McCall, Statistics Program Area, Foreign Demand and Competition Division, Economic Research Service, Washington, D.C.

DIGEST

Japan's Market Demand and Competition For Fiscal 1977 (see p.4). Agricultural exports to Japan reached \$3.9 billion in fiscal 1977 with feed grains, wheat, soybeans, and cotton accounting for 70 percent of the total. The value and volume of U.S. exports increased 9 and 13 percent, respectively, over fiscal 1976 levels.

U.S. Exports to USSR Down Nearly One-Half In Fiscal 1977; Sharp Improvement Seen For Fiscal 1978 (see p. 12). U.S. agricultural exports to the USSR dropped to \$1.1 billion in fiscal 1977, sharply below the 1976 level, but still the second best year on record. Exports during fiscal 1978 are expected to increase sharply due to both higher commodity prices and expected larger grain shipments.

World Food Aid Declines In 1976--Large Drop From Non-U.S.-OECD Donors (see p. 16). Disbursements of food aid from OECD countries and multilateral and regional agencies totaled \$1.9 billion in calendar 1976, 11 percent below a year earlier but still above previous years. U.S. food aid of \$1.2 billion in 1976 declined slightly, but since food aid from most other OECD donors fell sharply, the U.S. share rose from 59 percent to 64 percent in 1976. World aid in grains totaled 8.1 million metric tons in fiscal 1977, 14 percent higher than a year earlier. U.S. grain aid of 5.5 million tons increased by 28 percent from the previous year, while grain aid from the other major donors declined or remained about the same.

Small Rise in January-October U.S. Farm Exports (see p. 24). U.S. farm exports, valued at \$19.3 billion for the first 10 months of 1977, were 3 percent above a year ago, mainly because of increases in cotton, soybean products, fruits, tallow, poultry, barley, and rice. The value of wheat, corn, and grain sorghum declined.

U.S. Farm Product Imports Decline In October (see p. 54). The value of U.S. farm product imports in October continued its decline since April, falling to the lowest monthly level in about a year. However, the cumulative value of January-October farm imports of \$11.4 billion was 28 percent above a year ago. A higher import value of green coffee during the first half of 1977 mainly caused the gain.

International Price Highlights (see p. 80). U.S. agricultural export prices were up 3 percent in fiscal 1977, while import prices were up 14 percent from a year ago. U.S. grain export prices declined, but prices for soybeans and products, cotton, tobacco, cattlehides, tallow, and nonfat dried milk gained. Among imports, coffee, cocoa beans, bananas, rubber, wine, tobacco, wool, and tomatoes were priced higher while sugar prices declined.

JAPAN'S MARKET DEMAND AND COMPETITION FOR FISCAL 1977

by
William T. Coyle 1/

In fiscal 1977, U.S. agricultural exports to Japan increased 9 percent in volume and 13 percent in value over the previous period. Feed grains, wheat, soybeans, and cotton accounted for more than 70 percent of the \$3.86 billion value of U.S. agricultural exports to Japan.

U.S. agricultural imports from Japan increased 4 percent to a value of \$80.5 million. Canned mandarin oranges, canned and dried mushrooms, and alcoholic beverages continued to account for about one-third of the total. The United States increased its purchases of rice wine (sake) by 24 percent, demonstrating a growing interest for the traditional Japanese beverage among American consumers. The overall U.S. merchandise trade account with Japan was in deficit by about \$7 billion at the end of fiscal 1977; however, the agricultural trade account was in surplus by \$3.78 billion.

In fiscal 1977, the United States improved its share of Japanese beef and veal, wheat, corn, tobacco, cattlehide, soybean, and cotton imports. The United States lost ground in its share of sorghum and pork imports, but continued to supply about 95 percent of all citrus imports. Large gains in cotton, soybeans, and soybean meal, which were shipped not only in larger volumes but at substantially higher prices, as compared with the previous year, were shipped by the United States.

Japan's consumption of feed grains depends principally on the profitability of domestic livestock production, particularly that of swine and poultry, which account for about 80 percent of mixed feed consumption. The ratio of livestock product prices received by producers to feed prices paid by producers declined 6.3 percent in fiscal 1977 to 109.9, but still remained well above the 1974 level of 96.6. Prices received by farmers for hogs were at a low of 59 to 60 cents per pound (U.S. currency) in early fiscal 1977, and then rose to a high of 80 cents per pound in June as a result of the Government's imposition of a variable levy on pork imports in October 1976. Feeder pig prices also strengthened through the year from an average low of \$65 per head in December to \$97 per head in March. Broiler, beef, and feed prices at the farm level remained fairly stable. Formula feed producers faced declining prices of sorghum and corn that were offset by large increases in prices of soybean meal and fish meal. Although cattle numbers were down slightly at the close of fiscal 1977, hog inventories were up 9.0 percent and poultry production was up 5.7 percent, compared with the respective inventories in fiscal 1976.

The Consumer Price Index (CPI) for all meat items dropped 0.4 percent in fiscal 1977, and the CPI for all foodstuffs was up 6.5 percent. The indices for fresh and salted and dried fish were up even more sharply, 16.9 percent and 15.0 percent, respectively. There is speculation that with the continued increase in the price of fish relative to prices of other meat items, Japanese consumers may shift toward pork and poultry. At present, almost 50 percent of animal protein in the Japanese diet comes from fish and fish products, a larger source of animal protein than poultry, pork, and beef combined.

Since production of feed grains and soybeans continues to be relatively insignificant in Japan, massive imports of these commodities were necessary in fiscal 1977 to meet

1/ Agricultural Economist, Developed Countries Program Area, Foreign Demand and Competition Division. The author wishes to acknowledge the invaluable help of Mr. Alan Brigida in developing the tables for this article.

the sizable demand for feedstuffs in the livestock sector. Feed grain imports rose to 15.7 million tons, 20.3 percent more than last year's level. The United States increased its share of the total from 59 percent in fiscal 1976 to 63 percent in fiscal 1977. Major competitors were Argentina, Australia, Canada, Thailand, and South Africa. The volume of corn imports from South Africa and Thailand was down sharply with the United States making up much of the difference. The U.S. share of corn imports increased from 72 percent in fiscal 1976 to 84 percent in fiscal 1977.

Argentina exported a record volume of grain sorghum to Japan, more than 2 million metric tons--2.5 times its fiscal 1976 level. Per unit import value of Argentine sorghum was on the average almost \$8 per ton below that of U.S. sorghum. As a consequence, the U.S. share of sorghum imports dropped from 57.3 percent in fiscal 1976 to 45.8 percent in fiscal 1977.

Japan's total imports of soybeans were down slightly from about 3.7 million metric tons in fiscal 1976 to about 3.6 million metric tons in fiscal 1977. The United States was able to increase its share of soybean imports from 92.4 percent in fiscal 1976 to 95.5 percent in fiscal 1977 because of declining volumes from Brazil and the Peoples Republic of China. Anticipated declines in prices reduced the volume of monthly purchases from the United States below last year's level in the June-September period and led to a general shortage of raw material for crushing by the year's end. Soybean meal imports rose a dramatic 118 percent in fiscal 1977 over the previous year, with the United States holding a share of about 70 percent. Considering soybean meal and soybeans, together on a soybean meal equivalent basis, imports increased 4.7 percent with the increased meal imports more than offsetting the slight decline in raw soybean imports.

Rising prices of fish meal led to heavier reliance on soybean meal in hog and poultry rations during the year. As a proportion of total formula feed ingredients, fish meal utilization fell from 3.6 to 2.9 percent, whereas that of soybean meal rose from 10.2 to 10.8 percent in the January-July 1977 period, compared with the same period a year ago.

The Japanese cotton spinning industry continued to slump in fiscal 1977 because of the strengthening of the yen and continued competition from other Asian countries. As a result, total raw cotton imports were down a little more than a tenth. Nevertheless, the United States increased its volume of cotton exports by 42 percent in fiscal 1977. The sharp improvement in U.S. performance in this market was attributed to improved availability and competitive prices of U.S. cotton, as well as tighter supplies in other producing countries.

Overall wheat imports were down 6 percent in fiscal 1977. The United States increased its share of the total but its volume was down 5 percent, according to Japanese customs clearance figures. U.S. census figures, however, showed a 3-percent increase--the discrepancy arising from variability in monthly shipments and transportation time. The Government of Japan continued a policy to encourage rice consumption at the expense of wheat consumption. This has been done principally through manipulation of the relative prices of the two substitutes.

In fiscal 1976, the resale price of wheat was raised a total of 34 percent, but that of rice was increased only 10 percent. The purchase and resale prices for rice were raised again in late July, 5 and 10 percent, respectively. At the same time, the purchase price of wheat was raised 7 percent. The resale price of wheat has not yet been officially announced, although it is expected to be at least 7 percent above a year earlier.

Japan's agricultural imports are dependent, among other factors, on population, national income, price of agricultural imports, and the domestic production of substitutes. Real income in Japan increased 5-1/2 percent and population increased roughly 1 percent, leaving per capita income growth at 4-1/2 percent in fiscal 1977.

Total domestic agricultural production was also up 5-1/2 percent. Rice production is expected to be nearly 10 percent above last year's level adding to the already large stocks of 3.2 million tons. Real prices of food imports continued to fall in fiscal 1977 but at a somewhat slower rate than the year before. Declines in prices of imported feed grains were offset by substantial increases in prices of soybeans, soybean meal, and cotton.

Table 1 --Japan: Factors affecting the volume of Japanese agricultural imports, fiscal 1976 and 1977

Item	FY 1976	FY 1977

U.S. EXPORTS TO USSR DOWN NEARLY ONE-HALF IN FISCAL 1977; SHARP IMPROVEMENT SEEN FOR FISCAL 1978

by
Judith G. Goldich*

FY 1977 Exports Decline

The value of U.S. agricultural exports to the U.S.S.R. was slightly less than \$1.1 billion in fiscal 1977, sharply below the \$1.85 billion total of the preceding year, but still the second best year on record. Volume and value of transshipments in fiscal 1977 are not yet available, but in fiscal 1976, transshipments accounted for around 8 percent of the value total. The value decline was almost entirely because of reductions in Soviet purchases of corn, as well as slightly lower unit values for corn and rice.

The Soviet Union cut U.S. grain imports sharply as a result of its record 224-million-ton grain crop harvested in 1976. As a result, Soviet grain imports during the first year of the U.S.-USSR agreement on the sale of grain totaled only 6 million tons, evenly divided between wheat and corn, compared with 3.0 and 10.5 million tons of wheat and corn, respectively, imported during the preceding year.^{2/}

Exports of U.S. soybeans to the USSR more than doubled in comparison with fiscal 1976. In early July 1976, the Soviet Union contracted for a total of slightly more than 1.5 million tons of soybeans for delivery from the 1976 crop, with 802,700 tons designated as U.S. origin. Slightly more than that original commitment was actually shipped from the United States, but almost half of the earlier announced sale was either composed of non-U.S. soybeans or cancelled.

Although grains and soybeans continue to dominate U.S. exports to the U.S.S.R.--accounting for 96 percent of the fiscal 1977 total value--a growing number of other U.S. agricultural products also are being shipped. The value of animals and animal product exports nearly tripled in fiscal 1977, compared with a year earlier, as sharply expanded poultry meat and increased cattlehide shipments accounted for most of the gain. The export value of nuts was also much higher than a year earlier. New items exported in fiscal 1977 included small quantities of peanuts and upland cotton.

U.S. Imports Up

The value of U.S. agricultural imports from the Soviet Union reached \$10.3 million in fiscal 1977, up 17 percent from a year earlier. Furskins and casein continued to account for most of the total.

Prospects For Fiscal 1978 Much Improved

USDA forecasts U.S. exports to the U.S.S.R. in fiscal 1978 to total \$1.6 billion, substantially above the fiscal 1977 total. Soviet imports of U.S. grain are now forecast at

*Agricultural Economist, Centrally Planned Countries Program Area, Foreign Demand and Competition Division.

^{1/} Fiscal years ending September 30. Data exclude value and volume of transshipments through third countries. Transshipment information will be included in a future issue of FATUS.

^{2/} All following references to tons are metric tons.

15 million tons--well above fiscal 1977 level--as the result of a disappointing Soviet grain crop. As of December 9, Soviet purchases of 6.4 million tons of U.S. wheat and corn had been announced. U.S. soybean exports are forecast at 850,000 million tons, about the same as in fiscal 1977.

WORLD FOOD AID DECLINES IN 1976-- LARGE DROP FROM NON-U.S. OECD DONORS

by
Susan A. Libbin 1/

Disbursements of world food aid from the Organization for Economic Cooperation and Development (OECD) countries and multilateral and regional agencies totaled \$1.9 billion in calendar 1976, 1 percent below a year earlier but still above previous years (table 7). 2/ Food aid programs of the OECD countries which accounted for the lion's share of world food aid in 1976, were down 13 percent from the previous year partly because of increased production and less need for aid in some countries, such as India, a shift from concessional to commercial purchases by some recipients, and political reasons.

Table 7--World Food Aid

Calendar Year	Multilateral and regional			Total Food Aid
	Bilateral OECD Countries	UN World Food Program	European Community	
<u>Thousand dollars</u>				
1970	1,142	149	39	188
1973	851	212	144	389
1974	1,065	226	261	527
1975	1,631	263	215	478
1976	1,448	295	132	427

Source: Organization for Economic Cooperation and Development, Development Cooperation (annual reviews) and Food and Agriculture Organization, Food Aid Bulletin, Jan. 1976 and July 1977.

Food aid from the European Community (EC) fell by 39 percent to its lowest level since 1972. Only food aid from the United Nations World Food Program rose, totaling 30 percent higher than in 1975.

OECD Donors

In 1976, food aid disbursements (bilateral and contributions to multilateral and regional agencies) from 17 OECD countries totaled \$1.8 billion (table 8). U.S. food aid declined slightly in 1976, but since food aid from most other OECD donors fell sharply, the U.S. share rose from 59 percent in 1975 to 64 percent in 1976. Prior to 1970, the United States provided at least 90 percent of world food aid.

1/International Economist, Statistics Program Area, Foreign Demand and Competition Division.

2/ Libbin, Susan. "Bilateral and Multilateral Food Aid, 1964-76," FATUS, Jan. 1977.

Canada, the second leading food aid donor, provided \$190 million in 1976--28 percent below a year earlier but still much higher than previous years. Food aid from seven EC countries (chiefly Germany and France) declined from a peak of \$451 million in 1974--30 percent of all food aid from OECD countries--to \$279 million in 1976, or 16 percent of the total. Australia, the third leading food aid donor until 1969, provided \$35 million in 1976, only about half of its food aid of the 2 previous years, but still much higher than for previous years. Japan was a major food aid donor from 1969 to 1974, with its food aid reaching a peak of \$106 million in 1973. However, in 1975 and 1976, Japan's food aid was less than \$20 million. Since the mid-seventies, Japan's food aid has been in cash.

Total economic aid from OECD countries was \$13.7 billion in 1976, slightly above a year earlier. The United States and France were the only major donors whose economic aid increased in 1976. Only three of the OECD countries--Norway, Sweden, and the Netherlands--met or exceeded the OECD target of 0.7 percent for aid as a percent of GNP. U.S. economic aid was 0.26 percent of its GNP in 1975 and 1976.

Food aid from OECD countries amounted to 13 percent of all economic aid from these countries in 1976. U.S. food aid was 28 percent of its total economic aid in 1976, a slightly smaller share than in 1975, but about the same as in 1970. Canada's food aid was about one-fifth of its economic aid in 1976, whereas food aid from the other major OECD countries was less than 10 percent of its total economic aid.

The United States, Canada, Australia, and Japan have supplied most of their food aid bilaterally, whereas European donors generally contribute their major share through multilateral or regional agencies (table 9).

The United States provided 80 percent of all bilateral food aid in 1976, compared with 72 percent a year earlier. However, the United States contributed only 13 percent of the contributions from all OECD donors to regional or international agencies. About one-third of all U.S. economic aid in 1976 was channeled through multilateral agencies, while only 4 percent of all U.S. food aid was distributed multilaterally.

World Aid in Grains

World aid in grains, accounting for at least four-fifths of all food aid, totaled 8.1 million metric tons in July-June 1976/77, 14 percent higher than the previous year but far below the 12.8 million tons shipped in 1970/71 (table 10). The 1974 World Food Conference recommended an annual target of 10 million tons. U.S. grain aid of 5.5 million tons in July-June 1977 increased by 28 percent from a year earlier, while grain aid from the other major donors declined or remained about the same. Thus, the U.S. share rose to almost 70 percent, about the same share as in July 1970-June 1971.

Non-OECD Donors 3/

Economic aid from the 10 Organization of Petroleum Exporting Countries (OPEC) rose from \$1.3 billion in 1973 to \$5.4 billion in 1975 and then fell to \$5.1 billion in 1976. Saudi Arabia, the major oil exporter, provided 44 percent. OPEC aid in 1976 went to 51 recipients, although it was concentrated among a few countries, mainly Egypt, Pakistan, Jordan, and Syria.

Very little OPEC aid is food assistance. Saudi Arabia pledged \$100 million in cash to the World Food Program for 1975/76 and 1977/78. OPEC also pledged \$435 million

3/ Organization for Economic Cooperation and Development, Development Cooperation 1977 Review.

to the International Fund for Agricultural Development, UN agency designed to provide concessional financing to help promote food production in developing countries. OPEC has pledged 44 percent of the \$1 billion funding for the agency.

Economic aid disbursements from the U.S.S.R. and China have fallen since the mid-seventies. Soviet aid declined from \$650 million in 1973 to \$249 million in 1976; China's economic aid went from \$415 million to 225 million during the same period. Economic aid from East European countries (excluding the USSR) has remained at about \$80 million during most of the seventies.

Economic Aid Recipients

Africa, south of the Sahara, and South Asia each received one-fourth of all economic aid from OECD countries and multilateral agencies in 1975 (table 11). The Far East received another 13 percent. India was the principal recipient, receiving 11 percent of all economic aid in 1975. Bangladesh received 7 percent and Indonesia received 5 percent.

SMALL RISE IN JANUARY-OCTOBER U.S. FARM EXPORTS

U.S. farm exports, valued at \$19.3 billion the first 10 months of 1977, were 3 percent above a year ago. There were mainly increases in exports of cotton, soybean products, fruits, cattlehides, inedible tallow, poultry, barley, and rice. Export declines occurred chiefly for wheat, corn, and grain sorghum, partly because of lower prices.

The agricultural trade surplus--at \$7.9 billion during January-October 1977--declined by one-fifth from a year earlier as the value of agricultural imports rose faster than the value of exports. Partly because of large oil imports, the nonagricultural trade deficit more than doubled, raising the overall trade deficit to \$23.4 billion during the first 10 months of 1977, compared with \$4.7 billion a year ago.

October farm exports, valued at \$1.7 billion, were slightly below the previous month but were nearly one-third less than a year earlier. Large decreases in wheat, rice, corn, grain sorghum, tobacco, and cotton more than offset a substantial rise in soybean exports. The longshoremen's strike partially explained lower exports. Cotton trade has been adversely affected by increased foreign competition.

Exports of U.S. soybeans increased from \$113 million in September to \$448 million in October 1977, as a result of increased production, larger supplies, and lower prices.

As October agricultural imports declined more than agricultural exports from the previous month, the trade surplus rose 18 percent to \$850 million. However, exports of nonagricultural products declined more than nonagricultural product imports in October, creating a larger nonagricultural trade deficit. The overall trade deficit of \$2.6 billion in October was 18 percent higher than the previous month.

The value of U.S. agricultural exports may decline in fiscal 1978 to about \$22 billion from \$24.0 billion in fiscal year 1977.

The volume of U.S. grain exports may increase almost a tenth in fiscal 1978, with wheat expected to post the biggest gain. The volume of soybean exports may increase by a tenth, and oilmeal exports are expected to rise slightly. Shipments of animal fats and vegetable oils are likely to decline during fiscal 1978.

The value of U.S. agricultural exports to the U.S.S.R. and Eastern Europe is expected to rise. But value declines are anticipated for agricultural shipments to the European Community and Japan. 1/

U.S. FARM PRODUCT IMPORTS DECLINE IN OCTOBER

U.S. farm product imports, valued at \$855 million in October, continued their decline, falling 19 percent below September's level to the lowest monthly level in about a year. Declines in import values of green and soluble coffee, beef and veal, vegetable oils (mainly coconut oil), sugar, tobacco, fruits, and vegetables contributed to the drop.

Higher import unit prices of green coffee during the first half of 1977 helped boost the cumulative value of January-October 1977 agricultural imports to \$11.4 billion, 28 percent above the year-earlier level. Although coffee imports have declined since April, the January-October green coffee import value rose by two-thirds to \$3.3 billion, mainly because prices rose from 93 cents per pound during the 1976 10-month period to \$2.01 per pound during this period in 1977 (U.S. unit import prices of green coffee have fallen since July). The quantity of green coffee imported fell by one-fourth between the two periods.

Other major cumulative value increases occurred in imports of soluble and roasted coffee, cocoa beans, cocoa butter, cocoa powder, bananas, dry rubber, tea, spices, chocolate preparations, dairy products, poultry products, fruits, vegetables, vegetable oils, wines, malt liquors, and tobacco. Increased unit import prices partly accounted for the value rises in soluble coffee, cocoa beans, cocoa butter, cocoa powder, and vegetable oils (mostly coconut and palm oils), as the total quantity of these commodities declined between the January-October 1976 and 1977 periods.

Declines occurred in the import values of beef and veal, pork, and sugar. A decline in the U.S. sugar unit import price from \$264 per short ton in January-October 1976 to \$178 per short ton during this period in 1977 partly caused the decline in the value of sugar imports, although the quantity of imported sugar rose by 13 percent.

On November 8, duties on imported sugar were raised to 6.1 cents a pound, compared with the previous duty of 1.9 cents per pound, in order to maintain producer prices of U.S. sugar. The increase included a new variable import fee of 3.3 cents per pound and a 0.9 cent per pound hike in the existing tariff to 2.8 cents--the maximum allowed by law. The duties could raise the retail price of domestic refined sugar, which now averages 21.68 cents a pound, to as much as 25 cents a pound.

Countries producing coffee have recently acted to bolster declining world coffee prices. In October, 10 Latin American nations (mainly in Central America, Ecuador, and Venezuela, and Mexico) agreed to withhold their supplies of beans from the world market until prices were raised to satisfactory levels.

In November, Brazil and Colombia--the world's largest coffee producers--agreed to sell their beans at prices no lower than the daily composite International Coffee Organization price indicator. Mexico, the Ivory Coast, and El Salvador also indicated their desire to support the Brazilian-Colombian agreement.

The value of U.S. farm imports in fiscal 1978 are expected to be slightly less than the \$13.4 billion fiscal 1977 value. Coffee import values and prices have begun to decline, sugar import values are expected to be about the same, and meat values are expected to increase.

Table 20 -- U.S. agricultural imports: Value by commodity, January-October and October 1976 and 1977

INTERNATIONAL PRICE HIGHLIGHTS

Despite a sharp downturn in international grain prices, U.S. agricultural export prices were up 3 percent in fiscal 1977 from a year earlier. Total U.S. import prices were up 14 percent from a year ago, as the import unit values for coffee more than doubled and for cocoa beans increased 78 percent.

Export Commodities

In fiscal 1977, the bountiful 1976 world grain harvests caused a pronounced decline in U.S. export grain prices.

Wheat, at \$3.24 a bushel, was 22 percent lower than the fiscal 1976 level. Corn, at \$2.69 a bushel, showed a smaller price decrease. The grain sorghum export unit value was only 5 percent lower than the corn export unit value, as grain sorghum prices slipped only 5 percent, and the export unit value of rice was down 6 percent. As of September 1977, wheat, corn, and sorghum export unit values were at their lowest level in 4 years.

In contrast, the soybean complex experienced sharply rising prices in fiscal 1977 because of the short 1976 soybean crop. The export unit value of soybeans hit a record year average at \$7.74 a bushel, 41 percent higher than in fiscal 1976, but in May it soared to \$9.57 a bushel.

The export unit value of soybean meal also hit a new fiscal average high, but no month compares with the August 1973 high for soybean meal prices. While the export unit value of soybean oil rose one-fourth, it did not reach the 1974/75 peaks.

At the ports, soybean prices were nearly the same as the market value for oil and meal during fiscal 1977, whereas a year earlier the market value of soybean oil and meal far exceeded soybean prices at the ports.

Smaller than anticipated 1976 U.S. and world cotton crops gave impetus to rising cotton export unit values, as the average running bale was exported at a fiscal value record of \$343. The monthly cotton export unit value hit its peak at \$372 a running bale in October 1976.

Other major U.S. agricultural export commodities, experiencing price hikes included flue-cured tobacco, whole cattlehides, inedible tallow, and nonfat dried milk.

Import Commodities

In fiscal 1977, the import unit value of coffee rose to a record \$1.84 a pound, more than double a year earlier. Although coffee has historically been the leading U.S. agricultural import commodity, higher prices caused the commodity's share of the total value of agricultural imports to climb to 30 percent. Cocoa beans also hit a record high in fiscal 1977, reaching \$1.12 a pound, as the beans climbed steadily through the year. Lower 1976 crops caused prices for both commodities to skyrocket.

In contrast, raw sugar prices have continued to slide from their January 1975 peak. Their October 1976 through September 1977 import unit value of 9.3 cents a pound was about the same as during that period in 1973/74.

In the livestock complex, imported beef and veal, canned hams, and live cattle showed slight price downturns in fiscal 1977 from a year ago.

Rubber, bananas, wine, tobacco, tomatoes, and wool also were priced higher than they were a year ago.

October Price Highlights

In October, prices for major grains, soybeans, and soybean products took an upturn, as export prospects improved and inclement weather set in the U.S. producing areas.

Among import commodities, coffee and sugar prices continued to slide, but imported cow meat and crude rubber strengthened slightly.

1/¹ Excludes imports of coconut oil. 2/² Excludes imports of fibers, excl. cotton and jute.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the Island possessions, between Puerto Rico and the Island possessions, among the Island possessions, and Intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces and diplomatic missions abroad for their own use and supplies for vessels and aircraft engaged in foreign trade. Data on shipments valued at less than \$251 are not compiled by commodity and are excluded from agricultural statistics but are reflected in non-agricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; under P.L. 87-195 (Act for International Development); and involving Government payments to exporters. USDA payments are excluded from the export value. Separate statistics on Government Program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country known to him at the time of shipment from the United States. Shipments of certain U.S. grain from Great Lakes ports to Canadian ports are designated as exports to "unidentified countries." Except for Canada, export shipments valued at \$251-\$999 are included on the basis of sampling estimates; shipments to Canada valued at \$251-\$1,999 are sampled.

IMPORTS Imports for consumption are a combination of entries for immediate consumption and withdrawals from warehouses for consumption. Data on shipments valued at less than \$251 are estimated on the basis of a 1-percent sample and are not compiled by commodity. They are excluded from agricultural statistics but are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. When the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary or partly competitive. All other commodities are complementary or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
