FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

U.S. Farm Exports Rocketed to a Record \$17.7 Billion in 1973 (see p. 8). U.S. agricultural exports in 1973 totaled \$17.7 billion--an alltime calendar year high and 88 percent above the \$9.4 billion worth exported in 1972.

A sharp advance in exports of grains, particularly wheat and feed grains, accounted for three-fifths of the total increase in agricultural exports in 1973. But increases for soybeans, protein meal, tobacco, cotton, fruits, nuts, vegetables, meats, cattle hides, and poultry meats were also important.

Volume of agricultural exports gained by 30 percent in 1973, accounting for about two-fifths of the value increase. Exports to all major markets increased significantly. Shipments to traditional markets, such as Western Europe and Japan, grew at a phenomenal rate because of increased consumption and limited supplies in other major exporting countries. Increased exports to the USSR and the People's Republic of China--a new market in 1973--accounted for about one-sixth of the calendar year growth. In addition, exports to the developing countries of Latin America, Asia, and Africa rose to record levels because of increased incomes, improved foreign exchange positions, and reduced agricultural production in many of these areas.

* * * * *

U.S. Agricultural Imports in 1973 Reached a Record \$8.4 Billion (see p. 24). U.S. farm product imports advanced 30 percent in 1973 to an alltime high of nearly \$8.4 billion. About nine-tenths of the gain resulted from higher prices. Strong demand raised some commodity prices markedly, especially tropical products, wines, dairy products, and meats.

Competitive imports rose 29 percent to a record \$5.52 billion. Meat imports were about the same as 1972's volume but sharply higher prices raised the value by 36 percent. U.S. dairy product imports jumped to \$331 million in 1973 from \$167 million a year earlier. Nonfat dry milk, cheese, butter, and butteroil import quotas were increased during the year. Other competitive value gains occurred for fruits, nuts, and vegetables; sugar; vegetable oils and oilbearing products; grains; feeds; and hides.

Sharp advances in prices for coffee, cocoa, crude rubber, carpet wool, and sisal pushed the value of noncompetitive imports to almost \$2.9 billion. Volume was

only marginally above the 1973 level as increases for coffee, rubber, bananas, tea, pepper and silk were nearly offset by declines in cocoa, carpet wool, and sisal.

* * * * *

Export Fact Sheet (see p. 34). This article highlights a wide variety of information on U.S. agricultural exports for the past fiscal year.

* * * * *

Selected Price Series of International Significance (see p. 38). Fears of a mounting energy crisis and possible tight supplies of key agricultural commodities were reflected in climbing December commodity prices. The Dow-Jones and Reuter's commodity indexes were at the highest level of the year. The U.S. f.o.b. Gulf port price for No. 2 Hard Winter wheat, ordinary protein, was \$200 a ton, 10 percent higher than during November. The f.o.b. Gulf port price for No. 2 Yellow corn advanced 4 percent and that for No. 2 yellow soybeans, 5 percent. The c.i.f. Liverpool price for cotton rose 9 percent, but the sharpest price jump was for rubber--33 percent.

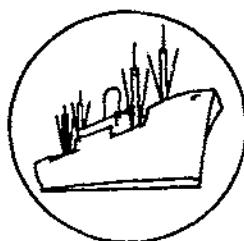

Cocoa beans, imported cow meat, rice, and sugar destined for the U.S. market were the only major import-export commodities to show a downturn in price.

* * * * *

U.S. Farm Exports in First Half of Fiscal 1974 Nearly Doubled Year-Earlier Levels (see p. 43). During the first half of fiscal 1974, U.S. agricultural exports totaled \$9.9 billion, 92 percent greater than the level of a year earlier. Nearly three-fourths of the increase stemmed from higher prices. A sharp advance in export values of grains and products accounted for over two-thirds of the total increase in value. But significant gains also occurred in exports of cotton, tobacco, soybeans, meats, live cattle, fruits, nuts, vegetables, and poultry meat. Only dairy products, hides and skins, and vegetable oils were below the export levels of a year earlier. Virtually every country and area took more U.S. farm exports during the period.

* * * * *

U.S. Agricultural Import Value Up One-Third In July-December 1973 (see p. 53). U.S. agricultural imports in July-December 1973, at \$4.3 billion were 33 percent above the level of a year earlier. Price increases accounted for a large part of this gain. In addition, larger volume was registered for some commodities, mainly dairy products. Competitive farm product imports totaled almost \$2.95 billion, while imports of non-competitive items approached \$1.37 billion.

U.S. FARM EXPORTS ROCKETED TO A RECORD \$17.7 BILLION IN 1973

by
Dewain H. Rahe 1/

For calendar year 1973, U.S. agricultural exports totaled an unprecedented \$17.7 billion. Exports were 88 percent above the 1972 record of \$9.4 billion, reflecting the biggest dollar and percentage increases in history.

Growth in our farm exports had begun to accelerate late in 1972 and continued through 1973 as a result of the opening of East-West trade, reduced agricultural production in many areas of the world, lower fishmeal output in Peru, and continued gains in demand stemming from higher incomes in major foreign markets.

Unfavorable weather conditions in 1972 caused the agricultural production shortfalls, particularly in the Soviet Union, Southeast Asia, Australia, and parts of Latin America and Africa. Crop output was down sharply in these areas and major exporters other than the United States did not have the facilities or the uncommitted supplies to meet import needs. In addition, the sharp drop in Peruvian fishmeal output, together with reduced peanut output in India and Senegal, put greater demand on U.S. soybeans to make up for the shortfall in world protein supplies.

At the same time, economic growth in many developed countries was continuing to advance at record rates, and they were importing more farm products to satisfy increased demand for food resulting from higher incomes. A number of developing countries—for example, Taiwan, Korea, Brazil, Venezuela, and Mexico—were also achieving substantial increases in per capita income. This factor, together with population gains, contributed to substantial increases in their demand for imported food products. In addition, many countries—both developed and developing—were using stepped-up agricultural imports as a policy instrument to reduce the impact of the inflationary spiral in food prices.

The competitive position of U.S. agricultural exports in 1973 was enhanced by realignment of major foreign currencies in 1971-73. For the principal commercial markets in Western Europe and Japan, the depreciation of the dollar averaged about 15 percent in 1973. This depreciation was the result of the 1971 Smithsonian agreement, the February 12, 1973, devaluation by the United States, and the floating of currencies by Japan and major European countries.

The sharp advance in grain exports, particularly wheat and feed grains, alone accounted for three-fifths of the total increase in agricultural exports in 1973. But increases for soybeans, protein meal, tobacco, cotton, fruits, nuts, vegetables, meats, cattle

1/ Supervisory Agricultural Economist, Statistics Program Area, Foreign Demand and Competition Division, Economic Research Service.

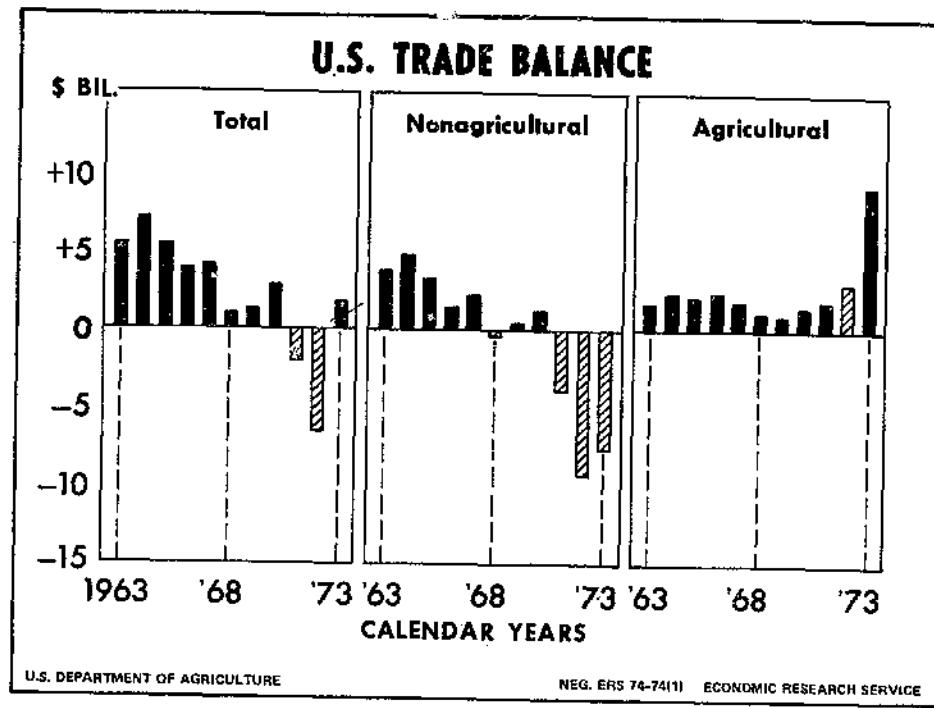

Figure 1

hides, and poultry meats also contributed significantly to the 1973 record. In fact, new export records were established for wheat, corn, soybeans, soybean meal, cattle hides, lemons, grapefruits, fresh vegetables, and live animals. Cotton exports were the highest since 1960.

The volume of U.S. agricultural exports gained 30 percent in calendar year 1973, accounting for around two-fifths of the value gain. Higher prices--especially for soybeans, soybean meal, wheat, feed grains, most fruits, vegetables, hides and skins, meats, tobacco, and nuts--were responsible for the balance of the increase.

The phenomenal rise in agricultural exports boosted the favorable U.S. agricultural trade balance by over \$6 billion to a record \$9.3 billion despite a nearly 30-percent gain in agricultural imports to a record \$8.4 billion. This record agricultural trade balance more than offset the country's trade deficit in nonagricultural products, which totaled \$7.6 billion in 1973. Although the nonagricultural trade balance is somewhat improved from last year's deficit of \$9.4 billion, it is considerably below the \$4- to \$5-billion surplus that was racked up annually during the early 1960's. Overall, the United States had a favorable trade balance of \$1.68 billion in 1973--measurably better than 1972's deficit of \$6.4 billion.

Major Commodities Exported

Grains and preparations.--U.S. exports of grains and preparations rose to an alltime high of \$8.5 billion in calendar year 1973--nearly 2½ times greater than the 1972 level. While exports of all major products gained, those of wheat and feed grains accounted for most of the overall increase. Larger volume accounted for nearly two-

U.S. AGRICULTURAL EXPORTS, BY COMMODITY GROUPS

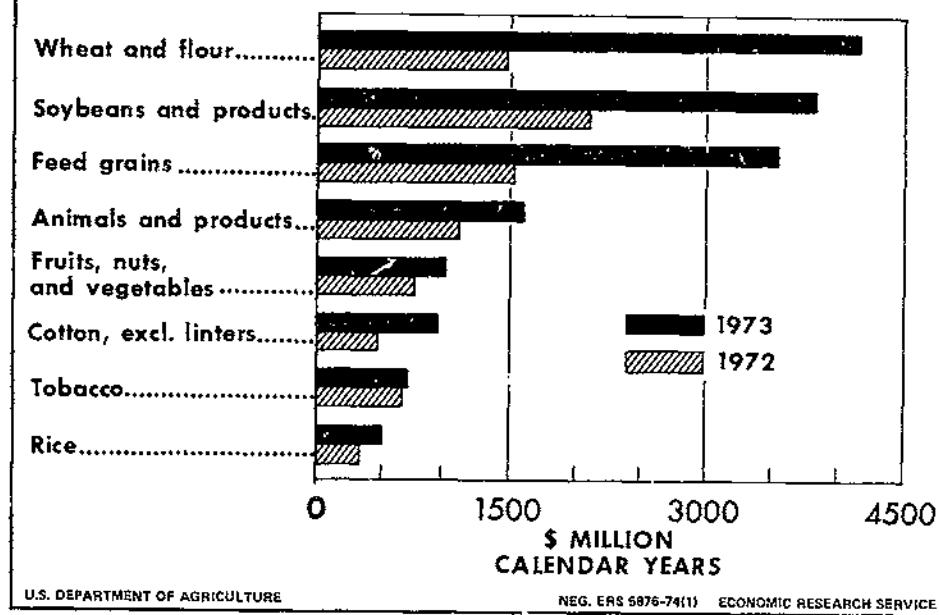

Figure 2

fifths of the overall value increase, and higher prices for the balance. The wheat export unit value, for example, averaged \$2.93 a bushel in 1973, compared with \$1.74 a year earlier. Feed grain exports averaged \$85 a ton, compared with \$55 in 1972; rice averaged \$341.00 a ton--a year earlier, the export unit value was \$198.00 a ton.

Exports of wheat and products reached an unprecedented level of 1.4 million bushels in 1973, sharply above the 840 million bushels exported in 1972. The 1973 wheat exports were equivalent to over three-fourths of U.S. production.

The biggest increase in wheat exports occurred in shipments to the USSR, which took 320 million bushels, accounting for about two-fifths of the total gain. The People's Republic of China was the next most important growth market, taking 97 million bushels in 1973, compared with only 21 million in 1972. Japan was a market for 132 million bushels of U.S. wheat in 1973, up from 92 million a year earlier. A number of developing countries also became more important cash customers for U.S. wheat. Sharp increases were registered in shipments to Asia, the Middle East, North Africa, Latin America, and the Far East. The adverse weather in 1972 was a principal factor in the rapid growth of U.S. wheat exports, but stocks were down in many areas and consumption also gained.

Total world wheat trade in the current marketing year (July-June) is estimated at 71 million tons--down slightly from the 74 million tons traded a year earlier. The United States is expected to account for over two-fifths of the 1973/74 world trade.

U.S. rice exports totaled 35.8 million cwt in 1973, down a fifth from the previous year's record of 44.8 million. The decline occurred because of a very tight supply

U.S. AGRICULTURAL EXPORTS: COMMERCIAL AND UNDER GOVERNMENT PROGRAMS

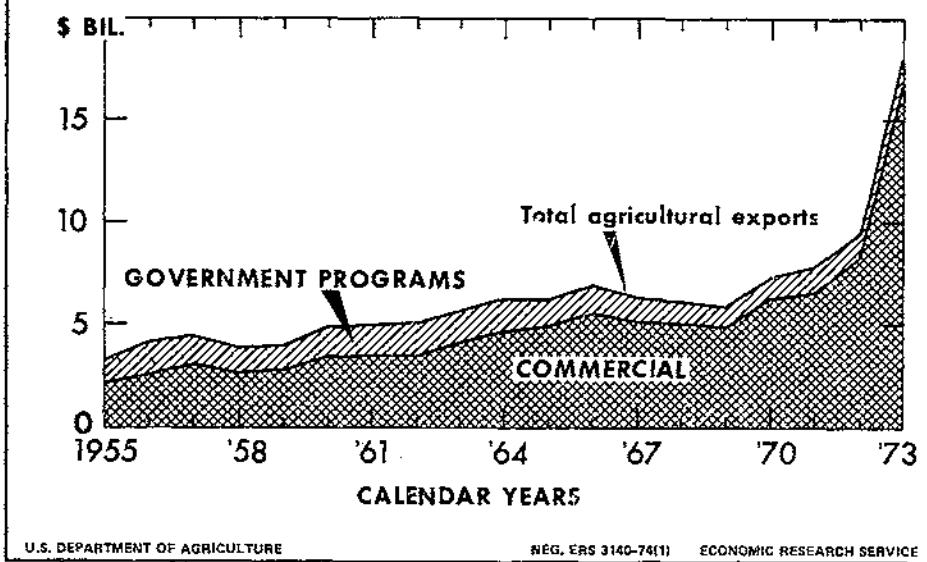

Figure 3

situation in the United States. Although rice exports rose during the last half of 1972 and early 1973, reduced stocks slowed exports in the last half of 1973. Most of the decline occurred in shipments under Government-financed programs. Exports fell sharply to South Vietnam, Bangladesh, Indonesia, and South Korea.

Several factors worked together to boost U.S. feed grain exports from only 27.8 million tons in 1972 to a record 41.5 million tons in 1973. First, feed grain production was off sharply in Thailand, Australia, and other major exporting countries. At the same time, livestock production was expanding in many countries. Producers were using more feed grains in feed rations instead of fishmeal and peanutmeal--which were in short supply--and instead of other high-priced protein and nongrain, high-carbohydrate feeds.

In Japan, for instance, livestock production increased nearly 3 percent, yet only a half million tons of surplus rice were allocated for mixed feeds, compared with 1.2 million tons in 1972. U.S. feed grain exports to Japan in 1973 more than doubled the 1972 level, reaching a record 9 million tons. Exports to the USSR in 1973 totaled over 4.2 million tons, about the same as a year earlier. As a result, the USSR was the third largest market for U.S. feed grains following Japan and the enlarged European Community (EC). U.S. feed grain exports to the enlarged EC totaled over 10 million tons--up sharply from about 8.8 million tons a year earlier. Ireland, the Netherlands, and West Germany all substantially increased their purchases. The biggest increase, however, occurred in shipments to Italy, which was a market for 3 million tons.

These increased feed grain exports occurred despite record grain production in the EC countries in 1972. Rising incomes in the EC were increasing the demand for meats.

1/ Listed in order of percent change from previous year.

2/ Total export value reported divided by total quantity exported.

3/ Includes tangerines and clementines.

And higher meat prices encouraged livestock producers to expand livestock production, which required additional imports of feed grains. The EC dairy producers were using more feed grains because higher CAP prices encouraged both an expansion in dairy herd and production per animal.

Other major markets for U.S. feed grains in 1973 included Spain, Portugal, the Republic of China (Taiwan), Indonesia, Korea, Peru, Israel, India, Egypt, Poland, Greece, and Mexico. Exports to Mexico rose to a record of nearly 906,000 tons in 1973 from 438,000 in 1972.

Oilseeds and products.--U.S. exports of oilseeds, including products, rose to a record \$4.3 billion in 1973, a gain of 79 percent over the 1972 level. Higher prices accounted for over three-fourths of the increase.

As with feed grains, the growth in our oilseed exports was largely due to the very tight world protein meal situation that prevailed through all of 1973. Peru, the world's largest fishmeal exporter had a sharply reduced anchovy catch in 1972 because a change in the ocean current drove the anchovies out to deeper water. During 1973, Peru exported only an estimated 325,000 tons of fishmeal. Normally, exports would total close to 1.7 million tons, which is equivalent to over 120 million bushels of soybeans. In addition to reduced protein meal supplies from Peru, sunflowerseed production was down in the USSR and Eastern Europe, and peanut production declined in Africa and Asia.

Despite higher prices for protein meal, demand for soybeans advanced with the continued rise in livestock production in Western Europe, Japan, Canada, and other developing countries. U.S. exports of soybeans in 1973 increased about 50 million bushels to a calendar year record of 486 million bushels. U.S. soybean exports have gained steadily since World War II, with the increase averaging over 10 percent annually. Most of the 1973 gain occurred in shipments to the enlarged EC, the USSR, Spain, Poland, Israel, Japan, and Korea. Over half of U.S. soybean production is exported in the form of meal or soybeans, and these exports account for well over one-half of world meal exports in either oilseeds or meal form.

U.S. exports of oil cake and meal rose over 1 million tons in 1973, reaching 5.3 million short tons. Higher prices pushed value up 127 percent. Spain, Yugoslavia, Australia, Greece, Eastern Europe, Portugal, and Japan accounted for most of the increase. Because of a greater crushing capacity, the European Community took about the same volume of oil cake and meal as in 1972, but higher prices resulted in a sharp increase in the value of 1973 shipments.

U.S. exports of cottonseed and soybean oil in 1973 totaled 1.51 million pounds--270 million pounds below the 1972 level. Soybean oil exports, which accounted for all of the decline, fell by 341 million pounds, partly because more U.S. soybeans were crushed overseas. But U.S. cottonseed oil exports increased by over 70 million pounds because of plentiful U.S. supplies and reduced availability of sunflower oil in Eastern Europe. Exports of cottonseed oil to Egypt rose to 204 million pounds in 1973 from 187 million a year earlier. Other important markets for U.S. cottonseed oil included Venezuela, Mexico, enlarged EC, Sweden, Japan, and South Africa.

Fruits and preparations.--U.S. exports of fruits and preparations rose by a fourth to a record \$535 million in 1973. Higher prices accounted for over one-half of the gain. Values were up substantially for canned fruits, fresh fruits, and juices. While most of the overall gain occurred in shipments of fresh products, exports of canned fruits showed a substantial rise despite smaller supplies and higher prices. While the value of dried fruit exports was up, quantity was down because of reduced supplies resulting from freezing weather conditions in many U.S. production areas. The realignment of currencies in the past 2 years has made many U.S. fruits attractively priced to many foreign buyers.

Table 4.--U.S. agricultural exports: Value by months, January 1961 to December 1973

1/ Beginning January 1970, export values include small amounts of commodities formerly classified as nonagricultural.

2/ Preliminary, monthly totals for 1973 are not revised and will not add to total.

3/ Totals may not add due to rounding.

Vegetables and preparations.--Exports of vegetables and preparations in 1973 rose by 46 percent to a new record of \$366 million. Again, fresh items accounted for most of the increase, but there were also sharp gains in shipments of canned and dehydrated vegetables. Hop exports fell from 1972's high level because of a big crop of better quality hops in Western Europe.

Animals and animal products.--Exports of animals and animal products advanced by over two-fifths in 1973 to \$1.60 billion, another alltime high. Cattle hide shipments, which accounted for 17 percent of the overall increase, rose to a record \$398 million, 35 percent above the 1972 level. The increase was partly due to a decline in export availability in Argentina because of an embargo and a sharp increase in demand for leather and leather products. However, the Argentine embargo was somewhat offset by the expansion in Argentine exports of leather and leather products.

Exports of meats and prepartions gained 83 percent to total \$374 million. Pork exports to Japan increased to over 97 million pounds from 46 million in 1972, and those to Canada gained about 12 million pounds to reach 43 million. Exports of variety meats gained only 11 percent in volume, but higher prices pushed the value up by 40 percent. A 52-percent increase in beef exports was accounted for by larger shipments to Japan, the Caribbean, and the principal markets in Europe.

Exports of poultry and poultry products rose to \$120 million in 1973. The increase occurred for turkeys, fresh and frozen chickens, and eggs. Substantial increases in red meat prices encouraged many countries to import more U.S. poultry products to satisfy the rapidly expanding demand for meat.

U.S. exports of dairy products fell from \$150 million worth in 1972 to \$60 million in 1973. The 60-percent decline was concentrated in shipments of nonfat dry milk and butter. In 1972, butter exports were unusually large to the United Kingdom because of reduced supplies in the European Community and New Zealand. Most of the decline in nonfat dry milk occurred in exports under Government-financed programs or in concessional exports to developing countries for welfare and food lunch programs. Increased U.S. consumption and lower production of nonfat dry milk reduced the supplies available for export. (Because of a very tight nonfat dry milk supply situation, the United States imported nearly 300 million pounds in 1973.)

U.S. exports of animal fats and oils rose 59 percent in 1973 because of substantially higher prices. Export volume for tallow and greases fell 2 percent to 2.2 million pounds, while value was up nearly 65 percent to \$297 million. Exports of lard fell by one-third to 113 million pounds. Declines occurred mostly in exports to the United Kingdom.

Cotton.--U.S. cotton exports totaled 5.4 million bales in 1973, up 78 percent from the 3.1 million bales in 1972. Most of the increase occurred to the Far East countries especially People's Republic of China and Japan. The People's Republic of China took 609,000 bales in 1973, compared with none in 1972. Exports to Japan rose 1.1 million bales from 717,000 in 1972. Canada and the enlarged EC also took more U.S. cotton in 1973. The increase in cotton exports reflected increased world consumption particularly in the foreign non-communist countries.

Tobacco.--U.S. exports of tobacco rose slightly to 639 million pounds in 1973 from 636 million a year earlier. Value was up by 6 percent, primarily because of higher prices. Gains were in shipments of burley and tobacco stems. Exports of flue-cured tobacco fell 2 percent to 416 million pounds but higher prices drove the value up by 6 percent. In the principal U.S. tobacco markets in Europe and Asia, cigarette smoking continued to gain in 1973. Tobacco production in Africa, the major U.S. competitor in the world market, fell about 7 percent.

Table 5.--U.S. agricultural exports by regions, calendar years 1970-73

Major Market for U.S. Agricultural Exports

The 1973 growth in U.S. agricultural exports occurred to nearly every country and region. Exports to Western Europe totaled \$5.6 billion, over two-thirds above the \$3.4 billion level of 1972. Grains and soybeans accounted for most of the gain, primarily because increased livestock production in Western Europe generated demand for protein meal, and supplies from sources other than the United States were down. And--as mentioned above--the short protein supply encouraged stepped-up feeding of grains in lieu of high-protein feeds. Countries in Western Europe also took more U.S. cotton, tobacco, fruits and vegetables. However, shipments of lard and dairy products were off sharply from a year earlier.

Exports to Eastern Europe and the USSR hit a record of \$1.5 billion in 1973--more than doubling the level of a year earlier. Farm shipments to the Soviet Union totaled \$916 million, compared with \$430 million a year earlier, and those to Eastern Europe (excluding USSR) increased to \$577 million--sharply above the \$288 million worth exported in 1972. Altogether, the increase in exports to Eastern Europe and the USSR accounted for 13 percent of the total rise in 1973 exports. The increase occurred primarily in wheat, feed grains, protein meal, and soybeans.

In calendar 1973, U.S. agricultural exports to Japan broke the \$3 billion mark--more than double the \$1,429-million level of 1972. Only 3 years ago, Japan became the first billion dollar foreign market for U.S. agricultural products. The value increase to Japan in 1973 was concentrated in grains, cotton, soybeans, fruits and preparations, pork, tallow and grease, and hides and skins. Much of the increase, of course, stemmed from higher prices.

U.S. agricultural exports to the People's Republic of China totaled nearly \$575 million in 1973, compared with only \$61 million in 1972. Wheat exports were 97 million bushels with a value of \$278 million. Corn exports, totaling 55 million, were the next most important item shipped. Cotton exports to this new country market totaled about 610,000 bales valued at \$100 million. Other commodities exported included soybeans, soybean oil, tallow, tobacco, and cattle hides.

Exports to other Asian countries in 1973 were valued at \$2.9 billion--a gain of 65 percent over a year earlier. Grains accounted for much of the overall increase. But exports of soybeans, cotton, and hides and skins also gained sharply. Countries in this area have become a very rapid growth market for U.S. agricultural exports, especially the Republic of Korea, Hong Kong, and the Republic of China (Taiwan). More important, the 1973 increase in exports to these Asian countries occurred in commercial sales, although shipments under Government programs were still important.

The Middle East and Africa were also more important markets for U.S. farm products in 1973. Most of the increase to these regions was concentrated in grains.

Exports to Latin American countries in 1973 totaled \$1.7 billion--nearly double the level of a year earlier. The increase occurred in shipments to Brazil, Mexico, Peru, Chile, Argentina, and Colombia. Caribbean countries increased their imports of U.S. farm products by over two-fifths in 1973 to a record \$266 million because of rising demand from the hotel and tourist industry, as well as from demand generated by population and income growth. On a commodity basis, grains alone accounted for over three-fourths of the increase in exports to Latin American countries.

1/ PRELIMINARY

SPECIAL in this issue

U.S. AGRICULTURAL IMPORTS IN 1973 REACHED A RECORD \$8.4 BILLION

U.S. imports of agricultural products advanced strongly during calendar year 1973, reaching a record high of \$8.38 billion--30 percent above the 1972 level. About nine-tenths of the nearly \$2-billion gain resulted from higher prices. Volume, measured by the volume index, rose only 3 percent to 121 (1967 = 100). Following currency realignment in February 1973, imported items from many countries became more expensive in dollar terms. Strong demand raised some commodity prices markedly, especially for certain tropical products. Competitive agricultural imports rose 29 percent to \$5.52 billion, and noncompetitive items jumped 31 percent to \$2.86 billion. In November 1973, total farm product imports broke previous records, reaching \$850.5 million.

Beef and veal import volume remained at 1972's 1.5 billion pound level, but sharply higher prices raised value by 36 percent to \$1.17 billion. In 1973, beef and veal imports from Mexico, Ireland, and Argentina were less than in 1972, while those from New Zealand, Australia, and most Central American countries increased. Mexico placed export restrictions on cattle and beef to increase the availability of meat in domestic markets, and U.S. feeder cattle imports from that country declined substantially. Total dutiable cattle entries--which include nonregistered feeder cattle, calves, and heavyweight cattle--numbered 1,019,000 head in 1973, compared with 1,169,000 in 1972. Although entries from Canada were higher, these did not offset the drop in 200-700 pound feeders from Mexico.

Pork import volume went up slightly from 1972's 395 million pounds, but higher prices pushed value up 46 percent to \$440 million. Denmark, the Netherlands, Poland, and Canada--the principal sources of canned hams, shoulders, and fresh-frozen pork--revalued their currencies upward relative to the dollar in February 1973. Strong demand and inflationary pressures also resulted in higher prices for meats imported from those countries.

Dairy product imports jumped significantly in 1973--to \$331 million from \$167 million a year earlier, primarily because import quotas on nonfat dry milk, cheese, butter, and butteroil were increased during the year. Cheese import volume gained nearly 30 percent, mainly cheddar, Swiss, and "other" cheeses not specifically described in tariff schedules. Nonfat dry milk imports totaled 266 million pounds (\$87.3 million); butter imports amounted to over 43 million pounds (\$25 million); and butteroil imports, 23 million pounds (\$12.9 million). Imports of these items were insignificant during 1972. West European countries, Canada, Australia, and New Zealand were the principal sources for U.S. dairy product imports.

Fruit, nut, and vegetable imports totaled \$791 million in 1973, 20 percent higher than their year-earlier level. Fruit imports were valued at \$217 million, compared with \$182 million in 1972. Volume increases for frozen strawberries, fresh and canned oranges, mangoes, melons, pears, prunes, and grape juice, plus price rises, accounted

for most of the gain. Edible nut imports totaled \$148 million, compared with about \$116 million in 1972. Volume increases were concentrated in chestnuts, shelled cashews, pistache nuts, and filberts. Vegetable imports totaled \$425 million, 17 percent higher than the 1972 value. Volume gains were recorded for tomatoes, cucumbers, eggplant, garlic, onions, peas, peppers, and potatoes.

Overall, imports of oilbearing commodities reached nearly \$312 million, compared with \$213 million in 1972. Increased imports of oilbearing materials stemmed mainly from higher prices. Copra, coconut oil, castor, palm, palm kernel, and tung oil prices rose with strong upward demand pressures. Import volume was somewhat higher for sesameseed, castor oil, and coconut oil, but lower for copra, palm oil, and olive oil.

Wine imports rose 17 percent in volume to 55.5 million gallons as demand for table wines continued to expand strongly. Higher prices caused value to jump 37 percent to \$287 million.

Other competitive or partly competitive agricultural import gains took place for sugar and related products, grains, feeds, hides, nursery stock, seeds, swine, and eggs. Sugar import volume in 1973 totaled 5.23 million short tons, 1 percent below the previous year. Higher prices pushed import value up 10 percent to \$918 million.

Noncompetitive agricultural import gains in 1973 were primarily due to higher prices, especially for coffee, cocoa, crude rubber, spices, essential oils, and carpet wool. In 1973, \$2.86 billion worth of noncompetitive items were imported, compared with \$2.18 billion in 1972. The volume index rose by 3 percentage points to 109 (1967 = 100), with increases for coffee, rubber, bananas, tea, pepper, and silk. Green coffee import volume rose 5 percent, while value advanced 32 percent. Such imports from Brazil totaled 608 million pounds, compared with 814 million pounds in 1972. Freeze damage in mid-1972 reduced Brazilian supplies and contributed to sharply higher prices. Increased imports from Colombia, Central America, Mexico, Angola, the Ivory Coast, and Ethiopia more than offset the volume decline from Brazil. Cocoa bean import volume fell 12 percent to 555 million pounds, mostly because of reduced production. But because of sharply higher prices resulting from strong demand, the value of cocoa bean imports jumped 40 percent to \$212 million.

Crude rubber imports totaled 1.4 billion pounds, 7 percent higher than in 1972. Larger industrial demand for natural rubber was the main factor. Prices more than doubled with demand in other countries also higher. U.S. crude rubber import value soared 79 percent above the 1972 level of \$190 million.

Export Fact Sheet

U.S. AGRICULTURAL EXPORTS, 1972/73

Exports of farm products made waves in fiscal 1973, reaching \$12.9 billion: Unprecedented commercial sales in fiscal 1973 pushed our total farm exports 60 percent above the record \$8 billion set in fiscal 1972. The \$4.9-billion increase was more than total agricultural exports in any single year prior to fiscal 1961. While a part of the value increase was due to higher prices, volume accounted for 60 percent, with the quantity index for U.S. agricultural exports (1967 = 100) rising 37 percentage points above the 1972 level. In fiscal 1973, export records were set for wheat, corn, rice, soybeans, cattle hides, lemons, grapefruits, oranges, fresh vegetables, soybean meal, corn byproducts, and live animals. Value totals were up for all other commodities except dairy products and vegetable oils.

Farm exports in fiscal 1973 were equivalent to about 21 percent of 1972 U.S. farm marketings of \$60.7 billion.

The output of 1 of every 4 harvested acres was exported: Eighty-five million acres of U.S. cropland were required to produce the commodities exported in fiscal 1973. World production shortfalls in grains and protein meals provided foreign markets for three-fourths of U.S. wheat output (including wheat products), more than one-half of the soybeans and rice, and over three-fifths of the hops and flaxseed. More than one-third of U.S. production of cotton, tobacco, and tallow went to foreign markets in fiscal 1973. A larger share of U.S. produced feed grains entered the world market at substantially higher prices than in fiscal 1972.

The United States is the world's largest farm exporter: U.S. products accounted for nearly one-fifth of the world's agricultural exports in fiscal 1973. About 479,000 U.S. farmworkers supplied these exports which amounted to \$3.47 for every person living outside the United States. U.S. farmers supplied nine-tenths of world soybean exports, three-fifths of the feed grains, two-fifths of the wheat, one-third of the tobacco, and one-fourth of the cotton and rice.

Expanded sales for dollars accounted for all of the \$4.9 billion increase in U.S. agricultural exports: Commercial farm sales--which include barter for overseas procurement and CCC credit sales--hit a record \$11.9 billion in fiscal 1973, accounting for over nine-tenths of total farm exports. Remaining exports were concessional sales--primarily under Public Law 480--and these were off 8.2 percent from the fiscal 1972 level.

Export gain since 1960 is also largely attributable to expanded dollar sales: The \$4.9-billion gain in commercial sales for dollars in fiscal 1973 boosted our farm export gain since 1960 to \$8.6 billion. Government-assisted exports, which have trended down since 1960, averaged \$1.06 billion yearly during the past 5 years. On the other hand, commercial sales have advanced sharply, averaging \$7.17 billion yearly since fiscal 1969.

Farm exports to Japan, the top country market, topped the \$2 billion mark in fiscal 1973: U.S. farm exports to Japan totaled \$2.3 billion in fiscal 1973, accounting for a record 18 percent of all farm exports and nearly doubling the year-earlier level. A \$1.13-billion increase in exports to this market accounted for some 23 percent of the total fiscal year gain in farm exports. Feed grains, oilseeds, wheat and flour, cotton, and hides and skins continued to dominate the flow of U.S. farm exports to Japan.

Fifteen countries accounted for \$9.26 billion of fiscal 1973 exports: While U.S. agricultural exports go to some 164 countries, 15 countries took 72 percent of the total value in fiscal 1973. Five markets--Japan, the Netherlands, the USSR, Canada, and West Germany--accounted for about three-fifths of our farm exports to the top 15 countries. The United Kingdom, Italy, and the Republic of Korea followed, taking an additional one-fifth. Exports to the USSR, heavily concentrated in wheat and feed grains, totaled \$957 million in fiscal 1973, accounting for 16 percent of the total increase in our farm exports.

In fiscal 1973, Canada and the Netherlands remained the major transshipment points for sizable quantities of U.S. grains and oilseeds. Canada forwarded U.S. farm products valued at \$104 million.

Exports to Eastern Europe and the USSR were valued at \$1.4 billion in fiscal 1973, nearly triple the year-earlier level: U.S. farm sales to East European countries and the Soviet Union in fiscal 1973 towered over the previous year's \$353 million--which had been a record. The new alltime high in U.S. farm exports to these countries was largely due to the \$957 million worth of wheat, feed grains, soybeans, cattle hides, and linseed oil exported to the USSR. U.S. farm exports to the USSR increased five-fold between fiscal 1972 and 1973. Poland, Yugoslavia, and Romania were the other major markets in the area, taking U.S. farm products totaling \$360 million.

Agricultural exports to the People's Republic of China accounted for over nine-tenths of all U.S. exports to that country in fiscal 1973: After 20 years of trade isolation from the United States, the People's Republic of China took U.S. farm products valued at \$207 million in fiscal 1973. Grain and grain products totaled \$103 million, accounting for nearly one-fourth of China's total grain imports of 6.3 million tons. Other U.S. exports to China included cotton, soybean oil, and cattle hides.

International Price Highlights

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

Commodity prices climbed in December, reflecting fears of a mounting energy crisis and possible tight supplies of key agricultural commodities. The Dow-Jones commodity index averaged 326, 8 percent higher than the November index, and the highest level of the year. The Reuter's commodity price index for December was 1,345, 10 percent higher than the November index, and also the highest of the year.

Buyers of rubber and cotton bid up prices for these commodities, whose synthetic substitutes are petroleum based products. The energy crisis also gave rise to increasing shipping costs in December.

Because of official reports of stock drawdowns of U.S. wheat and feed grains to extremely low levels during 1973/74, world prices of these two key commodities climbed during December.

Cocoa beans, imported cow meat, and sugar destined for the U.S. market (at the f.o.b. Caribbean price) and rice were the only major import-export commodities to show a downturn in price.

Because of the tight wheat situation resulting from a drawdown of U.S. stocks, wheat prices increased steadily in December. The monthly average price for U.S. No. 2 Hard Winter wheat, ordinary protein, f.o.b. vessel, Gulf ports, was \$200 a ton, 10 percent higher than the November average and 90 percent higher than the December 1972 average. While no quotation was given for No. 1 Canadian Western Red Spring (CWRS) wheat, 14-percent protein, in store, Fort William-Port Arthur-Thunder Bay, the price of No. 1 CWRS wheat, 13.5-percent protein, in store, Lake Superior ports, rose slightly to \$205 a ton.

The December c.i.f. Rotterdam price for No. 1 CWRS wheat, 13.5-percent protein, averaged \$225 a ton--up 7.5 percent from the November price. For U.S. No. 2 Hard Winter wheat, 12-percent protein, the average was \$223 a ton--up 11 percent--narrowing the differential between these two wheats to about \$2 a ton.

The differential between U.S. No. 2 Hard Winter wheat, 12-percent protein, f.o.b. vessel, Gulf ports, and c.i.f. Rotterdam was \$23 a ton in December. For No. 1 CWRS wheat, 13.5-percent protein, the differential between the c.i.f. Rotterdam price and the f.o.b. Lake Superior ports price was \$20 a ton. The differential between No. 1 CWRS wheat, 13.5-percent protein, f.o.b. Lake Superior ports, and the same wheat type, 14-percent protein, c.i.f. U.K. nearest forward shipment, rose to \$34 a ton in December. This increase may be due to the quotation for different protein contents, as well to added shipping costs in U.K. ports. The increased shipping costs, in turn, were most likely a result of fuel and labor cost rises.

According to the November Feed Situation (USDA, ERS), a tight supply and demand situation also dominates the outlook for feed grains. World production of feed grains in 1973/74 is estimated to be at a record 580 million metric tons, 7 percent above the year-earlier level. But because of depleted stocks in major grain exporting nations, supplies will be barely adequate for 1973/74 requirements, and carryover stocks at the end of the season will be down to the lowest level in more than 15 years. While U.S. 1973/74 corn production was estimated in November at a record 5.7 billion bushels, production is short of expected demand. (Subsequently, in January, the 1973/74 corn crop was estimated at 5.6 billion bushels.)

The corn price in October and November was stable because of new crop supplies. However, in December, the price for U.S. No. 2 yellow corn, f.o.b. vessel, Gulf ports, advanced slightly to \$112 a ton. The c.i.f. U.K., nearest forward shipment price for U.S. No. 3 yellow corn advanced 11 percent to \$143 a ton, widening the differential between the two prices to \$35 a ton. The widening may be due to increased shipping costs resulting from higher fuel costs. Argentine corn, c.i.f. Rotterdam, rose to \$143 a ton, or 9 percent above the November price. With U.S. No. 3 corn, c.i.f. Rotterdam, averaging \$132 a ton, the differential between the two market classes of corn widened to \$11 a ton. During December, the c.i.f. Rotterdam price for U.S. No. 2 grain sorghum averaged \$131 a ton--nearly the same as in November. The 6-percent price rise in U.S. No. 3 yellow corn, c.i.f. Rotterdam, closed the gap between corn and grain sorghum prices in that market.

The f.o.b. vessel Gulf ports price for U.S. No. 2 yellow soybeans rose 5 percent to \$228 a ton in December. For U.S. soybean meal, 44-percent protein, the c.i.f. Rotterdam price advanced more sharply--by 11 percent to \$245 a ton. December price quotations for U.S. soybeans, f.o.b. Gulf ports, were 42 percent higher than a year earlier, and quotations for U.S. soybean meal, c.i.f. Rotterdam, 23 percent higher.

Rice prices moderated somewhat as the new crop came to market. The December c.i.f. Hamburg/Antwerp offering price for U.S. No. 2 long grain rice, 4-percent broken, averaged \$828 a ton, down slightly from the \$866-a-ton November offering. The f.o.b. mill price quotations for long and medium grain from U.S. rice-producing States reflected the same price drop. For example, the December f.o.b. mill, Houston, price quotation for No. 2 medium grain rice, 4-percent broken, was \$661 a ton, down from the November peak of \$672 a ton. Similarly, for No. 2 long grain rice, 4-percent broken, the quotation at Houston mills was \$746 a ton, down \$14 from the November high. The f.o.b. price for Thai white rice, 5-percent broken, is not yet being quoted.

American cotton, Memphis Territory, strict middling, 1-1/16 inches, c.i.f. Liverpool, took an upturn to 88 cents a pound from the weakened 81 cents a pound price of November. This price rise is in response to higher production costs for synthetic fibers produced from petrochemicals.

Price changes for major agricultural imports were mixed, with the rubber price making the most dramatic change. Heavy demand for natural rubber has been brought on by the changing competition from synthetic rubber. Synthetic rubber is a petroleum product whose output is likely to be restricted by the Arab oil embargo. Consequently, the December monthly average of No. 1 rubber, ribbed smoked sheets, advanced strongly to 51 cents a pound, 33 percent higher than the November average and 137 percent higher than the December 1972 average.

The New York spot price quotation for coffee from Santos, No. 4, remained steady at 70 cents a pound for the fourth consecutive month, but the December price was still 22 percent higher than a year earlier. The higher coffee import price is related to a 1973/74 world coffee harvest (October-September marketing year) of 66 million bags, down from the 76 million bags produced in 1972/73. According to an October 1973 Foreign Agricultural Service report on coffee (FAS Report FCOF 4-73), most of the

production drop is due to a 35-percent shortfall in Brazilian coffee output resulting from bad weather and a severe infestation of coffee rust. Prices of other market classes of coffee have also risen. The December New York spot price for Colombian Nanizales coffee averaged 71 cents a pound, 13 percent above the year-earlier price.

The New York spot price for cocoa beans averaged 65 cents a pound in December, dropping for the second consecutive month. The record high prices of 1973 are being eased by larger cocoa bean harvests from the new crop. According to a November 1973 Foreign Agricultural Service circular on cocoa (FAS Report FCB 2-73), the 1973/74 world cocoa bean crop (October-September) is about 1.46 million metric tons, up 5.2 percent from the 1972/73 crop, but well under the 1971/72 record of 1.57 million tons.

Through December, an acute shortage prevailed in world sugar supplies. With world sugar stocks at a very low level and consumption exceeding new crop production, world sugar prices continued to soar to a new high of 11.83 cents a pound. According to the Foreign Agricultural Service, however, 1973/74 world sugar production will climb to a record 82 million tons, 8 percent higher than the previous crop year.

The price for raw cane sugar, 96 degrees, f.o.b. and stowed, the Caribbean, destined for the U.S. market, was 9.33 cents a pound, down 3 percent from the November price.

During December, there was a "negative" premium on raw cane sugar of 2.50 cents a pound (the differential between the price which foreign suppliers to the U.S. sugar market receive and the price received for world free-market sales). This unusual situation was a result of extremely high prices on the world market and occurred during nine of the twelve months of 1973.

Expenses of duty, unloading, insurance, and freight for raw cane sugar shipped from the Caribbean to New York were 1.55 cents a pound in November and 1.52 cents a pound in December. Such expenses in November and December 1972 were 1.12 cents and 1.22 cents a pound, respectively.

The f.o.b. price, U.S. port of entry, for imported cow meat, 90-percent lean, frozen, boneless, declined for the fourth consecutive month to 95 cents a pound.

Export Highlights

U.S. FARM EXPORTS IN FIRST HALF OF FISCAL 1974 NEARLY DOUBLED YEAR-EARLIER LEVEL

For the first half of fiscal 1974, U.S. agricultural exports totaled \$9.9 billion, 92 percent greater than the level of a year earlier. Exports of grains and preparations were up 154 percent, accounting for around two-thirds of the overall increase. Exports of cotton, tobacco, soybeans, meats, live cattle, fruits, nuts, vegetables, and poultry meats were also up substantially. However, exports of dairy products, hides and skins, and vegetable oils fell sharply.

Nearly three-fourths of the \$4.7-billion increase in farm exports during July-December stemmed from higher prices. Higher prices were especially noted for grains, dried beans and peas, alfalfa meal, nuts, meats, cotton, and tobacco. Despite these substantially higher prices--which overall averaged 61 percent higher in July-December than a year earlier--the volume of agricultural exports was over one-fourth above the year-earlier level.

December 1973 exports of farm products totaled \$1.98 billion--sharply above the \$1.1 billion of December 1972 but somewhat below the November 1973 alltime monthly high of \$2.1 billion. December exports continued to be very strong for wheat, feed grains, soybeans, soybean meal, tobacco, live animals, fruits, nuts, and vegetables. Although volume was up 9 percent from December 1972, the value gain was 78 percent because of higher prices.

For the first 6 months of the current fiscal year, U.S. agriculture had a favorable trade balance of \$5.6 billion--substantially above the \$1.9 billion surplus registered during the first half of fiscal 1973. The trade balance for nonagricultural products was less in the red in July-December 1973: \$3.7 billion in deficit, compared with \$5.2 billion a year earlier. With the upsurge in agricultural exports, the total trade balance for the United States advanced to a \$1.95-billion surplus for the first half of fiscal 1974.

The gain in agricultural exports during July-December 1973 occurred to virtually every country and area. But most important was the more than doubling of exports to Asia, Latin America, and Africa. Exports to the People's Republic of China totaled \$435 million, compared with \$61 million during July-December 1972. China was the top foreign market for our wheat exports during the first half of fiscal 1974, taking 95 million bushels. The PRC was also a very important market for U.S. feed grains and cotton, and a smaller market for hides and skins, tobacco, and vegetable oils. Japan took over \$1.55 billion worth of U.S. farm exports in July-December 1973, compared with \$808 million a year earlier. Gains to Japan occurred for feed grains, soybeans, wheat, fruits, and vegetables. Shipments of U.S. farm products to Western Europe were up nearly two-thirds, with gains occurring both to the enlarged EC and non-EC countries.

Table 13.--U.S. agricultural exports to the People's Republic of China:
Quantity and value by commodity, December and July-December 1973

Commodity	Unit	December		July-December	
		Quantity	Value	Quantity	Value
		Thousands	1,000 dollars	Thousands	1,000 dollars
Wheat, unmilled	M.ton	174	23,174	2,584	272,436
Corn, unmilled	do.	220	23,887	928	95,606
Soybean oil	Lb.	0	0	15,430	2,471
Cotton, raw	R.bale	69	13,481	156	27,653
Tobacco, unmanufactured	Lb.	0	0	1,197	1,359
Total	---	---	60,542	---	399,525

Feed grains, cotton, tobacco, soybeans, and soybean products accounted for most of the increase. Eastern Europe took nearly three-fourths more U.S. farm products, while shipments to the USSR gained slightly. Wheat exports to the USSR in July-December totaled 72 million bushels, compared with 98 million a year ago. With an estimated record grain crop of over 220 million tons this year, the USSR will not need to import as much grain as it did last year. U.S. agricultural exports also gained significantly to African and Middle East and other Asian countries. Most of the increase to these countries was concentrated in grains.

Table 14.--U.S. agricultural exports: Value by commodity,

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry and pork variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT.

4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

1/ Grains, poultry, and pork were subject to variable levies beginning on July 30, 1962; rice, on Sept. 1, 1964; and beef and dairy products, on Nov. 1, 1964. 2/ Lard for food is a variable-levy commodity, while lard for industrial use is bound in the General Agreement on Tariffs and Trade (GATT) at 3 percent ad valorem. U.S. lard is for food use. 3/ Although canned poultry and pork variety meats are subject to variable levies, these cannot exceed the amount of import duties bound in GATT. 4/ Variable levy on sugar-added content. 5/ Mainly corn gluten feed and meal, which are nonvariable-levy commodities; but may contain small quantities of other corn products, subject to variable levies (see "Export Highlights, March 1970").

Import Highlights

U.S. AGRICULTURAL IMPORT VALUE UP ONE-THIRD IN JULY-DECEMBER 1973

Farm product imports reached a record quarterly high in October-December 1973, bringing the total for the first half of fiscal 1974 to \$4.3 billion. This total represented a 33-percent value increase over the year-earlier level. Higher prices for a wide variety of agricultural items accounted for a large part of the gain. Larger import demand, due primarily to production shortfalls for some commodities, led to increased volume of dairy products and eggs, pork, sugar, fruits and vegetables. Import volume also increased for wine, tobacco, tea and natural rubber.

Competitive or "supplementary" agricultural imports in July-December totaled almost \$2.95 billion, compared with \$2.1 billion the previous year. Prices were up sharply, but volume also expanded. Dairy product values more than doubled as nonfat dry milk, butter, and butteroil import quotas were relaxed. Additional cheese quotas allowed before July 1 led to larger imports in the July-December period. Although boneless beef import volume fell below the July-December 1972 level, price increases pushed the value substantially higher. Dutiable cattle entries also diminished noticeably, mainly because of reduced exports of feeder cattle by Mexico.

Fruit and vegetable imports continued their strong growth trends. Import volume for berries, apple and grape juice, raisins, and prunes was higher; price increases were evident for many other fruit items. Imports of tomatoes, onions, garlic, peppers, and olives were well above year-earlier levels. Edible nut imports gained strongly, especially coconut meat, pistache nuts, chestnuts, and filberts. Brazil and cashew nut volume declined, but unit values increased.

Sugar import volume in July-December totaled 2.65 million short tons--7 percent above year-earlier levels. Quota increases on a first-come, first-serve basis attracted more sugar from the Dominican Republic, Mexico, Peru, Brazil, Colombia, Argentina, Costa Rica, and Australia. Sharply higher sugar prices raised the import value 23 percent to \$490 million.

Tobacco imports totaled 140 million pounds (\$86.6 million), compared with 124 million pounds (\$74 million) in July-December 1972. Imports of oriental leaf, scrap, and stems were higher.

Wine imports expanded moderately in volume to nearly 28 million gallons, while price advances pushed value up 31 percent to almost \$154 million.

Noncompetitive agricultural imports during July-December totaled nearly \$1.37 billion or 22 percent above the same months of 1972. Volume gains occurred for cocoa products except cocoa butter, crude rubber, and tea; declines took place for bananas, coffee, cocoa beans, fibers, silk, and carpet wool. Green coffee unit values averaged nearly 11 cents per pound higher than during July-December 1972; crude dry form rubber values doubled to 28 cents per pound; and cocoa beans went to nearly 50 cents per pound from less than 28 cents a year earlier. Unground black pepper imports averaged 51 cents per pound, compared with 38 cents in July-December 1972. Vanilla beans averaged \$5.22 per pound against \$4.26 the previous year.

Table 20.--U.S. agricultural imports: Value by commodity,
July-December 1972 and 1973

1/ Based on 359 classifications in 1971.

2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 Variant of the Seasonal Method II Seasonal Adjustment Program, Technical Paper No. 15, U.S. Government Printing Office, Washington, D.C., 1965.

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such United States commodities. Complementary agricultural imports include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers.

2/ Based on 430 classifications in 1971.

3/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 Variant of the Seasonal Method II Seasonal Adjustment Program, Technical Paper No 15, U.S. Government Printing Office, Washington, D.C., 1965.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in transit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
