Digest

Japan Remains The Largest Market For U.S. Agricultural Exports In 1980 (see p. 4). U.S. agricultural exports to Japan, the leading market in 1980, totaled over \$6.1 billion. The value advanced 16 percent over 1979, while volume was up about 10 percent. Japan took 15 percent of total U.S. farm-product exports.

U.S. Agricultural Exports To The European Community, 1974-80 (see p. 16). Farm-product exports to the nine European Community (EC) members totaled over \$8.9 billion in 1980 and accounted for 21 percent of all U.S. agricultural exports. However, the proportion of U.S. farm-product exports to the EC declined from the 25-28 percent range 5 years ago, largely because commodities subject to variable import duties remained static.

Exports Continue To Expand In Calendar Year 1980; Markets Shift (see p. 35). Sharp increases in exports to Mexico and China more than offset a steep decline in shipments to the U.S.S.R. and changed the pattern of leading foreign markets significantly during 1980. Tables show the top 25 markets for U.S. agricultural products in 1980 and a 6-year series of farm exports to 50 major destinations by commodity groups.

U.S. Agricultural Exports Up 14 Percent In First Half Of Fiscal Year 1981 (see p. 56). U.S. farm-product exports totaled \$24.3 billion during the first 6 months of fiscal year 1981, 14 percent above the same months a year earlier. Shipments amounted to a monthly record \$4.7 billion in March with large movements of wheat, feedgrains, soybeans, and soybean meal. The agricultural export forecast for 1980/81 is now expected to reach \$46 billion.

U.S. Agricultural Imports Rise 3 Percent In First Half Of Fiscal Year 1981 (see p. 86). U.S. agricultural imports of \$9.2 billion in the first 6 months of fiscal year 1981 were slightly higher than in fiscal year 1980. A 20-percent value rise in competitive products--mainly sugar--offset a value decline for noncompetitive imports.

Selected Prices Of International Significance (see p. 105). Agricultural commodity prices were generally steady to slightly lower in March and April. Grain and oilseed export prices at gulf ports began to rise in late April, while import prices in Rotterdam continued to show mixed trends. First quarter export and import unit values averaged steady to slightly higher.

U.S. Agricultural Exports Under Public Law 480 Decline In Calendar Year 1980 (see p. 111). Concessional agricultural exports under Government programs in 1980 totaled nearly \$1.4 billion, 7 percent less than in 1979. Shipments under P.L. 480 of \$1.2 billion fell by 3 percent; volume fell 10 percent. AID disbursements dropped more than one-fourth in value.

Japan Remains The Largest Market For U.S. Agricultural Exports In 1980

by

William T. Coyle 1/

U.S. agricultural exports to Japan in 1980 increased 10.2 percent in volume and 16 percent in value over 1979. Coarse grains, soybeans, wheat, cotton, meat and poultry, cattle hides, tobacco, and citrus accounted for about 86 percent of the record \$6.11 billion of U.S. agricultural exports to Japan. Japan remained the largest single-country market for U.S. agricultural exports, taking about 15 percent of the total.

U.S. agricultural imports from Japan increased 11 percent to \$99 million in 1980, leaving the United States with a \$6.01 billion surplus in its agricultural trade account with that country. Canned mandarin sections, dried mushrooms, monosodium glutamate, sesame oil, macaroni, and rice wine were among the most important items, accounting for about 40 percent of the total value.

The increased level of U.S. exports in 1980 occurred despite a general decline in Japan's demand for imported agricultural products. The total value of agricultural imports increased 6.5 percent, but volume was off more than 8 percent. U.S. competitiveness and shifts in trading patterns resulting from the U.S. grain suspension to the U.S.S.R. were largely responsible for increases in the U.S. share of many commodities, including pork, poultry, wheat, coarse grains, forage products, soybeans, cotton, and tallow. The U.S. share of beef and veal, cattle hides, soybean meal, tobacco, and peanuts, however, lost ground. The U.S. share of total Japanese agricultural imports increased from 36.9 percent in 1979 to 40.2 in 1980.

Little growth in personal consumption expenditures and high commodity prices were responsible for the drop in import demand. The economy expanded 4.8 percent, a healthy rate by Organization for Economic Cooperation and Development (OECD) standards but below Japan's 1979 performance. Growth was sustained primarily by external demand and business investment not by personal consumption expenditures. Average household expenditures on all items declined 0.4 percent and on food items 1.1 percent as consumers were more cautious and increased their savings. Cutbacks in luxury food items such as meat, fresh fish, shellfish, and eating away from home were notable.

1/ Agricultural Economist, Asia Branch, International Economics Division, Economics and Statistics Service. The author would like to acknowledge the assistance of Lois Caplan in preparing the statistical tables.

Price increases on imported and domestic agricultural products contributed to a 7.7-percent increase in retail food prices, the same as the general rate of inflation. Import prices of sugar (up 94 percent), barley (up 31 percent), sorghum (up 25 percent), and corn (up nearly 20 percent) showed the most dramatic increases. Price declines were registered for cattle hides (down 34 percent), tobacco (down 34 percent), pork (down 2 percent), soybeans (down 2 percent), and poultry (0.6 percent). Domestic agricultural production declined 6.6 percent, pushing up prices of many fresh vegetables.

U.S. agricultural trade with Japan is most affected by developments in its feed-livestock economy and indirectly by changes in its rice policy. Much of the \$2.1 billion in U.S. coarse grain exports in 1980 was used in formula-feed production, which declined slightly last year. Increases in the marketings of poultry and beef rations were more than offset by declines in hog and dairy rations. Despite no growth in total coarse grain imports, the U.S. share increased significantly from 65 percent to 84 percent. The shares of other major suppliers of coarse grains were down. Argentina, which normally supplies more than 2 million tons of sorghum, supplied only 79,000 tons as it redirected its supplies, principally to the U.S.S.R. The proportion of soybean meal used in formula feed edged up in 1980, leading to some increase in import demand for soybeans. Concern about the previous year's U.S. drought and rising prices led to speculative purchases and stock buildups that will be drawn down in 1981.

The lack of growth in formula-feed production resulted from slow expansion in the livestock sector. Livestock production increased only 2.4 percent in 1980 compared with 6.5 percent in 1979 and an average of 4.9 percent per year over the past decade. Rising input prices, particularly a 13-percent average increase in feed prices, and weak consumer demand led to a 7.6-percent deterioration in livestock profitability.

Japan's livestock industry went through an adjustment period in 1980. Of all livestock activities, pork and poultry production showed the greatest growth, although modest when compared with the previous year. Pork output was up 3.2 percent compared with 11.4 percent in 1979. Profits in hog production, as in other livestock enterprises, were seriously squeezed during the year with feed prices increasing 14 percent and hog prices up only 3.5 percent. As of November 1980, total hog numbers were down 1.7 percent, with sow numbers off 3.0 percent. Government intervention stocks that had accumulated during November 1979-April 1980 were returned to the market as wholesale prices gradually strengthened through the year. Some of the adjustment was shouldered by foreign producers, as voluntary restraints and a variable levy system reduced pork imports by 18.2 percent.

Broiler meat production increased 4.6 percent compared with 9.1 percent in 1979. The Ministry of Agriculture, Forestry, and Fisheries (MAFF) urged producers to stabilize prices through cutbacks in production. Poultry imports were down only slightly from 1979.

Egg production showed only a 0.5-percent increase as producers tried to keep production in line with declining per capita egg consumption. A voluntary program to limit flock sizes helped stabilize egg prices through the year and prevented serious deterioration in profitability. Imports of egg products were off about 10 percent in 1980.

Expansion in cattle numbers slowed in 1980 to 2.8 percent compared with 3.5 percent the previous year. Beef production increased 4 percent to 418,000 tons with 68 percent coming from dairy breed animals, either fattened dairy steers or culled cows. Producer prices for fattened beef as well as feeder stock generally declined during the year as cattle feed prices increased almost 13 percent. Beef and veal imports in 1980 declined somewhat despite a slight increase in the import quota to 134,800 tons for Japanese fiscal year (JFY) 1980 (April 1980-March 1981). The Livestock Industry Promotion Corporation (LIPC), which handles most of Japan's beef imports, reduced its purchase plans and pushed back arrival times because of weakening demand.

Milk production, which has been excessive in recent years, was up only 0.5 percent in 1980. A Government campaign to encourage culling low-productivity cows has helped curb milk production but has put downward pressure on prices of lower quality beef. In addition, deficiency payments for manufactured milk have not been raised, and the total amount eligible for Government support has remained unchanged. Imports of most dairy products with the notable exception of compound butter (70 percent butter mixed with 30 percent vegetable fats) declined.

Japan's rice policy had an indirect but significant impact on U.S. agricultural trade in 1980. The Government was successful in reducing rice production (weather reduced yields as well) and disposing of some of its 4.8 million tons of surplus rice, but its efforts cost the United States an estimated \$30 million in wheat exports to Japan (about 4 percent of total U.S. wheat exports to Japan in 1980), and competition from Japanese exports reduced U.S. rice export revenues.

Pricing policy, a diversion program, and a surplus disposal scheme are the essential components of Japan's rice policy. The trade losses arose because of the dual emphases of these combined programs:

--Increasing rice utilization through (1) exporting rice surpluses, thereby competing with U.S. rice exports in third-country markets, especially Indonesia and South Korea, and (2) adjusting rice and wheat wholesale prices to encourage greater domestic consumption of rice and less of wheat.

--Reducing rice production by diverting land to other crops such as wheat, forage crops, and soybeans that compete with U.S. imports.

To limit the disruptions in the rice export market, which affect other rice exporters besides the United States, Japan agreed in April 1980 to limit its rice exports to 1.6 million tons (brown basis) between 1980 and 1984. This action came after U.S. rice interests filed a section 301 complaint with the United States Trade Representative (USTR). The complaint was subsequently withdrawn. The 420,000 tons specified for the period April 1980 through March 1981 were exceeded, however, because of large emergency shipments to South Korea.

Japan's subsidies to its rice-related program totaled about \$5.2 billion in 1980, about one-third of the country's total agricultural budget. Almost 60 percent of this budget was used to support the producer price at a level about \$150 above the resale (wholesale) price and more than three times the world level. High producer and resale prices have led to persistent problems of overproduction and declining consumption. To cope with this problem, the Government implemented a surplus disposal program in 1979 and a rice land diversion program in 1978. Both programs are currently in force.

About \$1.4 billion was spent on the diversion program in 1980. To date almost 600,000 hectares (about 1.4 million acres) of land that were previously in rice production have been shifted to other uses. Nearly half of that land now produces feed crops, soybeans, and grains, which reduces Japan's reliance on imports of those crops. Japan's wheat imports declined 4.1 percent in 1980 due in part to increased domestic wheat production. Given current trends, an additional 175,000 hectares (432,000 acres) will have to be diverted to bring rice consumption and production into balance by 1990.

About \$750 million of the 1980 subsidies went for the disposal of rice through increased exports and through using rice for industrial uses. Japan's rice exports since 1969 have been erratic and have generally been sold on terms favorable to the buyers and at prices below the prevailing world price. Japan's rice exports of 720,000 metric tons in 1980 were the second largest in its history. The current disposal program also calls for an additional 300,000 tons of rice to be diverted each year to

"industrial" uses. However, since that term includes chiefly traditional foods (sake, soybean paste, soy sauce, rice cakes, and rice flour), it is unlikely that such an additional amount could be absorbed.

During the first surplus disposal program (1969-74), the Japanese used rice in animal feed and found it to be a suitable ingredient so long as the proportion of rice did not exceed 10 to 20 percent of the total ration. In the 3 years that the feed substitution program was in effect (1971-73), 3.1 million metric tons of rice were fed, displacing primarily imported corn and sorghum. No rice was used in feed during the first 2 years of the current disposal program, although its use is contemplated for 1981.

Japan's raw cotton imports declined 2 percent in 1980 as cotton spinners faced another poor year. The U.S. share of this market increased slightly to a historical high of 44 percent but volume was unchanged. With raw cotton prices 12 percent higher than in 1979, weak domestic demand, and keen competition from imported yarn and cotton goods, the Japan Spinners Association instituted a voluntary cutback program in the summer of 1980. The industry may ask the Ministry of International Trade and Industry (MITI) for permission to establish an "anti-recession cartel" to impose more drastic restraints.

Nontariff concessions resulting from U.S.-Japan bilateral trade negotiations in late 1978 covered fresh oranges, citrus juice, and high-quality beef. It was agreed that import quotas on fresh oranges and citrus juice be expanded incrementally from JFY 1979 through JFY 1983 to reach levels of 82,000 and 12,500 tons, respectively. Japan's fresh orange imports have expanded on schedule. Between 1977 and 1980, total imports more than tripled, reaching 71,144 tons, with almost all coming from the United States. Orange and grapefruit juice imports have increased more or less as prescribed, although the U.S. share of orange juice imports has declined with strong competition from Brazil.

There is no specific quota for high-quality beef. The United States was assured, however, that imports of high-quality beef would expand under the general and hotel quotas. Total U.S. beef imports did not grow in 1980, but they have more than tripled since 1977, with much of the expansion in the general quota having been filled with high-quality beef. The U.S. share of total beef imports has increased from 8.3 percent in 1977 to 18.5 in 1979 and 18.0 in 1980.

Outlook

The Japanese economy is forecast to show real growth of about 4.5-5.0 percent in 1981. Wholesale and consumer price increases are expected to moderate, and personal consumption expenditures will recover and contribute relatively more to economic expansion.

Interest rates declined further in the first quarter of 1981. Exports will expand at a slower rate because of pressure from major trading partners and a stronger yen. Agricultural imports will expand in 1981, although there is considerable uncertainty about Japan's livestock sector. If personal consumption expenditures expand as expected, then growth in demand for livestock products should recover to some extent. Whether the increase is supplied by domestic or foreign producers will depend on profitability in Japan's livestock industry. As noted earlier, profitability deteriorated in 1980 for all major categories of livestock. An increase in feed prices in January 1981 will make recovery even harder. Imports of feedstuffs are expected to show some growth, responding to modest growth in beef and broiler production and little or no increase in egg, pork, and milk production. Soybean imports will be off as larger than normal stocks are drawn down.

Japan's rice program will continue to have a variety of effects on agricultural trade. In April 1981, the wheat and rice resale prices were increased 5.60 and 3.15 percent, respectively. This should have a slight negative impact on per capita consumption and import demand for wheat. The diversion target for 1981 has been raised to 640,000 hectares, 9.4 percent greater than the 1980 area. Increased production in selected priority crops will improve Japan's self-sufficiency but reduce import demand for those commodities concerned. Japan could feed as much as 500,000 tons of rice in JFY 1981. This and as much as 700,000 tons in rice shipments by the end of August to South Korea will help reduce surplus rice stocks to about 2 million tons by the end of the year. Such action, however, will displace corn and sorghum imports destined for livestock feed and have a negative effect on world rice prices.

U.S. Agricultural Exports To The European Community, 1974-80

The nine-member European Community (EC) collectively represents the largest market for U.S. farm-product exports. These member countries took over \$8.9 billion during 1980, up 16 percent from the \$7.6 billion recorded in 1979. Most of the growth in U.S. agricultural exports over the last 6 years occurred in commodities not subject to the EC's variable import levy system.

In 1980, nonvariable levy items accounted for 78 percent of the total U.S. agricultural export value to the EC compared with less than 60 percent in 1975. Principal nonvariable levy products were soybeans, soybean meal, tobacco, and corn gluten feed, which enter duty-free or at relatively low duty rates. Oilseeds currently account for nearly 45 percent of total U.S. agricultural exports to the EC, with soybeans for processing into high-protein feed ingredients reaching a record \$2.6 billion in 1980. Commodity exports subject to EC's variable rate duties such as grains and poultry products have shown little or no growth during the 1975-80 period.

During 1980, over 21 percent of all U.S. agricultural exports went to EC members. For soybeans and oilcake meal, EC markets absorbed one-half of U.S. shipments and virtually all of the \$475 million in corn gluten feed shipped. Farm-product export shares to the EC have declined over the 6 years from 25 percent in 1974-75 and 28 percent in 1976-77.

West Germany, the Netherlands, Italy, and the United Kingdom rank among the top 10 destinations and took a total of over \$7.2 billion in 1980. Although the Netherlands ranks well ahead of other EC destinations in statistics released by the U.S. Census Bureau, many agricultural commodities are transshipped through Holland to other countries. These transshipments, estimated at one-third of the total agricultural export value to the Netherlands in 1980, move primarily to West Germany by river barges and rail carriers. About \$744 million of the nearly \$1.2 billion in U.S. farm products transshipped through the Netherlands in 1980 went to West Germany (see table 10 on page 55).

1/ PRELIMINARY. 2/ GRAINS, POULTRY, AND PORK WERE SUBJECT TO VARIABLE LEVIES BEGINNING ON JULY 30, 1962; RICE, ON SEPT. 1, 1964; AND BEEF AND DAIRY PRODUCTS, ON NOV. 1, 1964. 3/ LARD FOR FOOD IS A VARIABLE-LEVY COMMODITY. WHILE LARD FOR INDUSTRIAL USE IS BOUND IN THE GENERAL AGREEMENT ON TARIFFS AND TRADE (GATT) AT 3 PERCENT AD VALOREM, U.S. LARD IS FOR FOOD USE. 4/ ALTHOUGH CANNED POULTRY LEVY ON SUGAR-ADDED CONTENT.

Exports Continue To Expand In Calendar Year 1980; Markets Shift

Leading export markets for U.S. farm products shifted significantly in 1980. Sharp increases in exports to Mexico and China more than offset a steep decline induced by the suspension in sales to the U.S.S.R.

Total agricultural exports to all foreign countries reached a record of \$41.3 billion compared with \$34.7 billion in 1979 and just under \$22 billion 5 years ago. Japan continued to be the largest market by a wide margin followed by West Germany (table 6).

Farm-product shipments to Mexico surged dramatically in 1980 after drought conditions damaged feedgrain, oilseed, and vegetable crops. Most of the \$1.5 billion increase between 1979 and 1980 stemmed from larger shipments of feedgrains, oilseeds, and dried beans.

Agricultural exports to the Netherlands totaled about \$2.3 billion after adjustments for transshipments, or 13 percent above the previous year's level. Farm-product exports to the People's Republic of China more than doubled 1979's value, reaching a record of nearly \$2.3 billion. Wheat, cotton, and soybean shipments contributed to the increase, while corn exports to China dipped below 1980's level. Wheat exports nearly quadrupled to over \$1 billion, elevating China to the principal overseas buyer of U.S. wheat.

Farm-product exports to the U.S.S.R. fell 62 percent in 1980 from their \$3.0 billion high during 1979. Shipments of grain to the U.S.S.R. ceased in April following imposition of the grain export suspension and did not resume until October. The U.S.S.R. fell to 11th place among foreign markets in 1980 from second position during 1979.

U.S. agricultural exports to Eastern European countries edged upward to nearly \$2.1 billion in 1980 from \$1.9 billion the previous year but nearly doubled their 1978 value. Increases to Romania, Bulgaria, and East Germany more than compensated for a decline in shipments to Poland. Grain and soybean meal accounted for 80 percent of total U.S. agricultural exports to Eastern Europe.

Spain and Portugal emerged in 1980 as the leading Western European destinations for U.S. feedgrains after the U.S.S.R.'s purchase of Argentine grain supplies.

Several other countries became relatively more important among the largest markets during 1980, including Egypt, Venezuela, Indonesia, and Nigeria. Conversely, Poland and Iran's rankings dropped sharply.

U.S. Agricultural Exports Up 14 Percent In First Half Of Fiscal Year 1981

by

Stephen R. Milmoe

U.S. farm exports during October-March 1980/81 amounted to \$24.3 billion compared with \$21.3 billion a year earlier, a 14-percent increase. Continued strong shipments of grain were augmented in March by unusually heavy soybean and soybean-product exports. Prices remained steady. Record farm exports of \$4.7 billion in March indicated a renewed strength in the critical exports of wheat, feedgrains, and soybean meal and had the effect of stabilizing the U.S. agricultural export forecast for fiscal year 1981 at \$46 billion.

The net effect of the U.S.S.R.'s reentry into the U.S. grain and oilseed market on April 23, 1981, has yet to be determined. Although the U.S.S.R. is expected to buy additional amounts of agricultural products over the remainder of the fiscal year, the pattern of Argentina's grain exports is still uncertain.

Prospects for another record year for U.S. corn exports has pushed the export price at the gulf up to \$142 per metric ton for March, or \$32 per ton above year-earlier figures. Shipments through March totaled 34.4 million tons, of which 7.0 million tons went to Japan. Other significant markets included the U.S.S.R., Mexico, Poland, Brazil, Korea, and Africa.

Wheat exports during the January-March quarter, ordinarily the lightest quarter, averaged 3.5 million tons per month versus 2.4 million tons the year before. China has already taken 4.2 million tons, or one-fifth of total U.S. wheat exports. The U.S.S.R. was the next largest market at 2.7 million tons. Nearly 1.7 million tons have already been shipped to Japan, one of our most consistent buyers. Other significant wheat markets during March include Mexico, Egypt, Iran, Peru, Lebanon, and South Africa. Although the March price at the gulf for hard winter wheat fell \$6 per ton from February, it was still \$13 per ton above levels of a year earlier.

U.S. rice exports to Korea remained high in March. At 656,000 tons in the October-March period, they were twice the level of a year earlier and 40 percent of total U.S. rice exports. Other major U.S. rice markets showing increases over the first 6 months of fiscal year 1981 included Saudi Arabia, Africa (excluding North Africa), and South America.

Oilseed and product exports, a major component of U.S. agricultural trade, have slowed during fiscal year 1981. Sluggish demand for soybeans and products, exacerbated by an excellent crop in Brazil, has had a dampening effect on prices. The Rotterdam price for U.S. soybeans fell from \$363 per metric ton in November

1980 to \$298 in February 1981. Soybean meal and oil had similar fates, falling \$68 and \$105 per ton, respectively, over the same period.

U.S. soybean exports in the first half of fiscal year 1981 totaled 12 million tons compared with 14 million the previous year. Shipments to Western Europe have picked up recently but are expected to end the current fiscal year 15-18 percent below the year-earlier level. More attractive alternatives such as soybean meal, corn, corn gluten feed, and citrus pulp are being used more widely. Nevertheless, Mexico, Taiwan, and Japan, the largest buyer, have shown strength in this otherwise sluggish market.

Record soybean meal exports of 855,000 tons in March brought the October-March total to 3.65 million tons, 9 percent below a year earlier. Soybean meal exports have apparently benefited from the reluctance by many importers and feeders to hold stocks of soybeans for crushing due to high interest rates. The strength of meal demand in Western and Eastern Europe raised the fiscal year 1981 projection for soymeal exports by 400,000 tons to 6.5 million tons.

Soybean oil exports during October-March were 43 percent below the year-earlier level. Factors that have contributed to this situation include: (a) the absence to date of Iran and India, usually the largest U.S. markets, (b) high global stocks of soybean oil at the end of fiscal year 1980, and (c) the competition from other vegetable oils, particularly Malaysian palm oil and Brazilian soybean oil.

The U.S. cotton export estimate was raised to 6.0 million bales, or 1.3 million tons, for fiscal year 1981, in light of the significant, albeit unexpected, demand to date. Exports amounted to 755,000 metric tons during October-March. Export prices are nearly \$400 per ton above their year-earlier levels.

Japan will remain the largest U.S. market for farm products in fiscal year 1981, having bought heavily in the first half of the fiscal year. U.S. exports of red meats, poultry, wheat, corn, and soybeans to Japan were unusually strong in the first half, bringing total agricultural imports from the United States to \$3.8 billion. Imports by Japan are expected to slow 20-25 percent in the second half.

Mexico has already taken \$1.6 billion in U.S. farm products this fiscal year and looks to take another \$1.1-1.3 billion, making it our second largest market. The major U.S. commodities exported include corn (\$388 million), grain sorghum (\$210 million), dried beans (\$205 million), soybeans (\$148 million), and wheat (\$134 million).

Corn exports to Africa remain very large at 1.4 million tons versus 833,000 tons the previous year. A portion of this total went to the drought-affected areas in East Africa below the Sahel. Scheduled reductions in P.L. 480 shipments and the inability of many of these countries to pay rising food bills with declining import revenues may slow down grain imports from the United States for the remainder of fiscal year 1981.

1/ PRELIMINARY

U.S. Agricultural Imports Rise 3 Percent In First Half Of Fiscal Year 1981

U.S. agricultural imports of \$9.2 billion in the first 6 months of fiscal year 1981 were 3 percent higher than a year earlier. A value rise in competitive products--mainly sugar--offset a value decline in noncompetitive imports.

Noncompetitive imports totaled almost \$3.3 billion, 16 percent less than a year earlier, mainly due to declines in coffee, cocoa products, rubber, spices, and tea.

Green coffee--accounting for just over half of all noncompetitive products--totaled \$1.7 billion, 23 percent less than the previous year. The quantity imported fell only slightly as unit import prices dropped from \$1.76 per pound in the first half of fiscal year 1980 to \$1.36 per pound in fiscal year 1981. Brazil was the principal supplier, providing about 20 percent of the total volume compared with only 8 percent in fiscal year 1980. Colombia was the second leading supplier with 14 percent of the total compared with 21 percent a year earlier. El Salvador and Indonesia were the other major suppliers in fiscal year 1981, both providing more than in fiscal year 1980. There were volume declines in imports from Mexico, Guatemala, the Dominican Republic, Peru, and Uganda.

Crude rubber, the second leading noncompetitive import, declined 14 percent in value, reflecting a drop in U.S. industrial demand. In contrast, cocoa beans, the third-ranking noncompetitive import, rose 18 percent in value and 75 percent in volume after prices fell by about one-third from 1979/80 levels.

Competitive imports of \$5.9 billion were nearly one-fifth higher than a year earlier, mainly due to sugar. Sugar imports of about \$1.3 billion were nearly double 1979/80 levels, due entirely to higher prices. The quantity of imported sugar fell 8 percent to 1.9 million tons as import prices more than doubled.

Meat and product imports of \$1.2 billion declined slightly because of a 10-percent drop in fresh and frozen beef and veal imports, which account for two-thirds of all meat imports. Lower U.S. prices and tight supplies in major exporting countries caused most of the reduction. Pork imports, mostly from Canada and Denmark, gained about 20 percent in value but only 12 percent in quantity as prices rose about 6 percent.

Other value increases among competitive items occurred mainly in dairy products (20 percent), poultry products (62 percent), hides and skins (13 percent), fruits and preparations (10 percent), and wine (16 percent). Most of the gain in fruits occurred in concentrated orange juice from Brazil due mainly to the winter freeze in Florida.

Value declines occurred in imports of live animals, vegetables, vegetable oils, and tobacco. Live animal imports--chiefly dutiable cattle--fell by about 30 percent mainly because of higher prices in Mexico, a major supplier. Vegetables and preparations declined 6 percent, mainly for tomatoes, cucumbers, peppers, and olives. Tobacco import values declined 8 percent, but the quantity imported remained about the same as prices dropped. Vegetable oil imports fell 4 percent in value, but because import unit prices dropped by about 30 percent (mainly for coconut and palm oils), the quantity of imported vegetable oils rose nearly 40 percent.

1/ PRELIMINARY

Selected Prices Of International Significance

Export Prices

Agricultural commodity prices at U.S. gulf ports increased in April after a decline in March. During the first half of April, prices were steady but then increased during the last 2 weeks. The price of wheat at the gulf rose to \$181 a metric ton in April, \$5 above March's average but \$3 below February's price. Corn declined \$1 a metric ton in March but increased \$1 in April to \$146 a metric ton. Soybean prices increased 4 percent in April over the previous month's average to \$297 a metric ton, a gain of 31 percent over the same month in 1980.

U.S. commodity prices in Rotterdam continued lower in March and April. U.S. hard winter wheat settled at \$212 a metric ton, down 6.1 percent from February. Dark Northern spring wheat declined 12.5 percent from February to \$209 a metric ton. Corn rose \$3 a metric ton in April to \$166, a 24 percent increase from April 1980.

The change in prices for U.S. export commodities at the gulf, denominated in gold, varied for wheat, corn, and soybeans. The gold equivalent price of wheat first declined to 0.35 ounce per metric ton in March but recaptured this loss in April as it rose back to the February level of 0.37. The gold equivalent price of corn steadied at 0.29 ounce per metric ton over the past 3 months (February through April). Soybeans denominated in gold increased both in March and April to 0.57 and 0.60 ounce per metric ton, respectively.

Import Prices

The New York spot price of coffee has not varied more than a few cents per pound since last October when the International Coffee Organization instituted export quotas. The April average was \$1.25 per pound.

The New York spot prices for both sugar and rubber continued their decline for the sixth consecutive month. Japan, the third largest importer of sugar, has increased domestic production, which has put a downward pressure on already declining sugar prices. Sugar sold for 20 cents a pound in April, a 33-percent decrease from the 1980 average price of 30 cents a pound. After peaking in October 1980 at 80.2 cents a pound, the price of rubber declined to 60.4 cents a pound in April. It has not been at this level since the first quarter of 1979.

For the sixth consecutive month, the Dow Jones Commodity Spot Price Index declined to 411 in April (1950 = 100), and was 1 percent below the year-earlier index.

First Quarter Export and Import Unit Values

The export and import unit values for leading U.S. agricultural trade commodities are moving in the same direction as international price quotations, although with some time lag. The average export unit value index of the first quarter of 1981 was

only 1 percent higher than the previous quarter, while it was 12 percent higher than the first quarter of 1980. Grain sorghum, rice, corn, and cotton increased 13, 8, 7, and 5 percent, respectively, over the fourth quarter of 1980, but they were 2, 28, 25, and 27 percent higher than the first quarter of 1980. While soybeans were 19 percent higher in January-March 1981 than in the same period in 1980, they kept the same price level as October-December 1980. Although the unit values of cattle hides and nonfat dry milk decreased from the first quarter of 1980, they were priced higher than in the fourth quarter. Corn by-product and soybean oil unit values decreased 1 and 7 percent, respectively, from the previous quarter and decreased 2 and 3 percent from the first quarter of 1980.

The overall import unit value index was 2 percent lower in the first quarter of 1981 than in the same period during 1980 and 5 percent lower than the previous quarter. The downward trend of coffee prices has steadied since the International Coffee Organization instituted export quotas in October 1980. The unit value for coffee was only 7 percent lower than the previous quarter, while it was 24 percent lower than January-March 1980. Compared with the first quarter of 1980, the downswing in cocoa bean unit values for the first quarter of 1981 was slower also; it was as much as 35 percent lower than January-March 1980 but only 5 percent lower than October-December. The unit value for sugar continued to decline; it was 4 percent lower than the previous quarter, although it was 70 percent higher than the first quarter of 1980.

1/ UNIT VALUES WERE COMPUTED FROM THE VALUE AND QUANTITY FIGURES PUBLISHED IN FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES.

U.S. Agricultural Exports Under Public Law 480 Decline In Calendar Year 1980

Concessional agricultural exports under all Government-financed programs in calendar year 1980 totaled nearly \$1.4 billion, 7 percent less than in the previous year. Public Law (P.L.) 480 shipments of \$1.2 billion declined primarily because of lower Title I credit sales. Agency for International Development (AID) disbursements' value dropped more than one-fourth in 1980.

Egypt--by far the leading recipient of concessional agricultural exports in 1980--received \$404 million, or almost 30 percent of the total food aid. Title I credit sales accounted for 57 percent of all food aid to Egypt, with most of the remainder under AID programs. India, the second largest recipient, got \$102 million under Title II, about one-third less than in 1979. Other major recipients in 1980 were Bangladesh, Indonesia, Pakistan, Somalia, Portugal, and Sudan. Africa, excluding the northern area, was the main region where Government programs increased in calendar year 1980, with substantial increases in P.L. 480 exports going to countries such as Somalia, Sudan, Kenya, Senegal, Zambia, Tanzania, Ethiopia, and Uganda.

U.S. commercial exports reached a record of nearly \$40 billion in 1980, one-fifth higher than the previous year. Government program exports accounted for only 3 percent of all U.S. agricultural exports, with the concessional share ranging between 4 and 7 percent of the total since 1973. U.S. commercial exports reached record levels in calendar year 1980 to several P.L. 480 recipient countries, including Bangladesh, Chile, the Dominican Republic, Egypt, Indonesia, Republic of Korea, Morocco, Peru, the Philippines, Portugal, and Tunisia. Cash sales to Korea of nearly \$1.8 billion in 1980 made it the seventh leading dollar market. Most of the gains were in exports of rice, wheat, and cotton, all provided to Korea under concessional programs in previous years. Korea will become a full commercial market in 1981 with the termination of food aid programs to that country after fiscal year 1981. Portugal was the 14th leading cash market in 1980 as U.S. commercial sales--mainly wheat and corn--reached \$568 million.

Exports under P.L. 480 Title I long-term dollar credit sales of \$759 million in 1980 declined by 8 percent in value and 17 percent in volume from 1979. Title I exports went to 32 countries; however, six countries--Egypt, Indonesia, Bangladesh, Pakistan, Portugal, and Korea--accounted for nearly two-thirds of the total. Wheat, accounting for nearly half the value of all Title I exports in 1980, fell by 19 percent in value and 27 percent in quantity due to rising prices. Egypt was the principal recipient of the wheat followed by Bangladesh, Sri Lanka, Bolivia, Korea, and Sudan.

Rising prices caused rice, the second most important commodity under Title I, to drop 9 percent in value and 29 percent in volume, with Indonesia receiving 46 percent and Peru receiving 15 percent.

Corn, the third main commodity under Title I, more than doubled in value but rose less in volume, going mainly to Portugal, Egypt, Zambia, the Dominican Republic, and Korea. Title I exports of wheat flour, going mostly to Egypt, and cotton fell more in volume than value in 1980, while soybean oil, going mainly to Pakistan, and cottonseed oil rose in both value and quantity. No tobacco was exported under Title I in 1980.

Record shipments under Title II donations of \$458 million--one-third of all concessional exports--were 5 percent higher than 1979's record. Donations shipped through voluntary relief agencies--56 percent of all donations--were 7 percent less than a year earlier, and those shipped through the World Food Program accounted for 30 percent of all donations compared with about 20 percent the previous year. Principal commodities under Title II in 1980 were soybean oil, 17 percent of the total; bulgur wheat, 16 percent; corn-soya-milk, 14 percent; wheat and rice, each about 10 percent; wheat flour, 9 percent; corn, 7 percent; and nonfat dry milk, 5 percent. Exports of all these commodities except bulgur wheat and soybean oil rose in value during 1980.

AID disbursements of \$173 million were about 26 percent less than in 1979 mainly due to a change in AID accounting of funds for Israel. Over half of all AID disbursements went to Israel during 1975-79. AID began in mid-1979 to extend financial loans and grants to Israel without recording the specific commodity purchases made with these funds. The purchases are only recorded by the Bureau of Census under total U.S. exports of the particular commodity to Israel. Almost all AID disbursements (mainly inedible tallow, tobacco, corn, and poultry) in 1980 went to Egypt, which got 72 percent more under AID than in 1979.

Wheat, valued at \$417 million, was the leading agricultural commodity shipped under concessional programs in 1980, accounting for about 30 percent of all Government program exports. The value of concessional wheat exports (mostly under Title I) declined 13 percent from the previous year, while the quantity fell 21 percent because of rising prices.

Rice and corn, each valued at around \$170 million, were the next leading concessional commodities. The value of exported rice--nearly three-fourths under Title I--rose 5 percent, while the quantity shipped dropped 17 percent. The value of exported corn (nearly 60 percent under Title I) dropped approximately 6 percent as the volume fell 18 percent.

Among other major concessional exports, value and volume declined for wheat flour, bulgur wheat, and cotton.
