Digest

U.S. Agricultural Exports Drop 10 Percent During First 11 Months of Fiscal Year 1982 (see p. 1). U.S. agricultural exports during the first 11 months of fiscal year 1982 dropped 10 percent below a year earlier to \$36.7 billion. The value of farm exports in fiscal year 1982 will probably fall to less than \$40 billion. July and August totals were the lowest rates in 3 years. Record crops and continued economic sluggishness have depressed prices of many farm commodities.

U.S. Agricultural Imports Down 12 Percent During First 11 Months of Fiscal Year 1982 (see p. 31). Depressed demand and lower prices for many products reduced the value of U.S. agricultural imports 12 percent to \$14 billion during the first 11 months of fiscal year 1982. Both noncompetitive and competitive commodities contributed to the decline, with lower prices affecting coffee, cocoa, rubber, beef, sugar, and vegetable oils. However, increased values for live animals, dairy products, pork, fruits, and vegetables partially offset these sharp declines.

International Commodity Prices Continue Year-Long Decline (see p. 53). Domestic farm and export prices as well as foreign prices continued to drop throughout the summer. World trade in grain was slower than expected in recent months, applying pressure to prices that were already low because of large supplies last year.

Leading Export Markets for U.S. Agricultural Products Fluctuate in Calendar Year 1981 (see p. 59). Japan maintained its lead in 1981 as the prime foreign market for U.S. agricultural exports, while Mexico moved up to second place. Developed countries took just over half of total farm-product shipments, and developing countries received 37 percent. New tables on pages 68-71 and 75-76 show exports to major regions and subregions over the last 6 years.

* * * * *

Prepared by the World Analysis Branch, International Economics Division, Economic Research Service, U.S. Department of Agriculture. Bradley Karmen, Susan Libbin, and Steve Milmoe contributed to this issue. Principal coordinators are Patrick M. O'Brien, John C. Dunmore III, Thomas A. Warden, and Thomasine B. McCall. Thelma Carpenter, Fannye G. Lockley, and Mary L. Fant provided statistical support. Linda L. Hatcher, Information Division, Economics Management Staff, provided editorial support.

U.S. Agricultural Exports Drop 10 Percent During First 11 Months of Fiscal Year 1982 .

U.S. farm exports totaling \$36.7 billion during the first 11 months (October-August) of fiscal year 1982 fell 10 percent below a year earlier. July and August exports at \$2.4 billion and \$2.5 billion, respectively, reached the lowest monthly levels in 3 years. Although shipments normally slow in the summer months, falling prices aggravated the situation this summer, as they did last summer. Expectations of record U.S. grain and oilseed harvests, accompanied by continued economic sluggishness and unfavorable exchange positions, dampened prices.

As fiscal year 1982 closes, the value of U.S. agricultural exports is likely to fall below \$40 billion, compared with earlier estimates of \$40.5 billion and fiscal year 1981's \$43.8 billion. The outlook for fiscal year 1983 does not appear any more promising. Export prices, already at low levels, are likely to remain under downward pressure over the coming year because of record U.S. supplies and only modest improvement in domestic and trade demand.

Feed Grain Exports Lowest Since Fiscal Year 1978

Feed grain exports through August were 9.6 million tons below last year's pace. Shipments of 54.5 million tons over that period portend the lowest fiscal year total since 1978. The USSR, Spain, Korea, Taiwan, and Egypt were among the few markets increasing their purchases of U.S. feed grains. The loss of the Mexican market had the most damaging effect. After purchasing about 6.5 million tons in each of the preceding two years, Mexico purchased only 1.2 million tons through August. Mexico has been working off relatively high stocks from the bumper 1981 harvest, and economic conditions have worsened, leading to a ban on all but essential imports in the early summer. Other major markets reducing their imports of U.S. feed grains included Japan, Italy, Brazil, Poland, and Romania.

Soviet corn purchases through August amounted to 7.6 million tons valued at \$960 million. No further sales were anticipated for September. Spain is expected this fiscal year to be the third largest U.S. feed grain export market after Japan and the USSR. Shipments through August reached 6.7 million tons, compared with 3.9 million a year ago.

Wheat Exports Move Out At Record Pace

Wheat exports continued to move out at a record pace during August, bringing the total volume shipped during the first 11 months of fiscal year 1982 to 41 million tons. China, the USSR, Japan, Brazil, and Egypt accounted for more than half the total. U.S. exports of wheat and flour for fiscal year 1982 are projected to reach 46 million tons, eclipsing last year's record by 3 million tons. China has been the largest U.S. wheat market this year at 7.7 million tons, followed by the USSR at 5.9

million tons. Both countries have grain agreements with the United States.

The outlook for wheat sales looks promising in 1983. While Canada is expecting a record harvest, Australia is expecting the smallest wheat harvest in 5 years this December. In addition, a disappointing crop in India has prompted officials there to purchase 2.5 million tons from the United States for delivery in fiscal year 1983. The magnitude of sales to the USSR is another prospect that will affect wheat and corn markets significantly.

The U.S.-USSR grain agreement was extended for the second time in August, binding the USSR to at least 3 million tons each of wheat and corn through September 1983. Prospects of a fourth consecutive poor crop increase chances that this minimum level will be exceeded. Even if other exporters supply Soviet needs, this will leave a number of markets undersupplied.

Rice exports recovered in fiscal year 1982 despite loss of the Korean market. Sales to Nigeria, Italy, Iraq, Iran, and Saudi Arabia helped offset over half of the 850,000-ton decline to Korea. The value of rice exports dropped farther than the volume with most of the lower valued brown and paddy rice exports going to Italy. Total rice exports for fiscal year 1982 may reach 2.9 million tons valued at \$1.1 billion.

U.S. exports of soybeans and soybean products should reach a record \$8.3 billion in fiscal year 1982, three-fourths of that in the form of beans. This year's boom in demand comes from Western Europe--the European Community (EC) and Spain in particular. The EC takes over half of all U.S. soybean and soybean meal exports. Corn and soybean meal prices in the EC strongly favor the feed use of soybean meal. Rotterdam's price is \$14 per ton less than corn, compared with a U.S. price relationship of 2 to 1 in favor of corn. Soybean oil exports picked up during the summer months, with increased movements to Pakistan and Mexico.

Cotton exports rose 21 percent above a year earlier through August, despite the dramatic decline in sales to China. Japan, Korea, Taiwan, and Hong Kong all took larger amounts than a year earlier. U.S. cotton has been selling at prices \$400 to \$500 per ton lower than it sold a year ago, making it much more attractive in foreign markets.

--- = NOT AVAILABLE.

1/ PRELIMINARY

U.S. Agricultural Imports Down 12 Percent During First 11 Months of Fiscal Year 1982

U.S. agricultural imports totaled \$14 billion during the first 11 months of fiscal year 1982, 12 percent less than a year earlier. Import values declined for most products except bananas, live animals, dairy products, fruits, vegetables, and malt beverages.

Noncompetitive Imports Off 13 Percent

Noncompetitive products of nearly \$4.8 billion fell 13 percent below those during the same period in 1980/81. Import unit prices dropped for most major noncompetitive commodities. Green coffee--accounting for about half of all noncompetitive imports--fell 10 percent in value while volume rose slightly. Coffee prices dropped because of increased world supplies. Rubber, the second major noncompetitive import, fell 22 percent in value, but volume increased 8 percent. Cocoa beans--the third leading noncompetitive product--declined 30 percent in value but only 21 percent in volume. Larger world cocoa supplies pushed prices down. Import volume dropped mainly because of high interest rates and the expectation of further price declines along with a predicted bumper crop this season. The Ivory Coast supplied about 27 percent of U.S. cocoa bean imports in 1981/82, considerably less than last year's record share but about the same share as in 1979/80. The Dominican Republic, Brazil, and Ecuador were the other major suppliers.

Beef, Sugar Imports Off Sharply

Competitive imports of \$9.3 billion dropped 11 percent below a year earlier. Beef and veal--accounting for over two-thirds of all meat imports--declined 18 percent in value to \$1.2 billion. Increased poultry consumption and diminished beef export supplies in Australia, the leading supplier, have depressed beef imports. Canned pork, mainly from Poland, declined while fresh pork (mostly from Canada) increased, partly due to higher prices and favorable exchange rates.

Sugar imports dropped 42 percent to \$1.1 billion while volume edged up slightly. Unit import prices fell sharply because of increased world supplies. On May 5, an emergency import quota program was implemented. A global import quota of 220,000 short tons was set for May 11 through June 30, and 420,000 tons was set for July 1 through September 30.

The new program apportions quotas among exporting countries according to average performance during 1975-81, excluding the years when performance was highest and lowest. The highest quotas were set for the Dominican Republic, Brazil, and the Philippines. Brazil, the major supplier, provided 20 percent of the total volume imported during October through August 1981/82, and slightly more than last year. Other major suppliers were Australia, the Dominican Republic, Thailand, and Argentina. Reduced output led to substantial import volume declines from Argentina, Colombia, and some Central American

countries. Shifts in Philippine exports to Asia helped lower imports from that country. Increased output stimulated greater import volume from Brazil.

Among other competitive imports, values declined for hides and skins, poultry products, cashew nuts, oilseeds and oilseed products, molasses, and tobacco. Oilseed import volume fell 52 percent as the U.S. peanut crop recovered from 1980's low level. Coconut oil, accounting for half of all vegetable oil imports, fell one-fifth in value as prices dropped. Favorable prices for domestic soybean oil replaced some coconut oil imports. Imports of palm oil also declined.

Orange Juice,
Vegetables,
Cattle Gain

Fruit imports jumped 28 percent in value, as imports of concentrated orange juice from Brazil substantially exceeded 1980/81 levels. Vegetable imports expanded to more than \$1 billion, with gains in canned tomatoes from Italy, Spain, Taiwan, and Israel. Larger processed fruit and vegetable imports followed poor U.S. harvests last year.

Imports of live animals (mainly cattle) rose 15 percent, partly due to favorable U.S.-Canadian exchange rates. Imports of wine and malt beverages increased to a smaller degree.

1/ PRELIMINARY

International Commodity Prices Continue Year-Long Decline

World agricultural prices continue to sink for most commodities, and little, if any, price strength is expected soon. Prices of commodities such as grains and oilseeds, exported largely by developed countries, as well as tropical commodities exported by developing countries, are lower than they were a year ago. Prices are the lowest in 3 years for some products. The driving forces behind the low prices have been large supplies and global economic stagnation.

U.S. Farm Prices Spiral Downward

Farm prices for wheat, corn, and soybeans are forecast to fall for the second consecutive crop season. With supply outstripping demand, season average farm prices for wheat and corn in 1982/83 likely will be below those in 1979/80. For soybeans, they will probably be the lowest since 1975/76.

In 1981/82, U.S. farm prices for wheat held steady throughout most of the season, but began to drop in the spring after early indications of a large winter wheat crop. By June, not only was the winter crop large, but spring wheat looked excellent. During the summer, farm prices fell to below \$125 a ton, a 3-year low, and likely will average under the \$130-per-ton loan rate through harvest. The 1982/83 season average farm price is forecast at \$127 to \$134, compared with last year's \$134.

Feed grain prices are much lower than earlier forecasts because of a larger than expected domestic crop and reduced global trade. However, relatively tight free stocks in the spring strengthened prices slightly. The situation eased somewhat in late July, when the rotation period for corn and sorghum in the farmer-owned reserve was extended to 60 days before harvest, making corn and sorghum immediately available to market channels in regions that harvest early. Also, during the summer, U.S. corn exports dropped to half the level reached during the spring. By mid-August, farm prices for corn, barley, and sorghum were below the loan rate. Even though exports are expected to be up sharply, global ending stocks likely will increase about one-fifth, keeping feed grain prices in 1982/83 below this year.

Early forecasts of 1981/82 oilseed production were understated both here and abroad. Despite record U.S. exports of soybeans, the large crops pushed farm prices below USDA's first forecast. By early summer, domestic prices were 10 to 15 percent below those of the year before. By midsummer, the United States was facing yet another record crop. Price prospects deteriorated further, indicating low prices again in 1982/83, despite projected record U.S. soybean exports.

World Prices Follow U.S. Declines

Export prices continued lower throughout the summer despite record world trade in wheat and oilseeds. Global economic stagnation, particularly affecting the livestock industry, hurt

import demand for coarse grains and lowered prices. High interest rates had a significant impact on stockholding policies, forcing exporters, especially in the United States, to hold higher stocks.

Wheat export prices in the United States, Canada, Argentina, and Australia slumped to between \$150 and \$165 a ton by July, a small range by historical standards, indicating a competitive marketplace. These prices are the lowest in several years. Similarly, corn export prices in the United States and Argentina fell more than 15 percent from a year earlier. Oilseed prices also have dropped significantly. Import prices for soybeans and products in northern Europe have paralleled price declines here.

Leading Export Markets for U.S. Agricultural Products Fluctuate in Calendar Year 1981

Japan maintained its position as the leading importer of U.S. farm products in calendar year 1981, while Mexico moved up to second place, edging out West Germany. The list of countries taking more than \$1 billion in U.S. farm products lengthened to 13 in 1981 with the rapid increase in exports to Egypt. Among the top 25 markets, Nigeria and Saudi Arabia moved up to 20th and 21st, respectively, from their 25th and 24th rankings in 1980.

Leading export markets for U.S. farm products continued to change in 1981, responding to a wide range of economic forces. Import demand in some countries tapered off from the rapid pace during 1978-80 when many crops failed. Shortage of foreign exchange and unfavorable currency exchange rates depressed imports in other areas. Despite these negative factors, U.S. agricultural exports reached a record value of \$43.3 billion. Volume declined slightly to less than 163 million tons.

Developed Countries Took Over Half of U.S. Farm Exports

Developed countries took just over half of U.S. agricultural exports in 1981, about the same percentage as a year earlier. Japan, Canada, and some West European countries maintained their historical importance among export markets. Growing exports of meat, fruits, and vegetables boosted shipments to Japan, the largest importer of U.S. food and agricultural products by a wide margin.

After adjustment for transshipments, farm-product exports to Western Europe totaled \$12.4 billion, slightly above the 1980 figure (table 16). Larger shipments to Spain and Portugal accounted for most of the gain to this region. Farm-product exports to West Germany, the second-largest market in 1980—dropped almost 4 percent to \$2.4 billion (table 17). Gains to Italy, the United Kingdom, and Belgium partly offset this decline.

U.S. Farm Exports to Developing Countries Increased

U.S. wheat, oilseed, poultry meat, and fruit and vegetable exports to developing countries accounted for most of the increase in shipments abroad. Expanded exports to Korea, Egypt, Brazil, Venezuela, Nigeria, and other developing countries contributed to this growth. As a group, developing countries took 37 percent of U.S. agricultural exports in 1981, compared with 35 percent a year earlier. Sharply higher wheat exports to Mexico, which moved up to become the second largest market in 1981, compensated for the drop in coarse grain and soybean shipments.

U.S. agricultural exports to the USSR rebounded in 1981 from their depressed 1980 value after embargo constraints were lifted. This increase more than offset reduced exports to Eastern Europe. Poor 1980 crop conditions in the USSR resulted in greater imports of U.S. wheat and coarse grains.
