FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

U.S. Agricultural Export Shares by States, Fiscal Year 1976 (see p. 5). U.S. agricultural exports in fiscal 1976 were a record \$22,146.9 million, 3 percent above the previous record, set in fiscal 1975. While all States contributed to the Nation's export achievement, the contribution of 10 States--Illinois, Iowa, Texas, California, Kansas, Nebraska, Indiana, Minnesota, Ohio, and North Carolina--accounted for 60 percent of the total. The attributed export shares of the States are based on contributions to the Nation's sales or output of agricultural commodities rather than an actual measurement of exports by States.

* * * * *

Export Grain Flows Through West Coast Ports (see p. 17). Results of a simulation model indicate that there is adequate capacity for increased exports of grains through West Coast ports. Nominal congestion does occur and rises with increases in grain flows but diminishes substantially with increases in elevator operating hours.

* * * * *

Exports Under Government-Financed Programs Decline in Fiscal 1976 (see p. 22). U.S. agricultural exports under Government programs in fiscal 1976, at \$1 billion, were below the previous year but about the same as during most of the 1969-73 period. Lower P.L. 480 Title I rice shipments accounted for most of the decline.

* * * * *

Fiscal 1976 Exports to USSR Exceed \$1.9 Billion: Some Slowdown Seen for Fiscal 1977 (see p. 46). U.S. agricultural exports to the USSR totaled a record \$1.9 billion during fiscal 1976. Grain exports at 13.9 million tons accounted for most of the increase over previous periods. Poor 1975 USSR grain crops led to large imports for livestock feed usage. Fiscal 1977 farm product shipments to the Soviet Union may reach only two-thirds of the 1976 value because of better Soviet grain crop prospects, but soybean and nongrain commodities are expected to be larger.

Exports of U.S. Farm Products Adjusted for Transshipments, 1975 (see p. 50). Because of transshipments of bulk U.S. agricultural commodities through Canada, the Netherlands, Belgium, and West Germany, previous data on 1975 exports to some 30 countries were understated. Tables in this article show adjusted export values to recipient countries and detailed data on movements through the principal transit ports.

* * * * *

Agricultural Exports in August Total Almost \$1.76 Billion (see p. 71). Farm product exports in August eased slightly from July's \$1.8 billion, but remained well ahead of the \$1.6 billion total in August 1975. Cumulative January through August shipments were valued 5 percent above similar months a year earlier at \$14.7 billion.

* * * * *

Agricultural Imports Up One-Fifth in January-August (see p. 112). Noncompetitive items led the rise with a 58-percent increase. Coffee, rubber, and banana values went up considerably more than tonnages. Competitive agricultural imports were marginally above year-earlier levels, however, as lower sugar and vegetable oil prices nearly offset gains in most other commodities.

* * * * *

Selected Prices of International Significance (see p. 135). In August, international prices of major agricultural commodities slipped as the bearish influences of the lull in export prospects and the influence of the beginning harvest affected the market. Wheat, corn, soybeans, soybean meal, cotton, coffee, and raw cane sugar prices were lower than they were in July. Rice and rubber were priced nearly the same, while imported cow meat and cocoa beans were the only commodities to make any significant price gains. The Dow Jones commodity spot price index fell 7 percent to 338.

SPECIAL in this issue

U.S. AGRICULTURAL EXPORT SHARES BY STATES, FISCAL YEAR 1976

by
Robert L. Tontz 1/ and
Thomasine B. McCall 2/

U.S. agricultural exports in fiscal 1976 were a record \$22,146.9 million, 3 percent above the previous record, set in fiscal 1975. Export tonnage in fiscal 1976, at 108 million tons, was 22 percent above that of a year earlier, offsetting the effect of lower prices for some major items.

While all States contributed to the Nation's export achievement in fiscal 1976, the contribution of 10 States--Illinois, Iowa, Texas, California, Kansas, Nebraska, Indiana, Minnesota, Ohio, and North Carolina--was particularly noteworthy. These States together accounted for 60 percent of total exports.

Five commodities and commodity groups accounted for over half of total U.S. agricultural exports in fiscal 1976. These national commodity totals and the principal State contributors were as follows:

Feed Grains

U.S. exports of feed grains and products totaled \$5,597.7 million in fiscal 1976, representing 25 percent of U.S. production. Five States--Illinois, Iowa, Nebraska, Indiana, and Texas--provided 64 percent of the U.S. feed grains exported. Illinois alone supplied over \$1 billion worth.

Wheat and Flour

Wheat and flour exports equaled \$4,934.5 million in fiscal 1976. Fifty-five percent of the 1975 wheat crop was exported. Kansas, the leading State, contributed \$855.3 million. Other States accounting for \$300 to nearly \$500 million worth each were North Dakota, Oklahoma, Montana, Washington, and Texas.

Soybeans

In fiscal year 1976, slightly over half of the 1975 soybean crop, including the bean equivalent of soybean products, was exported. Soybean and soybean product exports of 773.6 million bushels (bean equivalent) were valued at \$4.0 billion. Illinois and

1/ Agricultural Economist and Statistics Program Leader, Foreign Demand and Competition Division (FDCD). 2/ Supervisory Statistical Assistant, Statistics Program Area, FDCD.

Iowa together produced 35 percent of the total. Other States contributing in the \$100-million to \$200-million range were Indiana, Missouri, Arkansas, Ohio, Minnesota, and Mississippi.

Tobacco

U.S. tobacco exports of \$917.3 million were equivalent to 30 percent of U.S. production. North Carolina continued as the principal contributor, accounting for over half of the Nation's exports. Other important contributors were Kentucky, South Carolina, Georgia, and Virginia. These five States accounted for 90 percent of U.S. tobacco exports.

Cotton

Although U.S. exports of cotton in fiscal year 1976 were the lowest in 4 years, the share exported equaled 40 percent of U.S. production, compared with 33 percent a year earlier. Texas and California were the leading States, accounting for over half of U.S. exports. Other leading exporters were Mississippi, Arkansas, Arizona, Louisiana, Alabama, Tennessee, Missouri, and Oklahoma.

* * * *

U.S. agricultural exports include mainly nonprocessed agricultural commodities, but also some processed agricultural products. The Bureau of Census classification shows the basic contribution of farmer producers. Almost three-fourths of total U.S. agricultural exports in fiscal year 1976 consisted of nonprocessed commodities. The principal nonprocessed commodities were feed grains, wheat, soybeans, tobacco, and rice. The processed items included animal products, processed fruits and vegetables, and other products such as flour and vegetable oils. Although information is unavailable on the degree of correlation of nonprocessed and processed agricultural exports by States, generally the States with the largest output of nonprocessed commodities are also the leaders in output of processed products. This condition, for example, characterized soybean production and soybean oil output, wheat and flour output, and milk and nonfat dry milk production by States.

Methodology for Deriving Export Shares

In the highly specialized economy of today, a great deal of trade takes place between the States. This favorable economic practice makes it difficult to fully measure the actual share of the separate States in national exports. Since the United States has been a "common market" since 1789, few statistics are available showing actual commodity exports by States.

Export shares for individual commodities (some of which were combined into commodity groups) were calculated according to the following formula:

$$X = a\left(\frac{b}{c}\right) \text{ where}$$

X = export share in dollars;

a = value of each commodity or commodity group exported in fiscal year 1976 as summarized from USDA's agricultural trade statistics developed from U.S. Bureau of Census sources;

b = quantity of each commodity produced or value of each commodity or commodity group sold in a State in 1975;

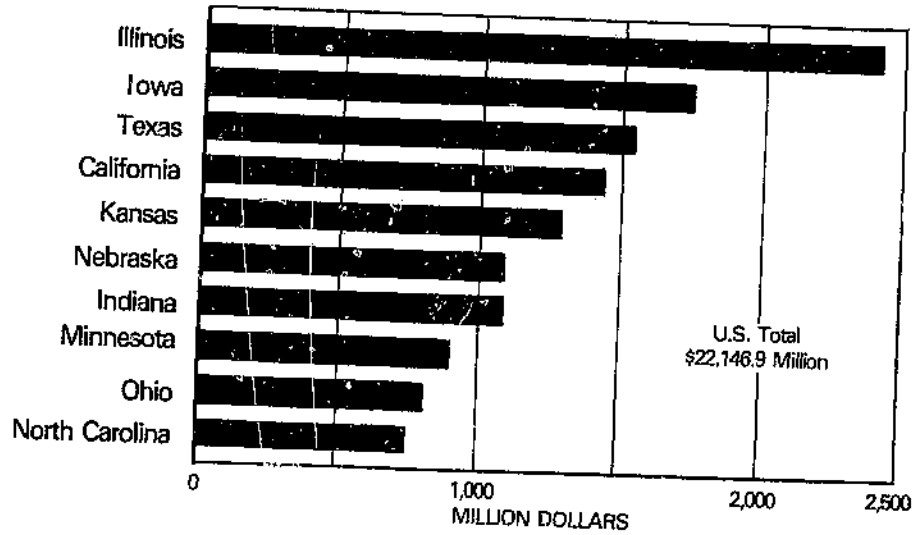

c = quantity of each commodity produced or value of each commodity or commodity group sold in the Nation as a whole in 1975 (compiled from 1975 national and State agricultural data of USDA's Statistical Reporting Service).

To illustrate, U.S. cotton exports in fiscal year 1976 were valued at \$881,937,000; let this be *a* in the formula. Texas produced 2,412,000 bales in 1975 and the U.S. production was 8,327,000 bales; let this be *b* and *c*, respectively in the formula.

$$\text{Thus: } x = a\left(\frac{b}{c}\right) = \$881,937,000 \left(\frac{2,412,000}{8,327,000}\right) = \$255,462,000$$

As shown in table 1, the share of Texas in U.S. cotton exports in fiscal 1976 was \$255.5 million.

EXPORT GRAIN FLOWS THROUGH WEST COAST PORTS

by
Jerome J. Hammond and Michael S. Salvador ^{1/}

Grain and soybean inspections for export from all U.S. ports increased from nearly 1.2 billion bushels in 1960 to 3.2 billion in 1975, reaching a peak of 3.5 billion bushels in 1973. The Gulf ports accounted for over 2 billion bushels, or nearly two-thirds of U.S. grain and soybean exports during 1975. The Atlantic ports were second with 14 percent of the grain and soybean exports, followed by the West Coast ports with 11 percent and the Lake ports with 10 percent (table 3).

The growing export volume and the continuing large share flowing through the Gulf ports have at times severely strained the grain export transportation system. The large U.S. grain exports of 1972-73 showed that the transportation system could not easily handle such sudden surges in demand. That period's record grain exports were accompanied by such bottlenecks as railcar and ocean carrier shortages and port congestion. While both domestic and export grain were eventually moved, it was done with many disruptions and increased costs to shippers and transportation firms.

During the summer of 1974, a House Subcommittee investigating the problems involved in the marketing of grain found that:

...an additional marketing change which may facilitate the easing of the transportation shortage is a shift in port traffic. A large amount of our grain exports are [sic] destined for Japan and other countries in the Far East. The West Coast ports along California's shore and the Pacific Northwest are some 4,000 to 5,000 miles closer to Japan than are the ports situated along the Gulf of Mexico. Since the former ports are not operating at full capacity and since Gulf ports are operating at almost full capacity, it appears logical ... that more of our exports destined for the Far East should be moved through the West Coast rather than through the Gulf.

In cooperation with industry researchers, ERS economists recently analyzed system capacity constraints and operating strategies associated with increases in grain and soybean exports through 15 elevators at 11 West Coast ports. The commodities

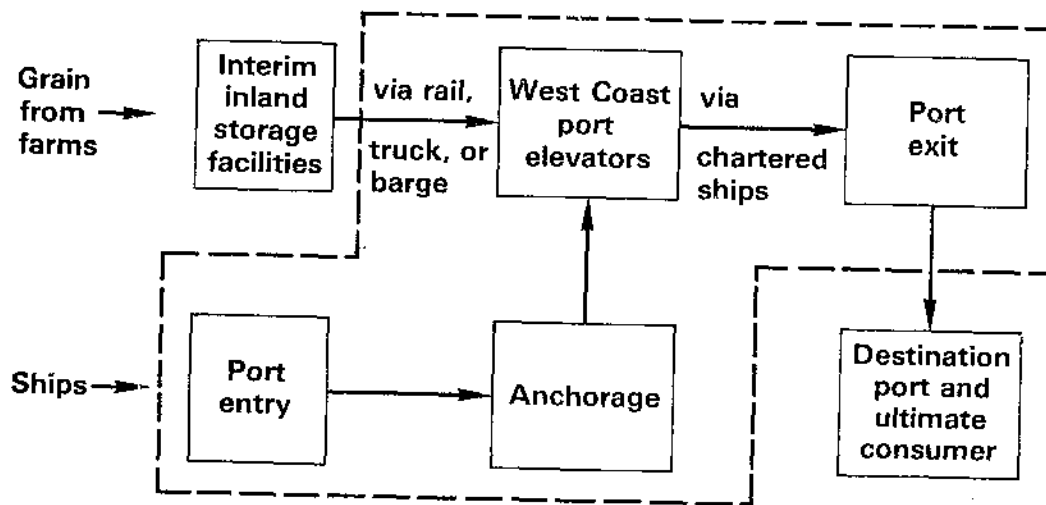

^{1/} Agricultural Economist, Transportation Economics Program Area, National Economic Analysis Division, and Management Consultant, Ernst and Ernst, respectively.

considered were wheat, corn, soybeans, and sorghum; and they were assumed to arrive at the elevators by rail covered-hopper cars, rail boxcars, trucks, or barges. Costs involved in transporting grain from Midwest locations to the West Coast were not considered in the analysis because the present structure of rail and ocean freight rates causes most Midwest export grain to move through Gulf ports.

Using the Maritime Administration's Bulk Commodities Simulation Model, ^{2/} the researchers estimated the effects of changes in export grain flows through West Coast ports for: (1) a 20-percent increase in grain exports over the 350 million bushels shipped in 1975 with elevators operating at the normal 8 hours; (2) a 50-percent increase in grain exports with normal elevator operating hours; and (3) a 50-percent increase in grain exports with elevators operating at 16 hours.

The scope of the model for making the determinations as illustrated in figure 1 includes those activities within the broken line. Input data for the model are generally divided into three parts: (1) System attribute data; (2) statistical data; and (3) event data.

Figure 1. --Major steps in the exporting of grain through West Coast ports

^{2/} While the model and the computer programs developed to implement it are restricted in this study to West Coast ports, it has previously been applied to port operations in the Gulf. The model inputs and structure allow specification of virtually any similar system of port operations which may include additional ports, port loading facilities, vessels, and commodities. For further details, contact the authors or refer to the U.S. Department of Commerce, Maritime Administration, the Maritime Bulk Commodities Simulation Model, three volumes, prepared for the Office of Commercial Development by Ernst and Ernst, Washington, D.C., May 1976.

The system attribute data represent the port facilities, inland transportation system, commodity types, and maritime resources to be included in the simulation. The specific attribute data for the system include maximum ship length and draft that can be accommodated, working storage capacity, receiving rates for inland modes of transportation, and delivery rates to ships in the case of elevators.

The statistical data generally define the supply and demand assumptions associated with the simulated operation of the system. The event data are the specification of user-controlled events which are to occur. These include port shutdown, ship reallocation, and general attribute and statistical data changes.

Results under the three basic alternatives were compared with actual operations during 1975, when nearly 350 million bushels of grain moved through West Coast ports. In the base case simulation, no grain was queued (waiting) at the elevators. The elevators were assumed to have 24.5 million bushels in storage, and that figure was reduced by only 400,000 bushels during the year. The grain was loaded on 1,091 ships, with an estimated 95 empty ships having to be detained at anchorage. The delay at anchorage for all ships averaged 4.6 hours.

Results of analyses using the model are detailed in table 4. In brief, they indicate there is adequate capacity for increased exports of grain and soybeans through West Coast ports, although there may have to be some tradeoffs between new investment, added operating hours, and congestion.

Nominal congestion might be expected to occur with a 20-percent increase in grain flows. The average amount of grain queued at the elevators was none in 1975 and would increase only slightly under this alternative. In addition, only 242 ships would have been temporarily detained at anchorage, with an average waiting time for all vessels of 17 hours.

With a 50-percent increase in grain exports and ship arrivals, but no increase in working hours, the average amount of grain queued at elevators increased only 1.4 million bushels, or less than 3 percent of present elevator working storage capacity. In essence, this congestion would tie up a very small amount of inland transportation capacity. For example, the queued grain would approximate only four unit trains of 105 hopper cars each if it all arrived by rail. On the shipping side, the model indicated under this alternative that there would be a total of 549 ships detained at anchorage during the year. This may appear to be large, but note that the average waiting time for all vessels was only 44 hours. The costs of ship delays in such a situation are significant, however.

- Longer elevator operating hours could reduce congestion considerably. Doubling the working day to 16 hours would cut the amount of grain queued at the elevators to zero, even with a 50-percent increase in grain flows. The decrease can be attributed to the approximately 11-million-bushel increase in grain moved through the elevators.
- The total number of ships detained at anchorage would also decrease substantially because more ships would be loaded. Also, the average wait-time at anchorage would decrease to around 3 hours.

For comparison, a study of the Gulf area indicated that a 50-percent increase in grain and ships would cause considerable congestion. Grain waiting at elevators amounted to nearly a third of elevator working storage capacity, and the average delay for ships entering ports was over 90 hours under this situation. Even increasing all receiving and delivery operations to 16 hours would only decrease the amount of grain waiting and the average delay for ships by around two-fifths. (For more detail on the Gulf port analysis, contact the authors.)

The present analysis indicated that West Coast port elevators are underutilized. During 1975, they had a throughput of 7, which was quite low when compared with a throughput of 21 for the Gulf port elevators. (Throughput is based on the volume of grain moving through an elevator compared to capacity.) Thus, a shift in export traffic from the Gulf ports to West Coast ports would seem to be one way to ease such transportation bottlenecks as railcar and ocean carrier shortages and port congestions. Of course, it should be pointed out that there would be higher transportation costs involved in such a movement, and a change in the current freight rate structure would be necessary to encourage greater use of West Coast ports.

Table 3.--Grain and soybeans inspected for export by port area, 1975

Port area	Wheat	Corn	Soybeans	Grain : sorghum	All grains ^{1/}

-- Hours --				
Average wait-time at anchorage	4.6	17	44.4	3.5

1/ 1975 was chosen as the base year because export data were available for 1975. The amount arriving at the West Coast was allocated to the elevators and modes in the proportion occurring during 1974. The commodity types arriving were distributed in a similar manner. To permit ship-loading to begin on the first day of the simulation period, it was assumed that the elevators were half full. Finally, to adequately represent average grain and ship queues, ship arrivals and elevator delivery and receiving hours were adjusted to the levels required for the model to deliver to the ships all the grain that arrived at elevators during the period.

Government Program Export Highlights

EXPORTS UNDER GOVERNMENT-FINANCED PROGRAMS DECLINE IN FISCAL 1976

by
Susan A. Libbin ^{1/} _{2/}

U.S. agricultural exports under Government-financed programs on a preliminary basis totaled \$1,047 million in fiscal 1976. The final data, which will be available shortly, are estimated at about 3 percent higher. Government exports in 1976 were below the previous year's level, but were about the same as during most of the 1969-73 period. Lower rice shipments accounted for almost all of the decline in Government-financed exports. As in recent years, Government-financed exports accounted for only about 5 percent of total U.S. farm exports. Commercial exports increased slightly in 1976 to \$21 billion. Fiscal 1976 completes the July-June reporting series. Hereafter, all fiscal data will run from October-September.

Program Review

As in other years, P.L. 480 accounted for about four-fifths of all Government program shipments in fiscal 1976. Most P.L. 480 exports are Title I sales for dollar credit and convertible local currencies. The proportion of Title I exports financed under convertible local currency agreements declined from about 80 percent in fiscal 1973 to 60 percent in 1976.

Preliminary data shows Title I exports of \$615 million in fiscal 1976. Final data are estimated to be about 5 percent higher. Wheat accounted for almost 60 percent of all Title I shipments, followed by rice, 22 percent of the total, and wheat flour, soybean oil, and cotton, each 6 percent. The value of Title I rice export fell by one-half in 1976 from the prior year, wheat shipments were slightly lower, while exports of the other major Title I commodities increased. Bangladesh was the principal Title I importer, taking about one-fourth of the total. Other major Title I recipients were Egypt--20 percent of the total--Pakistan, the Republic of Korea, and Chile.

As in recent years, P.L. 480 Title II exports accounted for about one-fourth of all P.L. 480 Title II exports in fiscal 1976. However, there was a considerable decline in all Title II programs--contributions to the World Food Program, bilateral government donations, and donations through voluntary agencies. A shortage of commodities, such as nonfat dry milk, bulgar wheat, and blended food products, mainly caused the reduction in donations.

^{1/} International Economist, Statistics Program Area, Foreign Demand and Competition Division.

^{2/} Special acknowledgements are due Louise Stanton and Linda Myers for compilation of the data in this article.

Food shipments under AID programs (Mutual Security) rose substantially in 1976 as they did the previous year. They consisted mostly of soybeans, one-third of the total; inedible tallow, 22 percent; wheat and soybean oil, each 16 percent; and corn, 8 percent. Almost all AID shipments have gone to Israel in the last 2 years.

Country Review

The leading recipients of Government-financed agricultural exports were about the same in fiscal 1976 as in 1975, except for South Vietnam and Cambodia (Khmer Republic) --P.L. 480 exports to these countries ceased in fiscal 1976. The rankings of several major recipients changed. With Government programs about doubling to Israel and Egypt in 1976, they became the leaders, each taking about 16 percent of the total. Large declines in Government-assisted exports to Bangladesh and India, leaders in 1975, moved them down somewhat in the rankings in 1976.

U.S. commercial farm sales to India continued to register large increases in fiscal 1976. Commercial exports also rose substantially to Indonesia, but declined by large percentages to Israel, Egypt, Pakistan, the Republic of Korea, and Chile. In fiscal 1976, India was the eighth largest commercial market for U.S. farm products--up from 11th place in 1975 and 18th place in 1974. Oil revenues helped Indonesia more than double its commercial purchases (mainly wheat) from the United States in fiscal 1976. Although U.S. commercial farm sales to the Republic of Korea (mainly wheat and rice) declined by 22 percent in 1976, the country maintained its 1975 position as the sixth leading commercial market.

The International Development and Food Assistance Act of 1975 requires that at least 75 percent of the food commodities provided under P.L. 480 Title I be allocated to countries that have a per capita GNP under \$300 and that are unable to meet their food needs through domestic production or commercial imports. In fiscal 1976, 70 percent of all Title I food shipments went to 9 countries that had a 1974 per capita GNP below \$300 and whose population represented about 52 percent of total developing country population. ^{3/} There were 44 countries that had a GNP per capita below \$300. In fiscal 1975, about 80 percent of all Title I food shipments went to 11 countries with a 1974 GNP per capita below \$300. Cessation of sales to Cambodia and South Vietnam partly accounted for the reduced proportion going to low-income countries in 1976. If all food aid shipments are included (Title II and AID) for 1976, then about 57 percent of all Government exports went to 38 countries with a per capita GNP below \$300.

Commodity Review

There were substantial declines in Government-financed exports of rice and dairy products in fiscal 1976 and notable percentage increases in Government shipments of cotton, oilseeds and products, and animal fats and oils.

Wheat and Wheat Products

Government exports of wheat and products totaled, on a preliminary basis, about \$500 million in fiscal 1976, below the previous year. Government-financed wheat exports, accounting for four-fifths of all wheat and product concessional exports and 40 percent of total Government program exports, amounted to a preliminary figure of \$400 million. Final data are estimated to be about 5 percent higher. Government program

^{3/} These were India, Pakistan, Bangladesh, Sri Lanka (Ceylon), Indonesia, Egypt, Guinea, Zaire, and Tanzania.

wheat exports accounted for about 8 percent of total U.S. wheat shipments in fiscal 1976. There was a slight increase in U.S. commercial wheat exports. Of the six leading importers of concessional wheat--Egypt, Pakistan, Bangladesh, Chile, Israel, and India--only India increased its commercial wheat imports from the United States. In each of the last 2 years, over \$500 million in commercial wheat went to India, compared with less than \$186 million worth prior to 1974. Government program wheat exports to India dropped to only 6 percent of all U.S. wheat exports to that country in 1976.

Rice

The value of Government-financed rice exports dropped by more than one-half in fiscal 1976 and contributed to most of the decline in total concessional exports. Factors accounting for the decrease were cessation of aid to Cambodia and South Vietnam and much lower concessional sales to Korea, partly because of that country's good crop in 1975.

Government program rice shipments amounted to about one-fourth of all U.S. rice exports in fiscal 1976. Commercial rice exports also declined considerably.

Feed Grains and Products

The value of Government-assisted exports of feed grains and products (mainly corn) increased slightly in fiscal 1976, but was still substantially below the level of years prior to 1975. Volume rose more than value because of lower export prices. Israel was the principal recipient, with all its Government feed grain imports coming under AID programs. Commercial U.S. feed grain sales to Israel also increased. Since 1973, almost all U.S. feed grain exports to Israel have been commercial, compared with 40 percent or less in most other years. India, a principal importer of Government program feed grains in most years, purchased all of its feed grains (grain sorghum) commercially from the United States in fiscal 1976--\$68 million worth. This compares with the previous high of \$34 million worth purchased commercially in 1973.

Oilseeds and Products

Peanut oil, shipped mainly through voluntary relief agencies, accounted for almost the entire increase in Government-assisted exports of oilseeds and products in fiscal 1976. Soybeans (all under AID) and soybean oil (under AID and Title I) each accounted for about two-fifths of Government-financed oilseed product exports. Exports of the former declined, while the latter increased somewhat in value.

Other Commodities

Because of scarce milk supplies, Government program exports of dairy products declined considerably in fiscal 1976. Most nonfat dry milk moved through Title II voluntary relief agencies and the World Food Program. Blended food products (mainly corn-soya-milk and wheat-flour-soya) declined slightly. Most of it was shipped through voluntary relief agencies to a broad range of countries.

Animal fats and oils--mostly inedible tallow under AID programs--increased to a record high of \$50 million in fiscal 1976. Almost three-fourths was shipped to Egypt; the remainder to Pakistan.

Although Government program exports of cotton in fiscal 1976 increased to the 1974 level, they were still considerably below the levels of previous years. All were Title I sales to Indonesia. In recent years, concessional exports of cotton have accounted for less than 5 percent of total U.S. cotton exports, compared with about 40 percent in fiscal 1970.

Commercial Exports Under Credit Sales

In the past 3 years, only 1-3 percent of U.S. commercial farm exports were provided credit, mainly under Commodity Credit Corporation (CCC) sales program. CCC credit sales more than doubled in fiscal 1976, with large sales to the Republic of Korea, Pakistan, Indonesia, and Morocco. CCC credit financed about one-third of all U.S. commercial sales to the Republic of Korea and Morocco and almost all the U.S. commercial exports to Pakistan. About 40 percent of CCC credit sales were in cotton, 25 percent were wheat, and 13 percent were tobacco.

Export-import bank loans and medium term guarantees declined in fiscal 1976 and accounted for 14 percent of total U.S. credit sales.

1/ Shipments under overseas procurement barter contracts are authorized by the CCC Charter Act and are essentially equivalent to dollar sales since they offset the dollar overflow for foreign purchases by U.S. agencies with a dollar inflow for agricultural commodities. The barter program was suspended July 1, 1973. Shipments shown are completion of prior transactions.

2/ Shipments under Export-Import Bank loans and guarantees and under the CCC credit sales program are credits for relatively short periods repayable in dollars plus interest (cover the costs of the lending agency).

FISCAL 1976 EXPORTS TO USSR EXCEED \$1.9 BILLION:
SOME SLOWDOWN SEEN FOR FISCAL 1977

by
Judith Goldich

Fiscal 1976 Exports

U.S. agricultural products valued in excess of \$1.9 billion were exported to the USSR during fiscal 1976. These record shipments--more than four times the value of fiscal 1975 exports--made the Soviet Union the second largest purchaser of U.S. agricultural products, trailing only Japan. (Data for the USSR include the value of goods transhipped through Canada. Sizable transshipments via the Netherlands and Belgium will be reported separately.)

Grain shipments accounted for 96 percent of the value of all agricultural exports, with corn, valued at \$1.2 billion, supplying the largest share. The quantity of grain hit a record level of 13.9 million tons--slightly above the previous high of 13.7 million tons in fiscal 1973. The Soviet grain imports were made to offset livestock feed shortfalls resulting from 1975's disastrous grain harvest.

Imports of U.S. soybeans totaled 325,000 tons in fiscal 1976, which was only the second fiscal year in which any sizable soybean exports to the USSR have been made. Soviet imports of soybeans came as a result of the disastrous sunflowerseed crop in 1975.

Fiscal 1977 Export Forecast

U.S. agricultural exports to the USSR during October 1976-September 1977 are currently expected to reach about two-thirds of the fiscal 1976 level of \$1.9 billion. Corn shipments are expected to drop sharply from the 9.8 million tons of fiscal 1976. However, reduced corn exports have already been offset to some extent by the 1.5 million tons of soybeans scheduled for shipment during the September 1976-August 1977 soybean marketing year.

Increased soybean imports by the Soviets during fiscal 1977 may signal a reevaluation by the Soviets of the need for more protein in their livestock rations. The 325,000 tons of U.S. soybeans imported during fiscal 1976 were clearly purchased in response to the disastrous sunflowerseed and grain crops of 1975 and the subsequent need to provide raw material for the oilseed processing industry as well as the need for supplemental feed. However, short supplies were apparently not behind the purchases made through the end of August 1976, when both grain and sunflowerseed crop prospects

were much better than in 1975. The Soviets have stated their intentions to improve the Soviet diet, and in particular to increase meat consumption. Attainment of the goal could be facilitated by adding soybean meal to industrially produced mixed feeds.

Soviet purchases of commodities other than grain and soybeans may improve somewhat this year, depending on the ability of the USSR to increase hard currency earnings. The Soviets have made continuing, albeit small, purchases of citrus fruit, nuts, hops, and whole cattle hides. U.S. exports of these products during fiscal 1976 were all below year-earlier levels, but may improve somewhat during 1977.

U.S. Imports

The United States imported \$8.6 million worth of agricultural products from the USSR in fiscal 1976, slightly more than in fiscal 1975. Imports of furskins--at \$4.9 million--accounted for the largest single share of U.S. purchases.

EXPORTS OF U.S. FARM PRODUCTS ADJUSTED FOR TRANSSHIPMENTS, 1975

by
Thomas A. Warden

Previous data on 1975 exports of grains and oilseeds to some 30 countries were understated because of bulk commodity movements through transit facilities in Canada, the Netherlands, Belgium, and West Germany. Frequently, U.S. bulk commodity exporters indicate the transshipment country as destination because ultimate destinations are not known when shipments leave port. Some bulk commodities may be transshipped through two intermediate locations before reaching the final destination. For example, corn exports from Great Lakes ports recorded as shipments to "unidentified countries" could subsequently move to the Netherlands and be reloaded again for West Germany.

Transshipments through Canadian St. Lawrence ports--designated in U.S. export statistics since 1973 as shipments to "unidentified countries"--totaled 3.2 million tons valued at \$537 million in 1975. Intransit U.S. agricultural commodities through the Netherlands reached 2.5 million tons valued at \$510 million. Transshipments accounted for 30 percent of direct U.S. farm product exports to the Netherlands in 1975 (23 percent of direct shipments plus transshipments through Canada).

Over 60 percent of the soybean tonnage, 25 percent of the wheat, and 9 percent of the corn exported to Holland moved to other countries, chiefly West Germany, Belgium, France, the United Kingdom, and Switzerland. Transshipments of U.S. corn through Dutch ports are conservatively estimated at 379,000 tons for 1975. Official Netherlands' import data indicate that over 4.4 million tons of corn came from U.S. sources in 1975, compared with 3.36 million tons in 1974. Corn reexports during 1975 climbed to nearly 2.3 million tons from 1.26 million in 1974. An increase in reexports equal to the rise in imports implies that much of the corn during 1975 was transshipped to other countries after import declarations were recorded.

In 1975, a larger volume of wheat and feed grains moved through Rotterdam to East Germany and the USSR because of increased demand in those countries and requirements for shipping in smaller coastal vessels into Baltic ports. Storage and transshipment facilities capable of handling an additional 2-1/2 to 3 million tons of grains and oilseeds were completed near Rotterdam in 1975.

Grain and oilseed transshipments through West Germany to East Germany reached almost 2.1 million tons (\$315 million) in 1975 against just over 1 million tons (\$187 million) in 1974. North German ports--primarily Hamburg--located near rail and river facilities handled large amounts of U.S. grains and protein meals en route to East Germany. Czechoslovakia also receives soybeans and oilmeals through West German ports.

Export Highlights

AGRICULTURAL EXPORTS IN AUGUST TOTAL ABOUT \$1.76 BILLION

Farm product exports in August approached \$1.76 billion, slightly below the July value, but well above the \$1.6 billion during August 1975. Increases over the previous month for cattle, poultry, meat, cattle hides, wheat, edible nuts, pulses, oilcake, tobacco, and cotton were more than offset by value declines for feed grains, rice, soybeans, vegetable oils, fruits, and beef. Compared with August a year ago, gains were posted for cattle, dairy products, tallow, poultry, hides, fruit, vegetables, grains, and feeds.

Cumulative exports for the January-August period rose nearly 5 percent above year-earlier levels to \$14.7 billion. Shipments of cattle, meat, poultry, tallow, hides, feed grains, prepared animal feed materials, fresh fruit and vegetables, soybeans, oilcake, and tobacco were higher.

Exports of grains and preparations in January-August declined slightly from their year-earlier value to \$7.3 billion. Reductions for rice and wheat more than offset gains in feed grain shipments. Wheat volume slipped 3.6 percent to 17.8 million tons, while lower prices depressed value by 14 percent to \$2.7 billion. Rice exports fell 15 percent to less than 1.4 million tons, and value dropped by 38 percent to \$414 million. Feed grain shipments, however, surged 37 percent ahead of the 1975 period to 37 million tons, while value gained 19 percent to \$3.92 billion.

Exports of oilseeds and products rose 6-1/2 percent from their year-earlier value to \$3 billion. Soybean shipments jumped 37 percent to 9.7 million tons while value gained nearly 10 percent to \$1.93 billion. Western European countries, Japan, and the USSR took most of the 2.6-million-ton increase in soybean exports. Oilcake and meal shipments were nearly a third ahead of the previous year level at 3.5 million tons valued at just under \$607 million. Increased feeding rates in some countries and drought conditions in others raised demand. West Germany, Italy, Spain, Poland, Yugoslavia, and Canada have been among the largest purchasers this year.

Meat exports have been up sharply from year-earlier levels because of larger beef and pork shipments to Japan and Canada. Improved economic conditions, favorable foreign exchange relationships, and removal of import restrictions in those countries contributed to the increases.

Poultry meat exports more than doubled year-earlier rates as Japan, Canada, the European Community, Iraq, Iran, and many other countries bought additional U.S. chicken and turkey meat.

Fresh potato shipments raised vegetable exports significantly. Total vegetable exports, at \$418 million, were up more than one-fifth from the first 8 months of 1975. Fresh potato exports more than doubled, reaching 402,000 tons valued at \$53 million. Potato flakes and granules shipments increased more than sevenfold to 91 million pounds valued at \$27 million. Dehydrated potatoes gained by similar magnitudes to 27 million pounds worth \$8.6 million. Western European countries suffering from drought this year bought most of the export increase. Other market gains included Mexico, Chile, Trinidad, and Hong Kong.

1/ PRELIMINARY

2/ NEW CLASSIFICATION EFFECTIVE JAN. 1, 1976 EXCLUDES TURKS, CAICOS, AND CAYMAN ISLANDS.

NOTE: MNO = 1,000 HEAD OR PIECES
 HLB = 1,000 POUNDS
 MRBA = 1,000 RUNNING BALEW
 MGAL = 1,000 GALLONS
 MMT = 1,000 METRIC TONS
 MBU = 1,000 BUSHELS
 MSTN = 1,000 Short tons

Import Highlights

AGRICULTURAL IMPORTS UP ONE-FIFTH IN JANUARY-AUGUST

Imports of agricultural commodities during January-August were valued at \$7.2 billion, 20 percent above the level of a year earlier. The increase was concentrated in noncompetitive products such as coffee, cocoa, rubber, bananas, and carpet wools. Imports in this category rose 58 percent to \$3 billion, largely because of higher prices. Green coffee volume gained about 9 percent to 859,000 tons, but value jumped 77 percent to \$1.68 billion because of price increases. Processed coffee values more than doubled during this period. Fresh banana tonnage was also up 9 percent while value rose over 22 percent. Crude rubber import volume gained 14 percent whereas value surged by 48 percent. And carpet wool entries, which were up 37 percent in volume, were valued 73 percent higher.

The value of competitive farm commodities, in contrast, rose less than 3 percent to about \$4.2 billion. Gains for live animals, dairy products, meat, hides, apparel wools, cotton, some fruits and vegetables, beer, and wine were offset somewhat by lower prices for sugar and vegetable oils.

Cattle entries--mostly from Canada and Mexico--were fivefold higher at 522,000 head. Cheese imports increased one-fourth and higher prices pushed value up a third. Beef and veal volume climbed more than 17 percent, but price increases resulted in a 52-percent value jump. Strong U.S. demand for processing grade beef and ample foreign supplies (even at higher prices) contributed to the rise.

Sugar imports were more than one-fifth above their January-August 1975 tonnage, but a 51-percent drop in unit prices resulted in substantially lower import value. Similarly, vegetable oil volume gained more than one-third while value dropped 18 percent.

1/ PRELIMINARY

International Price Highlights

SELECTED PRICES OF INTERNATIONAL SIGNIFICANCE

In August, international prices of major agricultural commodities slipped as the bearish influences of the lull in export prospects and the beginning of harvest took over the market. Wheat, corn, soybeans, soybean meal, cotton, coffee, and raw cane sugar prices were lower than they were in July. Rice and rubber were priced nearly the same, while imported cow meat and cocoa beans were the only commodities to make any significant price gains. The Dow Jones commodity spot price index fell 7 percent to 338 from July to August.

Export Commodities

In August, the U.S. Gulf ports price for Hard Winter Wheat (HWW) dropped 10 percent from the July level. At \$128 a ton, wheat was priced 20 percent lower than it was in August 1975. The Rotterdam price for HWW declined by about the same magnitude. The bumper U.S. wheat crop of 2,135 million bushels (September 1976 USDA estimate), the slowdown in foreign demand for wheat, and potential competition from Canada, Argentina, Turkey, Greece, and France are all dampening U.S. wheat export prices. The Duluth and Rotterdam prices for U.S. Dark Northern Spring wheat and the Thunder Bay price for Canadian Western Red Spring (CWRS) wheat fell by 12-13 percent. For the first time in a year, prices for CWRS wheat were quoted in the Rotterdam market in mid-August. Canada has a record 23.5-million-ton wheat crop.

The Gulf port price for corn declined 5 percent to \$118 a ton, which, like wheat, was lower than it was a year earlier. In the Rotterdam market, the price for Argentine corn dropped more sharply than U.S. corn and sorghum. The U.S. corn crop is currently estimated at 5,865 million bushels.

In August, soybean traders took the view that the market was oversold. Consequently, after the strong price rally in July (which is near the end of the 1975/76 marketing year), the Gulf ports soybean price dropped back to \$242 a ton. USDA also estimated that demand for soybeans would be diminished because of the high prices that have been generated, thus blunting the effect of the reduced crop forecast, which is now set at 1,274 million bushels. The Rotterdam price for soybean meal, at \$212 a ton in August, was 8 percent lower than in July but was still priced at a high level compared to a year earlier.

The Thai rice price, remaining nearly steady for 3 months, was \$243 a ton in August. The outlook for lower 1976 Thai and Chinese rice crops is currently buoying prices.

The Osaka price of U.S. Arizona strict middling 1-1/16-inch cotton declined slightly to 78 cents a pound in August, but was still one-third higher than it was a year earlier. Prospects for a smaller-than-anticipated U.S. cotton crop will probably buoy prices.

Import Commodities

The New York spot price for coffee weakened slightly to \$1.45 a pound in August. Nevertheless, the outlook for the coming year is still for higher prices because of the continued scarcity of green coffee from producing countries and a modest but steady demand from roasters for the raw beans. The Colombian crop, according to the September 9, 1976, issue of the Wall Street Journal "was not damaged by bad weather but shipments will be delayed past their normal start this fall. Most Central American countries have little, if any, coffee left from the previous crop. Except for Guatemala, Central American producing countries won't expect coffee until late October or November."

Raw sugar prices nosedived in August because of ample supplies in the world market and a small number of purchasers. The New York spot price of sugar fell 22 percent to 11 cents a pound.

At the Caribbean ports, the price of raw sugar destined for the U.S. market, at 10 cents a pound, was .08 cents a pound higher than that destined for the world market. On September 21, the President tripled the import duty on raw sugar imported into the United States to 1.875 cents per pound to protect U.S. producers from falling world prices, which was expected to have a further depressing effect on the world sugar price in late September.

Cocoa beans continued to strengthen because of speculation that the forthcoming West African crop may fall short of expectations. Whenever cocoa bean prices began to moderate during the month, candy manufacturers bought contracts to assure supplies at attractive prices. In August, the New York spot price for cocoa beans was \$1.14 a pound.

The imported cow meat price took an upturn in August to 72 cents a pound.

The New York spot price for rubber was 41 cents a pound in August, having remained steady at that high level for the third consecutive month. Earlier in the year, U.S. tire manufacturers, anticipating the United Rubber Workers Union strike, stock-piled raw rubber. Moreover, purchases by the USSR, Poland, and Romania in Malaysia and Singapore, coupled with the steady demand from other countries such as the United States, Western Europe, and Japan, buoyed prices.

The general upturn in car manufacturing--and thus tire manufacturing--has kept rubber prices high. The growth in the steel belted radial tire market and manufacturing requirement for natural rubber (rather than synthetic rubber) for this product has also strengthened U.S. demand for natural rubber. Another bullish factor is the political unrest in Thailand, which makes the supply of raw rubber from the country uncertain.

1/ Totals may not add due to rounding. 2/ New classification effective Jan. 1, 1976. Turks and Caicos Islands reported with Jamaica prior to Jan. 1, 1976. 3/ Prior to Jan. 1, 1976 country designation read West Germany. 4/ Prior to Jan. 1, 1976 country designation read East Germany. 5/ Prior to Jan. 1, 1976 country designation read Yemen Arab Republic. 6/ New classification effective Jan. 1, 1976. Previously included under the former designation "Southern and Southeastern Asia, n.e.c.", now classified as South-east Asia, n.e.c. 7/ New classification effective Jan. 1, 1976. British Indian Ocean Territory reported partly with Seychelles and partly with Mauritius prior to Jan. 1, 1976. 8/ Transshipments through Canada where final destination was not known at the time of export.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in non-agricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at the time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued at \$251-\$999 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
