## Foreign Agricultural Trade of the United States

March/April 1981

REPRODUCED BY  
NATIONAL TECHNICAL  
INFORMATION SERVICE  
U.S. DEPARTMENT OF COMMERCE  
SPRINGFIELD, VA. 22161

U.S. Agricultural Exports Reach \$19.6 Billion In October-February 1980/81 (see p. 3). Exports of U.S. farm products in the first 5 months of fiscal year 1981 were 12 percent above year-earlier levels. This growth was fueled by higher prices since volume was up only 1 percent. Increased grain sales (wheat, rice, and feed-grains) offset reductions in oilseed and product exports. Japan, China, Mexico, Korea, and South America were major growth areas.

U.S. Agricultural Imports Rise 4 Percent During October-February 1980/81 (see p. 41). U.S. agricultural imports of \$7.6 billion in the first 5 months of fiscal year 1981 were about 4 percent higher than a year before. A value rise in competitive products (mainly sugar, meat, and wine) offset a value decline in noncompetitive imports.

Selected Prices Of International Significance (see p. 75). Prices for most major agricultural products averaged lower in February. Export prices for wheat and corn declined from January highs, while soybean and grain sorghum prices in Europe continued to drop from December 1980 levels. However, grain and oilseed prices remained well above year-earlier levels.

U.S. Grains And Oilseeds Major Input Factor In \$15 Billion Dutch Food Export Industry (see p. 81). The United States is the largest supplier of grains and oilseeds to the \$15 billion Dutch food export industry. Grains, oilseeds, and feeds and fodder, which make up most of U.S. agricultural exports to the Netherlands, are used by the Dutch in a diversified food processing industry based heavily on international trade. This industry has made the Netherlands' one of the world's largest agricultural exporters. Some of the successes and problems this industry faces and the opportunities these present for U.S. exporters are discussed.

Commercial Agricultural Exports Assisted by CCC Programs Decline In Calendar Year 1980 (see p. 93). Commercial agricultural exports assisted by CCC programs totaled \$1.2 billion in calendar year 1980, nearly one-fourth less than a year ago, mainly due to elimination of funding for the Export Credit Sales Program. Corn, wheat, and cotton accounted for over two-thirds of the commodities assisted by CCC programs in 1980. The Republic of Korea and Poland received about two-thirds of the CCC-financed agricultural exports.

Contributors to this issue were Susan A. Libbin, Jitendar Mann, Stephen Milmo, and Stephen Sposato. Principal coordinators were Dewain H. Rahe, Thomas A. Warden, and Thomasine B. McCall, World Analysis Branch, International Economics Division, Economics and Statistics Service, U.S. Department of Agriculture, Washington, D.C. 20250.

## U.S. Agricultural Exports Reach \$19.6 Billion In October-February 1980/81

U.S. agricultural exports reached \$19.6 billion during October-February 1980/81, 12 percent higher than a year before. Higher prices have provided virtually all of the growth in total export value as volume increased by only 1 percent. Grain export volume (wheat, rice, and feedgrains) was 8 percent above year-earlier levels, offsetting a 23-percent drop in soybean and product exports.

Feedgrain exports in the October-February period amounted to 32.7 million tons, or 7 percent above those months of the last fiscal year. Japan, the largest U.S. market, has already taken 5.7 million tons of corn and almost 1.3 million tons of sorghum. The Japanese have apparently already purchased their fiscal-year requirements, with outstanding sales of feedgrains at the end of February totaling 9.2 million tons. Eastern Europe continued to buy heavily as U.S. corn shipments, primarily to Poland, Romania, and East Germany, totaled 3.4 million tons. Other areas that helped maintain U.S. feedgrain exports at record levels include Mexico, Spain, Korea, Portugal, and Brazil. In addition, by February over 1 million tons of feedgrains had been shipped to Africa as a result of prolonged drought conditions over much of eastern and southern Africa. Strong demand drove the export unit value for corn to \$159 per ton in February, with the October-February average nearly \$28 per ton higher than a year before.

Wheat exports rebounded in January and February. Cumulative exports were 13 percent above the year-earlier level at 16.8 million tons. China was the largest market, taking 3.3 million tons, or one-fifth of all U.S. wheat exports. The Chinese have bought an additional 2.5 million tons for delivery later in the fiscal year. Exports to Japan totaled 1.4 million tons, 9 percent above last fiscal year's figure. Shipments to West Asia (Iraq, Kuwait, Lebanon), North Africa (Egypt, Algeria), Nigeria, and South America (Brazil, Venezuela, Peru) have picked up since the beginning of the year. Matching the fiscal year forecast, the export unit value of wheat rose to \$196 per ton in February, and averaged \$190 per ton for October-February.

Rice exports totaled nearly 1.3 million tons during October-February, with over a third going to Korea. In addition, shipments to Saudi Arabia and Nigeria have spurred exports in the last 2 months. Prices had risen to nearly \$480 per ton in February.

Soybean exports continue to fall behind the progress of a year ago. Shipments of 9.2 million tons during October-February were 24 percent or 2.9 million tons below last fiscal year's record levels. However, sales to Western Europe have picked up in the last 2 months.

U.S. agricultural exports to Japan amounted to \$3.1 billion in the first 5 months of fiscal year 1981, up sharply from the \$2.1 billion of a year ago. Feedgrains accounted for over one-third of this total and soybeans nearly a fifth. Exports of wheat, cotton, and cattle hides to Japan provided additional strength relatively early in the fiscal year.

Shipments of corn and soybean meal were major components in U.S. exports to Eastern Europe which approached \$1 billion. Mexico continued in its role as a major U.S. market with imports of corn, sorghum, soybeans, soybean meal, wheat, and dried beans raising U.S. exports to Mexico to \$1.3 billion, twice the figure of a year before.

The United States continued to ship large amounts of wheat and corn to South America with Argentine grain being diverted to the Soviet Union. Brazil has already taken nearly 1.0 million tons of U.S. wheat and 1.4 million tons of corn. In addition, Venezuela, Peru, and Chile have become significant grain markets in the region.

As a result of persistent drought in many areas of eastern and southern Africa, the United States has sold 332,000 tons of corn and 209,000 tons of rice to these areas during October-February. Many of the countries (notably Tanzania, Kenya, and Malawi) had exported corn during the past 5 years. In contrast, the major markets for U.S. wheat in Africa were Egypt, Nigeria, Morocco, Algeria, the Ivory Coast, South Africa, and Zaire.

Asia may have three \$2-billion markets for U.S. farm products in fiscal year 1981. Japan has already passed this mark, and China is well on its way again this year by virtue of being the largest U.S. market for wheat and cotton. Korea, already at \$920 million for the first 5 months of the fiscal year, portends to be the third. Exports to Korea of corn, rice, wheat, cotton, soybeans, and cattle hides comprise approximately 95 percent of this burgeoning market.

## U.S. Agricultural Imports Rise 4 Percent During October-February 1980/81

U.S. agricultural imports of \$7.7 billion in the first 5 months of fiscal year 1981 were about 4 percent higher than a year ago. A value rise in competitive products (mainly sugar, meat, and wine) offset a value decline in noncompetitive imports.

Noncompetitive imports totaled \$2.7 billion, 16 percent less than a year earlier, as most products declined in value. Green coffee--accounting for over half of all noncompetitive imports--totaled \$1.5 billion, about 24 percent less than a year ago. However, because unit import prices declined by about 23 percent from \$1.78 per pound in fiscal year 1980 to \$1.36 per pound in fiscal year 1981, the quantity of green coffee imported remained near last year's volume.

Crude rubber--the second-leading noncompetitive import--declined one-tenth, reflecting a drop in U.S. industrial production. Cocoa beans, the third-ranking noncompetitive import, rose 13 percent in value and 65 percent in volume after prices fell by about 30 percent from previous-year levels. There were also value declines in soluble and roasted coffee, cocoa powder, chocolate preparations, spices, and tea.

Competitive imports of nearly \$5.0 billion were about one-fifth higher than a year earlier, mainly due to substantial value gains in sugar. Sugar imports of \$1.1 billion were more than double those of a year earlier due entirely to an increase in prices. The quantity of imported sugar fell 5 percent to 1.6 million tons. Import fees for the first quarter of 1981 remained minimal (zero for raw sugar and 0.52 cent per pound for refined). The import duty remains at the statutory minimum. <sup>1/</sup>

Imports of meat and meat products of nearly \$1.1 billion rose about 4 percent in value as a gain in pork offset the drop in fresh and frozen beef and veal. Beef and veal imports--accounting for about three-fourths of meat imports--declined slightly in value because prices dropped. Lower U.S. prices and tight supplies in major exporting countries caused most of the import reduction. Pork imports in the first 5 months of 1980/81 gained about 23 percent in value and 16 percent in volume over the same months of 1979/80. Most of the increase came from Canada. Other value gains among competitive imports occurred mainly in dairy and poultry products, hides and skins, fruit preparations, and wine.

<sup>1/</sup> U.S. Department of Agriculture, Economics and Statistics Service and Foreign Agricultural Service, Sugar and Sweetener Outlook and Situation, Feb. 1981, p. 8.

Value declines occurred in imports of live animals, vegetables, vegetable oils, and tobacco. Live animal imports--chiefly cattle--fell by more than one-half, mainly due to higher prices in Mexico, a major supplier. Vegetable and preparation imports fell about 8 percent, mainly for tomatoes, cucumbers, and peppers. Imports of vegetable oils declined in value but rose in volume as prices of coconut oil declined. Tobacco import value declined about 3 percent as prices fell.

Current expectations are that agricultural imports will rise about 4 percent in fiscal year 1981, with value gains in competitive imports such as sugar, fruits and vegetables, dairy and poultry products, malt beverages, and wine offsetting an anticipated value decline in noncompetitive imports. <sup>2/</sup> Sugar import quantities are expected to fall again with continued high prices. A value decline is anticipated for imports of coffee in fiscal year 1981, which will offset forecast value gains for bananas, cocoa beans, rubber, and spices. Quantity imports of cocoa beans and products should rise in 1981, mainly because of relatively low prices and adequate world cocoa supplies.

---

## Selected Prices Of International Significance

### Export Prices

The average U.S. gulf ports price for wheat declined in February to \$5.01 a bushel after a January increase to \$5.20. Corn prices at the gulf ports followed a similar trend, increasing to \$3.94 a bushel in January and then falling to \$3.69 in February. However, corn prices averaged 24 percent above February 1980. The price of U.S. soybeans at gulf ports have declined since November to February's price of \$7.74 a bushel. This was 14 percent above February 1980's price.

U.S. agricultural commodity prices in Rotterdam have also been on the downside. Hard winter wheat, after reaching a 1980 high in December of \$235 a metric ton, decreased \$2 in January and another \$8 in February. Corn prices in January reached a new high of \$181 a metric ton but then decreased to \$167 a metric ton in February. Soybean and grain sorghum prices in Rotterdam have declined steadily since December. Even though they have been on the decline, the prices of all four commodities are still much higher than those established a year ago. Argentine corn, c.i.f. Rotterdam, averaged \$200 a metric ton in February, about the same price as last February.

### Import Prices

Since May 1980, average New York spot prices of Brazilian coffee have steadily declined. The price in January broke this trend, increasing 4 cents to \$1.25 a pound, although February's price resumed the downtrend and settled at \$1.23 a pound.

Since peaking in October, the New York spot price of raw sugar has recently been on the downside, settling at 26 cents a pound in February. It remains 6 percent above last February's price, however.

The New York spot price of crude rubber decreased in February to 68 cents a pound, 18 percent below the prior February.

The Dow Jones commodity spot index (1950 = 100) reached a low of 424. The last time it was lower was in April 1980.

### Summary of 1980 Export and Import Unit Values

The 1980 unit-value indexes for exports and imports were higher than in 1979. The export unit-value index for 1980 was 9 percent higher than the previous year, while the import index was 15 percent higher. Among the leading U.S. agricultural export commodities, wheat, wheat flour, corn, grain sorghum, cotton, rice, and nonfat dry milk were priced substantially higher than in 1979, while inedible tallow, cattle hides, and soybean oil were priced lower. Among the major import commodities, the unit value of sugar was more than double a year earlier. Other import commodities such as crude rubber, Swiss cheese, and cashew nuts also made substantial price gains, while cocoa beans, palm oil, and coconut oil were priced much lower than the preceding year.

Quarterly Export  
Unit Values

Following the movement of international and U.S. farm prices, most major U.S. export commodities were priced higher in 1980. Thus, during the last quarter of 1980, the unit-value index of major U.S. agricultural export commodities was 12 percent above its year-earlier level. The heat and drought during the summer of 1980 lowered U.S. crop production, especially for feedgrains, oilseeds, and cotton. Corn was \$149 a metric ton, 20 percent higher than a year earlier; soybeans were \$307 a metric ton, 17 percent higher; and cotton was \$1.81 a kilogram, 22 percent higher. The unit-value index also rose for rice, reflecting strong export demand. However, the unit values of inedible tallow and cattle hides were substantially lower than in 1979.

Compared with the previous quarter, every major export commodity was priced higher. The average export unit-value index was 8 percent higher in the fourth quarter than in the third quarter of 1980. Among major U.S. agricultural export commodities, the unit values of wheat flour, soybeans, soybean meal, cotton, rice, and flue-cured tobacco made substantial gains.

Quarterly Import  
Unit Values

The import unit-value index in the fourth quarter of 1980 was 8 percent higher than in 1979, with imported sugar prices taking the lead. The U.S. unit value of imported sugar more than doubled the previous year's average. Live cattle, hams, tomatoes, cheese, and cashew nuts were all priced much higher than a year earlier. However, import unit values of coffee, cocoa beans, palm oil, and coconut oil were substantially lower than in 1979.

Compared with the third quarter, the average unit-value index rose only 1 percent in the fourth quarter of 1980. Quarter-to-quarter price increases continued for sugar, but to a lesser degree. Beef, hams, wines, and tea were priced higher, while cattle, coffee, cocoa, and tomatoes were priced lower.

1/ UNIT VALUES WERE COMPUTED FROM THE VALUE AND QUANTITY FIGURES PUBLISHED IN FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES.

## U.S. Grains And Oilseeds Major Input Factor In \$15 Billion Dutch Food Export Industry

By  
Stephen Sposato <sup>1/</sup>

The Dutch port of Rotterdam, reportedly the world's largest importer of grains and oilseeds, has been rapidly expanding its commodity-receiving facilities over the past decade to accommodate the growing European feed-livestock sector. Holland has been a converter of raw agricultural commodities into final food products for export since the 19th century. Dutch agriculture underwent a radical shift in the 19th century by importing cheap grains from North America in order to export meats and dairy products to the nearby developing urban centers in Amsterdam, London, Cologne, Hamburg, Brussels, and Paris. Today, with 160 million Europeans living within a 300-mile radius of Rotterdam, the Netherlands is the world's largest exporter of poultry and cheese. This is quite a feat for a country of 13 million inhabitants and one of the most densely populated countries in the world.

With agriculture accounting for 4.6 percent of the Dutch gross national product (GNP), it is on imports of agricultural raw materials that the Dutch base their considerably larger food and beverage sector. This sector accounted for 8.5 percent of GNP, 28 percent of manufacturing activity, and for exports of \$15 billion in 1979. Such a level of agricultural trade usually ranks Holland second or third in the world after the United States, and sometimes France, in the value of agricultural exports. The feed-livestock sector is the focal point of Dutch agriculture, with animal products accounting for 66 percent of agricultural output and 38 percent of agricultural and food exports.

The development of facilities to move large quantities of grains and oilseeds was necessary to the growth of trade based on the utilization of these commodities within the livestock sector. The port of Rotterdam, run by the municipal authority, has been the key to handling the great part of this trade. In 1963, the port handled 7 million tons of grains and oilseeds; by 1979, port activity had expanded to 12 million tons of grains and oilseeds with more than this much again in "feed derivatives" --corn gluten meal, manioc, citrus pulp, alfalfa meal, and others. The U.S. share of Holland's 1979 grain and oilseed imports was 85 percent, or 10.2 million tons, and about 75 percent of the citrus pulp imports. Most of these are reshipped directly to other countries through barges on the Rhine, Scheldt, and Meuse, or by rail, with only about one-third remaining in Holland. The development of the Rotterdam port has been significant enough to draw trade from the ports of Ghent, Belgium, and Hamburg, West Germany, and to provide for unloading and reloading smaller ships that serve the United Kingdom and Scandinavian countries.

<sup>1/</sup> Western Europe Branch, International Economics Division, Economics and Statistics Service.

In a country with only 2.0 million hectares of arable land, much of which has been reclaimed from the sea, the mainstay of Dutch agriculture has been the transformation of bulk commodities from abroad to high unit value finished products for domestic consumption and export. In so doing, the Dutch have assured the profitability of their agricultural sector. Though somewhat favored by the nearness of large urban markets, the Dutch are nevertheless, formidable competitors throughout the world. The efficient transportation infrastructure and a cost-efficient system of production of animal products have been the factors which have assured the success of this sector, and they will certainly be important in meeting any future competition.

Feed Manufacturing  
Industry Major User  
of Imported Grains,  
Oilseeds, and Other  
Feedstuffs

One of the most effective elements in the efficiency of transforming raw agricultural commodities to finished food items is the feed compounding industry. Compound feed production expanded in the Netherlands from 4.6 million tons in 1960 to 14.1 million tons in 1979. The availability of relatively inexpensive compound feeds has been a key factor in helping the Dutch remain competitive in the European Community (EC) poultry and dairy markets. (In trade with non-EC countries, the EC's export subsidies come into effect.) The feed compounding industry has grown up along the barge routes in Holland, the Northern and Rhineland areas of West Germany, and neighboring Belgium. Barges provide low-cost transport from Rotterdam to the farming hinterland. Dutch compounders have developed a complex feed manufacturing industry and are quite price competitive. Since the late sixties, they have used computers to choose among different ingredients for feed mixes, selecting for nutritive value at the lowest prevailing prices. Dutch agricultural and price policies are tied to the EC's Common Agricultural Policy (CAP). Under CAP, the price of grains is maintained at relatively high levels through intervention prices and variable import levies. Oilseeds enter the EC duty-free, and certain nongrain feeds enter either duty-free or at a relatively low duty. At prevailing European prices, soybean meal, for example, has tended to cost slightly less than corn and considerably less from a protein standpoint. <sup>2/</sup> Under such a pricing regime, lower cost nongrain feeds have been favored over grains in Dutch feed rations.

<sup>2/</sup> The 1980 soybean meal price, c.i.f. Rotterdam, fell to 80 percent of the price of corn. Although soybean meal prices are usually at or slightly above the price of EC corn, such prices represent a considerable discount in terms of total digestible nutrients per dollar of feed, soybeans having a higher total digestible nutrient rating than an equal quantity of corn and a considerably higher protein content.

Soybeans account for the largest amount of oilseed consumption in the Netherlands--54 percent--and for the greatest amount of oilseeds crushed. Approximately 80 percent of all crushing facilities are suitable only for soybeans. Facilities for the crushing of sunflower and rapeseed are being expanded, while other oilseeds (linseed, groundnut, cottonseed, and copra) are imported largely in meal form. Oilseed meal prices are closely monitored to determine, along with their nutritive values, their use in the feed mix.

Imports of manioc from Thailand and citrus pulp, largely from the United States, have increased. Both serve as sugar-starch providers and, in contrast to grains, require the addition of a larger proportion of high-protein feedstuffs such as soybean and other oilseed meals to achieve a balanced ration. Corn-gluten feed has also emerged as a major compound feed ingredient. Although lower in protein than soybeans (23 percent compared with 44 percent), corn-gluten feed competes with soybean meal and other oilseed meals as well as with grains, which have the lowest protein content of the three in raw form.

The following table compares compound feed cost with the cost of feedgrains in the United States and the Netherlands and indicates clearly the strides made by the Dutch compounding industry in reducing costs. Although the situation of comparative import costs is highly unfavorable to the Dutch in terms of the price of EC or imported grains, the cost of compound feeds is kept low by mixing food byproducts such as brewing or milling byproducts and low-cost feed fillers such as manioc or citrus pulp.

Table 18--U.S./Dutch feed cost comparisons, September 1980

Feed	U.S.	Dutch
-- Dollars per 100 kilograms --		
Corn	<u>1/</u> 11.84	<u>2/</u> 26.86
Compound:		
Dairy	20.88	19.96
Pig	35.26	21.96
Poultry	24.66	28.32

1/ U.S. No. 2 Yellow, Omaha.

2/ U.S. No. 3 Yellow, c.i.f. Rotterdam, including EC import levy.

Besides producing oilseed meal and feed concentrates for domestic animal feed, Dutch crushers and compounders have developed a large export industry operating almost entirely on imported raw materials. In 1979, Dutch exports of oilseeds and products totaled 2.6 million tons. Although most of the exports of meal traditionally go to neighboring European countries, vegetable oil exports go to many distant markets.

The expansion of livestock herds throughout the EC has supported the growth of the compound feed industry and concomitant imports of grain and oilseeds. Population and income increases in the EC are expected to be limited in the present economic environment. With current surpluses of milk, beef, and occasionally of pork in the EC, further expansion in the output of these commodities in response to internal demand is expected to be slow. In addition, with exports dependent on EC subsidies, and the CAP nearing its budgetary spending limit, no great impetus is expected from the export sector either. Enlargement of the Common Market to include Greece, Spain, and Portugal could prove to be a positive factor that may help to maintain herd growth in the EC. Some export possibilities may open for the Dutch in dairy, meat, and processed foods with the proposed enlargement of the Common Market and consequent tariff reduction there. By far the largest of these markets, Spain, however, has become more self-sufficient in livestock products and is a low-cost producer of poultry. The outlook then for the EC's livestock sector, considering all of these factors, is an expansion of herds not exceeding the 2- to 3-percent rate of increase which has been experienced the last few years.

Any increases in grain-oilseed consumption beyond increases in livestock and poultry numbers will consequently come from expanded use in compound feeds as opposed to grain-intensive, on-farm feeding. Compound feed manufacturing and use expanded rapidly over the last few years, especially in the Netherlands, where compound feeds now represent 63 percent of total feedstuffs utilized. Because of the strides already made in the compound feed sector in the Netherlands, expansion in the future will be much slower.

#### Dutch-U.S. Trade

The U.S. share of Dutch grain and oilseed imports averaged 85 percent from 1974 to 1978, including transshipments. However, the market shares are somewhat less when only quantities remaining in the Netherlands are considered. Excluding transshipments, the U.S. share of total Dutch imports of grains and oilseeds fluctuates within a range of 53 to 68 percent. U.S. exports and shares in grain and oilseed imports are summarized in table 19.

Table 19--Netherlands' imports of grains and oilseeds from the United States,  
quantity and percent of total imports <sup>1/</sup>

Item	1974		1976		1978		1979	
	Million M.T.	Percent share <sup>2/</sup>	Million M.T.	Percent share <sup>2/</sup>	Million M.T.	Percent share <sup>2/</sup>	Million M.T.	Percent share <sup>2/</sup>
Total grains and oilseeds	6.2	57	7.5	68	5.9	60	5.3	53
Grains

Corn	3.6	76	4.5	89	2.6	71	1.7	55
Other grains	.5	41	.4	52	<sup>3/</sup> ---	6	<sup>3/</sup> ---	8
Total oilseeds	1.4	70	1.6	72	2.3	76	<sup>4/</sup> 2.7	75
Soybeans	1.3	84	1.6	91	2.3	87	2.7	81
Oilseed meal	.3	20	.3	19	.4	24	.3	16

--- = Less than 100,000 tons.

<sup>1/</sup> Transshipments excluded.

<sup>2/</sup> U.S. share of total imports from all sources.

<sup>3/</sup> 48,000 M.T. imported from the United States in 1978, and 44,000 M.T. in 1979.

<sup>4/</sup> 35,000 M.T. of other oilseeds, chiefly peanuts, imported from the United States.

A sharp fall in the category of "other grains" after 1976 was due to the reduction in U.S. shipments of buckwheat, millet, and sorghum. U.S. exports of corn have declined sharply while soybean exports have risen. This reflects increasing use by the Dutch compounding industry of duty-free soybeans in feed rations.

Europe has been trying to develop its own protein feed substitutes for some time. Support for sunflower and rapeseed cultivation and high-protein peas and beans have been the primary areas of concentration but no breakthrough in dependency on the United States is foreseen.

The Netherlands' principal customers for agricultural exports are the EC partners with whom the Dutch enjoy a strong competitive position, due to the nearness and familiarity of the market. Since the implementation of the Common Market, the Dutch have also benefited from trade preferences in certain agricultural commodities from third countries.

The Netherlands does not vie for the same commodity markets as the United States. The United States, for example, supplies only limited quantities of animal products to Western Europe due to EC tariffs and the distance of the market. However, spurred by the decline of the dollar, the United States is just beginning to export large quantities of processed foods to Western Europe. With firms as Unilever (Unox-Zwanenberg), Coveco (cooperatives), and Hamburg (British Lyons group), the Dutch are well positioned in processed meats as well as other processed foods, and the United States may expect to meet stiff competition there in the coming years.

Dutch and U.S. poultry exports compete in the Middle East where Saudi Arabia and Iraq are large markets, as was Iran. The U.S.S.R. has also been a large buyer of poultry from the Netherlands in recent years. Although exports outside the EC are important to the profitability of the poultry sector, they constitute only 15 to 20 percent of poultry exports and 10 percent of total production.

The United States is not as large a poultry exporter as Holland except for turkeys. Competition for the turkey and turkey parts market in Europe and overseas was fierce; in 1979, the United States exported \$37.0 million in turkey meat and the Dutch exported \$12.6 million.

The Dutch supplied \$66 million worth of cheese to the United States in 1979 (a very small percent of U.S. imports) as well as processed meats, cocoa, beer, and garden seeds. U.S. agricultural exports to the Netherlands far exceed imports, with \$2.5 billion in 1979 (\$1.8 billion when transshipments are discounted) compared to \$0.4 billion imported. The Netherlands is the fourth largest market for U.S. agricultural exports (see tables 20 and 21).

Dairy Sector a Key  
Part of Dutch  
Agriculture

Dutch milk production has expanded rapidly under EC price supports and export subsidies, almost doubling between 1960 and 1979. The Dutch obtain the highest milk yields in Europe--5,042 kilograms per year--from their Friesian and red and white (Meuse-Rhine-Yssel) breeds, reflecting years of herd improvement through reliance on herd book breeding and milk production records.

The Dutch have developed a highly capitalized and efficient dairy sector. Their productivity is based, however, on high energy consumption and capital intensiveness. With energy costs rising and interest rates high, some question remains as to their future viability compared to the more pasture-extensive production systems.

Prices for dairy products in the EC are supported at well above world levels by intervention buying and an external tariff. In order to make Dutch products competitive abroad, export refunds (subsidies) are granted. These are set every 4 weeks by the EC Commission and are based on the difference between EC and third-country prices. Aided by EC subsidies, Dutch dairy exports have expanded from \$215 million in 1960 to \$2.2 billion in 1979. Cheese made up over a third of the value of Dutch dairy exports in 1979, followed in order of importance by butter, dry milk, and condensed milk and cream. Dutch dairy products are exported to almost every country in the world, but the largest share goes to EC partners, which took an average of 63 percent of all Dutch dairy exports since 1974. Dutch exports to the EC-9 have expanded somewhat since the founding of the Common Market, totaling between 55 and 65 percent of all dairy exports in 1978 and 1979 compared with only 45 percent in 1960. EC support prices, the growth of the European market, and increasing competition in non-EC markets have been factors leading to this shift (table 22).

Greenhouse Industry  
Also Important

Besides the feed-livestock complex, Holland also has a large greenhouse industry (7,878 hectares under glass in 1977) and exports seeds, potted plants, and some vegetables. The entry of Spain into the Common Market will pose particular problems for the Dutch greenhouse industry where Spanish cultivation under plastic and heated by the sun is considerably cheaper than Dutch gas-heated greenhouses. The Dutch are also important producers of potatoes and onions, both seed and ware, for domestic consumption and export.

Overall Situation  
of Dutch Agricultural  
Trade

A large surplus in the live animal and animal products category provided the Netherlands with a substantial agricultural trade surplus in 1979. The values of the other principal categories of agricultural trade were in approximate balance (table 23). Nevertheless, it is interesting to note that the quantities imported far exceeded the quantities exported while the values imported and exported were comparable. This points again to the value-added nature of Dutch agricultural production and exports. Export unit values exceeded import unit values giving favorable "terms of trade" throughout the period. The "terms of trade" (the ratio of the unit value of exports to the unit value of imports) was 2.6 to 1 in 1979. This represents an improvement over 1959's 2.3 to 1 ratio but a decline from the high level 2.9 to 1 achieved in 1969. The four categories, "grains," "meal," "oilseeds," and "feeds and byproducts," constitute bulk commodity imports for the feed-livestock and milling industries and comprise a particularly large amount of imports, 54 percent by weight in 1979. Of the category "feeds and byproducts," the larger share, 94 percent by weight, is from milling byproducts imported for feed preparations. The share in imports of these same four categories fell to 35 percent in value terms in 1979. For the "beverages" and "fruits and vegetables" categories, as well as for processed foods generally, increases in imports were matched by corresponding increases in exports over the 20-year period.

Food Exports Face  
Uncertain Future  
in Changing World  
Markets

Dutch agriculture and agricultural trade have been based on premises which prevailed since the 19th century: the cheapness of overseas grains, the impracticability of shipping animal products over long distances, low shipping costs for grain, and the growing demand for livestock products in Western Europe. However, these premises are changing. Animal products have increasingly entered world trade with refrigeration and vacuum packing, and the growth in demand for livestock products in Western Europe is slowing. On the other hand, shipping costs for bulk commodities, and grain and oilseeds in particular, are increasing rapidly due to high fuel costs. Thus, the natural advantage of transforming bulk commodities to high unit-value commodities near the source of procurement will play a greater role in competitiveness on world markets. The increasing dependence of the Dutch on the tariff-protected markets of the Common Market and export subsidies are signs that some of these constraints have already been felt. The Dutch, however, will likely remain keen competitors in international markets.

<sup>1/</sup> Due to the prior SITC trade classification system for Dutch trade, quantities and values shown for 1959 and 1969 were converted to the Brussels Tariff Nomenclature classification used in 1979.

## Commercial Agricultural Exports Assisted By CCC Programs Decline In Calendar Year 1980

Commercial agricultural exports assisted by Commodity Credit Corporation (CCC) programs totaled \$1.2 billion in calendar year 1980, nearly one-fourth less than a year ago, mainly due to termination of the Export Credit Sales Program (GSM-5) in September 1980. Commercial sales financed under GSM-5 totaled \$546 million, 62 percent below last year. No funding was provided for GSM-5 after October. Corn and cotton accounted for over two-thirds of the commodities financed under the GSM-5 program in calendar year 1980. Export credits assisted commercial exports to 18 countries. Over half were sales to the Republic of Korea and Poland.

Since August 1979, the Noncommercial Risk Assurance Program (GSM-101) has provided direct credit guarantees to exporters and private banks. Commercial sales financed by the GSM-101 program totaled \$703 million in calendar year 1980, compared with \$162 million in the previous year. Cotton, wheat, and corn accounted for over two-thirds of the commodities assisted under this program in 1980. About 75 percent of the commercial exports assisted by GSM-101 went to Poland, Korea, and Peru.

### **Economics and Statistics Service**

The Economics and Statistics Service (ESS) collects data and carries out research on food and nutrition, international agricultural trade, natural resources, and rural development. The Economics unit researches and analyzes production and marketing of major commodities; foreign agriculture and trade; economic use, conservation, and development of natural resources; trends in rural population, employment, and housing and rural economic adjustment problems; and performance of agricultural industry. The Statistics unit collects data on crops, livestock, prices, and labor, and publishes official USDA State and national estimates through the Crop Reporting Board. Through its information program, ESS provides objective and timely economic and statistical information for farmers, government policymakers, consumers, agribusiness firms, cooperatives, rural residents, and other interested citizens.
