports, it nevertheless represented a significant development in our agricultural trade.

Massive purchases of U.S. agricultural commodities were made by the USSR in fiscal 1973 because unfavorable weather conditions in that country sharply reduced grain output. First, a bitterly cold winter struck the Russian wheatland, and because of little snow cover, about a third of the winter grain crop was destroyed. Production of spring wheat, planted to recover the winter grain loss, dropped sharply because it was scorched by very hot and dry weather in much of the European part of the USSR. Unlike past years of reduced grain crops, when the USSR reduced consumption levels, slaughtered cattle,

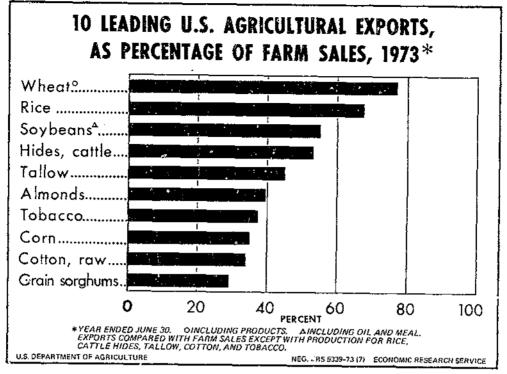

Figure 2

and made a general belt-tightening effort, the Soviet leaders decided to purchase substantial quantities of agricultural products from the West. The primary reason for increasing imports was to maintain livestock herds for an expansion of the livestock industry, which was planned to meet increasing demand for meats and other livestock products. By importing large quantities of high-quality wheat for milling, the USSR was able to use its weather damaged wheat for livestock feed.

Wheat was by far the largest item the United States exported to the USSR in fiscal 1973. Shipments were valued at almost \$566 million and totaled 345 million bushels, compared with slightly more than 100,000 bushels in fiscal 1972. Feed grain exports rose to 3.5 million tons from 2.5 million tons a year earlier. And soybean exports shot up to 31 million bushels, valued at nearly \$119 million, from none a year earlier. Other items exported to the Soviet Union included about 350,000 pieces of cattle hides and 46 million pounds of linseed oil.

U.S. agricultural exports to Latin American countries in fiscal 1973 totaled over \$1.1 billion, over two-fifths above the year-earlier level. Because of drought, Mexico accounted for a big share of the gain, but exports also rose to Venezuela, Chile, Peru, Brazil, and Uruguay. The Caribbean countries increased their imports of U.S. farm products by nearly one-third because of rising demand for U.S. food products from the hotel and tourist industry, as well as because of gains in population and growth in income. On a commodity basis, grains accounted for close to two-thirds of the increase in exports to Latin America.

The People's Republic of China emerged as an important market for U.S. farm products in fiscal 1973, taking over \$200 million worth. Cotton exports to this new country market totaled about 450 million bales valued at \$78 million. Corn, totaling over \$60 million, was the second most important item shipped. Next came wheat, with a value of \$38 million. Other exports included soybean oil and cattle hides.

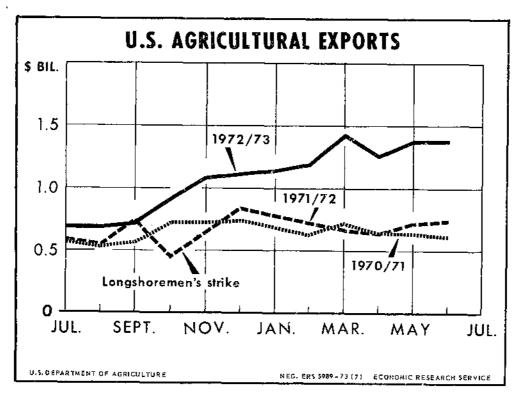

Figure 3

Exports to other Asian countries, excluding Japan and the People's Republic of China, were valued at \$2.1 billion during fiscal 1973, more than a third above the year-earlier level. Grains again accounted for most of the overall increase, rising to \$1,233 million from \$823 million. But exports of soybeans, cotton, and hides and skins also increased sharply. In recent years, the Asian region, especially Korea and Republic of China (Taiwan), have been one of the fastest growing markets for U.S. farm products. More importantly, all of the increase in the past year to these Asian countries has occurred in commercial sales, but shipments under Government programs still account for a large share of U.S. agricultural exports to these Asian countries.

Major Commodities Exported

Grains and preparations. --U.S. exports of grains and preparations totaled \$5.3 billion in fiscal 1973, double the level of a year earlier. All major products gained, but wheat and feed grains accounted for most of the increase. Larger volume accounted for nearly three-fourths of the value increase and higher prices for the balance. Wheat export unit value, for example, averaged \$1.98 a bushel during fiscal 1973, up from \$1.68 a year earlier. Feed grains averaged slightly over \$65 per ton, compared with slightly less than \$54 a year earlier, and rice averaged \$233 a ton, compared with \$186

U.S. feed grain exports skyrocketed to 35 million tons in fiscal 1973 from only 21 million tons a year earlier, primarily because of reduced supplies in Thailand, Australia, and other major grain exporting countries. Exports to Japan more than doubled, reaching 8.4 million tons. Japan only allocated about a half million tons of surplus rice for mixed feeds during fiscal 1973, compared with about 1.5 million tons in fiscal 1972. However, Japanese meat production increased an estimated 7 percent in fiscal 1973, adding to its feed grain import requirements.

U.S. exports of feed grains to the USSR in fiscal 1973 totaled slightly over 3.5 million tons, compared with around 2.5 million tons a year earlier. As a result, the USSR was the third largest market for U.S. feed grains, following Japan and the enlarged European Community (EC).

Countries in the enlarged EC took 10 million tons of U.S. feed grains in fiscal 1973, compared with about 7.9 million tons in fiscal 1972. The United Kingdom, Ireland, the Netherlands, and West Germany all substantially increased their purchases. Italy increased its purchases from 2 million to 2.8 million tons. The increase in feed grain exports to the EC countries occurred despite record EC grain production in 1972. Rising incomes in the EC are increasing the demand and price of meats. Because of the high prices, producers are rapidly expanding production, which requires vast amounts of feed grains. In addition, EC dairy producers are using more feed grains because high CAP dairy prices are encouraging expansion of the dairy herd.

Other major markets for U.S. feed grains in fiscal 1973 were Spain, Portugal, the People's Republic of China, Republic of China (Taiwan), Indonesia, South Korea, Peru, Chile, India, Venezuela, Yugoslavia, Greece, and Mexico. Mexico's purchases rose to over 600,000 tons from 104,000 tons in fiscal 1972.

In fiscal 1973, U.S. exports of wheat and wheat products amounted to a record 1,189 million bushels, almost double the 632 million bushels exported in fiscal 1972. This was the first time that such exports exceeded 1 billion bushels. The largest increase was to the USSR, which took close to 345 million bushels and accounted for about three-fifths of the total fiscal year gain. Adverse weather also reduced wheat crops in the People's Republic of China, India, other countries in Southeast and South Asia, and in some Latin American countries. In addition to the United States, Canada and Argentina shared in supplying this demand, but Australian exports were down because of a short crop and low stocks from a drought. Shipments to Japan, Egypt, Republic of China, Bangladesh, Pakistan, Yugoslavia, Mexico, Brazil, and the EC also increased sharply during 1972/73. Exports to the People's Republic of China rose to 22 million bushels, compared with none a year earlier. Exports were also up to Latin America, especially to Mexico, Brazil, and Peru, because of reduced production in some countries and increased consumption in other countries. Wheat exports in 1972/73 were equivalent to about three-fourths of U.S. production.

Rice exports also rose to a new record level of 42.7 million bags, from 37.6 million a year earlier. The previous export record for rice was in 1968, when 41.1 million bags of rice were exported. While the quantity was up 14 percent, higher prices pushed the value up by over two-fifths to a record \$435 million. In contrast to the increase of other commodities, most of the rice gain occurred under Government-financed programs. The largest increases occurred to South Vietnam, Cambodia, and South Korea.

Oilseeds and products.--U.S. exports of oilseeds, including products, rose to \$3.5 billion in fiscal 1973--up 57 percent from the \$2.2 billion worth exported in fiscal 1972. Price increases accounted for about three-fifths of the overall value increase. However, quantity was up about one-sixth for both soybeans and soybean meal. Approximately three-fourths of the overall value increase was in soybeans. World supplies of protein meal were very tight in fiscal 1973. Peru, the largest fishmeal exporter, has had sharply reduced supplies since September 1972 because a change in ocean currents has caused the anchovies to move out to deeper water. Peru exported only 443,000 tons. Normally, Peru's exports would total around 1.8 million tons of fishmeal, which is equivalent to around 120 million bushels of soybeans. Also contributing to limited protein meal supplies in fiscal 1973 was a decline in output of peanut meal in Africa and Asia. In addition, sunflower production was down in the USSR and Eastern Europe. Despite higher prices for feeds and protein meal, demand for soybeans escalated upward with the continued rise in livestock production in West European countries, Japan, Canada, and other developed countries.

U.S. exports of soybeans in fiscal 1973 increased by around 75 million bushels to a record 506 million bushels. As a matter of fact, it was the sixth consecutive year that U.S. soybean exports established a record volume. Exports in the past decade have grown at an annual compounded rate of 10 percent. Most of the gain has occurred to the EC, the United Kingdom, USSR, Spain, Poland, Israel, Japan, and South Korea. In fiscal 1973, over half of U.S. soybean production was exported in the form of meal or soybeans, and these exports accounted for over 75 percent of all world meal exports, in either the oilseed or meal form.

Exports of oil cake and meal rose 21 percent to 5.3 million short tons, and prices pushed value up by 85 percent. Switzerland, Yugoslavia, Spain, Greece, Eastern Europe, Portugal, and Japan accounted for most of the increase. Because of greater crushing capacity, the European Community took about the same volume of oil cake and meal as in fiscal 1972, but higher prices resulted in a sharp increase in the value of shipments. The EC got a large share of its protein meal from the crushing of U.S. soybeans.

U.S. exports of cottonseed and soybean oil totaled 1.70 billion pounds--16 percent below the fiscal 1972 level of 2.02 billion pounds. Soybean oil accounted for all of the decline, as more soybean oil was available from the crushing of U.S. soybeans overseas. Cottonseed oil gained because of more plentiful U.S. supplies. In addition, with less sunflower oil available from Eastern Europe and the Soviet Union, many countries increased their purchases of cottonseed oil. But most of the gain in cottonseed oil exports was to Egypt, which purchased 250 million pounds in fiscal 1973, compared with 171 million a year earlier. Other important markets for cottonseed included Venezuela, the United Kingdom, Ireland, Japan, and South Africa.

Fruits and preparations.--U.S. exports of fruits and preparations rose by nearly one-fifth to a record \$457 million in fiscal 1973. Higher prices accounted for about three-fifths of the gain. Values were up substantially for canned fruits, fresh fruits, and fruit juices. While most of the overall gain occurred in fresh products--primarily citrus products because of plentiful supplies--exports of canned fruits also showed substantial increases, despite smaller supplies and higher prices. The value of U.S. dried fruit exports was down slightly, and quantity was down sharply because of reduced supplies. The realignment of currencies has made many U.S. fruit items very attractively priced in many foreign markets.

<u>Vegetables</u> and <u>preparations.--U.S.</u> exports of vegetables and preparations in fiscal 1973 rose to an alltime high of \$296 million--26 percent above the level of a year earlier. Again, fresh products accounted for most of the increase, but substantial gains were also registered in shipments of canned and dehydrated vegetables. Hop exports fell sharply from the big increase of a year earlier because of significantly expanded production--and a better quality hop--in Western Europe.

Animals and animal products.--U.S. exports of animals and animal products advanced by one-third to \$1.35 billion, another alltime high. Cattle hide shipments, which accounted for about 66 percent of the overall increase, rose to \$373 million, more than double the fiscal 1972 level. The increase was partially due to a decline in cattle hide export availabilities in Argentina because of an embargo and a sharp increase in world demand for leather and leather products. The tight supply situation from Argentina's embargo was somewhat offset by its expansion of exports of leather and leather products.

Exports of meats and meat products were up about three-fourths to \$307 million. Pork exports increased substantially, with 100 million pounds going to Japan. In addition, more beef went to Canada, Japan, the Caribbean, and other principal markets. Higher prices, though, represented a good share of the increase. For example, pork prices during fiscal 1973 averaged 66 cents per pound, compared with 46 cents a year earlier.

Exports of poultry products rose to nearly \$100 million in fiscal 1973. Most of the increase occurred in turkeys, eggs, and egg products. U.S. egg prices were relatively low at the start of the fiscal year, and exports reached high levels. But in the latter part of year, higher prices caused exports to drop back to more normal levels. Exports of turkeys increased sharply to \$18 million in fiscal 1973 from only around \$10 million a year earlier. The European Community accounted for most of the gain, primarily the United Kingdom and West Germany.

U.S. exports of dairy products fell about 60 percent in fiscal 1973--to \$86 million from \$218 million in fiscal 1972. Most of the decline was in exports of butter and nonfat dry milk. Butter exports fell from nearly 130 million pounds in fiscal 1972 to slightly over 4 million pounds in fiscal 1973. The large 1972 exports were primarily due to unusually large purchases by the United Kingdom. Fiscal 1972 butter supplies were relatively scarce because of reduced supplies in the European Community and because 2 consecutive years of drought had reduced production in New Zealand, normally the United Kingdom's principal supplier.

In fiscal 1973, U.S. exports of animal fats and oils rose slightly in value, but dropped slightly in volume, primarily because plentiful world oil supplies discouraged U.S. exports. Tallow exports totaled about 2.3 billion pounds, about the same as a year earlier. But lard exports fell to about 144 million pounds from 184 million a year earlier.

Tobacco.--U.S. tobacco exports, including bulk smoking tobacco, gained about 6 percent in quantity in fiscal 1973, reaching 591 million pounds. With increased prices, value rose about 12 percent to \$640 million. The gain in tobacco exports occurred primarily in flue-cured tobacco to the United Kingdom, Japan, Belgium, New Zealand, and Switzerland. However, exports to the original six EC countries fell, mainly shipments to the Netherlands, West Germany, France, and Italy. Exports of bulk smoking tobacco fell about 13 million pounds, with reduced shipments to the Netherlands, Peru, Switzerland, Italy, Australia, and the Dominican Republic. In most major markets, U.S. tobacco faced increased competition from many developing countries who had expanded production. In addition, the EC tobacco policy has encouraged production within the Community, as well as in the overseas areas that have trade preferences with

Cotton.--U.S. cotton exports in fiscal 1973 were the highest since 1964. They totaled 4.7 million bales, up sharply from the fiscal 1972 level of 3.3 million bales. Demand for U.S. cotton was high because of increased world consumption and production declines in several countries. Production in noncommunist countries declined an estimated 300,000 bales from previous season's record production of 27.9 million bales. Consumption in these countries, however, is estimated to have increased by 800,000 bales over the 27.7 million.

The People's Republic of China purchased a substantial quantity of cotton from world markets in fiscal 1973, with shipments from the United States amounting to about 450,000 bales. Other major markets taking more U.S. cotton in fiscal 1973 were the European Community, South Korea, and Hong Kong.

^{1/} Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. I, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry and pork variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

^{1/} Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry and pork variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

^{1/} PRELIMINARY

SPECIAL in this issue

NEW RECORD FOR U.S. AGRICULTURAL IMPORTS IN FISCAL 1973 OF \$7.3 BILLION

Sharp price increases, coupled with some additional demand, resulted in a record \$7.3 billion level for U.S. agricultural imports during fiscal year 1973. Overall, farm product import value advanced 21 percent from the \$6 billion recorded in fiscal 1972. Volume of imports increased about 6 percent. Thus, higher prices accounted for nearly three-fourths of the import gain. Shortages in foreign supplies and upward foreign currency revaluations contributed to higher commodity prices. In the United States, bad weather cut back some crop and livestock production, attracting more imports. New import records were established for a number of commodities, including meat, dairy products, fruits, vegetables, edible nuts, wines, and bananas.

Most countries shared in the growing U.S. market for farm commodities, notably Brazil, Mexico, Colombia, the Dominican Republic, Central America, Canada, Australia, New Zealand, Indonesia, the original EC members (France, the Netherlands, Italy, West Germany, and Belgium-Luxembourg), Denmark, Spain, Switzerland, Portugal, Poland, Turkey, Greece, Iran, India, the People's Republic of China, Taiwan, Japan, Ivory Coast, Angola, Ethiopia, Uganda, Nigeria, Cameroon, Mozambique, and South Africa. Mexico moved ahead of Brazil as the principal supplier in fiscal 1972, shipping more than \$700 million in agricultural products. While the United States is the second largest importer of agricultural products behind West Germany, per capita imports are substantially less than those of most other developed countries.

Competitive agricultural imports advanced 19 percent to \$4.7 billion, with about three-fifths of the increase stemming from higher prices. Sharply higher prices were paid for feeder cattle, beef, pork, apparel wool, and hides. For example, import unit values for feeder cattle were up 31 percent--averaging \$142.00 per head in fiscal 1973, compared with \$109.00 in fiscal 1972. Fresh-frozen boneless beef, a major import item, averaged 63 cents per pound against 54 cents in 1971/72. Canned hams and shoulders were 97 cents per pound, compared with 83 cents a year earlier. Average import unit values for sheep and lamb skins jumped to \$1.30 per pound from 87 cents; apparel wools averaged 87 cents per pound (greasy basis) against only 50 cents in 1971/72. Most countries exporting these products revalued their currencies relative to the U.S. dollar in 1972/73, thus raising import prices significantly.

The gain in fiscal 1973's farm product imports was also due to additional demand and short world supplies for some commodities. Domestic shortages of meat, dairy products, fruits, and vegetables attracted more imports as bad weather damaged or delayed production of these items. Record levels in consumer's disposable incomes also tended to raise imports of certain specialty items such as wines, edible nuts, and mushrooms.

Dutiable cattle entries totaled nearly 1.2 million head, compared with 1 million in fiscal 1972. Value, however, jumped 50 percent to \$185 million. In May 1973, Mexico, the principal supplier, imposed export restrictions which held down shipments during the final weeks of the year.

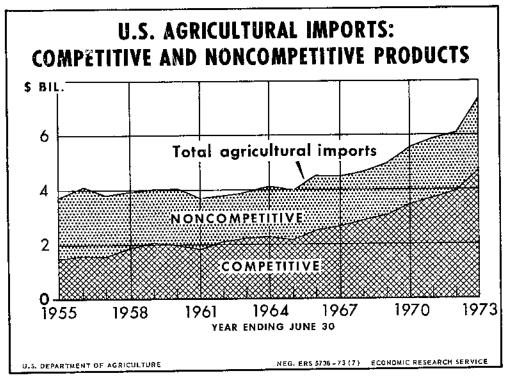

Figure 4

Meat imports responded to strong U.S. demand by rising 8 percent and grossing more than 2 billion pounds, a new record. Higher foreign prices raised value by 24 percent to nearly \$1.4 billion. Fresh-chilled or frozen beef volume advanced 15 percent to 1.36 billion pounds, while value moved up 35 percent to \$865 million. Principal suppliers included Australia, New Zealand, and Central America. In March 1972, the United States relaxed and in June suspended the voluntary restraint program on fresh, chilled, or frozen beef, veal, and mutton previously agreed to by exporters.

Larger import quotas for dairy products resulted in substantially increased inflows. Their value rose to a record \$195 million--39 percent over the fiscal 1972 level. Quotas for certain cow's milk cheeses were temporarily increased by 50 percent in March 1973. Cheese import volume in fiscal 1973 was 192 million pounds, compared with 148 million pounds a year earlier. Nonfat dry milk quotas were relaxed in December 1972 and again in May 1973. Nonfat dry milk imports in fiscal 1973 amounted to 84.4 million pounds (\$26.4 million) against 1.4 million pounds (\$316,000) in fiscal 1972. The additional imports came mostly from Canada and Western Europe.

Fruit and vegetable imports in fiscal 1973 totaled \$615 million, 24 percent above the previous year's \$497 million. Vegetable purchases reached \$409 million, led by cucumbers, eggplant, garlic, onions, peppers, squash, tomatoes, olives, and canned mushrooms. Fruit imports rose to \$206 million, primarily because of rises for apples, pears, berries, grapefruit, oranges, raisins, and grape juice. Most fresh fruits and vegetables entered from Mexico during off-season periods.

Table wine import volume jumped 38 percent in fiscal 1973 to 43 million gallons. Rapid increases in consumption resulted in larger imports. Import value gained 48 percent, advancing to \$190 million from \$128 million in fiscal 1972. Portugal, Spain, and Italy accounted for most of the additional volume.

Nut imports--led by Brazils, cashews, and pistache nuts--moved up 19 percent in value to nearly \$134 million from \$112 million.

Imports of grains and preparations exceeded \$104 million in fiscal 1973, up one-fourth over the previous year's \$83 million. Barley, wheat gluten, and prepared grain products accounted for most of the gain.

In contrast to most agricultural products, sugar import volume declined in fiscal 1973 to 5.06 million short tons from 5.55 million a year earlier. Because of higher prices, however, value rose to \$827 million from \$832 million. Imports of tobacco, including bulk smoking tobacco, dropped slightly to 260 million pounds (\$153 million) from 270 million pounds (\$159 million). Raw cotton imports declined to 38,000 bales (\$6 million) from 68,000 (\$12 million).

After remaining relatively static for several years, the value of noncompetitive agricultural imports jumped 26 percent, reaching \$2.6 billion. The volume of most noncompetitive items changed very little. Foreign supplies were somewhat limited because of bad weather conditions, and thus prices were higher. Price increases were especially sharp for coffee, cocoa, rubber, carpet wool, and sisal, and imports of these items accounted for most of the value gain. There were gains in both volume and value for bananas, processed coffee and cocoa products, some spices, and raw silk. These largely tropical products accounted for 36 percent of total U.S. agricultural imports in fiscal 1973, compared with 35 percent of fiscal 1972 imports, since value accelerated faster than for competitive items. Green coffee prices averaged 49 cents per pound, 23 percent higher than in fiscal 1972. Cocoa bean prices jumped 35 percent to 31 cents per pound. Natural rubber, at 17 cents per pound, was 21 percent higher.

The volume of green coffee imports exceeded 3 million pounds, the largest since fiscal 1966. Value climbed to nearly \$1.5 billion, its highest level since fiscal 1954. Both soluble and roasted or ground coffee imports broke previous records: 70 million pounds (\$102 million) for soluble and 35 million pounds (\$20 million) for roasted or ground products. Cocoa bean imports fell 19 percent in volume to 609 million pounds, but value jumped 12 percent to \$191 million. Cocoa butter entries jumped to 42 million pounds (\$29 million) from 38 million (\$19 million) in fiscal 1972. The volume of natural rubber declined slightly to 1.37 billion pounds from 1.39 billion a year ear-lier, but value rose 13 percent to \$229 million.

1/ PRELIMINARY

.

International Price Highlights

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Soybean meal prices in Decatur, Illinois, and Rotterdam climbed together during May. During the five Tuesdays in May, the Decatur price averaged \$343.92 a metric ton and the Rotterdam price, \$353.80 (for the latter, see table 17). The small difference was insufficient to pay for overland and ocean freight from Decatur to Rotterdam. In other words, ephemeral influences on price formation prevented these two monthly averages from reflecting the cost of moving meal from Decatur to Rotterdam.

The Decatur price reached a high of \$496 on June 5 and declined thereafter, even before President Nixon announced on June 13 that a new system for export controls was needed. Four weeks later, during July 9-11, that price was quoted at \$231.48, less than half its record level. By contrast, the Rotterdam price, which had been \$478 on June 5--less than the Decatur price--climbed to \$665 on July 9, as the effect of U.S. export restrictions was felt in the market.

Another factor influencing the soybean mealmarket is the outlook for Peruvian fishmeal production. As of mid-June, Peru optimistically but tentatively committed fishmeal exports for November at about \$650 a metric ton, c.i.f. Rotterdam, on condition that fishing will be resumed and sufficient fish will be caught. Rotterdam spot quotations in mid-June were \$700 to \$725 a ton.

A two-price system between domestic and foreign markets similar to that for soybean meal developed for soybeans in June and early July, but the difference was much less pronounced than in the case of soybean meal. In May, the Chicago price for No. 1 yellow soybeans averaged \$330.33 a metric ton, the Gulf ports export price for No. 2 yellow soybeans averaged \$350.98, while the c.i.f. Rotterdam price for that grade-averaged from only two observations early in the month-was \$328. Just as the Decatur soybean meal price reached a record high on June 5, so did the Chicago price for No. 1 yellow soybeans attain a record of \$450.85 a metric ton (\$12.27 a bushel) on that day. It averaged \$420.81 for the month. By contrast, the Gulf ports export price at about the same time--June 7--was only \$367.07 a metric ton (\$9.99 a bushel), but it subsequently resumed its climb and averaged \$392.67 for the month (with no quotation during the last week).

The c.i.f. Rotterdam price for No. 2 yellow soybeans was \$445 on June 7. It continued to climb throughout June, averaged \$470 during the month, reached a record \$522 on July 5, and dropped to \$283 a week later. The Chicago quotation reached a recent low of \$225.61 a metric ton (\$6.14 a bushel) on July 9, and the Gulf Port price similarly reached a low of \$268.23 a metric ton (\$7.30 a bushel) on July 5. Thus, early July soybean quotations in the United States and abroad also revealed a differential in excess of freight rates, as did soybean meal quotations; but soybean quotations were more volatile.

It should be borne in mind that all spot quotations in June and July related to small quantities, since the bulk of the soybean crop and most of the meal processed from it had long been sold. Accordingly, quotations for new-crop soybeans assumed significance. Unfortunately, the price of U.S. No. 2 soybeans, c.i.f. U.K., nearest forward shipment--which had been quoted for November arrivals in March, April, and May--was not quoted in June and early July. However, new-crop soybeans, c.i.f. Rotterdam, began to be quoted in early June. The average June price was \$286 a metric ton--\$184 less than the June spot price but \$89 more than the c.i.f. U.K. "forward" or new-crop price during May. Early July quotations for new-crop soybeans, c.i.f. Rotterdam, were higher. However, they preceded the July 10 crop report which showed 55,731,000 acres of soybeans to be harvested for beans in the United States this year (10.0 million acres or 22 percent more than acreage harvested last year) and which projected a 300-million bushel or 24-percent production increase to 1.588 billion bushels.

Sharp increases in feed grain prices were recorded in June. Except for one week, the price of Argentine corn, c.i.f. Rotterdam, has climbed from week to week since April 1, the beginning of the new Argentine crop year. At first, the price increased by only 1 cent a bushel each week; but since the beginning of May, weekly increases have averaged 13 cents a bushel or \$5 a metric ton. The average June price was \$125.58 a ton, 28 percent above the May price. The price of U.S. No. 2 sorghum grain, c.i.f. Rotterdam, rose almost as rapidly, from \$88.58 a ton in May to \$108.85 in June, a 23-percent increase. U.S. corn prices advanced 17 percent on a Gulf ports basis to \$101.97 a ton and 15 percent on a c.i.f. U.K. basis to \$118.52. Partly because of exchange rate fluctuations, the U.K.-Gulf ports differential widened to \$16.55 a ton in June, compared with \$15.27 a month earlier. The widening of the c.i.f. U.K.-Gulf ports differential in June 1973 compared with that of June 1972 must largely be attributed to sharply higher freight rates.

The July crop report shows 62.5 million acres of corn for grain harvest in the United States--5.3 million acres or 9 percent more than acreage harvested in 1972. Thus the prospective decline in carryover stocks at the end of September should be partly offset by larger production this year.

The Gulf ports price of U.S. No. 2 Hard Winter wheat, ordinary protein, rose 2 percent to \$2.90 a bushel (\$106.56 a metric ton) in June; but the corresponding c.i.f. U.K. forward quotation for September-October arrival jumped 14 percent to \$140.70 a ton. Sharply higher freight rates, already mentioned in connection with widening corn price differentials between U.K. and Gulf ports, have also affected similar wheat price differentials. The voyage charter rate per metric ton of grains from U.S. Gulf ports to the United Kingdom was \$15.86 during the second quarter of 1973, compared with \$10.04 during the first quarter and \$4.86 during the second quarter of 1972.

The price of Canadian No. 1 Western Red Spring wheat, 14 percent protein, was also strong in June. The export price at Lake Superior ports was \$114.26 a ton, up 11 percent from May, and the c.i.f. U.K. price for July-September arrival was \$145.34 a ton, up 12 percent.

The 1-3/4 billion bushel U.S. wheat crop now being harvested--13 percent or about 200 million bushels larger than last year's--is not going to market as usual. Many wheat growers may be holding their crop instead of selling it right after harvest. On the other hand, most of the tonnage to be exported is already contracted for export. These unusual marketing patterns may create stresses and strains on the price pattern for this crop.

The price of Memphis Territory cotton, c.i.f. Liverpool, advanced to 55.25 cents a pound, in June, a 7-percent increase over May and a 57-percent increase over the June 1972 level. This may be a market reaction to unfavorable weather in the Mississippi Delta during the cotton planting season, which resulted in the planting of only 13,128,400 acres of cotton in the United States, a 6-percent decline from 1972.

Also, world cotton production outside the United States in 1972, just recently reported, was 1 million bales (2 percent) down from 1971 even though total world production, including the United States, was up substantially; but data were long fully known.

The New York price of rubber, No. 1 ribbed smoked sheets, advanced 18 percent from May to June, its steepest rate of increase. At 37.4 cents a pound, it was more than twice as high as its depressed 1971 and 1972 averages. The New York price of cocoa beans, similarly, was 15 percent higher than in May, and at 70.2 cents a pound, it was substantially more than twice as high as its 1971 and 1972 averages.

Coffee and sugar prices, by contrast, were relatively stable, rising by 1 to 2 percent during June. But compared with the June 1972 price, the coffee price was up 39 percent; the world market sugar price, 48 percent; and the price of sugar destined for the U.S. market, 16 percent. The price of imported cow meat declined for the third successive month to 81.4 cents a pound, 10 percent below its 90.3-cent peak in March but 17 percent above a year ago.

^{1/} Based on 359 classifications in 1971.

Z/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 Varient of the Seasonal Method II Seasonal Adjustment Program, Technical Paper No. 15, U.S. Government Printing Office, Washington, D.C., 1965.

^{1/} Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers.
2/ Based on 430 classifications in 1971.
3/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-ll. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-ll Varient of the Seasonal Method II Seasonal Adjustment Program, Technical Paper No 15, U.S. Covernment Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The <u>import value</u>, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The <u>country</u> of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
