SPRINGFIELD, VA. 22161

U.S. Agricultural Exports Fell to \$39.1 Billion in Fiscal Year 1982 (see p. 1). U.S. exports of farm products dropped \$4.7 billion below those of a year earlier to \$39.1 billion due to the worldwide recession. Lower prices accounted for most of the value decline. Export volume declined only 2 percent to 158 million tons, primarily because of reduced corn and grain sorghum shipments. The agricultural trade surplus totaled \$23.7 billion, down from the record \$26.6 billion posted in 1980/81.

U.S. Agricultural Imports Dropped to \$15.3 Billion in 1981/82 (see p. 32). U.S. imports of agricultural products totaled \$15.3 billion in 1981/82, 11 percent below fiscal year 1981. Values declined for most products, notably for coffee, cocoa, rubber, beef, oilseeds and products, and sugar. Values gained for bananas, live animals, dairy products, fruits, vegetables, wine, and malt beverages.

U.S. Dollar Continues Upward Trend in World Markets (see p. 55). The U.S. dollar moved higher in 1982 in relation to other major currencies as relatively higher U.S. interest rates combined with reduced price inflation to increase the attraction of the dollar as a reserve currency.

International agricultural commodity prices in September were mixed, with food grain prices up slightly and feed grain and soybean prices lower than in August. Export and import unit value indexes declined again in the July-September quarter.

Ocean Freight Rates Decline in 1981-82 (see p. 63). Since 1980, the general level of ocean freight rates has decreased significantly. Reductions can be linked to both worldwide recession and oversupply of tonnage in the dry bulk shipping market. Rates showed a steady decline in the first three quarters of 1981 and strengthened briefly for part of the fourth quarter. The rate level continued to decline into the first quarter of 1982. Rates began to turn upward during the latter part of the first quarter due to increased chartering activity by the USSR. The short rebound was followed by a period of declining rates, which continued into the third quarter and reached levels not seen since 1978.

Prepared by the World Analysis Branch, International Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Patrick M. O'Brien, John C. Dunmore III, Thomas A. Warden, and Thomasine B. McCall. Thelma Carpenter, Fannye G. Lockley, and Mary L. Fant provided statistical support. Linda L. Hatcher, Information Division, Economics Management Staff, provided editorial support.

U.S. Agricultural Exports Fell to \$39.1 Billion in Fiscal Year 1982

U.S. agricultural exports in fiscal year 1982 fell 11 percent in value to \$39.1 billion mainly because of adverse economic conditions worldwide. Although export volume declined only 2 percent to 158.4 million tons, prices for most of the major commodities fell 10 to 20 percent. The U.S. agricultural trade surplus declined to \$23.7 billion from the record \$26.6 billion posted during 1980/81 as exports dropped more than imports.

The present worldwide recession has taken a greater toll on U.S. trade than the previous recession of 1974 and 1975, when global grain supplies were more evenly distributed worldwide, interest rates and inflation were more manageable, and the dollar was cheaper in relation to the currencies of U.S. trading partners.

Corn Exports Hardest Hit

Corn exports, the hardest hit, plummeted from 59.4 million tons valued at \$9 billion in 1980/81 to 49.6 million tons valued at \$6 billion in 1981/82. Demand for U.S. corn fell across a wide range of markets. Mexico, Japan, Poland, Italy, Romania, and Brazil together purchased 11 to 12 million tons less than in 1980/81. Increased shipments to the USSR, Spain, Korea, and China offset part of the decline. The USSR purchased 7.6 million tons valued at nearly \$1 billion.

Grain sorghum exports fared slightly worse, falling 18 percent to 6.3 million tons. Japan and Mexico accounted for 70 percent of U.S. grain sorghum exports in 1980/81, with Venezuela, Israel, and Taiwan taking an additional 17 percent. Because these top five markets absorb nearly 90 percent of all U.S. sorghum exports, sorghum exports are vulnerable to policy shifts. Exports of the record 1981 barley crop reached almost 2 million tons. The last time a barley crop of this magnitude was harvested in 1959, 2.5 million tons were exported. Drought in Spain spurred purchases of a wide range of feedstuffs, including 420,000 metric tons of U.S. barley. Other important barley markets included Taiwan, Japan, Singapore, and the European Community (EC).

Exports of wheat and products came to \$7.7 billion in fiscal year 1982. Although the value was below fiscal year 1981's peak of \$8.1 billion, export volume reached a record of over 46 million tons. China remained the largest U.S. wheat market, purchasing 8.2 million tons valued at \$1.2 billion. The USSR was the next largest market, buying 6 million tons valued at \$1.1 billion. At present the two countries are committed by agreements to importing 9 million tons of wheat annually.

Nearly half of the record 6.1-million-ton U.S. rice crop was exported in 1981/82, down from 60 percent in the previous year. The primary U.S. rice markets in fiscal year 1982,

Nigeria, Korea, Saudi Arabia, Italy, and Iraq, took most of the U.S. rice shipments. Record world production in 1981/82 severely limited U.S. exports of rice.

Soybean and Product Exports Earn Most

Soybeans and products (meal and oil) were the major U.S. export earners in fiscal year 1982 at \$8.4 billion. High grain prices in the EC in relation to nongrain feeds resulted in greater EC purchases of U.S. soybeans. The internal price for corn in the EC--no corn can enter the EC below this price--is currently \$210 to \$215 per metric ton, compared with a Rotterdam meal price of under \$200 per ton. Spain increased its purchases of U.S. soybeans by almost 70 percent to 3.1 million metric tons, making it the second largest U.S. customer. Japan remained the largest market at 4.3 million tons worth \$1.1 billion. Soybean meal exports also increased (to 6.3 million tons) but at a more modest rate of 5 percent, compared with 27 percent for soybeans. The EC was the dominant market, followed by Eastern Europe and Venezuela.

Pakistan has become the largest importer of U.S. soybean oil, gradually approaching the purchases by India and Iran in former years. Out of total U.S. soybean oil exports of 942,000 tons in fiscal year 1982, Pakistan accounted for 260,000 tons or 28 percent. Developing countries dominate this market, as most developed countries have facilities to produce adequate amounts of oil for domestic consumption through the crushing process.

Corn gluten feed exports, nearly all of which go to the Netherlands, West Germany, and the United Kingdom, grew at the rate of 16 percent annually from 1977 to 1982. Although this growth slowed during 1981/82 to 4 percent--reaching 2.8 million tons--it is still a significant element in EC feed rations. This byproduct currently enters the EC duty-free.

Animal-Product Shipments Slow Down

Exports of animal products slowed considerably in the last few months and closed out the year at 1980/81's total of \$4.1 billion. The decline in poultry meat exports was the primary source of this slowdown with the near-total loss of sales to Egypt, the second largest U.S. poultry market. Butter, beef, and cattle hides were a few of the bright spots in a sluggish export picture. Butter shipments to New Zealand, Poland, and Belgium totaled 85,000 metric tons.

Japan took virtually the same amount of U.S. red meat as it did in fiscal year 1981, but shifted 10 to 12 thousand tons from pork to beef. Exports of edible offals, or variety meats, were a record 226,000 tons or double those of a decade earlier. Since 1970, meat exports (beef, pork, and offals) have grown at an annual rate of 8 percent in volume and 17 percent in value, and now approach \$1 billion. This growth has occurred despite widespread import restrictions on meats in world trade.

U.S. exports of cotton were 23 percent above fiscal year 1981's reduced level of 1.2 million tons. Sluggish economic conditions, which appear to affect textile production to a greater extent than food production, and a bumper 1981 harvest heavily

influenced prices throughout the year. Prices fell over \$400 a metric ton--roughly 20 cents a pound--during the course of the year. Approximately one-fourth of all cotton exports--361,000 metric tons, or 1.5 million running bales--went to Japan. Taiwan, Korea, Indonesia, Hong Kong, and Western Europe also bought more U.S. cotton, easily offsetting declines to China and Canada.

Tobacco exports came to 254,000 tons in fiscal year 1982, slightly above fiscal year 1981's but 8 to 10 percent below the levels attained during 1977-80. Nonetheless, with high-quality American tobacco selling at twice the world price, exports reached a record \$1.5 billion in 1982. (Steve Milmo)

1/ PRELIMINARY

U.S. Agricultural Imports Dropped to \$15.3 Billion in 1981/82

U.S. agricultural imports totaled \$15.3 billion in fiscal year 1982, 11 percent below those of 1980/81. Values declined for most products, notably coffee, cocoa, rubber, beef, oilseeds and products, and sugar. Values gained for bananas, live animals, dairy products, fruits, vegetables, wine, and malt beverages.

Noncompetitive Imports Down 11 Percent

Noncompetitive imports--accounting for about one-third of all farm imports--fell 11 percent from fiscal year 1981. Green coffee imports of \$2.6 billion were lower than the previous year, but volume gained. Larger world supplies and reduced demand pushed average import prices down from \$1.29 per pound in 1980/81 to \$1.16 per pound. Five countries--Brazil, Colombia, Mexico, Indonesia, and Uganda--provided over one-half of total green coffee import volume in 1981/82. Purchases from Brazil and Colombia declined, but volume from Uganda rose sharply, partly due to more favorable prices.

Rubber imports dropped 25 percent in value to \$571 million, but volume increased as stocks were replenished. Over half of U.S. rubber imports came from Indonesia, with most of the remainder from Malaysia. Cocoa beans--the third leading noncompetitive import--fell more in value than volume as import prices dropped 13 percent. High interest rates and expectations of further price declines with a predicted bumper crop helped reduce cocoa imports. The Ivory Coast supplied 25 percent of cocoa bean volume, followed by the Dominican Republic, Brazil, and Ecuador. Cocoa products, spices, and tea imports also declined.

Beef, Sugar Imports Off Sharply

Competitive imports of \$10 billion were about 11 percent less than in 1980/81, mainly due to declines in beef and sugar. Beef imports dropped 14 percent to \$1.4 billion, while volume fell only slightly due to lower prices. Australia provided 47 percent of beef import volume, and New Zealand supplied most of the remainder. Fresh pork (mostly from Canada) increased, mainly due to favorable U.S.-Canadian exchange rates. Canned pork declined as a sharp drop in imports from Poland more than offset a gain in those from Denmark.

Sugar imports fell 46 percent to nearly \$1.2 billion because of substantial price declines, while volume dropped only 8 percent. Large volume increases during October-December 1981 failed to offset declines in 1982. Reduced demand was partly due to higher duties and fees imposed in January, and global and country quotas in effect during May 11 to September 30. Brazil--the major supplier--provided 20 percent of the total volume imported in fiscal year 1982, partly due to increased output. Other major suppliers were Australia, the Dominican Republic, Thailand, Argentina, and the Philippines. Reduced

output led to substantial volume declines from Argentina, Colombia, and most Central American countries. Higher output and elimination of duty-free status in April led to an almost threefold rise in imports from Thailand. Volume also increased sharply from Taiwan. A global quota of 2.8 million short tons has been set for fiscal year 1983, below the amount imported in 1981/82.

Among other competitive imports, poultry products, hides and skins, peanuts, vegetable oils, and tobacco declined. Oilseed (mostly peanut) volume fell sharply as the U.S. peanut crop recovered from 1980/81's record low. Vegetable oil imports (mainly coconut and palm oils) dropped 20 percent in value, but less in volume as prices declined. The Philippines supply most of the coconut oil, while Malaysia provides the palm oil.

Orange Juice,
Vegetables,
Live Animals,
Dairy Products,
and Beverages Up

Severe weather in Florida and California growing areas resulted in large import gains for fruits and vegetables during 1981/82. Concentrated orange juice volume from Brazil jumped by two-thirds. Canned tomatoes from Italy, Spain, Taiwan, and Israel also gained substantially. Imports of live animals (mainly cattle) rose 18 percent, partly due to favorable dollar exchange rates. Dairy-product imports rose 13 percent in value, while imports of malt beverages and wine increased 15 percent and 6 percent, respectively. (Susan Libbin)

1/ PRELIMINARY

U.S. Dollar Continues Upward Trend in World Markets

U.S. Dollar Continues Upward Movement

Calendar year 1982 has seen a sustained appreciation of the U.S. dollar in relation to other major Western currencies and the Japanese yen. Coming as a surprise to many, the strength of the dollar has shown little indication of fading as the year progressed. Most factors continue to point to a high international valuation of U.S. currency.

The high level of U.S. interest rates remains a compelling reason for those seeking to hold or purchase dollars. Combined with lowered inflation, the attraction of the relatively higher "real" rates of return in the United States has substantially increased the demand for dollars. Although interest rates are at similar relative levels in other countries, the inflation-adjusted rate clearly favors the United States. One may expect that a fall in the rate of return could lead to a somewhat weaker currency, but in the case of the dollar, any fall in interest rates will probably be echoed elsewhere; the U.S. dollar should retain its advantage.

Second, the U.S. dollar has been revived as the so-called "haven" currency for the rest of the world. Despite the current recession, the U.S. economy is viewed elsewhere as being singularly stable. With the recent dampening of inflation, the dollar has once again become a good store of value. Most important, the political and economic turmoil in other parts of the world tends to make the virtues of holding dollars stand out all the more.

The economic performance of the Japanese and West German economies has been of particular importance. Japan's export volume has slowed, and considerable evidence exists now of long-term capital investments being made overseas, especially in the United States. West Germany seems mired in economic stagnation, with very slow growth probably extending into next year.

The foreign exchange position of many developing nations is worsening. The slow economic growth and austerity programs in the West have hindered exports from the Third World, while the price of foreign exchange (mainly dollars) has risen significantly. In terms of their home currency, then, prices of imported goods may double or triple (as in Mexico) in very short periods of time.

International Agricultural Commodity Price Movements Mixed in September

Agricultural commodity price movements were mixed in September. Prices of food grains--wheat and rice--increased slightly from August, while feedstuffs--corn, sorghum, and soybeans and products--dropped. Larger than expected wheat movements into the farmer-owned reserve, slightly smaller supplies and stocks of U.S. rice, and a seasonal downturn in prices during

the coarse grain harvest highlighted the supply and demand situation for cereals. In the oilseed sector, a lower forecast for world crush of soybeans and higher carryover stocks caused prices to continue a downward trend.

Domestic wheat prices at the farmgate, at the wholesale level, and at export terminals were slightly higher in September, but all were 10 percent below prices a year earlier. With early-season farm prices below the 130-dollar-a-ton loan rate, movement into the reserve has been larger than expected. Also dampening prices is the slow export movement to date. U.S. hard winter wheat at the gulf ports averaged \$155 a ton in September. Export prices in Argentina, Canada, and Australia averaged \$159 to \$160. In comparison, in the corresponding month last year, the range in prices was \$168 in Australia to \$189 in Canada, and the gulf port price averaged \$170.

Since May, domestic corn prices have trended downward, falling 15 percent by September, with the farm price dropping below the 100-dollar loan rate. By the end of September, corn at the gulf ports was also selling below the loan rate. Sorghum at the gulf was priced only slightly below corn.

Domestic soybean prices have also dropped since May. Prices at the farm and gulf ports, at \$194 and \$214 a ton, respectively, have not been as low since October 1977. Although total use of soybeans and products remains high, large prospective harvests and expected large ending stocks have dampened prices.

Export and Import
Unit Values Decline

The export unit value index for fiscal year 1982 fell 17 percent from a year ago, but only 1 percent from last quarter. Leading the decline in prices from last year were rice, wheat flour, corn, sorghum, and cotton. Unit values were up from last year and last quarter for tobacco and nonfat dry milk.

Large supplies of many imported commodities and reduced demand have also held down import unit values. Unit values fell for coffee, cocoa, rubber, beef, sugar, and tomatoes. However, unit values rose during fiscal year 1982 for some imported goods including bananas, cattle, canned hams, and tobacco. (David Stallings and Bradley Karmen)

1/ UNIT VALUES WERE COMPUTED FROM THE VALUE AND QUANTITY FIGURES PUBLISHED IN FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES.

Ocean Freight Rates Decline in 1981-82

Ocean freight rates reached their lowest levels since 1978 despite a 3-percent growth in seaborne movements of grain in 1981. A worldwide recession and an oversupply of tonnage in the dry bulk shipping market are linked to this downturn. Ship owners have been confronted with falling demand for shipping and significant increases in the supply of ocean tonnage.

World Seaborne Movements Decrease

World seaborne trade dropped further in 1981 (movements decreased nearly 8 percent between 1979 and 1981) due to weak world markets for industrial goods and oil and reduced growth in markets for agricultural commodities (table 19). The demand for ocean shipping arises from world trade; therefore, these developments are significant because reduced commodity demands have decreased the demand for shipping.

Most of the decline in total world seaborne movements is due to a 22-percent decline in the world oil trade since 1979. However, movement of some dry bulk commodities, especially iron ore, also has been declining. Iron ore is the major dry bulk commodity transported in ocean vessels. Over the past 3 years (1979-81), ore movements decreased 7 percent due to a drop in world steel production. Japanese steel production fell by 9 percent in 1981 to its lowest level since 1972. Production in the European Economic Community also fell by 2 percent in 1981. Japan and the EC represent about one-third of world steel production and use about three-fourths of the total seaborne trade in iron ore and coal used for producing steel.

Shipments of grain, the second most important bulk commodity, increased 3 percent from 1980 to 1981. However, this yearly increase is the smallest since 1976-77.

Coal shipments continued to grow despite a slump in movements of metallurgical coal. Shipments increased 4 percent from 1980 to 1981, supported by increases in movements of steam coal. Future growth in world coal movements will depend largely on the oil situation and the conversion of energy-consuming sectors of foreign nations to steam coal.

Total tonnage of the three major bulk commodities increased 1 million metric tons from 1980 to 1981, despite decreases in iron ore. However, this increase is considerably less than growth in the 2 previous years.

Excess Tonnage

High rates and strong demand for ocean shipping in the late seventies and in 1980 caused shipowners to order large amounts of additional tonnage to meet the then anticipated continued demand expansion. Expanding supply and contracting demand has led to an excess supply of tonnage in the dry bulk market, resulting in the significant downturn in rates.

^{3/} Preliminary.

Source: Maritime Transport 1981, OECD.

Tonnage has continued to be added to the dry bulk trades because deliveries of new ships often lag ship orders by as much as 2 years. In both 1980 and 1981, 11.5 million deadweight tons of capacity were added to the dry bulk market, compared with 3.2 million in 1979.

Dry bulk carrier market supply was further increased by the influx of significant tonnage of combination ships into the bulk trades from the oil trades. This crossover was due to slowdowns in the oil trade and the capability of combination vessels to transport both liquid and bulk commodities.

The degree of excess tonnage can be demonstrated by examining the average monthly tonnage of laid up, slow steaming, and idle vessels in the market over this period. More than 36 million deadweight tons were estimated to be in these categories in each month of 1981 (table 20). This figure grew to more than 50 million tons in each of the first 4 months of 1982. This represented about one-fourth of total estimated supply in early 1982, compared with about one-fifth during 1980 and about one-tenth in 1979.

Current estimates indicate a continued buildup of shipping capacity in the short run (table 21). By December 31, 1981, orders had increased about 23 percent since the end of 1980, and 122 percent over the end of 1979. However, current growth of the world orderbook for bulk and combination ships appears to be subsiding in the face of the growing oversupply.

Grain Rates on
Major Trade
Routes

Ocean freight rates for grain fell significantly through the first three quarters of 1981 (table 22). Decreases in the first half of the year were primarily due to oversupply of shipping. Fourth quarter average rates strengthened slightly on most U.S. grain trade routes due to heavier chartering and increased grain movements.

In general, first quarter 1982 average rates continued their downward slide. However, changes were mixed with a few routes slightly higher than in the fourth quarter. In the second quarter, rates rebounded somewhat in response to intense Soviet chartering of vessels for anticipated grain movements from the United States and from Argentina. Generally, lower rates continued into the third quarter despite this second quarter upturn. Rates are not expected to recover substantially until world trade increases significantly or excess supply comes more in line with demand.

The World and
U.S. Merchant
Fleets

The world fleet consists mainly of three ship types: freighters, bulk carriers, and tankers. In 1980, bulk carriers comprised about 28 percent of the deadweight tonnage in the world fleet. Freighters made up nearly 19 percent and tankers nearly 53 percent.

Total capacity of all three ship types has grown dramatically in the last two decades (table 23). Between 1970 and 1980,

tanker capacity grew 126 percent, bulk ship capacity about 141 percent, and freighter capacity about 45 percent.

Recent estimates indicate continued strong shortrun growth in bulk ship tonnage. As of December 31, 1981, slightly more than 35 million gross registered tons (GRT) of shipping were on order. Over 53 percent of this tonnage was bulk carrier ships (about 1.8 million GRT). This figure (bulk ship orders) represents an increase of 44 percent over ending 1980 figures and 31 percent over ending 1979 figures. Tankers made up slightly more than 20 percent of these orders and general dry cargo ships about 1.2 percent. Average vessel size for freighters continued to increase slightly in 1980, while both bulk ships and tankers showed slight declines.

At the beginning of 1981 the privately owned U.S. fleet represented only about 3.2 percent of the deadweight tonnage in the world fleet (table 24). The U.S. fleet contains only 20 bulk carrier ships, representing 607,000 deadweight tons of capacity. Since 1970, the dry bulk carrier tonnage in the U.S. fleet has declined about 46 percent. Thus, the U.S. fleet could carry only a very small portion of the Nation's international bulk trade. (J. Michael Harris, National Economics Division)

1982 Handbook of Agricultural Charts

The *1982 Handbook of Agricultural Charts*, now available for sale from the Government Printing Office, contains 291 charts depicting all significant aspects of agriculture. These charts illustrate data and complex trends for agricultural subjects ranging from farm income to consumer costs, and from commodities to energy production and use. Charts showing trade data, cost of production figures, farmland numbers, and population trends round out the agricultural picture presented in this handbook.

First published in 1933, the *Handbook of Agricultural Charts* has proven to be a valuable research tool, a popular teaching device, and a convenient format for presenting a complete overview of the agricultural sector. The 1982 issue maintains the chartbook's successful tradition by making economic and agricultural trends come graphically alive.

Copies of the *1982 Handbook of Agricultural Charts*, AH-609, are now available for sale from the Government Printing Office. Ask for GPO stock no. 001-000-04305-6. The cost is \$5.50 per copy. Make your check or money order payable to Superintendent of Documents and mail to Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Microfiche copies of the handbook are available from the National Technical Information Service at \$4 per copy. Send your check or money order (payable to NTIS) to the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161. Ask for PB83-113787. Prices subject to change.
