FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

U.S. Agricultural Trade With Central America (see p. 5). U.S. agricultural exports to Central America in fiscal 1974 increased 54 percent to a new record high of \$158.5 million. Export values for wheat, corn, fruits and vegetables, tallow, and fixed vegetable oils and fats were well above the year-earlier level. Higher prices contributed significantly to the gain. Our agricultural imports from Central America during the period advanced nearly 8 percent to \$625.5 million. An increase in the quantity of sugar imported and the sharp increase in sugar prices accounted for most of the gain.

* * * * *

U.S. Agricultural Exports to Mideast Markets Growing Rapidly (see p. 14). Exports of agricultural commodities by the United States to markets in the Mideast increased from \$432 million in fiscal 1973 to \$1.1 billion in fiscal 1974, while exports to North Africa zoomed from \$90 million to \$311 million. During fiscal 1974, the value for U.S. wheat exports to the Mideast and North Africa quadrupled, reaching a record \$687 million. Further gains are underway for our exports of wheat to the area during fiscal 1975. Exports of rice, corn, tobacco, vegetable oils, and processed foods are also scoring spectacular gains. The European Community, Australia, and Thailand are increasing their agricultural exports to the Mideast and North Africa by more than 50 percent this year.

* * * * *

Imports of Fruits and Vegetables Under Quarantine, Fiscal Year 1974 (see p. 38). Imports of fruits and vegetables under Plant Protection and Quarantine regulations totaled over 6.7 billion pounds during fiscal 1974. More than 150 countries shipped fresh or frozen fruits and vegetables through 75 U.S. ports. Detailed information on imports by commodity, country of origin, and port of entry are presented in tabular form.

* * * * *

Selected Price Series of International Significance (see p. 59). The impending U.S. corn and soybean harvests, fears of continued inflation, and the possibility of U.S. export controls for grains and soybeans buoyed commodity prices in August. The Dow-Jones commodity index rose 7 percent from July to August. Grain sorghum,

soybean meal, corn, and soybean prices jumped sharply. International wheat prices, however, increased marginally. Among import commodities, international sugar prices reached new heights, while coffee prices slid.

* * * * *

U.S. Agricultural Exports Up 14 percent in July-August of Fiscal 1975 (see p. 64). U.S. exports of farm products in July-August 1974 totaled \$3.1 billion--14 percent above the year-earlier level. All of the increase stemmed from higher prices as volume was down 6 percent. Export value for soybeans and soybean products, cotton, tobacco, rice, inedible tallow, fruits, and vegetables gained, while volume was down for wheat and feed grains.

* * * * *

U.S. Agricultural Imports Up 29 Percent In July-August (see p. 94). During the first 2 months of the current fiscal year, farm product imports totaled \$1.75 billion, compared with \$1.35 billion in the same months last year. Price increases generated most of the value rise. Competitive agricultural imports advanced nearly 35 percent to \$1.236 billion, with volume increases for some items. Sugar, cotton, tobacco, fruits, grains, and certain vegetable oils accounted for most of the gain. Because of sharply higher prices, sugar became the largest single imported U.S. farm product. Declines took place in imports of cattle, meat, dairy products, and copra.

SPECIAL in this issue

U.S. AGRICULTURAL TRADE WITH CENTRAL AMERICA ^{1/}

by
John E. Link ^{2/}

U.S. agricultural trade with Central America during fiscal 1974 increased significantly above the previous year's record as prices of the important commodities traded, except bananas, continued an upward trend.

Our agricultural exports to Central America advanced 53 percent from fiscal 1973's peak of \$103.2 million to \$158.5 million in fiscal 1974. Shipments, to Costa Rica, El Salvador, and Nicaragua were up sharply (table 1).

Gains in imports from Belize, El Salvador, Guatemala, Honduras, and Panama more than offset reductions from Costa Rica and Nicaragua as total imports climbed from the fiscal 1973 high of \$580.9 million to \$625.5 million.

Panama continued to have a deficit in agricultural trade with the United States. The other Central American countries maintained traditional export surplus positions, but the region's total fell from \$477.7 million to \$467.1 million because of the reduced imports from Costa Rica and Nicaragua.

Commodities Traded

The increase in the value of our fiscal 1974 farm exports to Central America was due almost exclusively to higher prices, particularly for cereals and cereal preparations, which accounted for over half of the value of exports. Oilseed cake and meal, fruits and vegetables, vegetable oils and fats, and tallow made up nearly a quarter of this total.

The volume of wheat exports to Costa Rica, Guatemala, Honduras, and Panama fell appreciably, below earlier peaks, primarily because of a buildup in stocks and some resistance to the sharply higher prices (table 2). Volume declines for rice, oilseeds, and some animal products reflected the general recovery of the region's production from the 1972 drought. However, exports of feed grains and fats and oils to Costa Rica, El Salvador, and Guatemala continued to rise into early 1974, reflecting unusually large production deficits in these countries in 1972. Volume for most other major export groups also increased over fiscal 1973. Fruits and vegetables--apples, grapes, raisins, peas, beans, etc.--registered gains, and animal feed exports increased nearly 20 percent in value.

^{1/} Includes Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, and Panama.

^{2/} Agricultural Economist, Latin America Program Area, Foreign Demand and Competition Division, Economic Research Service.

The value rise in our agricultural imports from Central America was due to slightly higher prices offsetting volume declines for many products. Four commodities--coffee, beef and veal, bananas, and sugar--accounted for more than 90 percent of total agricultural imports.

Coffee imports from Central America were down significantly from an unusually high fiscal 1973 level, partly because of lower carryovers in most countries and efforts by many exporting countries to increase the world price by withholding coffee from the market. Banana imports fell 6 percent because of reduced imports from Costa Rica and Panama (table 3). Beef imports dropped 17 percent below the fiscal 1973 level of 206 million pounds as the principal exporting countries restricted sales in an effort to curb rising domestic food prices. However, sugar imports from Central America increased to an alltime high of 834 million pounds, with significantly larger purchases from Costa Rica and El Salvador.

Changes in U.S. Trade With Central America

Since the early 1960's, the value of agricultural trade between the United States and Central America, has nearly tripled, despite growing trade among the countries in the region (table 4). Agricultural exports have accounted for only 12 percent of total U.S. exports to Central America. In contrast, agricultural imports have comprised nearly 83 percent of total U.S. imports from Central America. Cereal and cereal preparations have continued to be the most important agricultural items we export to Central America, although large gains have been registered in exports of live animals, crude animal and vegetable materials, fats and oils, fruits and vegetables, food preparations, and feeding stuff for animals.

Coffee continues to be the main item the United States imports from Central America, but its share of total imports has dropped from over half to about one-third in the last 10 years. Imports of meat and meat preparations have made large advances, going from 9 percent of the total 10 years ago to nearly a quarter of the total during the past couple of years. Fruits and vegetables, and sugar have maintained their share of imports, but most other items have declined.

Country Breakdowns

U.S. farm exports to Panama, our major agricultural market in Central America, totaled \$38.3 million in fiscal 1974, accounting for about 24 percent of total farm exports to the region. Panama was the only country in Central America with which our agricultural trade balance was positive. Panama's share of U.S. farm exports to Central America has remained nearly stable for the past 10 years. Fruits, vegetables, wheat, and vegetable oils and fats are the main products exported to Panama (table 5).

Panama's share of our agricultural imports from Central America declined from 9 percent in fiscal 1974 to only 5 percent, or \$33.0 million worth, in fiscal 1974. Sugar was the major import, followed by bananas. Ten years ago, just the opposite was true.

El Salvador, Guatemala, and Costa Rica are the next most important markets in Central America. In fiscal 1974, U.S. agricultural exports to these countries totaled \$28.7 million, \$28.0 million, and \$24.9 million, respectively. Wheat was the major item exported to all three. El Salvador was the main Central American market for wheat, oilseed cake and meal, and tallow. Over the past 10 years, El Salvador's and Costa Rica's share of U.S. exports to Central America have increased while Guatemala's has declined.

Guatemala is the major supplier of U.S. agricultural imports from Central America, accounting for 26 percent, or \$160.4 million worth, of the the fiscal 1974 total. Guatemala's share has remained fairly stable since 1964. Coffee is the principal import from Guatemala, and Guatemala is the main supplier of our coffee imports from Central America.

Although Costa Rica is the major supplier of sugar in Central America, bananas are the most important commodity we import from that country. Costa Rica's share of U.S. agricultural imports from the region has remained nearly constant over the past decade. In fiscal 1974, these imports were valued at \$121.8 million.

El Salvador has been the second most important source of coffee imports from Central America over the last 10 years. Its share of the regions farm exports to the United States has remained quite stable. In fiscal 1974, agricultural imports from El Salvador amounted to \$105.6 million. Coffee was the most important item.

Belize, Honduras, and Nicaragua took about 25 percent of our agricultural exports to Central America in fiscal 1974. Their share has remained the same since 1964. Wheat is the main product exported to these countries.

Honduras accounted for about 19 percent, or \$116.1 million worth, of our agricultural imports from Central America in fiscal 1974, compared with about 13 percent 10 years ago. Honduras is the principal supplier of the bananas and plantains we purchase from Central America.

Nicaragua's share of U.S. agricultural imports from Central America has been relatively stable, representing about 12 percent, or \$75.0 million worth, of the fiscal 1974 total. Nicaragua is the main supplier of beef and veal from Central America.

Agricultural imports from Belize rose from \$2.3 million worth 10 years ago to \$13.5 million in fiscal 1974. Sugar is the major product imported from Belize.

Outlook for Central American Trade in Fiscal 1975

The outlook for agricultural trade between the United States and Central America in fiscal 1975 is filled with uncertainty. The full effects of the energy crisis on fuel, fertilizers, and insecticides are just beginning to influence agricultural production in Central America. The continuing problems of inflation and balance of payments are pressing Central American countries harder than ever. Weather is always a question mark and the final estimates of damage done by hurricane "Fifi" still have to be made.

Production of corn and sorghum in Central America in 1973 was up from the drought stricken year of 1972. The prospects are for further improvements this year. But while corn production has increased, stock levels are expected to be slightly below last year's level and sharply below that of 1972. Stock levels of sorghum have increased for the past 2 years. At the present time, U.S. exports of feed grains to Central America are expected to be near last year's volume.

Central America's rice production in 1974 is estimated to be near last year's level, and further improvements in stock levels are likely. The region should be in an export position in rice this year. The prospects are for higher bean production in 1974 with stocks nearly double last year's quantity, but still not quite half of the 1972 level. The region should still be a net importer, but there will be an increase in interregional trade.

U.S. wheat exports to Central America are expected to increase as the countries attempt to build up stocks in response to the drawdown of the past 2 years. Based upon this information and other data, preliminary estimates indicate that the value of U.S. exports to Central America should be up by 15-20 percent in fiscal 1975.

Coffee production in Central America is expected to be up in the 1974/75 crop year, resulting in a buildup of stocks. But production will still be below the 1972/73

level. Coffee available for export is also expected to increase. Our beef and veal imports from Central America in fiscal 1975 will depend largely upon prices here in the United States. Banana imports will likely be down as a result of hurricane "Fifi." Sugar production in Central America is expected to rise resulting in increased carryover and increased availability for export. Cotton production is also expected to be higher and with an anticipated drawdown in stocks, exports should be up appreciably.

Table 1.--U.S. agricultural trade with Central American countries,
fiscal years 1964 and 1972-74

SPECIAL in this issue

U.S. AGRICULTURAL EXPORTS TO MIDEAST MARKETS GROWING RAPIDLY

by
John B. Parker, Jr.
and
Michael E. Kurtzig ^{1/}

Some of the fastest growing markets for U.S. agricultural exports are in the Mideast and North Africa. Our exports of farm products to the area stretching from Morocco to Iran almost tripled in fiscal 1974, rising from \$521 million in fiscal 1973 to almost \$1.4 billion, which was greater than the fiscal 1974 value of our agricultural exports to the People's Republic of China (PRC) and the USSR combined. Large sales of wheat, rice, vegetable oils, and tobacco that have already been made indicate further gains in both quantity and value in fiscal 1975. U.S. farm exports to the area could reach \$2 billion in fiscal 1975, mostly because of larger sales of wheat to Iran, Turkey, and Egypt, and rising sales of rice to Iran, Iraq, and the Arabian Peninsula. Exports of a wide variety of processed foods to the Arabian Peninsula are still booming, following spectacular gains in fiscal 1974. Some of the popular items include: tomato products, canned fruits and juices, canned peas and beans, honey, and popcorn.

Some of our fiscal 1974 exports to the Mideast and North Africa showed especially notable gains over fiscal 1973 levels:

Wheat: \$687 million, up from \$165 million.

Corn: \$101 million, up from \$30 million.

Vegetable oils: \$117 million, up from \$66 million.

Rice: \$90 million, up from \$36 million.

Wheat flour: \$51 million, up from \$25 million.

Tallow, tobacco, beverage ingredients, and animal feed were also significant products.

Total agricultural imports by countries of the Mideast and North Africa are expected to reach \$5 billion between July 1974 and June 1975--up from about \$3 billion in the year-earlier period. Egypt will be the leading importer in the area, with agricultural imports totaling an estimated \$800 million. Iran, Israel, Turkey, and Algeria will be the other major food importers. Some of the smallest food importers are the most rapidly growing, particularly Qatar, Oman, and United Arab Emirates.

^{1/} Agricultural Economist, Developing Countries Program Area, Agricultural Economist, Developed Countries Program Area, Foreign Demand and Competition Division, Economic Research Service, respectively.

The major factor behind the bouyant demand for U.S. food in the Mideast is well known: tremendous gains in foreign exchange holdings due to sharply higher petroleum prices. Demand for food was strong before this major change occurred, but foreign exchange shortages limited food imports for some countries in the area prior to 1973, particularly Egypt.

The use of petroleum revenues to pay for food imports by Saudi Arabia, Iraq, Iran, and Kuwait has bolstered demand for U.S. rice. U.S. rice exports to the Mideast are expected to reach \$300 million in fiscal 1975--triple the previous peak. In 1974, flows of capital from Saudi Arabia, Kuwait, and Abu Dhabi to Egypt, Lebanon, and Syria have provided over \$1 billion more foreign exchange for those countries this year. Their exports are also rising. While Egypt must still be cautious in spending foreign exchange for food imports, expenditures for basic foods have increased markedly.

Kuwait's phenomenal economic development has been based on wide distribution of huge petroleum revenues among a small native population and providing many incentives to attract skilled immigrants. Iran and several other countries have also adopted a policy of widely dispersing benefits of petroleum revenues. Agricultural development projects are being emphasized. Most of the rural areas of oil-rich countries are scheduled to receive electricity, new schools, roads, and medical facilities. Average population growth is more than 2.5 percent annually in most of the Mideast. Programs to provide good nutritional meals for school children are likely to start a chain reaction which will eventually influence the typical diet of these nations.

Competition for Mideast markets from Australia, the European Community (EC), Pakistan, Thailand, and Brazil has gained momentum in the recent year. Australia has increased deliveries of wheat, live animals, meat, dairy products, and canned fruit. EC exporters are selling more wheat, beef, frozen poultry, powdered milk, butter, bakery products, and canned foods. Pakistan and Thailand are selling more rice. Brazil has become an important supplier of rice, sugar, coffee, and soybean products. The competition from other countries and effective demand for U.S. products varies depending upon the commodity involved.

Wheat

U.S. wheat exports to the Mideast and North Africa increased from 2.1 million to 4.2 million tons between fiscal years 1973 and 1974, with gains in all major markets. It appears that during fiscal 1975, quantity will reach 5 million tons for a value of possibly \$900 million. Iran is likely to be our largest Mideast market for wheat in fiscal 1975. Iran has already purchased over 1.5 million tons of U.S. wheat for 1974/75 delivery--almost triple the 584,000 tons we sent them during 1973/74. Turkey will purchase about 800,000 tons, more than double last fiscal year's level. Our exports of wheat to Egypt are also expected to exceed the 695,000 tons delivered in fiscal 1974. U.S. wheat exports to Iraq zoomed from only 13,000 tons in fiscal 1973 to 392,000 tons in fiscal 1974. It now appears that Iraq's purchases in fiscal 1975 will be about the same magnitude but the value will be greater because of higher prices.

Our farm exports to Turkey are scheduled to approximate \$200 million in the current fiscal year, more than double the \$73 million recorded last year. A smaller than expected wheat crop combined with rising consumer demand, caused Turkey to make record cash purchases at almost \$100 million of U.S. wheat during the last 6 months.

Algeria's 1974 wheat crop was also less than had been anticipated. U.S. wheat exports to Algeria reached a record 769,600 tons in fiscal 1974--almost double the previous level. Our wheat exports to Morocco also doubled in last fiscal year--reaching 509,300 tons, and exports to Tunisia more than doubled. Our exports of

wheat to North Africa in the current fiscal year are expected to remain about the same as last year's--1.4 million tons. However, France and Argentina are likely to send more wheat to North Africa.

Australia's exports of wheat to Mideast markets in 1974 will be about 2 million tons--double the 1973 level because of larger deliveries to Egypt, Iraq, and Saudi Arabia. Australian exports of flour to the Arabian Peninsula are also rapidly rising.

Wheat Flour

Larger sales of wheat flour to the Arabian Peninsula are underway following modest gains in 1973/74. Saudi Arabia is our largest export market for wheat flour. Sales of U.S. wheat flour to new markets in United Arab Emirates, Bahrain, Qatar, and Oman are rising despite strong competition from Australia.

Rice

Mideast countries will import over 1 million tons of rice between July 1974 and June 1975--some 30 percent above the year-earlier level. Rice exports by Thailand and Pakistan to Iraq and the Arabian Peninsula increased markedly in early 1974. The major importers are Iraq, Iran, Saudi Arabia, Kuwait, and United Arab Emirates.

U.S. rice exports to the Mideast are expected to reach 450,000 tons in fiscal 1975, up from 156,407 tons in fiscal 1974 and 125,825 tons in fiscal 1973. Sales to Iran should reach 230,000 tons in the current fiscal year. Rice exports to Saudi Arabia increased 60 percent to 91,000 tons in fiscal 1974 and a gain of more than 20 percent is expected this year.

Between July 1973 and June 1974, Iraq's total rice imports increased markedly to about 265,000 tons--triple the usual level. Thailand supplied 95,000 tons. Other important suppliers were Peru, Brazil, Pakistan, the PRC, and the United States. U.S. rice exports to Iraq in fiscal 1975 will be much higher than the initial 9,000 tons delivered a year earlier. So far this fiscal year, U.S. rice sales to Kuwait exceed 22,000 tons--five times the usual level. U.S. exports of rice to three new markets--Oman, Qatar, and Bahrain--were more than 10 times greater in fiscal 1974 than in fiscal 1973.

Egypt is keeping more of its rice at home to meet domestic demand. Egyptian rice exports declined from 546,000 tons in 1972 to 298,000 tons in 1973. A further decline has been indicated this year. Small shipments of packaged U.S. rice are now moving to Egypt.

Coarse Grains

U.S. exports of corn to the Mideast almost doubled in fiscal 1974--reaching a record 798,000 tons. Shipments to Egypt jumped to 444,600 tons from 132,000 tons in fiscal 1973. Corn meal is blended with wheat flour to prepare bread in many rural areas of Egypt. Further gains in U.S. corn sales to Egypt are forecast. Egyptian corn demand is rising rapidly, yet output appears to have stabilized at about 2.5 million tons annually.

U.S. corn exports to Iran reached 98,000 tons in fiscal 1974--almost double the previous year's volume. Thailand is now supplying much of the increased demand for corn in Saudi Arabia, Kuwait, and Iraq. Corn imports by Iraq are scheduled to rise markedly as more commercial feedlots are established.

Our exports of barley to Iran are rising. Iraq and Syria occasionally import barley from Europe. French exports of barley to Mideast markets exceeded 100,000 tons in 1973.

Vegetable Oils

Iran and Egypt accounted for about 86 percent of our exports of vegetable oils to the Mideast markets in fiscal 1974--even though such exports to Egypt declined in quantity to 91,200 tons. Egypt is our major export market for cottonseed oil and Iran is a rapidly growing market for soybean oil. Cottonseed oil shipments to Egypt are now rising rapidly. Fiscal 1974 vegetable oil exports to Iran reached 75,857 tons--almost double the fiscal 1973 level--worth \$39 million. Although still relatively small, our exports of vegetable oils to Saudi Arabia, Lebanon, and the Gulf of Sheikdom are increasing.

Sunflower oil exports to Mideast markets by the Soviet Union declined in 1973, although considerable deliveries to Iran and Iraq are underway in 1974.

Tobacco

U.S. tobacco exports to Egypt are expected to reach \$20 million in fiscal 1975--eight times the amount recorded a year earlier. Cigarette factories in Cairo need U.S. leaf tobacco for blending in the manufacture of high-quality cigarettes. Some of our 10 largest export markets for cigarettes are now in the Mideast, including Lebanon, Kuwait, and Saudi Arabia. Policies to allow large imports of cigarettes have limited prospects for U.S. sales of leaf tobacco to Iran, Iraq, and Lebanon.

Livestock Products and Meat

U.S. tallow exports to the Mideast and North Africa surpassed \$60 million in fiscal 1974, more than doubling the fiscal 1973 value. Egypt, Algeria, Iran, and, recently, Iraq are growing markets. Prosperity has brought a boom in soap sales throughout the area. Most of the tallow used by soap factories in the Mideast and North Africa is imported from the United States, Europe, and Australia.

Europe and Australia are supplying most of the rising imports of powdered milk. However, our sales of fresh milk to Saudi Arabia's supermarkets increased markedly in the recent year.

Programs to improve livestock breeds have resulted in larger exports of live animals from the United States to Iran and Egypt. U.S. exports of animal feed to the Mideast doubled in fiscal 1974, reaching \$20 million. Saudi Arabia, Lebanon, Egypt, and Iran were major markets.

Egypt is expected to resume purchases of frozen beef and poultry from the United States in fiscal 1975. Our frozen poultry exports to Saudi Arabia doubled in fiscal 1974, reaching \$400,000. Exports of frozen poultry by Denmark, the Netherlands, and France combined now exceed 20,000 tons annually. Kuwait, Saudi Arabia, and United Arab Emirates are some of their fastest growing markets for frozen poultry. U.S. exports of canned meat and luncheon meats to Arabian Peninsula markets are rising, but the value in fiscal 1974 was still less than \$2 million.

The value of U.S. beef exports to Arabian Peninsula markets is likely to rise sharply to over \$1 million in fiscal 1975. U.S. beef is now served in many restaurants of new hotels in Saudi Arabia, Kuwait, and Abu Dhabi.

Fruits, Vegetables, and Preparations

Our exports of these items to the Mideast and North Africa doubled to reach \$14 million in fiscal 1974. Algeria, Saudi Arabia, and Kuwait were the major markets. Sales of pulses to Algeria increased. Our exports of tomato products and canned fruits to Saudi Arabia, Kuwait, and Gulf of Sheikdoms (Bahrain, Qatar, Oman, and United Arab Emirates) are booming. New grocery stores with refrigeration and a marked rise in household ownership of refrigerators have contributed to the rise in sales of U.S. processed foods in these countries. Spectacular gains in U.S. exports of vegetable seeds to Egypt and Arabian Peninsula markets occurred in recent months.

Miscellaneous Processed Foods

Imported snack foods are sold by many small shops in many Mideast countries, particularly where the population is not yet sufficient to support local food industries. U.S. exports of popcorn, almonds, mixed nuts, potato chips, and bakery products to the Mideast more than doubled in value in fiscal 1974, reaching \$20 million.

Cotton

Spectacular gains in exports of U.S. short staple cotton to Egypt are expected in fiscal 1975. Policy changes in Egypt indicate that large imports of short staple cotton will be made at about 50 cents per pound. This cotton will be used for manufacture of many textiles for domestic use, items currently made from medium and long staple cotton. As a result, more extra long staple cotton will become available for export by Egypt at prices of more than \$1.50 per pound.

Imports of U.S. cotton by Lebanon, Algeria, and Morocco are also expected to increase. The construction of new textile factories in Iraq, Libya, and the Arabian Peninsula will create a demand for certain types of U.S. cotton during the next few years.

Wrap Up

U.S. agricultural exports to Egypt and Iran each are likely to exceed \$400 million in fiscal 1975. Turkey, Israel, and Algeria will each be markets in the \$200 million to \$300 million range. Our fiscal 1975 exports of farm products to Saudi Arabia and Iraq are likely to exceed \$100 million each for the first time. U.S. exports of cereals to the Mideast and North Africa are likely to exceed \$1 billion in 1974/75. Our exports of wheat flour, vegetable oils, and tallow are likely to be in the vicinity of \$100 million each in fiscal 1975.

SPECIAL in this issue

IMPORTS OF FRUITS AND VEGETABLES UNDER QUARANTINE, FISCAL YEAR 1974

Fruit and vegetable inspections by USDA's Animal and Plant Health Inspection Service totaled slightly over 6.75 billion pounds during fiscal 1974, compared with last year's record of nearly 7 billion pounds. A reduction in fresh vegetable entries accounted for the decline. Fresh fruit inspections remained at fiscal 1973's 5.3 billion pound level, while the volume of frozen products continued to expand. Increased entries of apples, apricots, strawberries, Chinese gooseberries, grapes, limes, melons, plantains, and plums were offset by decreases for bananas, oranges, pineapples, and pears.

During fiscal 1974, fresh vegetable inspections amounted to 1.3 billion pounds against 1.44 billion pounds a year earlier. Declines occurred for asparagus, broccoli, cabbage, carrots, eggplant, lettuce, onions, peas, pumpkins, and tomatoes, primarily because of larger U.S. vegetable crops. Frozen vegetable entries advanced to almost 34 million pounds from 28 million pounds a year earlier.

Table shows fruit and vegetable imports under permit at 75 U.S. ports arranged by commodity, country of origin, and port, based on notices of arrival reported by the initial entry port. Additional tables show inspections for the U.S. Virgin Islands, Guam, and intransit commodities through U.S. ports from one country to another. Plant Protection and Quarantine data provide detailed information not readily available from other sources. These statistics differ in several respects from official U.S. Census Bureau reports, however. Entries of fruits and vegetables from Canada do not require permits and are not included in these tables. Quarantine inspections may not agree with Census Bureau import data because of reporting lags. Finally, quarantine inspections include small shipments which are not tabulated separately in Census Bureau statistics.

Plant quarantine inspections have been published since 1924. During 1924-28, they appeared in annual reports of the Federal Horticultural Board; from 1929-32 in annual reports of the Plant Quarantine and Control Administration; from 1932 to 1934 by the Bureau of Plant Quarantine; and in 1935 and 1936 by the Bureau of Entomology and Plant Quarantine. From 1937 to 1952 the data were published by the Office of Foreign Agricultural Relations; from 1953 to 1960 by the Foreign Agricultural Service; and since 1960 by the Economic Research Service. Data for fiscal 1973 were published in the November 1973 issue of Foreign Agricultural Trade of the United States.

International Price Highlights

SELECTED PRICE SERIES OF INTERNATIONAL SIGNIFICANCE

The failure of U.S. corn and soybean harvests to meet expectations, fears of widespread inflation, and concern over possible U.S. export controls for grains and soybeans buoyed commodity prices in August. The Dow-Jones commodity index rose 7 percent from July to August, reaching 371 in August. (In contrast, the Reuter's commodity index, whose nonagricultural commodity price declines more than balanced off the agricultural commodity price rise, was 1 percent lower in August.)

During August, the largest export price jumps were made by grain sorghum and soybean meal, but price hikes for corn and soybeans were not far behind. International wheat prices increased marginally. Among import commodities, international sugar prices reached new highs. Coffee prices continued to slide, while other import commodity prices of this series changed marginally.

August Export Commodity Prices

In mid-August, the International Wheat Council (IWC) stressed the easing of the tight balance between supply and demand for wheat in its 1974/75 outlook report. Wheat consumption is expected to decline sharply, notably in the animal feeding sector. While the IWC report predicted that the 1974/75 world wheat output would be 2 percent lower than the 1973/74 record with the United States, the European Community, the USSR, Argentina, Australia, Sweden, Brazil, and Mexico having or expecting a higher crop outturn. Since August, however, ERS and IWC estimates have presented a tighter situation than indicated in earlier estimates. The 1974/75 world crop outturn is currently set at 351 million tons, 5 percent less than last year--with Canada, the USSR, and India experiencing shortfalls. In this setting, the f.o.b. track, Gulf ports price for U.S. No. 1 Hard Winter wheat (HWW), ordinary protein, hovered around the July price, changing marginally to \$168 a ton in August. The August 1974 wheat export price, however, was 8 percent lower than the wheat export price a year ago. Likewise, the August price for No. 1 Canadian Western Red Spring wheat (CWRS) was \$195 a ton, compared with \$193 a ton in July. The c.i.f. U.K. and Rotterdam wheat prices also were steady. The c.i.f. U.K. and Rotterdam prices for U.S. HWW were \$204 and \$194 a ton, respectively, while the c.i.f. prices for No. 1 CWRS in the two foreign markets ran \$221 and \$212, respectively. With ocean freight rates from the U.S. Gulf ports to West European ports at less than \$10 a ton, the price differential between the U.S. Gulf ports and West European markets far exceeded freight costs.

The predicted shortfall in the U.S. corn crop set the tone for international corn prices in August. The f.o.b. track, Gulf ports price for U.S. No. 1

Yellow corn increased 10 percent to \$146 a ton. Similarly, the c.i.f. U.K. and c.i.f. Rotterdam prices for U.S. No. 3 Yellow corn rose 9 and 14 percent, respectively. The c.i.f. Rotterdam prices for Argentine corn and U.S. grain sorghum also advanced sharply. Foreign fears of possible U.S. export controls also stimulated corn prices. Japan's purchases of a substantial amount of U.S. corn for shipment as far distant as January-March 1975 exemplifies these fears. Moreover, the EC and Japan announced they would voluntarily cut back on feed grain imports during the 1974/75 marketing year.

According to The World Agricultural Situation (WAS-5, Sept. 1974, ERS/USDA) world rice output in 1974 will probably equal last year's 210 million ton crop (milled basis).

According to the report, with no increase in production this season, demand can be expected to continue pressing on supply at current prices, thus keeping the rice situation tight for another year. (In the September FAS World Grain Situation Report FG 22-74, world rice production was put at 1 percent below last year's crop). During August, however, the f.o.b. Bangkok price for white Thai rice, 5-percent broken, advanced only slightly to \$521 a ton.

While the 1974/75 U.S. soybean crop is expected to decline from that of a year earlier, U.S. suppliers are protected by the large stock buildup in 1973/74. Moreover, the output of Brazilian soybeans, Peruvian fishmeal, and Malaysian and Philippine copra is expected to increase. In an August summary of the fats and oils situation, world production of protein meal (in soybean equivalent) is estimated to decline from 66.2 million tons in 1974 to 63.8 million tons during 1975. Output of fats and oils will continue to grow by 275,000 tons to 46.2 million tons in 1975. Nevertheless, the pressure on U.S. soybeans and soybean meal prices was nearly as strong as the pressure on corn prices during August. (According to the October 1974 Fats and Oils Situation FOS-274, availabilities of protein meal and fats and oils will be lighter than earlier estimated.) The f.o.b. vessel, Gulf ports price for U.S. No. 2 Yellow soybeans was \$296 a ton, 15 percent higher than a month earlier. Likewise, the c.i.f. U.K. and c.i.f. Rotterdam prices for U.S. No. 2 yellow soybeans increased 15 and 16 percent, respectively. The c.i.f. Rotterdam price for U.S. soybean meal rose 21 percent, reflecting the tightening effect that the expected shortfalls in corn production will have on the total feed supply. In the United States, the Decatur price of 44-percent soybean meal rose 11 percent.

The c.i.f. North European ports price of American cotton, Memphis Territory, strict middling, dropped slightly to \$1,416 a ton.

August Import Commodity Prices

Among import commodities, sugar prices continued their spectacular rise. The f.o.b. and stowed Caribbean ports price to the world market rose 24 percent from July to August, reaching \$693 a ton. The August 1974 price was 346 percent of a year earlier. Similarly, the f.o.b. and stowed price to the U.S. market, at \$684 a ton, was 332 percent of a year earlier. It appears likely that the tight supply will continue in the near future. Beet tests for sugar content in France and West Germany have been disappointing and so there is a growing likelihood of EC raw sugar imports.

Brazil, a major sugar exporter, is facing production problems as is the United States, a major importer. A bright light is Australia's anticipated 1974 record sugar cane harvest. The tight situation, according to Sucres et Denrees, Paris-based sugar experts, is leaving the Philippines in control of free market supplies. The Philippines suspended raw sugar sales to the United States, leaving some 300,000 short tons of the quota to be filled. The United States also is currently facing the prospect of having no sugar act in 1975.

Coffee prices, in contrast, have fallen. The New York spot price for Santos No. 4 coffee fell 7 percent to 64.5 cents a pound, in response to the large 1974 coffee harvest. The f.o.b. Santos price for Santos No. 4 coffee was also 64.5 cents a pound, down 3 percent from the July price.

The New York spot price for cocoa beans from Accra increased only 1 percent to \$1.07 a pound. While Ghana is looking forward to a larger cocoa bean crop for the 1974/75 season, it is expected to only balance off the poor main cocoa bean crop in Brazil. According to a Reuter's report (based on the research of Gill and Duffus Ltd. of the U.K.), 1974/75 could be another tight year for cocoa beans.

During August, the f.o.b. U.S. port of entry prices of imported cow meat, and the New York spot price of rubber quoted in table , each fell 2 percent to 73 cents and 77 cents a pound, respectively.

July Export and Import Unit Values

In July, the agricultural export price index (which corresponds to the quantity index published monthly in FATUS) dropped 10 percent from the June export price index. July export prices were 188 percent of the corresponding calendar year 1967 prices. Of the major export items, unit values of wheat, grain sorghum, soybean cake and meal, and whole cattle hides pulled down the index. The export unit value of soybean meal plunged 34 percent to \$118 a ton, while the unit value of wheat declined 5 percent to \$156 a ton. Corn and soybean unit values, however, both increased slightly to \$120 a ton and \$232 a ton, respectively. The unit value of raw cotton was steady at \$1,215 a ton.

Among import commodities, the unit value of fresh and frozen beef slid 6 percent to 64 cents a pound, while the unit value of crude rubber declined 8 percent to 35 cents a pound. The unit value of green coffee remained steady at 61 cents a pound. The cocoa bean unit value advanced 4 percent to 70 cents a pound, while the unit value of raw sugar rose 23 percent in 1 month. The July 1974 unit value for sugar was 13 percent of a year ago, indicating the lag between spot prices and import unit values.

Export Highlights

U.S. AGRICULTURAL EXPORTS, JULY-AUGUST 1974

U.S. agricultural exports in July-August totaled \$3.08 billion, 14 percent above the same period a year earlier. Export increases occurred primarily in soybeans and products, tobacco, animals and animal products, and fruits and vegetables. Ex-Volume of grains and preparations, mainly feed grains and wheat, was off sharply from a year earlier. However, higher unit values resulted in relatively little overall value declines. Rice exports were up substantially in both quantity and value.

All of the increase in total agricultural exports in the first 2 months of fiscal 1975 stemmed from higher prices as the volume was about 6 percent below that of a year earlier.

U.S. exports of wheat and wheat products totaled 4.9 million tons, compared with 7 million a year earlier. Much of the decline took place in shipments to the USSR, Argentina, Colombia, the EC, and Japan. However, exports were up to Turkey, India, Pakistan, Bangladesh, and Mexico. Exports of wheat were relatively strong to the developing countries during the first 2 months of fiscal 1975.

Feed grain exports during July-August of 5.3 million tons were 37 percent below the record volume shipped a year earlier. With higher prices, the value of \$643 million was only 15 percent below the level of a year earlier. Declines occurred primarily to Mexico, the EC, the USSR, Japan, and the People's Republic of China. Foreign importers are purchasing more of their products from the Southern Hemisphere producers during these months. In addition, U.S. stocks were at a relatively low level and consumption, it is estimated, will drop in the major developed countries.

Rice exports in July-August increased 39 percent to 218,000 tons. The value gain was even larger as a result of a 44-percent rise in prices. Increases occurred to Korea, Japan, Cambodia, Iran, and the Republic of South Africa.

Exports of oilseeds and products were up 46 percent to \$645 million during July-August of fiscal 1975 over the same period a year earlier. The increase occurred in both quantity and value. In the first 2 months of fiscal 1974, exports of oilseeds and products were unusually small, because of the sharply reduced stock levels in the United States and also the embargo on exports from June until September. Soybean exports of 48 million bushels were over 90 percent larger than a year earlier. The increase occurred primarily in shipments to the EC and other West European countries. The People's Republic of China also increased its purchases of soybeans as did Canada and Mexico. Exports of soybean meal rose 86 percent to 870,000 tons. However, value was down 14 percent to \$121 million. Because of very tight supplies, prices were unusually high during the summer of 1973. In addition, the high price of soybean oil has stabilized the price of meal. Soybean oil exports during July-August were 339 million pounds, more than double the level of a year earlier. Value was

Total agricultural exports	2,702	3,084	+14

up by over four times, reflecting the substantial rise in world prices because of increased demand and a relatively tight world supply of vegetable oils.

Tobacco exports gained 16 percent in volume and 26 percent in value during the first 2 months of fiscal 1975. The increase came about primarily to the EC, but exports were also substantially larger for Taiwan, Egypt, New Zealand, Syria, Switzerland, and the Dominican Republic.

Cotton exports of 687,000 bales were slightly below the level of a year earlier, but value was up 63 percent to \$182 million. The declines to Taiwan, Thailand, the Philippines, and Korea were more than the gains to Japan, Hong Kong, Singapore, Indonesia, and Bangladesh. Exports to Europe continue to be at the sharply reduced level of last year.

Exports of fruits and preparations were up by 23 percent because of gains in fresh fruits, citrus fruits, dried fruits, and fruit juices. Canned fruits, however, were down by over two-fifths in value. Larger U.S. crops and attractive export prices have encouraged shipments abroad during the current fiscal year.

Exports of vegetables and preparations gained 35 percent to reach a record of \$73 million. Much of the increase was accounted for by dry edible beans. Continued strong foreign demand and better U.S. crops stimulated exports during the current year. Exports of fresh vegetables and vegetable specialties also gained during this period.

Exports of animals and animal products rose by nearly one-third to \$276 million. Most of the increase was in animal fats and greases. A relatively tight world supply situation and higher prices contributed to the value increase. However, exports of meats, hides and skins, and poultry also gained. Dairy products were only slightly above the \$9 million exported during July-August 1973. Restrictions on imports of beef and poultry imposed by Canada and the EC have severely restricted U.S. exports during the current year. Japan also has restricted imports of beef. The EC has raised the supplementary levies on poultry to the magnitude where it is nearly impossible for U.S. producers to compete in this market.

1/ PRELIMINARY

Import Highlights

U.S. AGRICULTURAL IMPORTS UP 29 PERCENT IN JULY-AUGUST

U.S. agricultural imports during the first 2 months of fiscal 1975 totaled \$1.75 billion. Imports amounted to \$854 million in August, compared with \$898 million in July 1974 and \$720 million in August 1973. Most of the 29-percent increase in July-August over last year's value was due to higher prices.

Competitive agricultural imports were up almost 35 percent in value. While volume was somewhat larger for sugar, coconut oil, grains, tobacco, and cotton, there were sharp declines for cattle, meat, most dairy products, and copra. Dutiable cattle entries dropped to 47,000 head from 89,000 head in July-August 1973. Most of the decrease occurred in feeder cattle from Canada. Fresh, chilled, or frozen beef imports fell nearly 38 percent to 161 million pounds, and unit values fell from 76 cents to about 60 cents per pound as U.S. domestic supplies increased. The reduction in fresh beef imports stemmed mainly from lower shipments from Australia, New Zealand, Canada, Mexico, and most Central American countries.

U.S. raw cotton imports in July-August jumped to 11,000 bales (480 pounds each) valued at \$3.87 million against only 2,000 bales valued at \$218,000 a year earlier. Most of the additional cotton came from Mexico, Sudan, and Peru. The import unit value of raw cotton averaged nearly \$354 per bale, compared with \$123 in July-August 1973.

The value of U.S. fruit imports rose 27 percent between July-August 1973 and 1974, with strong gains for canned pineapple, canned mandarin oranges, canned apples, fresh raspberries, and fresh pears. Most of the canned pineapple was shipped by the Philippines, the canned oranges by Japan, the canned apples by New Zealand, pears by Australia, and the fresh raspberries by Canada.

Sharply higher prices for edible nuts resulted in import value gains, especially for cashews, pistachios, and shredded coconut.

Larger barley and wheat imports, plus higher prices for wheat gluten, pasta, and bakery items resulted in a more than doubling of the grain product import value in July-August, compared with its year-earlier level. Canada shipped most of the grains and preparations.

Mixed volume trends for oilseed imports and substantially higher prices in July-August reflected shifts in supplies by source. Copra imports ceased in March 1974 due to short supplies and the closing of U.S. crushing facilities. Sesame became the largest imported oilseed type. Increased imports of palm, palm kernel, and babassu oils continued upward in August due to limited coconut oil supplies and high prices. Import value for oilbearing materials for July-August, at \$117.6 million, more than doubled year-earlier levels.

Sugar imports in July-August totaled 1.19 million tons, up nearly 17 percent from a year earlier, while value skyrocketed 181 percent to \$495 million. Thus, sugar became the largest single agricultural import commodity, representing 28 percent of the total value of U.S. agricultural imports and 40 percent of the value of competitive agricultural import products. The sugar import unit value averaged over \$414 per short ton in July-August, compared with \$172 during the same months last year. In August, the unit value was \$441 per ton.

Noncompetitive agricultural imports in July-August rose 18 percent above similar months a year earlier and amounted to \$516 million. Volume gains were concentrated in rubber, tea, essential oils, soluble coffee, and spices. Quantity declined for coffee, bananas, cocoa beans, carpet wools, and raw silk.

Table 37--U.S. agricultural imports: Value by commodity,
July-August 1973 and 1974

Commodity or commodity group	July-August		Change

^{1/} P.L. 88-482 (1964) provides for the imposition of quotas on fresh, chilled, or frozen beef, veal, mutton, and goat meat. Fresh, chilled, or frozen boneless beef accounted for more than 90 percent of the import volume in 1969-73 (95.3 percent in 1973). The data in this table include rejections by APHIS inspectors totaling 13.5 million pounds in 1969, 17.4 million pounds in 1970, 21.0 million pounds in 1971, 17.8 million pounds in 1972, and 18.4 million pounds in 1973.

1/ Based on 359 classifications in 1971.

2/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. This new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 Variant of the Seasonal Method II Seasonal Adjustment Program, Technical Paper No. 15, U.S. Government Printing Office, Washington, D.C., 1965.

1/ Supplementary agricultural imports consist of all imports similar to agricultural commodities produced commercially in the United States together with all other agricultural imports interchangeable to any significant extent with such U.S. commodities. Complementary agricultural imports include all others, about 98 percent of which consist of rubber, coffee, raw silk, cacao beans, wool for carpets, bananas, tea, and vegetable fibers.

2/ Based on 430 classifications in 1971.

3/ The seasonal adjustment series has been revised to incorporate the Bureau of the Census Method X-11. The new method of adjusting for seasonal variations is a continuing system which takes into account changing seasonal patterns. For detailed explanation of the new adjustment procedures, see U.S. Department of Commerce, Bureau of the Census, The X-11 Variant of the Seasonal Method II Seasonal Adjustment Program, Technical Paper No. 15, U.S. Government Printing Office, Washington, D.C., 1965.

10/74 Foreign Agricultural Trade

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$499 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
