FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

Mexico's Agricultural Trade (see p. 5). U.S. agricultural exports to Mexico in 1972/73 soared 94 percent to a new record high of nearly \$254 million. Sales of wheat, corn, grain sorghums, soybeans, and oilseed products were well above the 1971/72 levels. Increased prices contributed to some of the gain, especially for cattle hides. During the same period, Mexico became the principal source of U.S. agricultural imports. U.S. agricultural imports from Mexico advanced 32 percent to \$706 million. Fruits, vegetables, beef, sugar, and coffee accounted for much of the gain.

* * * * *

Top Outlets for U.S. Agricultural Exports in Fiscal 1973 (see p. 19). While U.S. agricultural exports of \$12.9 billion in fiscal 1973 went to 164 destinations, 15 countries received 72 percent, or \$9.3 billion of the total. The top 50 markets took \$12.1 billion, accounting for 94 percent of the total. Exports to 25 of the 50 major markets exceeded the \$100 million mark. Eleven of these markets were developing countries. The largest value gains occurred in shipments to Japan, the USSR, the Netherlands, West Germany, Italy, Spain, and South Korea. Value gains of over \$100 million occurred in shipments to Canada, France, and Mexico. U.S. agricultural exports to the People's Republic of China topped \$200 million in fiscal year 1973, and shipments to the USSR reached \$957 million. Exports to Eastern Europe increased to \$449 million from only \$198 million in fiscal 1972. Estimated transshipments through Canada are presented in table format.

* * * * *

U.S. Agricultural Import Fact Sheet, Fiscal Year 1973 (see p. 38). Almost all supplying countries shared in the 21-percent increase in U.S. agricultural imports in fiscal year 1973. The 50 largest suppliers accounted for 94 percent of the \$7.3 billion worth of farm products we imported. Competitive farm products accounted for 64 percent of the total, noncompetitive products for 36 percent. Per capita, imports averaged \$35 in fiscal 1973, compared with \$29 a year earlier--higher prices accounted for most of the increase. Tables accompanying the article show commodity-group breakdowns of imports from the 50 major suppliers over the past 5 years, as well as total import data for all suppliers.

* * * * *

Export Prices Rise More Than Import Prices (see p. 54). Export prices (unit values) for the summer 1973 quarter were 76 percent higher than a year earlier and 42 percent higher than during the spring quarter. Import prices during the summer quarter were 29 percent above the level of a year earlier. Summer quarterly unit values of soybean meal and soybeans, which were more than twice as high as a year earlier, experienced the largest increases. The doubled unit value of inedible tallow, and the 85 percent increase in wheat and rice prices also pushed up the soaring quarterly export price index. During the October 1972-September 1973 period, export prices averaged 37 percent higher than a year ago, and import prices, 26 percent higher.

* * * * *

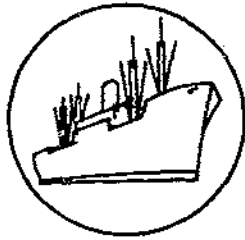

Selected Price Series of International Significance (see p. 58). For the first time in more than a year, the Dow-Jones commodity spot price index and Reuter's commodity spot index took a downturn, reflecting the good 1973/74 crop outturn. During October, export prices of soybeans and soybean meal took the deepest plunge, falling 10 percent from the September prices. Price quotations of wheat, corn, and sorghum also declined, but were still well above their October 1972 levels. Declines also prevailed for the principal U.S. agricultural import items, with the notable exceptions of sugar and cocoa beans.

* * * * *

Agricultural Export Growth Accelerates in July-October (see p. 63). U.S. agricultural exports rose to an alltime high of \$5.87 billion in July-October 1973--nearly double the \$2.98 billion for these months in 1972. About two-thirds of the value increase stemmed from higher prices. The balance of the increase was from larger volume, especially for wheat, feed grains, cotton, tobacco, fruits and vegetables, live animals, and meats. Grain exports alone accounted for over two-thirds of the total increase. But export value gains for soybeans, soybean meal, meats, live animals, cotton, fruits, nuts, vegetables, and tobacco also contributed to the sharp value rise in U.S. agricultural exports during July-October. October 1973 exports of farm products rose to a record \$1.73 billion--nearly double the \$907 million in October 1972 and nearly one-fifth above the previous record of \$1.47 billion in August 1973.

* * * * *

U.S. Agricultural Import Value Up 25 Percent, Volume Declines (see p. 75). U.S. agricultural imports during July-October 1973 totaled \$2.7 billion, or 25 percent above the same months last year. Price increases were responsible since volume declined about 6 percent. There were a few exceptions to the general volume decline, notably dairy products and eggs, pork, certain fruits and vegetables, tobacco, and wines. Competitive agricultural imports amounted to \$1.8 billion, compared with \$1.4 billion a year earlier. This 30-percent gain reflected mostly higher prices, particularly for cattle, meat, wool, oil-bearing materials, and sugar. Noncompetitive farm product imports, valued at \$880 million, were 17 percent above the level of a year ago. Price advances for coffee, cocoa, spices, essential oils, and carpet wools raised import values while volume declined.

SPECIAL in this issue

MEXICO'S AGRICULTURAL TRADE

U.S.-Mexican Trade, Fiscal Year 1973

During fiscal year 1973, agricultural trade between the United States and Mexico accelerated rapidly from year-earlier levels, setting new records. U.S. agricultural exports to Mexico amounted to \$254 million, 94 percent above fiscal 1972. At the same time, U.S. agricultural imports from Mexico totaled \$706 million, up 32 percent. Bad weather and continued growth in demand for farm products contributed to the trade surge. A combination of hot, dry conditions in northern Mexico and flooding in other producing areas reduced Mexican grain crops, while severe cold and heavy rains adversely affected U.S. livestock and crop output.

Total U.S. exports to Mexico in fiscal 1973 amounted to \$2.31 billion, 36 percent ahead of last year's value. U.S. imports from Mexico rose 31 percent to \$1.87 billion. The trade surplus was nearly offset by U.S. tourist expenditures and investment flows to Mexico.

Although U.S. exports to Mexico are primarily manufactured goods, we are nevertheless Mexico's principal supplier of farm imports, usually accounting for about half the total. Agriculture's share of total U.S. exports to Mexico increased in fiscal 1973, accounting for about 11 percent of the total, compared with 7.7 percent in fiscal 1972 and an average of 7.6 percent over the previous 10 years. In terms of total U.S. agricultural exports, those to Mexico accounted for 2 percent in fiscal 1973, compared with 1.6 percent in fiscal 1972.

Increased demand and production shortfalls in Mexico raised their imports of U.S. wheat to a record of nearly 669,000 tons (\$53.6 million) in fiscal 1973 from 402,000 tons (\$25.2 million) a year earlier. During fiscal years 1952-71, U.S. wheat exports to Mexico were relatively insignificant.

U.S. exports of corn to Mexico soared to 426,000 tons (\$33 million) in fiscal 1973 from less than 15,000 tons (\$1.5 million) in fiscal 1972. Reduced corn production due to weather damage raised Mexico's import requirements last year. The previous record was 1,148,000 tons (\$64.7 million) in fiscal 1958. Fiscal 1973 grain sorghum shipments also reached a near record--172,000 tons (\$10 million), compared with 78,000 tons (\$4.3 million) in fiscal 1972 and the previous high of 173,000 tons (\$8.3 million) in fiscal 1963. Grain sorghum is the main grain used in poultry and hog feeds in Mexico. Heavy rain in the primary sorghum producing region near Matamoros (fig. 1) for the second consecutive year damaged crops and reduced output by an estimated 250,000 tons. Imports in fiscal 1974 may be larger than the fiscal 1973 volume.

U.S. soybean exports to Mexico totaled 50,000 tons (\$9.9 million) in fiscal 1973 against 18,000 tons (\$2.2 million) a year earlier, 67,000 tons (\$7.9 million) in

Figure 1

fiscal 1971, and 129,000 tons (\$13.6 million) in fiscal 1970. Nondefatted soybean flour shipments jumped to 45,000 tons (\$11.9 million) from about 6,000 tons (\$789,000) in fiscal 1972.

Other U.S. farm product exports to Mexico showing gains in fiscal 1973 included dairy cattle, edible offals, poultry meat, dairy products, barley, grain products, seeds, fruits and vegetables, lard, and vegetable oils. Cattle hide exports increased in value because of higher prices, but volume fell.

While Mexican grain production should increase significantly in 1973/74, imports are expected to continue at high levels because of low stocks and consumption increases. Mexican wheat imports are expected to be 700,000-800,000 tons; corn, over 900,000 tons; and sorghum, 350,000 tons. The United States is expected to furnish most of these imports.

Mexico became the largest source of U.S. agricultural imports for the first time in fiscal year 1973, replacing Brazil as the traditional leading supplier. Mexico supplied 9.6 percent of our total farm imports last fiscal year, compared with 8.9 percent in fiscal 1972. Also, Mexico continued to be the main source of competitive farm commodities--as it had been for many years--accounting for 12 percent in fiscal 1973, compared with 11.5 percent a year earlier.

Sharp increases in U.S. consumption of livestock products and fruits and vegetables, attracted larger inflows from Mexico, especially during off-season periods. Virtually all fruit and vegetable entries increased in fiscal 1973. Heavy rains and other weather damage in U.S. producing areas contributed to larger inflows, especially for oranges, onions, and tomatoes. Price increases raised the value of some imported items such as cattle, beef, sugar, and molasses.

Of U.S. fresh vegetable imports, about 85 percent come from Mexico. Most or all imported beans, cucumbers, eggplant, garlic, onions, peas, peppers, squash, and tomatoes are shipped from Mexico. Over 60 percent of our imported fresh fruits--mostly melons, oranges, and strawberries--are supplied by Mexico.

Mexico is also the principal supplier of U.S. dutiable cattle imports. With a decline in the number of cattle imported from Mexico--from 844,000 in fiscal 1972 to 838,000 in fiscal 1973--Mexico's share fell from 80 to 70 percent. Even with sharp price increases, the value share of cattle imports from Mexico fell to 59 percent from 72 percent, while the dollar amount rose to \$109 million from \$89 million. Mexican export restrictions on feeding cattle imposed in May 1973 reduced import numbers in final weeks of the fiscal year.

U.S. imports of noncompetitive agricultural items from Mexico expanded sharply in fiscal 1973. Value advanced nearly two-thirds to \$145 million from \$84 million in fiscal 1972. Increased prices for Brazilian coffee made the relatively high-quality Mexican beans more attractive to U.S. importers. Coffee accounted for 78 percent of noncompetitive agricultural import values from Mexico in fiscal 1973, compared with 69 percent a year earlier.

Mexico's Trade in 1967-71 and 1972

In calendar year 1972, Mexico's international trade increased sharply. Total exports rose nearly 23 percent above the 1971 level, reaching \$1.8 billion.* This increase was more than offset by a 23-percent rise in total imports, which amounted to \$2.9

* The asterisk indicates that the figure includes a revaluation to reflect f.o.b. market values. In Mexico, certain export commodity values are determined by the Government.

billion. Although agricultural products account for only a small share of Mexico's total imports, production shortfalls and increased demand boosted imports of farm products in 1972, and these contributed significantly to the increase in imports.

Mexico's export trade is largely dependent upon agriculture. During 1967-71, agricultural exports averaged 52.3 percent* of total Mexican exports. In 1971, agriculture's share was only 46.7 percent* as bad weather and increasing demand combined to put downward pressure on exportable commodities.

On the reverse side of the coin, agricultural products represent only a small percentage of total Mexican imports. Their share was 9.3 percent in 1970 and 8.4 percent in 1971. The 1967-71 average, however, was only 7.3 percent.

The United States has been Mexico's most important supplier of imports and will likely continue to be. In 1967-71, U.S. products accounted for 67.5 percent of Mexico's total imports and for 64.8 percent of the agricultural imports. In 1972, the U.S. share of Mexico's total imports was approximately 60 percent (\$1.8 billion). Next in importance was the European Community with about 16 percent (\$474 million); Asia, 5 percent (\$133 million); the Latin American Free Trade Association, 4 percent (\$120 million); Canada, 3 percent (\$75 million); and the rest of the world 12 percent (\$362 million). The United States is also Mexico's main market for exports, taking 79.1 percent* of that country's total exports in 1967-71. In 1972, we accounted for about 67 percent (\$1.1 billion) of all Mexican exports. Members of the Latin American Free Trade Association were the second most important market, accounting for about 9 percent (\$141 million), followed by Asia, 6 percent (\$94 million); the European Community, 5 percent (\$78 million); the Central American Common Market, 2 percent (\$35 million); and the rest of the world, 11 percent (\$193 million).

Mexico's agricultural exports to the United States averaged 64.7 percent* of total agricultural exports in 1967-71. During the period, however, that share was declining.

The following tabulation compares Mexico's 1971 and 1972 total agricultural exports:

Commodity	: Volume of :		: Value of :	
	: exports, :	: Change :	: exports, :	: Change :
	: 1972 :	: 1971-72 :	: 1972 :	: 1971-72 :
	: 1,000		Million U.S.	
	: <u>metric tons</u>	<u>Percent</u>	<u>dollars</u>	<u>Percent</u>

Strawberries with sugar	: 50	31	17	45
Fresh horticultural products	: 179	-6	16	-5
Honey	: 33	94	13	178
Total selected products	: <u>2/2,225</u>	15.3	476	18

1/ Individual commodities with administratively determined values assigned by Mexican customs are not adjusted to reflect f.o.b. market values. 2/ Doesn't include live cattle.

Mexican agricultural imports for 1972 reflected the world's changing supply and demand situation. Some of Mexico's main agricultural imports and changes from 1971 were:

Commodity	Volume of	Change	Value of	Change
	imports,	1971-72	imports,	1971-72
	1972		1972	
	1,000		Million U.S.	
	metric tons	Percent	dollars	Percent
Grains	1,094	385	80	349
Milk--powdered, condensed	68	10	39	47
Oilseeds	52	-63	13	-45
Vegetable and animal fats and oils	26	-9	13	32
Total listed items	1,240	171	145	88

Preliminary information for the first half of 1973 indicates that Mexican exports were up 25.5 percent* from the first half of 1972 and imports, up 33.4 percent.

The following totals give some indication of Mexico's principal partners and the main agricultural commodities traded.

Table .--Total Mexican trade for selected countries, January-March 1973 with 1972 comparisons

1/ Exports include reevaluations for certain commodities. Some export commodities, principally bovine cattle, coffee, and cotton, are assigned administratively determined values by the Mexican customs. This results in undervaluation. The value of these commodities are adjusted to f.o.b. transaction values by the Bank of Mexico. These adjusted values are included in this table in the major SITC codes, SITC subgroups, and totals. These adjusted values have all been added to exports to the United States, since the major share of these products are exported to the United States. Exports to the United States also include some commodities, such as cotton, which are transhipped to other countries.

2/ Less than \$500.

3/ Mostly for transshipment to other countries.

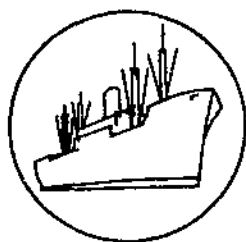

Sources: Anuario Estadístico del Comercio Exterior de los Estados Unidos Mexicanos, and U.N. trade runs.

TOP OUTLETS FOR U.S. AGRICULTURAL EXPORTS IN FISCAL 1973

U.S. agricultural exports of \$12.9 billion in fiscal 1973 went to 164 countries, but 15 countries accounted for \$9.3 billion, or 72 percent of the total. Exports to the 50 major markets totaled \$12.1 billion, 94 percent of the total.

Exports to Japan nearly doubled over the fiscal 1972 level, keeping this country in first place as the major market for U.S. farm products. The Netherlands and Canada exchanged second and third places as exports to the Netherlands advanced 58 percent, while those to Canada rose 16 percent. Larger farm shipments to the USSR in fiscal 1973 boosted that country to fourth place, with West Germany dropping into fifth position. Of the 50 major markets, only five countries--India, Pakistan, Morocco, Algeria, and the Dominican Republic--registered a decrease in their imports of U.S. farm products. Exports to these countries declined slightly over \$100 million. The largest decrease occurred in exports to India, which moved from tenth place in fiscal 1972 to twentieth place in fiscal 1973.

In order of magnitude, the largest value gains in U.S. agricultural exports to a single country were to Japan, the USSR, the Netherlands, West Germany, Italy, Spain, and South Korea. Value gains of over \$100 million occurred in farm shipments to the People's Republic of China, Poland, Canada, France, and Mexico. Exports to 25 of the 50 markets exceeded the \$100 million mark. Eleven of these markets were less developed countries.

Japan

Exports to Japan totaled \$2.3 billion in fiscal 1973, representing 18 percent--a record share--of total U.S. agricultural exports. The \$1.1-billion increase in exports to Japan accounted for 23 percent of the total fiscal year gain. Three-fourths of the increase in exports to Japan was due to expanded shipments of feed grains, oilseeds, wheat and flour, and hides and skins. Japan took about one-fourth of our exports of feed grains, cotton, and oilseeds, and about one-third of the hides and skins and red meat shipments.

European Community

U.S. farm exports to the nine countries comprising the enlarged European Community (EC) totaled \$3.6 billion in fiscal 1973--47 percent above the level of the previous year. Most of the \$1.1-billion gain was concentrated in larger shipments of oilseeds, feed grains, protein meal, and wheat and flour. Slightly better than two-thirds of our farm shipments to the EC went to the Netherlands, West Germany, and the United Kingdom. The Netherlands was the top outlet for oilseeds, feed grains, and wheat and flour. Principal purchases by West Germany include oilseeds, protein meal, feed grains, and tobacco. The United Kingdom took large shipments of tobacco, feed grains, and oilseeds.

As a group, the EC countries took about half our tobacco exports, better than two-fifths of our oilseeds and nuts and preparations, and 30 percent of our feed grain and meat exports.

Canada

U.S. farm exports to Canada, excluding grains and oilseeds transshipped through Canadian ports, advanced considerably to \$824 million in fiscal 1973, but accounted for a smaller proportion of total exports than in fiscal 1972. Sizable reductions were recorded in Canadian purchases of U.S. cotton, vegetable oils, oilseeds, animal fats and oils, and dairy products. However, reduced shipments of these products were more than offset by expanded purchases of fruits, vegetables, and preparations. U.S. poultry meat exports to Canada reached a record \$6 million in fiscal 1973. Canada was second only to Japan in purchases of U.S. red meat (excluding products).

Eastern Europe and the USSR

Over \$1.4 billion worth of U.S. agricultural exports were shipped to Eastern Europe and the USSR during fiscal 1973, nearly 3 times the \$353 million exported a year earlier. Almost 11 percent of our total farm exports moved to these destinations in fiscal 1973, compared with 4.4 percent in fiscal 1972. COMECON members took over \$1.3 billion, and the USSR was the largest buyer, taking \$957 million. New records were established for exports to Czechoslovakia, Poland, Romania, and the USSR. Large shipments of wheat, feed grains, and soybeans accounted for most of the increase. About 82 percent of total U.S. exports to Eastern Europe and the USSR were agricultural products in 1972/73.

People's Republic of China

After a lapse of more than 20 years, the United States and the People's Republic of China resumed trade in 1971. By fiscal 1973, U.S. agricultural exports to the People's Republic of China, which accounted for over 90 percent of all U.S. exports to that country, amounted to \$207 million including transshipments. Grain exports totaled \$103 million and accounted for 24 percent of China's total grain imports of 6.3 million tons that year. China imported an estimated total of 1.7 million bales of cotton in fiscal 1973, of which 447,000 were from the United States. U.S. exports also included 33,000 tons of soybeans and 61,000 tons of oil with a combined value of \$27 million.

SPECIAL in this issue

U.S. AGRICULTURAL IMPORT FACT SHEET, FISCAL 1973

Imports of agricultural products totaled \$7.3 billion in 1972/73. The volume index for U.S. agricultural imports increased about 4.5 percent in fiscal 1973 to 121.4 from 116.1 a year earlier (1967=100). The value of imports increased 21 percent, reaching \$7.32 billion. Thus, price effects accounted for almost 80 percent of the gain. Production declines and continued strong demand resulted in sharply higher prices. Devaluation of the dollar against many other currencies also made imports more expensive.

Per capita agricultural imports averaged \$35. With the sharp increase in import value and a small population gain, U.S. imports of farm products averaged \$35 per person during fiscal 1973, compared with \$29 a year earlier, \$28 in fiscal 1971, and \$27 in fiscal 1970.

The United States ranks second in agricultural imports on a c.i.f. basis. During calendar 1972, West Germany imported \$8.4 billion in agricultural products. Other large importers that year were the United Kingdom (\$6.8 billion), Japan (\$5.5 billion), Italy (\$4.9 billion), and France (\$4.2 billion). All values are c.i.f., except for the United States, which values imports on an f.o.b. or f.a.s. basis.

Farm products accounted for 12 percent of total U.S. imports. After a long-term decline, agricultural imports as a share of total imports leveled at about 12 percent in fiscal 1973. In fiscal 1965, farm products had made up 20 percent of total imports; by fiscal 1971 they accounted for 14 percent. Nonagricultural imports totaled \$54 billion in fiscal 1973, compared with \$44 billion a year earlier, \$37 billion in fiscal 1971, and \$15.7 billion in fiscal 1965.

More than two-thirds of U.S. agricultural imports came from 20 countries. Although U.S. farm product imports originated in over 150 foreign countries, 71 percent came from only 20 countries. Mexico emerged as the principal source in fiscal 1973, replacing Brazil, which had held first place for many years. Imports from Mexico totaled more than \$700 million, compared with Brazil's \$690 million. Australia was again the third largest supplier. Canada shipped \$437 million, moving ahead of the Philippines for fourth place. The 20 leading suppliers all increased their agricultural exports to the United States in fiscal 1973, except Argentina. Regional trade groupings such as the Latin American Free Trade Area (LAFTA), the Central American Common Market (CACM), and the European Community (EC) supplied nearly half of U.S. agricultural imports.

Competitive products accounted for 64 percent of U.S. agricultural imports. The value of "supplementary" or competitive farm products advanced 19 percent in fiscal 1973 to \$4.71 billion from \$3.96 billion a year earlier. Higher prices accounted for three-fourths of the increase. The volume index for competitive items rose 5 percent

Table 12.--Agricultural imports of selected countries: Value, 1971-72

Country	Agricultural imports		Agricultural imports from U.S.		U.S. share	
	1971	1972	1971	1972	1971	1972
	-- 1,000 dollars --				Percent	
West Germany	7,126,320	8,385,054	794,162	822,477	11.1	9.8
United Kingdom	6,106,532	6,823,739	484,492	569,267	7.9	8.3
Japan	4,451,841	5,486,109	1,334,618	1,585,463	30.0	28.9
Italy	3,866,420	4,893,942	306,715	359,309	7.9	7.3
France	3,391,632	4,226,536	282,930	342,665	8.3	8.1
Netherlands	2,285,041	2,797,195	518,290	542,563	22.7	19.4
Belgium-Luxembourg	1,822,002	2,219,324	193,651	127,850	10.6	5.8

to 127.9 from 121.7 (1967=100). Volume was higher for dutiable cattle, beef and veal, pork, cheese, nonfat dry milk, eggs, most fruits and vegetables, edible nuts, vegetable oils, molasses, and wine. Values increased for nearly all commodities; exceptions included cotton, sugar, tobacco, and live poultry.

Noncompetitive products rose to 36 percent of total farm commodity imports. Noncompetitive or "complementary" agricultural imports expanded sharply in value in fiscal 1973, totaling \$2.6 billion, compared with \$2.1 billion the previous year. This one-fourth increase in value raised the share of noncompetitive imports by 1 percentage point to 36 percent--the same as in fiscal 1971, but still well below the 46-percent share of fiscal 1963. Substantial price increases took place, accounting for 85 percent of the value growth in noncompetitive farm imports. The volume index rose to 112, gaining only 3.6 percent (1967=100). Prices were higher for coffee, cocoa, rubber, hard fibers, essential oils, and carpet wool.

Import duties for agricultural commodities are relatively low. During calendar year 1972, customs duties on imported agricultural products averaged 5 percent ad valorem equivalent. Duty rates have declined for several years, primarily as a result of tariff reductions agreed to by members of the General Agreement on Tariffs and Trade (GATT). Staged reductions between 1968 and 1972 followed "Kennedy Round" negotiations completed in 1967. Average ad valorem duty rates for agricultural commodities averaged 5.8 percent in 1967 and subsequently fell to 5.5 percent in 1969 and to 5.1 percent for 1970 and 1971. Between August 15 and December 20, 1971, a temporary import surcharge was imposed on some dutiable items, resulting in a leveling of the downtrend. Dutiable items made up 60 percent of total agricultural imports in 1972, up from 56 percent in 1967. During the same period, average rates for dutiable items declined to 8.3 percent from 10.4 percent. Duty-free agricultural imports accounted for 40 percent of the total in 1972.

Some agricultural imports are subject to quantitative restrictions. Under section 22 of the Agricultural Adjustment Act, certain commodities are limited by annual import quotas. These include wheat and wheat products, cotton and some cotton products, peanuts, and some dairy products. Quotas for certain types of cheese and nonfat dry milk were raised in 1973. Regulated cheese quotas were increased by 50 percent in March, and nonfat dry milk quotas were increased by 85 million pounds. Although authority to restrict certain meat imports exists under Public Law 88-482, quotas have not been imposed. The voluntary import restraints which regulated shipments by major exporting countries were suspended in July 1972.

The following tables show commodity-group breakdowns of imports from the 50 leading suppliers over the past 5 years. Total import data for all suppliers are also shown.

SPECIAL in this issue

EXPORT PRICES RISE MORE THAN IMPORT PRICES

Export prices during the 1973 summer quarter (July-September) increased faster than during any 1973 quarter to date. Prices of the 13 leading U.S. agricultural exports virtually soared, increasing 42 percent over the 1973 spring quarter and 76 percent over the 1972 summer quarter.

Prices of the 12 leading U.S. agricultural import commodities were 29 percent higher during the 1973 summer quarter than during the corresponding 1972 period, increasing somewhat less than the export price rise. Thus, the July-September terms-of-trade index (export price index divided by import price index) reached 136.6, improving from earlier quarters. This meant that the same combination of export goods which paid for the purchase of 100 units of a combination of import goods during July-September 1972 paid for 136.6 units of such goods a year later.

The export and import price rises were due to strong demand, a continuing result of the generally poor 1972/73 crop year. Devaluation of the U.S. dollar also influenced price increases.

The unit value of nearly every export commodity rose, with the unit values of soybeans and soybean meal increasing the most. The soybean meal unit value, which began its rise in the spring of 1972, was up to an unprecedented \$302 a metric ton during the summer quarter, more than 250 percent of a year earlier. Likewise, the unit value of soybeans--the third largest U.S. agricultural export--also more than doubled to \$7.80 a bushel. In contrast to the spectacular climb of soybean and soybean meal unit values, soybean oil prices rose at the more modest rate of 40 percent from the 1972 summer quarter.

Normally, the oil price is about three times the meal price, but with the average unit value of soybean oil at 18 cents a pound, the soybean oil/soybean meal price ratio was down to 1.33. A bushel of soybeans yield about 78 percent meal and 18 percent oil--about 4-1/3 as much meal as oil. Thus, the meal content of soybeans normally is worth about 1.4 times as much as the oil extracted (4-1/3 divided by 3). At the 1973 summer quarter export values, the meal content was worth 3.3 times the oil content (4-1/3 divided by 1.33). The strong foreign demand for soybean meal as a high-protein feed and substitution of soybean meal for other high-protein feeds in short supply have resulted in this turnabout situation. Moreover, the peaking of domestic bean and meal prices in June and the subsequent peaking of domestic oil prices may have exaggerated the price differentials in the export unit values of these products. Large importers of U.S. soybeans were West Germany, the Netherlands, Taiwan, and Japan. Leading importers of soybean meal during the 1973 summer quarter were Spain, Italy, Romania, and Japan. The summer quarter also experienced the effects of the June 27 embargo on oilseeds and oilseed products, which was replaced by validated licensing for soybean, cottonseed and oilseed cake and meal on July 2.

The summer quarter unit value of inedible tallow, at 16 cents a pound, was double that of a year ago. The fall in U.S. tallow output (due to a lower cattle slaughter) and the high price of competitive lauric acid oils (coconut oil and palm kernel oil) contributed to this rise. Japan, the Netherlands, the Republic of Korea, and Egypt were the principal importers of U.S. inedible tallow this summer.

Exports of wheat--the leading U.S. agricultural export commodity--showed a quarterly unit value of \$3.13 a bushel, compared with \$2.16 a bushel during the spring quarter and \$1.67 a bushel during the summer of 1972. During July-September 1973, large volumes of wheat were shipped to the People's Republic of China, the USSR, Japan, and India, as well as to many other countries. The unit value of flour rose to \$6.81 a hundred weight--in the 1973 summer quarter--two-thirds higher than a year earlier and 21 percent higher than during the 1973 spring quarter. This implies that a pound of flour was valued 1.30 as high as a pound of wheat. Over the preceding 17 quarters, this price relationship ranged from 1.41 to 1.64. Because 1.4 pounds of wheat are required to make 1 pound of flour, these quarterly price statistics alone imply a negative million margin--balancing out the .9 cent a pound of flour milling margin of the second quarter.

The quarterly price of corn (our second leading export commodity), at \$2.37 a bushel, was 56 percent higher than the 1972 summer price. The quarterly grain sorghum price, at \$2.09 a bushel, was up 72 percent. The large quantity of exports, coupled with these higher prices, is indicative of the strong foreign demand for feedstuffs. Japan, the USSR, the People's Republic of China, and Spain were leading corn purchasers during the quarter. Like wheat, because of the timing of contract negotiations, the quarterly average unit value of shipments to individual countries had a 100 percent range. Grain sorghum--with a narrower 25 percent range between the high and the low export unit values--went to Japan, Israel, India, and the Netherlands.

The average unit value of rice increased 85 percent, reaching 17 cents a pound, compared with 9 cents a pound a year ago. A short 1972/73 world rice crop led to the bid-up export unit values of the summer quarter. Like wheat exports, U.S. rice exports were shipped to both developed and less developed countries. The largest U.S. shipments of milled rice went to Hong Kong, the Republic of South Africa, Canada, and Saudi Arabia during July-September 1973.

Commodities whose price rises were less than the increase in the index average were wheat flour, grain sorghum, soybean oil, cotton, flue cured tobacco, whole cattle hides (whose unit values increased the most during 1973), and nonfat dry milk.

The export unit value for cotton was relatively stable compared with the year-earlier level, and did not yet reflect the increasing price quotations of July-September 1973 brought on by considerable forward buying activity. Also, the summer quarter's average unit value was down 11 cents a pound from the spring quarter. The Republic of Korea, the People's Republic of China, Hong Kong, and the Philippines were leading recipients of U.S. cotton exports during the third quarter.

Because unit values of leading export commodities have marched up quarter-by-quarter, the annual price index for October 1972-September 1973, at 137, was not as high as the summer quarter index of 176.

Among import commodities, the price of clothing wool hit a new high--\$1.33 a pound, double the 1972 summer quarter unit value. In terms of volume, clothing wool ranked ninth among U.S. agricultural imports.

Rubber, however, ranked fourth in import volume, and its unit value rose to 26.3 cents a pound--85 percent above the July-September 1972 price and 19 percent above the 1973 spring quarter price. Despite the quarter-to-quarter price rise, during the past

year, the volume of U.S. rubber imports was appreciably higher during October 1972-September 1973 and during July-September 1973 quarter than they were during the corresponding periods a year earlier.

The summer quarter unit value of cocoa bean imports was 73 percent higher than during the same quarter of 1972. But unlike rubber, the quantity imported was less during July-September 1973 and during October 1972-September 1973 than during year-earlier periods. The price of coffee--by far the leading import commodity--was 56 cents a pound, 27 percent above the unit value of July-September 1972. Most of the coffee imports came from Brazil, Colombia, and Mexico.

The second leading agricultural import during the 1973 summer quarter was fresh, frozen, and chilled beef and veal. Ham ranked third and dutiable cattle, fourth. Prices were higher for all these livestock products. The unit value of dutiable cattle, at \$267 a head, was 69 percent above the summer 1972 price. Nevertheless, the summer quarter unit values of canned hams and fresh, chilled, or frozen beef climbed--by 56 and 33 percent, respectively. The third quarter unit value for beef was 78 cents a pound and for ham, \$1.28 a pound. These import unit values were rising with domestic meat prices. Australia, New Zealand, and Canada supplied the beef imports, while the hams originated in Denmark, the Netherlands, and Poland.

The unit import values for coffee, sugar, bananas, wines, tobacco, and tomatoes rose more slowly than the import price index of the July-September 1973 period. The unit value of sugar rose 14 percent to 9.0 cents a pound, reflecting rising world sugar prices. Wines also moved upward to \$5.39 a gallon--22 percent above the unit value in July-September 1972. Tomatoes, with seasonal price fluctuations, had a summer 1973 unit value of 14.9 cents a pound--off .7 cent a pound from the spring quarter, but 16 percent higher than during the summer 1972 quarter. Among the leading import commodities, only tobacco and bananas had a stable unit value throughout the four quarters from the summer of 1972 to the summer of 1973. The July-September average unit import value of tobacco was 60 cents a pound, and set bananas, 4.5 cents a pound.

The October 1972-September 1973 yearly import price index at 126 was about the same as the June-September 1973 quarterly import price index of 129. Due mainly to higher export and import prices, the total value of exports during the 1973 summer quarter was about double the level of a year earlier. The total value of imports was about one-fourth higher. The quarterly quantity indexes (which are obtained as by-products of the price indexes) were down slightly for imports and up sharply for exports. The annual quantity indexes, however, showed increases for both imports and exports.

^{1/} Unit values were computed from the value and quantity figures published in Foreign Agricultural Trade of the United States. Cotton poundages were obtained from U.S. Bureau of the Census Reports, Supplement to EM 522.

^{2/} The index numbers are of "fisher's Ideal" type.

International Price Highlights

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

The October average of the Reuter's commodity price index (in which agricultural commodities comprise about four-fifths of the total weights) was 1,186, reflecting a slight fall from the September average. In the Dow-Jones commodity index (consisting entirely of agricultural commodities in U.S. markets) the October average was 317, 6 points below the September average. Both downturns were the first in well over a year, reflecting the materialization of a good agricultural production year.

Price quotations for the principal U.S. agricultural export items--wheat, corn, sorghum, soybeans, and soybean meal--were all lower than in September, but still well above the October 1972 prices. Except for price increases for raw-sugar and cocoa beans, declines also occurred in prices of the principal U.S. agricultural import items.

Of the selected export commodity prices, those of soybeans and soybean meal took the deepest plunge, reflecting a record U.S. soybean harvest and prospects for a large carryover from the 1973/74 crop year.

The October price average for U.S. No. 2 yellow soybeans, f.o.b. vessel, Gulf ports, was \$226 a ton and for U.S. soybean meal, 44 percent protein, c.i.f. Rotterdam, \$207 a ton, both prices were 10 percent lower than the September prices.

The U.S. No. 2 soybean, bulk, c.i.f. U.K., nearest forward shipment, price continued upward. This contrary price movement may be the result of a time lag. While the c.i.f. U.K. price should reflect freight and insurance charges and thus be higher than the f.o.b. vessel, Gulf ports price, the differential between the two markets widened to \$60 a ton during October. The U.S. soybean production estimate released by USDA in early November was 1,574 million bushels--a record but slightly less than the October estimate.

October average prices for U.S. No. 2 yellow corn, f.o.b. vessel, Gulf ports, at \$106 a ton, and for U.S. No. 3 yellow corn, c.i.f. U.K., nearest forward shipment, at \$124 a ton, were down slightly from the September averages. The U.S. No. 2 sorghum grain price, c.i.f. Rotterdam, quoted at \$104 a ton, fell by 16 percent from the September average. This adjustment brought the c.i.f. Rotterdam price spread between U.S. No. 3 yellow corn and U.S. No. 2 sorghum to \$19 a ton. The adjustment reflects a return to a more usual pricing situation, where U.S. corn is sold at a premium in comparison to U.S. sorghum. During most of 1973, the very strong demand for corn spilled over to sorghum grain, creating a substitution effect. The demand for sorghum grain was strengthened and its price rose.

In October--the midpoint of the southern hemisphere's corn marketing year--the c.i.f. Rotterdam price for Argentine corn rose 3 percent from the September average to \$136 a ton. The differential between the c.i.f. Rotterdam price for Argentine corn and the c.i.f. U.K. price for U.S. corn was \$12 a ton, nearly the same as the differential of October 1972.

International wheat price movements will be influenced by a record world wheat harvest this year, according to the November 1973 Wheat Situation (USDA, ERS). However, U.S. stocks could drop to 250 million bushels by the end of the crop year, the lowest level since 1948. The large disappearance would result primarily from anticipated record export levels for U.S. wheat and wheat products. Carry-in stocks at the beginning of the 1973/74 marketing year (July-June) were 400 million bushels. Hard Winter wheat, Soft Winter wheat, Durum wheat, and white wheat stocks will be depleted. While Hard Spring wheat is more abundant, some substitutions of this wheat for other wheat will probably occur.

In this setting of record wheat crops, the October U.S. wheat export price took a downturn. Meanwhile, the Canadian wheat price was steady--perhaps reflecting the differences in marketing policies and the return of the premiums paid for Canadian wheat in the world market. The October monthly average price for U.S. No. 2 Hard Winter wheat, ordinary protein, f.o.b. vessel, Gulf ports, was \$182 a ton, down \$7 from the September average. The price of No. 1 Canadian Western Red Spring wheat, 14 percent protein in store, Lake Superior ports, was \$206 a ton, the same as the previous month. The price differential between the Canadian and U.S. wheat classes specified above widened to \$23 a ton--the largest difference during 1973. Spreads between other Canadian and U.S. hard wheats also widened in the Rotterdam market.

The October average c.i.f. U.K., nearest forward shipment, price for No. 1 Canadian Western Red Spring wheat, 14 percent protein, rose 4 percent from the September average. This increase, however, may be due to the absence of U.S. and Australian wheat in the U.K. market during October.

The price for American cotton, Memphis Territory, strict middling, 1-1/16 inches, c.i.f. Liverpool, was off 1.43 cents a pound in October, declining to 88.75 cents a pound. Reports of a record world cotton crop had a slackening effect on the high September price.

The rice market prevailing through October was one of low supply and strong demand. The 1972/73 world rice harvest was 5 percent lower than the previous year's, with many key Asian countries--importers and exporters alike--suffering significant declines. The combination pushed international rice prices to record levels. In the FAO price index for rice (a composite price index based on import-export rice prices with a 1957-59 base = 100), the index numbers moved from 107.5 in October 1972 to 227.8 in August 1973 (the latest available information in this series). The October c.i.f. Hamburg/Antwerp offering price for U.S. No. 2 long grain rice, 4 percent broken, averaged \$728 a ton, up from the August offering price of \$518 a ton. The f.o.b. mill price quotations for short, medium, and long grain rice from the U.S. rice producing States reflected the price rises through August and continued upward through October. For example, the October f.o.b. mill, Houston price quotation for No. 2 medium grain rice, 4 percent broken, was \$604 a ton, up from \$370 a ton in August.

For No. 2 long grain rice, 4 percent broken, the quotation at Houston mills was \$710 a ton, nearly 60 percent higher than the August price.

World rice production for 1973/74 is forecast to be at a record level and this is expected to relieve the extremely tight market situation of recent months. Major exporters like Thailand will also be entering the market at year's end.

U.S. rice production in 1973/74 is estimated at 3.1 million metric tons (4.3 million tons paddy). Because of anticipated heavy export commitments, however, the ending stocks for the 1973/74 marketing year are forecast near the low carryover level of July 31, 1973.

October prices for imported agricultural products were mixed. The average price of imported cow meat, 90 percent lean, frozen, boneless, f.o.b. U.S. port of entry, continued downward from its August high to 99.75 cents a pound. The average New York spot price for No. 1 rubber, ribbed smoked sheets, followed a downward trend to 35.5 cents a pound from the July peak. Coffee and cocoa bean prices showed little action; the coffee from Santos, No. 4 New York spot, averaged 70 cents a pound, the same price as in September, and for cocoa beans from Accra, the New York spot price was 80.9 cents a pound, up only slightly,

The world sugar price made a turnabout to advance to 9.56 cents a pound, up .55 cent from the September average, approaching the peaks hit in May-July 1973. The higher price resulted primarily from two developments: The United States increased its requirements determination by 100,000 short tons (raw value) to 11.6 million short tons, and the EC announced that estimated 1973/74 sugar exports would be 400,000 tons instead of 800,000 tons, as forecast earlier. These developments occurred at a time when a tight market prevails, even though prospects are for an excellent 1973/74 world sugar output. The price of sugar for the U.S. market continued its upward climb to 9.68 cents a pound, up .14 cent a pound from the September average. For sugar destined for the U.S. market, the premium which had appeared for the first time in August and September, was down to almost nil in October.

From November 1973 through February 1974, the U.S. requirements determination must be adjusted whenever the 7-day average market price falls outside a corridor ranging from only 97 to 103 percent of the stationary price objective. This is in contrast to the 96-to-104 percent tolerance prescribed for March 1973 through October 1973. Thus, the sugar requirements determination had to be raised to 11.7 million short tons on November 2.

Export Highlights

AGRICULTURAL EXPORT GROWTH ACCELERATES IN JULY-OCTOBER

October 1973 agricultural exports hit an alltime monthly high of \$1,734 million, nearly double the \$907 million in October 1972 and well above the previous record of \$1,470 million in August 1973. The record level in October 1973 exports stemmed from substantial gains in shipments of wheat, feed grains, soybeans, soybean meal, tobacco, cotton, live animals, fruits and vegetables, and tobacco.

These and other farm exports in October brought the July-October total to a record \$5.87 billion--also nearly doubled the \$2.98 billion for these months in 1972.

Grain exports alone accounted for over two-thirds of the July-October increase. Higher export levels for soybeans, meats, live cattle, cotton, fruits, nuts, vegetables, and tobacco also contributed to the sharp surge. Shipments of dairy products, hides and skins, and vegetable oils, however, were down from the levels of a year earlier.

During July-October, about two-thirds of the \$2.9-billion increase stemmed from higher prices. Volume, was up about one-third.

During the first 4 months of fiscal year 1974, some rather significant changes occurred in our farm trade situation. First, farm products to the People's Republic of China increased substantially. Exports to Japan climbed to an alltime high of over \$900 million in July-October almost double the level of a year earlier. In addition, sharp advances continued in shipments to Western Europe, Latin America, the Middle East, Asia, and Africa.

Grains and preparations.--Substantial increases in the volume of wheat and feed grain shipments pushed total U.S. exports of grains and products to a record \$3.35 billion in July-October 1973--or 167 percent above the level of July-October 1972.

Exports of wheat and products totaled 14.1 million tons during July-October 1973--nearly three-fourths above the level for the same months in 1972. Principal gains occurred in shipments to the USSR, the People's Republic of China, Italy, India, Brazil, Argentina, North Africa, and the Middle East. Exports to the People's Republic of China and the USSR amounted to 3.7 million tons, accounting for around two-fifths of the increase in these commodities. The average export unit value for wheat was \$122 per ton during July-October 1973, compared with about \$62 a year earlier. The continuing tight world supply situation has strengthened the demand for U.S. wheat exports.

U.S. rice exports of 369,000 tons were 44 percent below the level of a year earlier. Value, however, was up about a fifth. The decline in volume of shipments occurred to South Vietnam, Iran, and Korea. No rice was exported to South Korea during July-October 1973, compared with 262,000 tons in the same months of 1972. But exports to Canada, Singapore, Hong Kong, Malaysia, and Turkey rose sharply during July-October.

Cotton, raw	Rble	0	0	86	14,162
Tobacco, unmanufactured	Lb.	759	827	1,197	1,358
Total	---	---	44,863	---	273,356

Feed exports, at 15 million tons, were two-fifths larger than a year earlier. And higher prices helped to push the value up by 137 percent to \$1.39 billion. Japan, other Far East countries, the enlarged EC, India, Mexico, and the People's Republic of China accounted for most of the increase.

Oilseeds and products.--U.S. exports of oilseeds and products rose to \$983 million from \$684 million a year earlier. All of the increase stemmed from higher prices as the volume fell for most products. Soybean exports totaled 79 million bushels in July-October, compared with 121 million a year earlier. A late harvest and reduced stock levels slowed exports during the first 4 months of the current fiscal year. However, exports are expected to rise sharply in the coming months. Export unit value of soybeans averaged \$6.72 per bushel during July-October 1973, compared with \$3.46 for these months last year. The export decline for soybeans occurred primarily in shipments to Spain, Japan, Israel, and the enlarged EC. Exports of soybean meal fell 13 percent to 907,000 tons. However, higher prices caused the value to double to \$259 million. Most of the decline in soybean meal volume occurred in exports to Venezuela, Canada, Yugoslavia, Poland, and Hungary. Exports to Japan, on the other hand, rose to 49,000 tons from 17,000 tons a year earlier. Soybean oil exports fell nearly two-fifths to 217 million pounds. However, at \$39 million, the value of shipments was only 11 percent below the level in July-October 1972. Exports of cottonseed oils, on the other hand, increased 4 percent to 129 million pounds and value rose 40 percent to \$24 million.

Cotton.--U.S. cotton exports in July-October 1973 totaled 1.2 million bales, nearly 3 times the volume of a year earlier. The value gain was even greater because of higher prices. Cotton export shipments increased primarily to the Far East countries, especially to Korea, Hong Kong, Republic of China (Taiwan), Japan, Thailand, and the People's Republic of China. Exports also rose to Canada and to most countries of the enlarged EC.

Tobacco.--U.S. tobacco exports rose to 217 million pounds in July-October 1973 from 189 million for these months in 1972. The value of exports was up by one-fifth to \$246 million. The increase occurred in exports to members of the enlarged EC, Malaysia, Singapore, Egypt, Dominican Republic, Brazil, Uruguay, Spain, and the People's Republic of China. The increase occurred for Burley, flue-cured, Maryland, and dark-fire-cured Kentucky and Tennessee leaf.

Fruits and preparations.--U.S. exports of fruits and preparations rose by one-fourth to \$208 million. The increase occurred in nearly all categories, but especially for

fresh deciduous fruit, dried fruit, canned fruit, and fruit juices. Most of the value increase reflected substantially higher prices. Approximately 80 percent of the value increase stemmed from higher prices. Somewhat improved U.S. supply situations and a more competitive U.S. position stimulated exports.

Nuts and preparations.--U.S. exports of nuts and preparations--particularly almonds, walnuts, pecans, and filberts--rose by nearly one-fourth to \$44 million. Big increases occurred in shipments to Japan, the Netherlands, France, West Germany, and Canada. Again, higher prices accounted for much of the overall value rise.

Vegetables and preparations.--U.S. exports of vegetables and preparations rose by 71 percent to \$117 million because of substantial increases in exports of fresh vegetables and pulses. Exports of dried beans totaling \$26 million were nearly 4½ times larger than a year earlier. Big increases occurred in exports to the United Kingdom, the Netherlands, West Germany, the Dominican Republic, Mexico, Australia, New Zealand, Israel, Kuwait, Senegal, and many other countries. Dried pea exports of \$7.7 million were double the value of a year earlier. However, quantity was up only 5 percent. More fresh vegetables were exported to Japan, Hong Kong, Sweden, the United Kingdom, and the Netherlands. Exports of canned vegetables totaling \$15 million doubled the level of a year earlier. Japan, other Far East countries, Canada, and the enlarged European Community accounted for the increase.

Animals and animal products.--U.S. exports of animals and animal products rose 43 percent to \$511 million in July-October 1973. The increase occurred in live animals, poultry meat, and inedible tallow. There were declines in exports of dairy products and hides and skins.

Exports of cattle reached an alltime high of \$67 million. Most of this gain was accounted for by the substantial rise in exports to Canada, which took over \$52 million worth during July-October. Higher prices in Canada attracted many U.S. slaughter cattle to the Canadian market. Even though Canada increased duties, large shipments of U.S. livestock continued to move to this market.

Exports of meat and meat products rose by 51 percent to \$106 million. Increased shipments of beef, pork, and variety meat--primarily to Canada, the enlarged EC, and the Caribbean, accounted for the growth.

U.S. exports of poultry and poultry products rose 40 percent to \$44 million dollars, with the gain occurred in shipments to Canada, the Caribbean, the enlarged EC, the Philippines, Korea, and Taiwan. Fresh and frozen poultry meat gained the most. Dairy product exports totaling \$19 million were 53 percent below the level of a year earlier. The decline occurred primarily in shipments of nonfat dry milk, under specified Government programs, primarily to the developing countries. A tight domestic supply situation sharply reduced availability of these products for export.

Exports of animal fats and oils increased 86 percent to \$124 million. All of the value increase was due to higher prices as quantity fell 10 percent to 726 million pounds.

Exports of cattle hides fell 22 percent in quantity, but only 11 percent in value. The unit price of cattle hides averaged \$18 during July-October 1973, compared with \$16 a year earlier. Most of the decline occurred in shipments to Czechoslovakia, Spain, and Japan. Offsetting these declines were increases to Romania, Mexico, and Korea.

Import Highlights

U.S. AGRICULTURAL IMPORT VALUE UP 25 PERCENT, VOLUME DECLINES

During the first 4 months of fiscal year 1974, U.S. agricultural imports amounted to \$2.7 billion--25 percent higher than during the same months last year. Price increases accounted for the advance as volume was about 6 percent lower. Volume growth items were limited to dairy products and eggs, pork, certain fruits and vegetables, tobacco, and wines.

Competitive agricultural imports totaled \$1.8 billion in July-October against \$1.4 billion during the same months a year ago. This 30-percent value increase reflected sharply higher prices, especially for cattle, meat, wool, oil-bearing materials, and sugar. The volume index of competitive farm product imports declined about 3 percent to 121 (1967 = 100).

Import commodities showing the greatest volume reductions were:

	<u>July-October 1973</u>	<u>July-October 1972</u>
Dutiable cattle	134,000 head	156,000 head
Beef and veal	576 million pounds	620 million pounds
Apparel wool	7 million pounds	13 million pounds
Cotton	10,000 bales	33,000 bales
Copra	71.6 million pounds	172.6 million pounds
Coconut oil	182.5 million pounds	198.8 million pounds
Palm oil	111.5 million pounds	170.4 million pounds
Sugar	1,637,000 short tons	1,785,000 short tons
Molasses	116 million gallons	117 million gallons

Volume increases were recorded for the following commodities:

	<u>July-October 1973</u>	<u>July-October 1972</u>
Nonfat dry milk	170 million pounds	22,400 pounds
Cheese	83 million pounds	67 million pounds
Casein	35 million pounds	26.6 million pounds
Chicken eggs	3.8 million dozen	573,000 dozen
Pork	130 million pounds	120 million pounds
Frozen strawberries	20.5 million pounds	12.9 million pounds
Grape juice	3.3 million gallons	270,000 gallons
Tobacco	90.6 million pounds	85.6 million pounds
Castor oil	41 million pounds	32 million pounds
Wines	18 million gallons	15 million gallons

Temporary quotas for additional nonfat dry milk were issued on July 19 and August 28. On October 31, a Presidential Proclamation established special temporary quotas for certain other dairy products. These quotas would allow 56,000,000 pounds of products in Tariff Schedule Item 950.05 (butter, fresh or sour cream containing over 45 percent butterfat) and 22,600,000 pounds under Item 950.06 (butter substitutes containing over 45 percent butterfat and butter oil). The temporary quotas will be effective through December 31, 1973.

Noncompetitive agricultural imports in July-October 1973 were valued at \$880 million, 17 percent above the July-October 1972 level. Volume declined about 12 percent. Import volume fell for coffee, cocoa, spices, essential oils, and carpet wool. However, higher import prices raised values for those items. In addition, crude rubber imports jumped sharply in volume and price.

Table 26.--U.S. agricultural imports: Value by commodity,
July-October 1972 and 1973

Commodity or commodity group	July-October		Change
	1972	1973

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 96 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers.

2/ Based on 430 classifications in 1971.

3/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 Variant of the Seasonal Method II Seasonal Adjustment Program, Technical Paper No 15, U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States; to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
