<b>16. Abstract (Limit: 200 words)</b> During 1980, ocean freight rates fluctuated, dropping in the early part of the year following suspension in shipments to the USSR and subsequently rising steeply with increased demand for tonnage on European and Far Eastern routes. Farm-product exports during the first 9 months of fiscal year 1981 reached \$34.8 billion, up 12 percent from the same period in 1979/80. U.S. agricultural imports of \$13.4 billion during the first three quarters of fiscal year 1981 were only slightly higher than those of a year earlier. World agricultural trade prices continued to weaken in May and June 1981, with average quotations for wheat, corn, and soybeans decreasing. U.S. agricultural imports totaled \$17.4 billion in 1980, nearly 90 percent above 1975's level. In fiscal year 1980, U.S. commercial exports of agricultural commodities to nine countries receiving food aid under P.L. 480 programs reached record levels.				<b>13. Ocean Freight Rates for Major Agricultural Exports Increase Further in 1980 (see p. 4). Since 1977, the general level of ocean freight rates for grain has increased. Freight rates escalated sharply during 1979 due to strong export demand. During 1980, rates fluctuated more, dropping in the early part of the year following suspension in shipments to the U.S.S.R. and subsequently rising steeply with increased demand for tonnage on European and Far Eastern routes. Rates turned downward again in first quarter 1981, influenced primarily by the excess of shipping tonnage created by the coal miners' strike.

U.S. Agricultural Exports Near \$35 Billion During October-June 1980/81 (see p. 10). Farm-product exports during the first 9 months of fiscal year 1981 reached \$34.8 billion, up 12 percent from the same period in 1979/80. Wheat, rice, and feed grain shipments posted significant gains over year-earlier levels. Japan, Latin America, and several African countries have accounted for most of the advance in agricultural exports thus far this fiscal year.

U.S. Agricultural Imports Up Slightly in First 9 Months of Fiscal Year 1981 (see p. 43). U.S. agricultural imports of \$13.4 billion during the first three quarters of fiscal year 1981 were only slightly higher than those a year earlier. A value rise in competitive products--mainly sugar--offset a decline in noncompetitive imports.

Selected Prices of International Significance (see p. 66). World agricultural trade prices continued to weaken, with average quotations for wheat, corn, and soybeans decreasing in May and June. Coffee, cocoa, and sugar prices were also lower, reflecting a general softness in commodity markets.

U.S. Agricultural Imports: Principal Commodities and Major Sources, Calendar Years 1975-80 (see p. 70). U.S. agricultural imports totaled \$17.4 billion in 1980, nearly 90 percent above 1975's level. Ten countries supplied about half the total in 1980, with Brazil the leader. The major value gains during 1975-77 were in noncompetitive imports, mainly coffee. Competitive imports (mostly meats and recently sugar) caused most of the gains during 1978-80.

Commercial Farm Export Sales Set Records to Nine Countries that Received Food Aid in Fiscal Year 1980 (see p. 90). In fiscal year 1980, U.S. commercial exports of agricultural commodities to nine countries receiving food aid under P.L. 480 programs reached record levels. Economic growth and increased foreign exchange earnings in those countries resulted in higher levels of commercial sales.

## Ocean Freight Rates for Major Agricultural Exports Increase Further in 1980

J. Michael Harris <sup>1/</sup>

Ship chartering for heavy grains remained strong during 1980 due to continued increases in export demand. Wheat, feed grain, and soybean exports totaled slightly more than 131 million metric tons during 1979/80, a 15-million-ton increase over the record exports of 1978/79. Continued strong demand is expected since export volume of these grains is projected to increase to about 134 million metric tons in 1980/81.

Since 1977, the general level of ocean freight rates has been increasing. Rates increased sharply in 1979. Rates averaged somewhat higher for 1980 despite wider quarterly fluctuations (table 1).

Changes in the supply of shipping tonnage and the demand for that tonnage affect rate levels much the same as supply and demand in cash commodity markets. The relationship between shipping supply and demand is influenced by both grain and nongrain commodities since both compete for available tonnage.

In 1979, fourth quarter rates rose above those in the three previous quarters due to strong export demand. However, these increases were dampened early in the first quarter of 1980 by the suspension in shipments to the U.S.S.R. in January. The immediate impact was a sharp decline in freight rates. Shortly after, rates increased sharply through the remainder of the first quarter and into the second quarter.

This rate increase can be attributed principally to three factors. First, European importers took advantage of depressed U.S. grain prices to make additional purchases, thus increasing the demand for tonnage on European routes. Second, the market was influenced by the U.S.S.R.'s attempts to find alternative sources of grain, which often involved longer voyages. Third, increased U.S. grain exports to Japan and other Far Eastern countries led to a shortage of vessels for trading with this region and, consequently, pushed rates up on major trade routes.

In the third quarter of 1980, rates turned downward in response to the customary seasonal decline in grain exports preceding the fall feed grain and soybean harvests. The slowdown became apparent as an excess supply of available shipping tonnage developed.

During the fourth quarter, rates rebounded sharply due to increased export movements brought on by smaller grain supplies in some parts of the world. The shipping market was further influenced by prospects of the lifting of the U.S.S.R. grain embargo and the fact that many importers were anxious to secure needed grain and were willing to bid up shipping rates.

1/ Average of rates for individual cargoes weighted by volume.

2/ None reported.

3/ Revised.

Most major trade rates turned downward in the first quarter of 1981. Grain exports remained strong but were down somewhat from the previous quarter. The major downward pressure on rates came from an increased supply of available tonnage in the market. Overtonnage was caused primarily by a decrease in world iron ore traffic, a depressed oil shipping market, and the U.S. coal miners' strike.

The present supply of tonnage continues to exceed the demand for international shipping of heavy grains. Current projections indicate continued growth in available tonnage. Orders for all ships to be delivered in 1981 stand at 19 million gross tons. Future orders for 1982/83 total more than 15 million tons. This excess should tend to restrain sharp increases in rates like those which occurred in 1973.

#### The World and U.S. Merchant Fleets

The world merchant fleet consists primarily of freighters; bulk carriers, which transport the largest percentage of international grain; and tankers. Total capacity of all three types of ships has continued to grow since 1960 (table 2), but bulk carriers and tankers have experienced the largest growth. Bulk carrier capacity totaled 182 million tons in 1979 compared with 13 million tons in 1960 and 77 million tons in 1970. Of the 19 million tons of ship capacity ordered for 1981, 7 million tons are designated for ore and bulk carrier ships. Capacity of tankers, which are sometimes used to transport grains, appears to have leveled off around 1977, and total capacity has decreased slightly since that year. In 1979, total tanker tonnage was 346 million tons, a 449-percent increase over 1960. Freighter capacity grew by 69 percent between 1960 and 1979. While the average size of bulk carriers continues to increase, the average size for freighters and tankers appears to have leveled off.

The U.S. merchant fleet continues to be a small, declining part of the world fleet (table 3). Few recent grain sales have specified the use of American ships. Since rates for U.S.-flag vessels are substantially higher than rates for foreign ships and American fleet capacity is limited, U.S. grain movements rely heavily on foreign flag vessels.

Between 1960 and 1977, bulk carriers in the privately owned merchant fleet of the United States experienced a continuous decline in both numbers and total capacity. Both increased in 1978, and although capacity again declined in 1979, it remained above the 1977 total. Nonetheless, capacity in 1978 and 1979 was significantly below the levels of the sixties and early seventies. Average bulk carrier capacity has increased 113 percent over 1960; however, it remains somewhat below the average for the world fleet.

Source: Merchant Fleets of the World, U.S. Dept. of Commerce, Maritime Administration.

Freighter capacity in the U.S. merchant fleet has continued to decline in both numbers and total tonnage. However, average capacity has continuously increased since 1960 and is nearly double that of the world fleet. Until 1973, privately owned U.S. tankers were also decreasing in both numbers and capacity. Since then, total numbers have risen 18 percent and total tonnage has increased 88 percent. Average capacity has increased from 34,100 tons to 54,300 tons over the same period. Like U.S. bulk carriers, average capacity is below that of the world fleet.

Figure 1

**Ocean Freight Rates from U.S. Gulf to Northern Europe and Japan, 1973-81<sup>1</sup>**

Dollars per metric ton

<sup>1</sup>Ocean freight rates are quarterly averages based on reported shipping contracts for grain. However, because some grain shipments are not covered, average rates should not be considered precise estimates.

## U.S. Agricultural Exports Near \$35 Billion During October-June 1980/81

U.S. agricultural exports during the first 9 months of fiscal year 1981 reached \$34.8 billion, 12 percent or \$3.8 billion above the previous year's figure. Since June, exports have begun to taper off somewhat with the advent of the summer harvest in both the United States and overseas. In order for fiscal year 1981 exports to reach the level of \$46 billion forecast in May, exports will have to average \$3.7 billion per month through September versus \$3.2 billion in the last 3 months of fiscal year 1980.

Factors that will affect U.S. exports for the remainder of fiscal year 1981 and continue into fiscal year 1982 include:

- ° the severity of the recession in Western Europe,
- ° the level of interest rates and their impact on inventory buildup,
- ° the size of the grain crop currently being harvested in the Northern Hemisphere,
- ° the extent of grain and oilseed purchases by the U.S.S.R.

Food grain exports through June remained well above year-earlier levels. Wheat exports, at 29.2 million tons, were 16 percent above fiscal year 1980's pace, with China, the U.S.S.R., Japan, Brazil, Korea, Egypt, and Mexico accounting for three-fifths of all wheat shipments. Other markets that have maintained or increased imports of U.S. wheat include Nigeria, Chile, Peru, and Venezuela. The drought in Morocco should result in a significant increase in imports of U.S. wheat. India purchased 1.5 million tons of wheat in early July, their largest purchase since 1975 and 1976 when India was the largest U.S. market. India may buy another 500,000 tons before the end of fiscal year 1981, continuing to build up low stock levels with U.S. wheat. For the last 2 to 3 years, India has imported over 300,000 tons of bulgur wheat annually donated under P.L. 480, Title II.

Despite high prices, rice exports during October-June 1980/81 were 17 percent above year-earlier levels. The export unit value for rice averaged above \$500 a ton for the first time since fiscal year 1974. Shipments to Korea, Nigeria, Saudi Arabia, and Peru, accounting for nearly two-thirds of all U.S. rice exports, augmented shipments to more consistent markets such as Canada, Western Europe, Republic of South Africa, and West Africa. Fiscal year 1981 exports were forecast in May at 3.3 million tons, compared with 3.0 million tons in fiscal year 1980.

Feed grain exports over the first 9 months in fiscal year 1981 amounted to 54.9 million tons, 88 percent of which was corn and another 10 percent grain sorghum. This figure was 2 percent

above year-earlier levels and within reach of the fiscal year 1981 estimate of 71.7 million tons. One of the major factors that will affect feed grain exports for the remainder of the fiscal year is the extent to which Argentina begins exporting to countries other than the U.S.S.R., especially to Japan. Trade statistics through June, however, indicated that Argentina had not yet made significant shipments to Japan. U.S. feed grain shipments to Japan totaled 12.1 million tons during October-June 1980/81, including 10.1 million tons of corn and 1.8 million tons of sorghum. Corn shipments to the European Community were down 9 percent at 6.4 million tons.

Feed grain shipments to Mexico reached 5.9 million tons by the end of June despite an embargo on rail shipments of corn and sorghum. The embargo was invoked on June 10 due to railcar backlogs and a record-breaking spring harvest of corn and sorghum. In a flurry of purchases, the U.S.S.R. bought 1 million tons of corn in the last 2 weeks of July. Corn export prices at the gulf have recovered somewhat from mid-June lows of \$134 per metric ton, the lowest prices since July 1980. Sorghum also fell to a yearly low of \$125 a ton.

Nongrain feeds have had mixed success thus far in fiscal year 1981. While soybean and soymeal exports have fallen 16 and 10 percent, respectively, corn gluten feed and meal exports, nearly all of which go through Rotterdam, have amounted to 2 million tons and are running 11 percent ahead of fiscal year 1980. Soybean exports totaled 16.6 million tons during October-June 1980/81. U.S. soybean meal has recently enjoyed a price advantage over Brazilian and Argentine soymeal at Rotterdam. Nevertheless, Brazilian soymeal exports have competed successfully in the European Community and Eastern Europe, running 2 to 3 percent above total U.S. exports of 5.2 million tons through June. With soybean oil stocks at very high levels and European crushers still reluctant to hold stocks, U.S. soymeal exports are expected to reach 6.7 million tons. In the longer term, Brazil signed a 5-year agreement with the U.S.S.R. in mid-July to provide 4.7 million tons of soybeans and soybean products during 1982-86 in exchange for oil and technology.

U.S. soybean oil exports have also suffered at the hands of Brazilian competition. Brazilian soybean oil exports to date are nearly twice as large as those from the United States--a reversal of the normal pattern. U.S. exports through June amounted to 510,000 tons, about half of the previous year's figure, and fully warranted a reduction in the export forecast to 750,000 tons.

U.S. farm exports to Japan over the first three quarters of fiscal year 1981 came to \$5.4 billion, 25 percent above a year earlier. Grain exports, valued at \$2.4 billion, were up a third.

The value of soybean exports rose a third, while the value of livestock and poultry-product exports was also up one-third.

The European Community, still in the throes of a recession and not expected to recover before 1982, has maintained its demand for U.S. agricultural products in recent months at levels approaching fiscal year 1980's record pace. Shipments to date are an estimated \$7.1 billion--only \$300 million below a year earlier. The summer grain harvest in Western Europe is currently projected to be 2 percent below the year before, increasing the possibility of additional U.S. grain exports later in the summer.

Mexico's position as the second largest U.S. market was enhanced by the signing of an agreement to purchase 4.7 million tons of U.S. agricultural products during 1982. In addition to its demand for corn, sorghum, soybeans, and wheat, Mexico's demand for pulses, refined sugar, and sunflower seeds alone would rank it among the top 20 U.S. markets. U.S. exports to Mexico during the first 9 months of 1980/81 totaled \$2.3 billion.

Exports to Africa, at nearly \$2.2 billion, mostly going to the resource-rich nations such as Algeria, Nigeria, and Angola, were 30 percent above year-earlier levels. However, Egypt, Ghana, Senegal, the Canary Islands, and nearly all of the countries in drought-plagued East Africa (particularly Somalia, Tanzania, and Kenya) have seen some increase in the level of U.S. agricultural exports.

Table 4--U.S. agricultural exports: Value by commodity, October-June 1979/80 and 1980/81 and June 1980 and 1981

1/ PRELIMINARY

## U.S. Agricultural Imports Up Slightly in First Nine Months of Fiscal Year 1981

U.S. agricultural imports of \$13.4 billion during the first 9 months of fiscal year 1981 were only slightly higher than those a year earlier. A value rise in competitive products--mainly sugar--offset a decline in noncompetitive imports.

Noncompetitive imports totaled \$4.7 billion, 19 percent less than a year earlier, as most products declined in value except bananas and cocoa. Green coffee--accounting for about half of all noncompetitive imports--totaled \$2.3 billion, 30 percent less than the previous year. The quantity imported fell only 9 percent as unit import prices dropped sharply from \$1.73 per pound in the first 9 months of fiscal year 1980 to \$1.32 in 1981.

Crude rubber, the second leading noncompetitive import, declined 10 percent in value due to lower prices as the quantity imported declined only 5 percent. About 60 percent of the rubber came from Indonesia, with another 20 percent from Malaysia. Cocoa beans, the third-ranking noncompetitive import, rose 16 percent in value and 75 percent in volume with a sharp drop in import prices. Nearly half the cocoa beans came from the Ivory Coast, and over one-tenth were from Brazil. Value declines occurred in imports of cocoa powder, chocolate, tea, and spices. However, gains took place in banana and cocoa butter imports.

Competitive imports of \$8.7 billion were 17 percent higher than a year earlier, mainly due to substantial gains in sugar prices. Sugar imports of \$1.7 billion were 64 percent higher than 1979/80 levels, due entirely to higher prices. The quantity of imported sugar fell 7 percent as import prices rose sharply.

Meat and meat-product imports of \$1.7 billion declined slightly because of an 11-percent drop in fresh and frozen beef and veal imports, accounting for about two-thirds of all meat imports. The decline resulted mainly from lower domestic beef prices, an abundance of pork and poultry meat, and a reduction in the availability of beef from Australia, the largest supplier. Pork imports gained about 16 percent in value but less in volume as import prices rose 4 percent.

Other value increases among competitive items occurred mainly in dairy and poultry products, hides and skins, fruits and preparations, nuts, wine, and malt beverages. Value declines occurred in imports of live animals, vegetables, vegetable oils, and tobacco. Live animal imports--chiefly dutiable cattle from Mexico--fell 27 percent because of low prices for feeder cattle in the United States. Vegetable oil imports fell 11 percent, mainly in coconut oil, which accounts for over half of all vegetable oil imports. However, the quantity of imported coconut oil increased as unit prices dropped by about one-third from the previous year. Tobacco imports declined much more in value than quantity due to lower prices.

1/ PRELIMINARY

## Selected Prices of International Significance

### Export Prices

Prices for major agricultural commodities decreased in May and June following a slight upturn in April. Wheat prices at the gulf declined to \$171 a metric ton in June, 8 percent above prices a year earlier. U.S. wheat, c.i.f. Rotterdam, declined \$2 in June to \$203 a metric ton, slightly above the year-earlier level. Canadian wheat prices at Thunder Bay posted losses for 5 consecutive months, dropping to \$188 a metric ton in June. Australian standard white wheat, valued at \$168 in June, was also at a yearly low.

Corn prices at the gulf ports declined to \$139 in June, a 3-percent drop from May but up 22 percent from a year earlier. U.S. corn, c.i.f. Rotterdam, recorded a net loss of \$5 a metric ton in June from the previous month, settling at \$155.

World soybean prices posted losses in June, led by a drop in the monthly average of soybeans at the gulf from \$291 a metric ton in May to \$273 in June. U.S. soybean prices, c.i.f. Rotterdam, declined to \$291 in June.

### Import Prices

Coffee prices have slumped to a 5-1/2-year low, as the New York spot price bottomed at \$1.17 a pound in June. Prices tumbled in recent months because the major exporters--Brazil, Colombia, and the Ivory Coast--are harvesting bumper crops this year.

Cocoa prices continued to decline as the Ivory Coast continued to sell cocoa and refused to join the International Cocoa Agreement. The New York futures price of 70 cents a pound in June was 36 percent below the price a year-earlier.

Sugar prices also declined in June. The New York spot price began the month at 21.3 cents a pound and dropped to 19 cents by June 30. Similarly, the International Sugar Agreement world price slumped 18 percent in June, closing the month at 15.2 cents a pound.

## U.S. Agricultural Imports: Principal Commodities and Major Sources, Calendar Years 1975-80

U.S. agricultural imports were valued at \$17.4 billion in calendar year 1980, nearly 90 percent above their value in 1975. Values increased each year, mostly in noncompetitive products during 1975-77 and competitive products during 1978-80.

Although the United States imports agricultural products from over 150 countries, over 90 percent of the total value of these imports in 1980 came from the 50 countries listed in table 19. Ten of these countries supplied slightly more than half of the \$17.4 billion imported in 1980. Brazil--the leading exporter--supplied a record \$2 billion, more than double 1975's value, mainly in noncompetitive products such as coffee and cocoa beans, and fruits and preparations (chiefly concentrated orange juice).

Australia--exporting mainly meat and sugar--was the second leading agricultural supplier, providing over \$1.1 billion in 1980. The eight other leading suppliers in 1980 were Canada, Mexico, Colombia, Indonesia, New Zealand, the Philippines, the Dominican Republic, and France.

The value of noncompetitive imports rose from \$3.1 billion in 1975 (one-third of all agricultural imports) to a record \$7.2 billion in 1979 (43 percent of the total) because of rising prices. However, noncompetitive imports dropped to \$6.9 billion in 1980 mainly due to lower prices for crude rubber and cocoa beans. The value of green coffee imports--generally about half of all noncompetitive products--rose from \$1.6 billion in 1975 to a record \$3.9 billion in 1980 due to rising prices. The quantity imported declined 10 percent, as unit import prices rose from 58 cents per pound in 1975 to \$1.61 per pound in 1980. Brazil and Colombia were the leading suppliers in 1980, each providing about 20 percent of the total. Among other leading sources, there were mainly gains for Indonesia, Uganda, and El Salvador, and declines from Mexico, Guatemala, Ecuador, and the Ivory Coast.

Crude rubber, the second leading noncompetitive import, totaled \$800 million in 1980, more than double 1975's level due to higher prices; the quantity imported declined 9 percent. However, the volumes imported during 1976-79 were higher than in 1975. Indonesia has generally supplied over half the rubber, with most of the remainder coming from Malaysia.

Cocoa beans, generally the third leading noncompetitive import, totaled \$395 million in 1980, above 1975's level but considerably less than during 1977-79. Principal suppliers were the Ivory Coast, Brazil, Nigeria, and the Dominican Republic.

Competitive imports reached a record of nearly \$10.4 billion in 1980, over two-thirds more than in 1975, mainly due to increases

in meat and sugar imports. Meat and meat-product imports--the leading competitive products in recent years--totaled \$2.3 billion in 1980, compared with \$1.1 billion in 1975. Rising prices caused much of the gain as the volume imported rose only 20 percent. Australia and New Zealand have been principal sources for beef and veal, while Canada, Denmark, and Poland have provided most of the pork.

Sugar, the next leading competitive import, totaled nearly \$2 billion in 1980, 8 percent higher than the 1975 total but about 75 percent or more than the value throughout 1976-79. During these years, a near-doubling in unit import prices caused the value gain as the quantity imported declined. Principal suppliers in 1980 were Brazil, the Dominican Republic, the Philippines, and Australia.

Oilseeds and products (mainly vegetable oils) totaled \$594 million in 1980, slightly more than in 1975 but 20 percent less than 1979's level. The quantity of vegetable oils--chiefly coconut oil from the Philippines and palm oil from Malaysia--was considerably lower in 1980 than that during 1975-79 as prices rose.

Among other competitive imports, large value gains occurred in fruits and vegetables during 1975-80. Fruits and preparations totaled \$564 million in 1980, less than in 1979 but more than double 1975's level. A drop in concentrated orange juice caused most of 1980's decline from the previous year's total. In 1980, Mexico provided over one-fifth of the fruit imports; the Philippines and Brazil each supplied over one-tenth, and Thailand, Chile, and Canada furnished most of the remainder.

Vegetables and preparations totaled \$864 million in 1980, more than double 1975's level. Mexico provided 40 percent in 1980, with Taiwan and Spain the other major sources.

## Commercial Farm Export Sales Set Records to Nine Countries that Received Food Aid in Fiscal Year 1980

U.S. commercial sales of agricultural commodities to nine recipient countries of U.S. food aid under P.L. 480 programs reached record levels in fiscal year 1980 (figure 2). These countries have experienced gains in economic growth, exports, and foreign exchange earnings in recent years, helping them to increase commercial purchases. They also had generally reduced crop production in the past year and increased demand, which increased their import needs.

The largest dollar market within this group was the Republic of Korea, a classic example of a major U.S. food aid recipient that reduced its need for aid and substantially increased its commercial imports with economic growth and improved financial conditions. In recent years, P.L. 480 exports (less than 10 percent of all U.S. farm exports to Korea since fiscal year 1974) have been extended mainly for market development. U.S. food aid to Korea will be terminated at the end of fiscal year 1981. Korea --the seventh leading cash market--purchased nearly \$1.6 billion commercially in fiscal year 1980, 18 percent more than the previous year's high. Since the early seventies, Korea has ranked among the top 10 dollar markets for U.S. farm products.

Rice, wheat, and cotton accounted for most of the gain in commercial exports to Korea. A sharp drop in Korea's 1980 rice production led to substantial value and volume increases in rice and wheat from the United States. U.S. rice exports to Korea (all commercial) jumped from \$11 million in fiscal year 1979 to \$220 million in fiscal year 1980, while wheat exports rose from \$247 million to \$287 million, nearly all commercial (table 21). Korea was the top cash market for U.S. rice in fiscal year 1980 and the fifth leading cash market for wheat. The United States has supplied all of Korea's wheat imports, and except in fiscal year 1979, over three-fourths of its rice imports. The United States provided only about one-fifth of Korean rice imports in fiscal year 1979; Japan supplied most of the remainder under food aid. During the early seventies, most U.S. wheat and rice exported to Korea was under P.L. 480 programs, but since fiscal year 1973, almost all the wheat has been commercial. Commercial rice exports to Korea dominated in fiscal years 1974 and 1975 and since fiscal year 1978. The availability of short-term credit to importers on commercial terms under Commodity Credit Corporation (CCC) programs has helped finance commercial grain exports to Korea. CCC credit financed 86 percent of all U.S. commercial wheat exports and about one-fourth of all U.S. rice exports to Korea in fiscal year 1980. Korea will increase its wheat and rice imports in 1981.

In fiscal year 1980, U.S. cotton exports to Korea rose 30 percent in value from fiscal year 1978's record level. Since the early seventies, almost all U.S. cotton to Korea has been commercial;

Figure 2

## U.S. Agricultural Exports to Selected Countries, Government and Commercial, Fiscal Years\*

\*Fiscal years covers July-June for 1971-76 and October-September for 1977-80.

--- \* Not applicable.

<sup>1/</sup> 1971-76 covers June-June and 1977-80 covers September-October.

<sup>2/</sup> Almost or entirely commercial exports.

<sup>3/</sup> Less than \$50,000.

the United States has generally supplied over 90 percent of the country's imports. During fiscal years 1977-80, CCC credit provided financing for 27 to 54 percent of U.S. cotton exported to Korea. Korea was the third largest cash market for U.S. cotton in fiscal year 1980.

Corn, another leading commodity exported commercially to Korea, declined in 1979/80 mainly due to the country's reduced livestock output. However, corn import volume is expected to increase in fiscal year 1981. In recent years, the United States has been the sole supplier. Since fiscal year 1974, almost all U.S. corn exports to Korea have been commercial. CCC credit financed 28 to 40 percent of all commercial corn to Korea during fiscal years 1978-80.

Portugal was the second largest dollar market among food aid recipients in fiscal year 1980, purchasing a record \$562 million (mainly grains), about 50 percent more than 1978's record. Economic growth and foreign exchange reserves enabled Portugal to nearly double its commercial corn purchases and increase by one-half its dollar imports of U.S. wheat in 1980. Since fiscal year 1975, the United States has supplied almost all of the country's corn imports and generally 70 percent or more of its wheat imports. Commercial exports have accounted for well over half of all U.S. wheat and corn exports to Portugal. CCC credit financed 40 percent or more of all commercial corn and wheat exported during fiscal years 1977-79 but only about 10 percent in 1979/80. Portugal is expected to substantially increase its corn import volume in fiscal years 1981 and 1982 (mainly from the United States) due to lower production and government emphasis on livestock expansion. Wheat imports may decline somewhat in 1981 but should sharply increase in fiscal year 1982 over fiscal year 1978-80 levels. Portugal's trade deficit is expected to worsen in 1980/81 and may impede increased commercial imports without CCC credit.

U.S. commercial agricultural exports to Indonesia--second leading aid recipient in fiscal year 1980--reached \$339 million, nearly double fiscal year 1979's record level. Generally, increased revenue from oil exports and economic growth sparked the country's commercial imports. Most of the dollar gain was for U.S. wheat, which nearly tripled in fiscal year 1980 from a year earlier. P.L. 480 programs accounted for 10 percent of all U.S. wheat exported to Indonesia in 1979/80, compared with one-third or more of the total during most of the seventies. Indonesia is expected to increase its wheat imports in 1980/81, but by a lower rate than in 1979/80; the United States may provide about half of wheat imports.

U.S. commercial cotton and soybean exports to Indonesia also increased in fiscal year 1980. Since fiscal year 1977, all cotton and soybeans exported to that country have been commercial. Indonesia's cotton imports are expected to decline in fiscal year 1981, mainly due to high prices, greater use of synthetics, and reduced availability of U.S. cotton needed by mills. Soybean imports--about half from the United States--are expected to increase in 1980/81.

U.S. commercial agricultural exports to the Philippines totaled a record \$293 million in fiscal year 1980, 40 percent more than the previous year's high. Most of the value gain was in wheat, with lesser rises in corn and cotton. Wheat export volume in fiscal year 1980 declined slightly due to higher prices. Wheat exports to the Philippines have been almost entirely commercial, while sales of all corn and cotton exports have been commercial since fiscal year 1977. The United States has supplied most of the country's wheat and cotton imports and has been a major corn supplier in most years. The Philippines is expected to reduce wheat and cotton imports in fiscal year 1981 but step up the volume of corn imports.

U.S. commercial exports to Chile of \$256 million in fiscal year 1980 were 84 percent above the 1978/79 level. Most of the gain was in wheat, with a smaller increase in corn exports. All wheat and corn exports to Chile have been commercial since 1971 except during 1975/76 when about two-thirds of all wheat was under P.L. 480. The United States supplied at least 70 percent of Chile's wheat imports and 25 to 40 percent of all corn during fiscal years 1975-79, but was the sole supplier of these grains in 1979/80. Chile shifted its imports from Argentina mainly due to higher prices and reduced availabilities, as Argentina shifted its grain exports to the U.S.S.R. Chile is expected to increase its volume of wheat and corn imports again in fiscal year 1981 (almost all from the United States).

U.S. commercial exports to Peru of \$224 million in fiscal year 1980 were 15 percent higher than the previous record set in fiscal year 1975. Most of the increase was in wheat and corn. Since fiscal year 1971, almost all wheat and corn exported to Peru has been commercial, financed partly by CCC credit. Since fiscal year 1972, the United States has generally supplied all of Peru's corn imports and at least half of all wheat imports, with the wheat share rising to nearly 80 percent in fiscal year 1980. Higher prices, a shift in Argentina's wheat export patterns, and the inability of Australia and Canada to reach trade agreements with Peru enabled the United States to increase its market share.

U.S. commercial exports to the Dominican Republic of \$193 million in fiscal year 1980 were nearly 40 percent higher than the pre-

vious year's record, with the gain mostly in wheat, rice, and corn. Generally, all the U.S. rice exported has been commercial, as has been nearly all the corn and wheat. The United States is usually the country's sole supplier of wheat and corn.

U.S. commercial agricultural exports to Bangladesh reached a record \$164 million in fiscal year 1980--nearly three times more than the previous record set in 1975/76. Bangladesh's high level of exports and increased economic growth and foreign exchange earnings enabled it to increase its commercial wheat purchases from the United States from only \$2 million in fiscal year 1979 to \$119 million in fiscal year 1980. P.L. 480 shipments generally accounted for half to nearly all U.S. wheat exported to the country until 1979/80, when the share dropped to about one-third.

U.S. commercial exports to Tunisia reached a record \$85 million in 1979/80, more than double the dollar total the previous year, with the gain mainly in wheat and corn. A substantial rise in Tunisia's export earnings, due mainly to higher petroleum exports, helped increase commercial purchases. P.L. 480 wheat exports accounted for 27 percent of all U.S. wheat exports to Tunisia in fiscal year 1980, compared with higher shares in previous years. In most years, the majority of U.S. corn exported has been commercial. The United States usually supplies about 40 percent of Tunisia's wheat imports and most of its corn imports.
