Prepared by the Trade Analysis Branch, Commercial Agriculture Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Joel L. Greene and Lilia E. George. Mrs. George also provides word processing and table formatting support. Editorial support is furnished by Martha R. Evans, Publishing and Communications Branch, Information Services Division, Economic Research Service. Data processing support is provided by Kenneth King, Information Technology Services, Information Services Division.

## Digest

**U.S. Exports Reach Record \$59.8 Billion in Fiscal 1996** (see p. 2)--U.S. agricultural exports reached a record \$59.8 billion in fiscal 1996, 10 percent higher than the previous year. Exports surged because of strong bulk commodities and continued growth in high-value products. However, exports slowed considerably during the last quarter of the fiscal year (July-September 1996) because of sluggish sales of red meat, feed grains, and cotton. Exports during the last quarter were only 3 percent higher than the same quarter a year earlier, compared with a 13-percent gain during the first three quarters. Despite the late-year slowdown, exports reached record levels to most major country markets.

**Imports Set Record at \$32.4 Billion in Fiscal 1996** (see p. 6)--U.S. agricultural imports reached \$32.4 billion in fiscal 1996, a 10-percent increase over fiscal 1995. Lower production of domestic fruits and vegetables, strong consumer demand for foreign beverages, appreciation of the U.S. dollar, and reduced trade impediments with NAFTA partners contributed to the increase in U.S. agricultural imports.

**U.S. Agricultural Trade Boosts Overall Economy** (see p. 8)--U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1995 stimulated another \$1.38 (an additional \$77.1 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 895,000 full-time civilian jobs, including 562,000 jobs in the nonfarm sector. Farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

## Note to Subscribers

The Economic Research Service (ERS) will publish the Foreign Agricultural Trade of the United States (FATUS) quarterly, instead of bimonthly, and fiscal and calendar year supplements. The data published in the January/February/March issue will include calendar year totals; the April/May/June issue, data from the first 6 months of the fiscal year; the July/August/September issue, 9 months of fiscal year data; and the October/November/December issue will include fiscal year totals.

The export and import data files (tables A-2 and B-3 in the FATUS publication) are available each month on the CALL-ERS/NASS electronic bulletin board. Set your communications software to 9600 (or lower) baud, N-8-1, and dial 1-800-821-6229, or 1-202-219-0377 to access the bulletin board. Log on as a new user and follow the instructions. The tables are self extracting archives which are decompressed by typing the file name at the command prompt. The data files are available on ERS' homepage on the Internet. The Internet address is <http://www.econ.ag.gov/>. The files are located under Products and Services-ERS Publications-U.S. Agricultural Trade-U.S. Agricultural Trade Update.

ERS plans to phase out the printed issues of FATUS and merge FATUS and U.S. Agricultural Trade Update into a single subscription in 1997. Subscribers will receive the monthly newsletter, and have electronic monthly access to the FATUS data files, and the fiscal and calendar year supplements. Special articles, such as State export shares and export share of production, will be summarized in the monthly Update and made available electronically.

## U.S. Exports Reach Record \$59.8 Billion in Fiscal 1996

U.S. agricultural exports reached a record \$59.8 billion in fiscal 1996, 10 percent higher than the previous year. Exports surged because of strong bulk commodities and continued growth in high-value products. However, exports slowed considerably during the last quarter of the fiscal year (July-September 1996) because of sluggish sales of red meat, feed grains, and cotton. Exports during the last quarter were only 3 percent higher than the same quarter a year earlier, compared with a 13-percent gain during the first three quarters. Despite the late-year slowdown, exports reached record levels to most major country markets.

### Bulk Export Value Highest in 15 Years

The United States shipped 119 million tons of major bulk commodities (wheat, rice, feed grains, soybeans, tobacco, and cotton) in fiscal 1996, nearly 8 million fewer tons than the previous year. Tight global supplies of grain and soybeans boosted export prices sharply in 1996, and export value surged 19 percent to \$27.9 billion, the highest since fiscal 1981's \$29.2 billion.

Wheat exports reached 33.7 million tons, 5 percent higher than fiscal 1995. The value of wheat exports soared 39 percent to \$6.9 billion, the highest since fiscal 1982 when wheat exports were \$7.4 billion on shipments of nearly 45 million tons. World wheat prices soared on tight global stocks, pushing U.S. export prices to an average of \$204 per ton. South America was a growing market for U.S. wheat in 1996. Exports to Brazil reached 1.1 million tons, compared with 178,000 the previous year, and shipments to Peru rose 73 percent to 642,000 tons. Egypt was the leading market in 1996 with exports of 5.4 million tons, a 7-percent decline from 1995. Exports to Japan were 3 million tons, unchanged from a year earlier, and shipments to China were 2.3 million tons, 39 percent less than 1995.

Corn exports dropped 10 percent to 52.7 million tons, but value jumped 26 percent to \$8.4 billion on strong export prices. Corn export prices averaged \$159 per ton compared with \$113 in 1995. Corn shipments declined to most major markets, except for Mexico and Southeast Asia. Exports to Japan were 14.9 million tons, down 7 percent, and shipments to South Korea dropped 17 percent to 7.4 million tons. Mexico was the third leading corn market with shipments reaching a record 6.3-million

tons, as severe drought sharply raised demand for U.S. corn in 1996. Exports to Southeast Asia reached 2.3 million tons with record shipments of 1.4 million tons to Malaysia.

Soybean exports dipped 5 percent to 22.4 million tons but was valued at \$6.3 billion, a 20-percent rise from 1995. Lower world oilseed production and tight U.S. soybean supplies lifted export prices. Exports to the European Union (EU-15) fell 16 percent to 8.5 million tons, as EU-15 oilseed production increased in 1996. Shipments to Japan dropped 8 percent to 3.7 million tons. Increased U.S. exports to China, Mexico, and Southeast Asia partially offset declines to the EU-15 and Japan. Shipments to China were 490,000 tons, compared with no shipments in 1995. Exports to Mexico and Southeast Asia jumped 25 percent to 2.2 million tons, and 89 percent to 1.7 million tons, respectively.

Cotton exports declined 17 percent to 1.6 million tons and value fell 13 percent to \$3 billion. Increased foreign production and tight U.S. cotton supplies resulted in lower U.S. exports. China reduced its total cotton imports in 1996, dropping U.S. shipments 15 percent to 401,000 tons. Exports to Japan decreased 10 percent to 203,000 tons, and shipments to Indonesia fell 17 percent to 165,000 tons. U.S. cotton shipments to Mexico rose 41 percent to 146,000 tons.

### HVP Exports Top Previous Year

U.S. high-value product (HVP) exports increased 4 percent in fiscal 1996 to a record \$31.8 billion because of increased red meat, poultry meat, almond, and soybean meal exports. HVP growth was slower than in recent years because of a slowdown in meat shipments and reduced exports of intermediate products such as hides and skins and vegetable oil. Whole cattle hide export volume dipped 5 percent, but lower cattle hide prices reduced export value 16 percent to \$1.2 billion. Vegetable oil exports fell 66 percent to \$272 million largely because of a sharp decline in exports to China.

Red meat exports rose 9 percent to a record \$4.7 billion. Pork exports increased 22 percent to a record \$993 million, and variety meats increased 13 percent to \$778 million. Beef exports only gained 1.5 percent to \$2.6 billion, but were still a record. Shipments to Japan rose 14 percent to 356,000 tons, but value only increased 2 percent to \$1.7 billion because of lower export prices. Total U.S. beef exports in the last quarter of fiscal 1996

were 24 percent lower than a year earlier, and exports to Japan slowed even more at 31 percent less due to concerns about E. coli contamination in its food supplies.

Fruit, nut, and vegetable exports were \$8.1 billion, unchanged from the previous year. Nut exports, including peanuts, rose 17 percent to nearly \$1.6 billion because of a 25-percent rise to \$942 million in almond exports. Fruit exports, including juice, rose slightly to nearly \$3.3 billion. Fresh vegetable exports decreased 14 percent to \$934 million because of lower prices, especially for broccoli, cabbage, celery, lettuce, and peppers. Fresh vegetable shipments to Canada were up slightly, but export value dropped 15 percent to \$632 million, as average vegetable export prices were 16 percent lower than in 1995. Exports to Japan, the second largest fresh vegetable market, fell 19 percent to \$156 million as volume also fell 21 percent to 226,000 tons. Sharply lower onion shipments accounted for much of the decline.

The HVP commodity with the greatest increase in 1996 was poultry meat, which jumped 26 percent to almost \$2.4 billion. Russia remained the leading market for U.S. poultry meat exports, as shipments reached a record 910,000 tons valued at \$840

million. Demand for poultry meat imports in Russia remained strong in 1996 because of the continued contraction of the domestic industry. Hong Kong was a distant second, with U.S. exports of \$414 million.

#### **Japan Leading Market Again**

The United States exported a record \$11.8 billion worth of agricultural commodities to Japan. The EU-15 was second at \$9.2 billion, followed by Canada at nearly \$6 billion, Mexico at \$5 billion, South Korea at \$3.7 billion, Taiwan at \$2.9 billion, China at \$1.8 billion, the former Soviet Union at \$1.7 billion, and Egypt and Hong Kong at \$1.5 billion each. U.S. exports established a new record in each of these major markets, except for the EU-15 and China. Exports to China fell 24 percent, the largest decline of the major markets. Of the leading markets, Mexico was the fastest growing, as exports rebounded 36 percent compared with 1995. Seventy-six percent of U.S. agricultural exports were shipped to the top-ten markets, unchanged from the previous year. The top markets were leading destinations for both bulk and HVP exports. Seventy percent of U.S. bulk exports and 81 percent of HVP exports went to the top-ten markets. *(Joel Greene, Trade Analysis Branch, 202-219-0816)*

## Imports Set Record at \$32.4 Billion in Fiscal 1996

U.S. agricultural imports reached \$32.4 billion in fiscal 1996, a 10-percent increase over fiscal 1995. Lower production of domestic fruits and vegetables, strong consumer demand for foreign beverages, appreciation of the U.S. dollar, and reduced trade impediments with NAFTA partners contributed to the increase in U.S. agricultural imports.

Import growth in fiscal 1996 came largely from horticultural products which reached \$11.3 billion, a 14-percent increase compared with 1995. Fresh and frozen vegetables rose 17 percent to \$2 billion. Mexico and Canada supplied 85 percent of U.S. fresh vegetable imports in fiscal 1996. Domestic tomato yields and acreage decreased in 1996, and lower domestic production of fresh tomatoes was offset by tomato imports from Mexico. The volume of fresh tomato imports increased 29 percent to 725,000 tons, but higher import prices boosted the value 67 percent to \$680 million. The sudden increase in tomato imports from Mexico prompted an anti-dumping case by U.S. tomato growers. The case, however, was suspended in November by the U.S. Department of Commerce through a negotiated agreement. To prevent undercutting of fresh tomato prices in the United States, the negotiated agreement between the Commerce Department and Mexican exporters established a minimum price for fresh-market tomatoes imported from Mexico.

The value of imported beverages rose 23 percent in fiscal 1996, reaching \$2.8 billion. Wine imports were up 24 percent to \$1.4 billion. Growth in wine imports varied by foreign source. The largest increase was in Chilean wine imports where volume increased 84 percent. Chile supplied 12 percent of the total volume of U.S. wine imports in fiscal 1996. Price competitiveness and quality attributes were likely factors explaining increased imports from Chile. The unit value of Chilean wine imports was 60 percent less than the unit value for wine from the European Union (EU-15). Wine import volume from Italy, the largest supplier to the United States (37 percent), increased by 11 percent. Beer imports increased from \$1.1 billion to \$1.3 billion, a 17-percent increase. The EU-15 supplied 46 percent of total U.S. beer import volume, and import value rose 14 percent to \$750 million. Beer imports from Mexico accounted for 23 percent of import volume, and value jumped 34 percent to \$296 million.

Fruit juice imports rose 30 percent to \$819 million. While apple juice import volume fell 8 percent, a higher unit value pushed the import value up 27 percent to \$327 million. Similarly, orange juice import volume decreased while value increased 22 percent to \$221 million. Although domestic consumption of both apple and orange juice fell in 1996, growing foreign consumption and limited supplies contributed to higher import prices.

The value of live cattle imports fell 6 percent to \$1.6 billion in fiscal 1996. A larger share of live cattle imports was drawn from Canada as Mexico's cattle inventory was reduced. Imports of live cattle from Mexico fell sharply from \$553 million to \$184 million while imports from Canada increased from \$994 million to \$1.3 billion. Beef import volume fell 4 percent to 695,000 tons while value fell 12 percent to \$1.3 billion. The average unit value for imported beef dropped 9 percent to \$1,907 per ton in fiscal 1996 as a result of abundant supplies of lower grade beef in the world market.

In fiscal 1996, the United States imported an unprecedented volume of cotton. U.S. imports of raw cotton rose from 4,000 tons to 165,000 tons. Fundamentals of supply and demand and trade policy were factors that contributed to the surge in cotton imports. The U.S. stocks-to-use ratio declined in 1994/95, pushing domestic cotton prices up. In 1995/96, lower U.S. yields pushed domestic cotton prices up further while production rose in the leading cotton producing countries of Pakistan, India, and China. These conditions increased the price differential between the domestic and world price. Changes in the U.S. in-quota amounts for cotton imports are dependent on the price differential between the U.S. cotton price and an index of cotton import prices for delivery in northern Europe. A threshold price differential is established by the U.S. import policy. The objective of the import quota policy is to ensure the availability of competitively priced cotton for U.S. mills. In fiscal 1996, when the price differential exceeded the threshold level, import quotas in the United States were temporarily increased. Actual imports remained well below the size of quotas since the purchases were confined to the brief period of peak price differential.

Import prices of tropical products stabilized in fiscal 1996. The volume of coffee imports increased from 935,000 tons to 1.1 million tons, a 19-percent

increase. Part of the imported coffee helped replenish stock levels which had been reduced in fiscal 1995 when supplies from Brazil were reduced. Coffee prices fell in fiscal 1996, decreasing the value of imports 15 percent to \$2.9 billion. The volume of banana imports was up 3 percent,

reaching 4 million tons. The unit value for banana imports remained nearly unchanged, giving a total import value of \$1.2 billion, a 4-percent increase. *(Mark Gehlhar, Trade Analysis Branch, 202-501-8525).*

## U.S. Agricultural Trade Boosts Overall Economy

U.S. agricultural exports generate employment, income, and purchasing power in both the farm and nonfarm sectors. Each dollar received from agricultural exports in 1995 stimulated another \$1.38 (the \$55.8 billion of agricultural exports in 1995 stimulated an additional \$77.1 billion) in supporting activities to produce U.S. exports. Agricultural exports generated an estimated 895,000 full-time civilian jobs, including 562,000 jobs in the nonfarm sector. Farmers' purchases of fuel, fertilizer, and other inputs to produce commodities for export spurred economic activity in the manufacturing, trade, and transportation sectors.

U.S. agricultural export value rose (22 percent) in 1995 from 1994 levels (\$45.7 versus \$55.8 billion). Production from more than a third of U.S. cropland moved into export channels. The United States exported an estimated 57 percent of its wheat, 47 percent of its rice, 39 percent of its soybeans, 31 percent of its corn, and 37 percent of its cotton in the 1995 marketing year.

U.S. agricultural exports had reached an earlier peak in 1981 at \$43.3 billion after years of steady growth, but then declined 33 percent by 1986. That record was broken in 1994 when agricultural exports reached \$45.7 billion. Bulk and processed agricultural exports provided employment for 1.2 million workers in 1981. Employment from agricultural exports in 1995 required 895,000 workers. Exports in 1981 generated \$106.3 billion in business activity: \$43.3 billion for exports and \$63 billion for supporting activities. Exports generated \$132.9 billion in business activity in 1995: \$55.8 billion for exports and \$77.1 billion for supporting activities. Thus, each dollar received from agricultural exports produced a multiplier effect of more than 2. Net exports in 1995 contributed \$25.8 billion to the U.S. trade balance, an increase from \$18.9 billion in 1994.

### Exports Generate New Business, Add Jobs

The United States exported \$55.8 billion of agricultural products in 1995. The value of exported raw products was \$23.4 billion; processed commodities, \$21 billion; and transportation and trade services for raw and processed products, \$11.4 billion.

The \$77.1 billion in 1995 supporting activity included \$20 billion from the farm sector, \$6.3

billion from the food processing sector, \$15.5 billion from other manufacturing sectors, \$9.8 billion from trade and transportation, and \$25.5 billion from other services. Nonfarm sectors of the economy received about 74 percent of the additional economic activity.

Employment required to support 1995's agricultural exports added over 100,000 jobs to the level required in 1994. Various factors such as the export commodity mix, sectoral price changes, and increased volume of goods have contributed to the rise. Of the 895,000 full-time civilian jobs related to agricultural exports, more than 333,000 U.S. farmworkers, 10 percent of the farm labor force worked in the production of export commodities. In addition, 562,000 jobs in the nonfarm sector were directly or indirectly related to the assembling, processing, and distributing of agricultural products for export. About 84,000 of these were in food processing, 200,000 in trade and transportation, 71,000 in other manufacturing sectors, and 207,000 in other services.

### Bulk Export Levels Continue To Decline

Maintaining a trend begun in 1990, bulk agricultural exports (grains, oilseeds, and cotton) continued to provide a decreasing share of the total export mix. Non-bulk (fresh fruits and vegetables, semi-processed and high-value processed) products are worth more in the \$55.8 billion commodity mix of agricultural exports in 1995. Higher value agricultural exports accounted for \$31.7 billion, or 57 percent of all direct exports.

Bulk exports have a smaller proportional effect on the nonfarm economy than processed exports. Direct bulk exports generated an additional \$23.3 billion of business activity while direct non-bulk exports generated an additional \$53.8 billion (\$0.97 additional output per dollar of bulk exports compared with the \$1.38 for all agricultural exports and \$1.70 for higher value exports).

The additional business activity attributable to bulk exports was distributed differently across economic sectors (11 percent to farming, 25 percent to manufacturing, 50 percent to other services, and 14 percent to wholesale and retail trade, and transportation) than the additional business activity for higher value agricultural exports (32 percent to farming, 30 percent to manufacturing, 26 percent to other services, and 12 percent to wholesale and retail trade, and transportation). Of the 895,000 jobs related to

U.S. agricultural exports, 577,000 (64 percent) supported non-bulk exports. Bulk exports increased their share of total exports from 32 percent (\$17.1 billion) in 1994 to 36 percent (\$24.1 billion). Most of the export value increase in 1995 occurred in bulk commodities, \$7 billion versus \$3.1 billion in other or high value products.

#### **Agricultural Exports Bolster U.S. Trade Balance**

Agriculture's contribution to the U.S. trade balance increased substantially through the 1970's. Net U.S. agricultural exports (exports minus imports) rose to \$27 billion in 1981 from about \$1 billion in 1969. Net agricultural exports of \$25.8 billion partially offset a \$220-billion deficit in nonfarm trade in 1995, leaving the U.S. trade balance in deficit by \$194 billion.

#### **The Effect of Agricultural Imports on U.S. Output**

The United States imported \$30 billion in agricultural commodities in 1995. Some \$8.4 billion of this total was spent on items such as bananas, coffee, and tea, that did not compete directly with U.S. agriculture. The balance of \$21.6 billion was spent on imports such as meat, dairy products, fruits, nuts, vegetables, sugar, and wines that compete with U.S. products.

Noncompetitive farm product imports registered an increase over 2 consecutive years for the first time since 1986. Noncompetitive imports were 25 percent larger in 1995 than in 1994. They had been declining at an annual rate of nearly 2 percent until 1993, when led by coffee and rubber noncompetitive imports, increased rapidly. Competitive agricultural imports are growing annually by 5 percent. Only competitive imports were included in the input-output (I/O) analysis of the effects of imports on the economy.

Using the I/O model, ERS estimated that the equivalent domestic output effect of the \$21.6 billion of competitive imports in 1995 was \$53.6 billion. That is, each dollar spent on imports would have required roughly another \$1.48 in supporting goods and services if those imported items had been produced domestically, an output multiplier of about 2.48.

#### **Stimulating the U.S. Economy through Agricultural Trade**

Almost all of the positive trade balance or direct benefit comes from bulk agricultural exports. The

port value of other agricultural exports and total imports just about offset each other (table 5). The additional business activity needed to produce the supporting goods and services for exports and the output lost by importing competitive farm products shows the different sectoral effects of these activities. The economywide 1995 net business surplus for agricultural trade was an estimated \$70.9 billion, a result of \$132.9 billion of total output generated by farm exports minus \$62 billion stimulated by agricultural imports (including noncompetitive imports).

U.S. agricultural trade positively affects most sectors of the economy. The farm sector's \$43.4 billion of output associated with agricultural exports more than doubled the \$14.8 billion of farm output implicitly lost because of competitive agricultural imports. All manufacturing, including the food processing sectors, gained \$23.2 billion in total output, about 97,000 jobs and \$5.4 billion in income.

Some industrial sectors were examined for their net gain or loss due to trade. The following industries gained from trade in terms of income, employment, and output: dairy, except cheese; poultry and grain processing; fats and oils milling, except miscellaneous vegetable oil mills; chocolate makers; and miscellaneous foods. Agricultural trade was not beneficial to domestic candy and confectioners; cheese processors; wine and malt beverage makers; sugar processors; and bakers. The net effects of trade turned from unbeneficial in 1994 for sausage and prepared meat producers to beneficial in 1995 and from a negative for canners to a virtual wash in 1995 for canners.

The U.S. economy outside of farming and food processing directly accrued a net \$6.8 billion from agricultural trade and a net increase in output of \$37.8 billion after considering the output lost to competitive agricultural imports.

#### **Nonfarm Sector Receives Most Income Effects**

Some of the business activity stimulated by foreign trade includes inputs purchased from other sectors. Although \$1 of agricultural exports in 1995 generated \$2.38 in total (direct and supporting) economic activity, \$1 represented income to wage earners, profits, and taxes. Thus, the \$55.8 billion of agricultural exports in 1995 generated \$132.9 billion of total economic activity but \$55.8 billion of income in the form of wages, profits, and taxes.

This income is directly associated with agricultural trade. With this additional income earned from exports, U.S. farmers can purchase more household appliances, farm equipment, building supplies, and other capital and consumer goods. More purchasing power is spread throughout the total economy. The heightened activity, trade, and transportation can boost investment in plants and equipment. Because I/O analysis does not consider this additional spending, our estimates of the economywide influences of agricultural trade are conservative.

The distribution of these income effects showed a different pattern for exports and imports. The I/O analysis used in this article enables researchers to determine the impacts of imports on the economy had they been domestically produced. The following descriptions of income from imports is income which would have been realized had those commodities been produced in the United States.

In 1995, the share of total income attributed to agricultural exports and competitive imports to the nonfarm sector was 68 percent and 74 percent, respectively; with nonfarm, nonfood sectors of the

economy receiving 58 percent of income from agricultural exports and 57 percent of the income effects attributed to competitive imports. The distribution of the income remaining within the farm and food processing sectors differed markedly. The farm sector received 32 percent of the total income from agricultural exports, while the food processing sector received 10 percent, reflecting the importance of raw agricultural commodities in the export bill of goods. The total income effect of competitive imports (a lower level than exports) was less pronounced between the farm and food processing sectors, with the food processing sector at about 17 percent and the farm sector generating about 26 percent of all import income effects, reflecting the greater importance of processed food products in the competitive import bill of goods.

This analysis does not include additional spending that may result from higher levels of income, so these estimates of economywide influences of agricultural trade are conservative. (*William Edmondson, Rural Industry Branch, Rural Economy Division, (202-219-0777).*)

# ERS AutoFAX

Another Service for Users of

ERS Information and Data

---

Timely information and data from ERS are as handy as your fax machine! A call from your fax to the ERS AutoFAX gives you immediate access to documents covering crops and livestock, rural affairs, farm sector economics and many other topics. Enter your selections using the instructions below and AutoFAX will fax these documents to you, **free**, in the same call!

## How to use AutoFAX—

1. Use the handset and Touch Tone keypad attached to your fax machine.
2. Call 202-219-1107 and listen for the voice prompts.
3. Enter document ID number 0411 and confirm when prompted.
4. Enter # to complete your selections.
5. When prompted, press the "start" button on your fax machine and hang up the handset.
6. In moments, the 0411 "help" document will be on its way to you with information on the contents and use of AutoFAX.

Available now, ERS AutoFAX is online 24 hours a day, 7 days a week for your convenience.

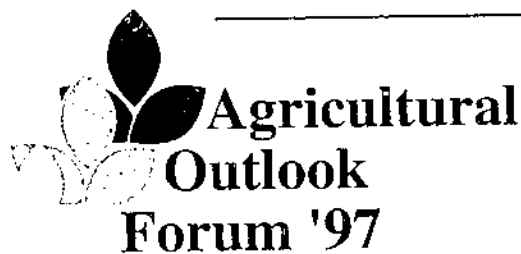

---

**ERS AutoFAX**

**202-219-1107**

---

AutoFAX works with most common fax machines. For assistance or to report system problems, please call the system manager at 202-219-0232 (8:00 a.m. - 4:30 p.m. ET).

**The meeting will come to order**

USDA's **73<sup>rd</sup>** Annual Outlook Forum

**When:** February 24-25, 1997

**Where:** Omni Shoreham Hotel  
Washington, DC

*Hear from government and industry experts on:*

- *Farm Act Impacts, 1997 and beyond*
- *Risk management issues*
- *Farm commodity and trade prospects beyond the year 2000*
- *Market stability and world food security*

**For information:**

Call (202) 720-3050

E-mail to [Agforum@oce.usda.gov](mailto:Agforum@oce.usda.gov)

Write Outlook Forum, Room 5143 South Bldg., USDA  
Washington, DC 20250-3800

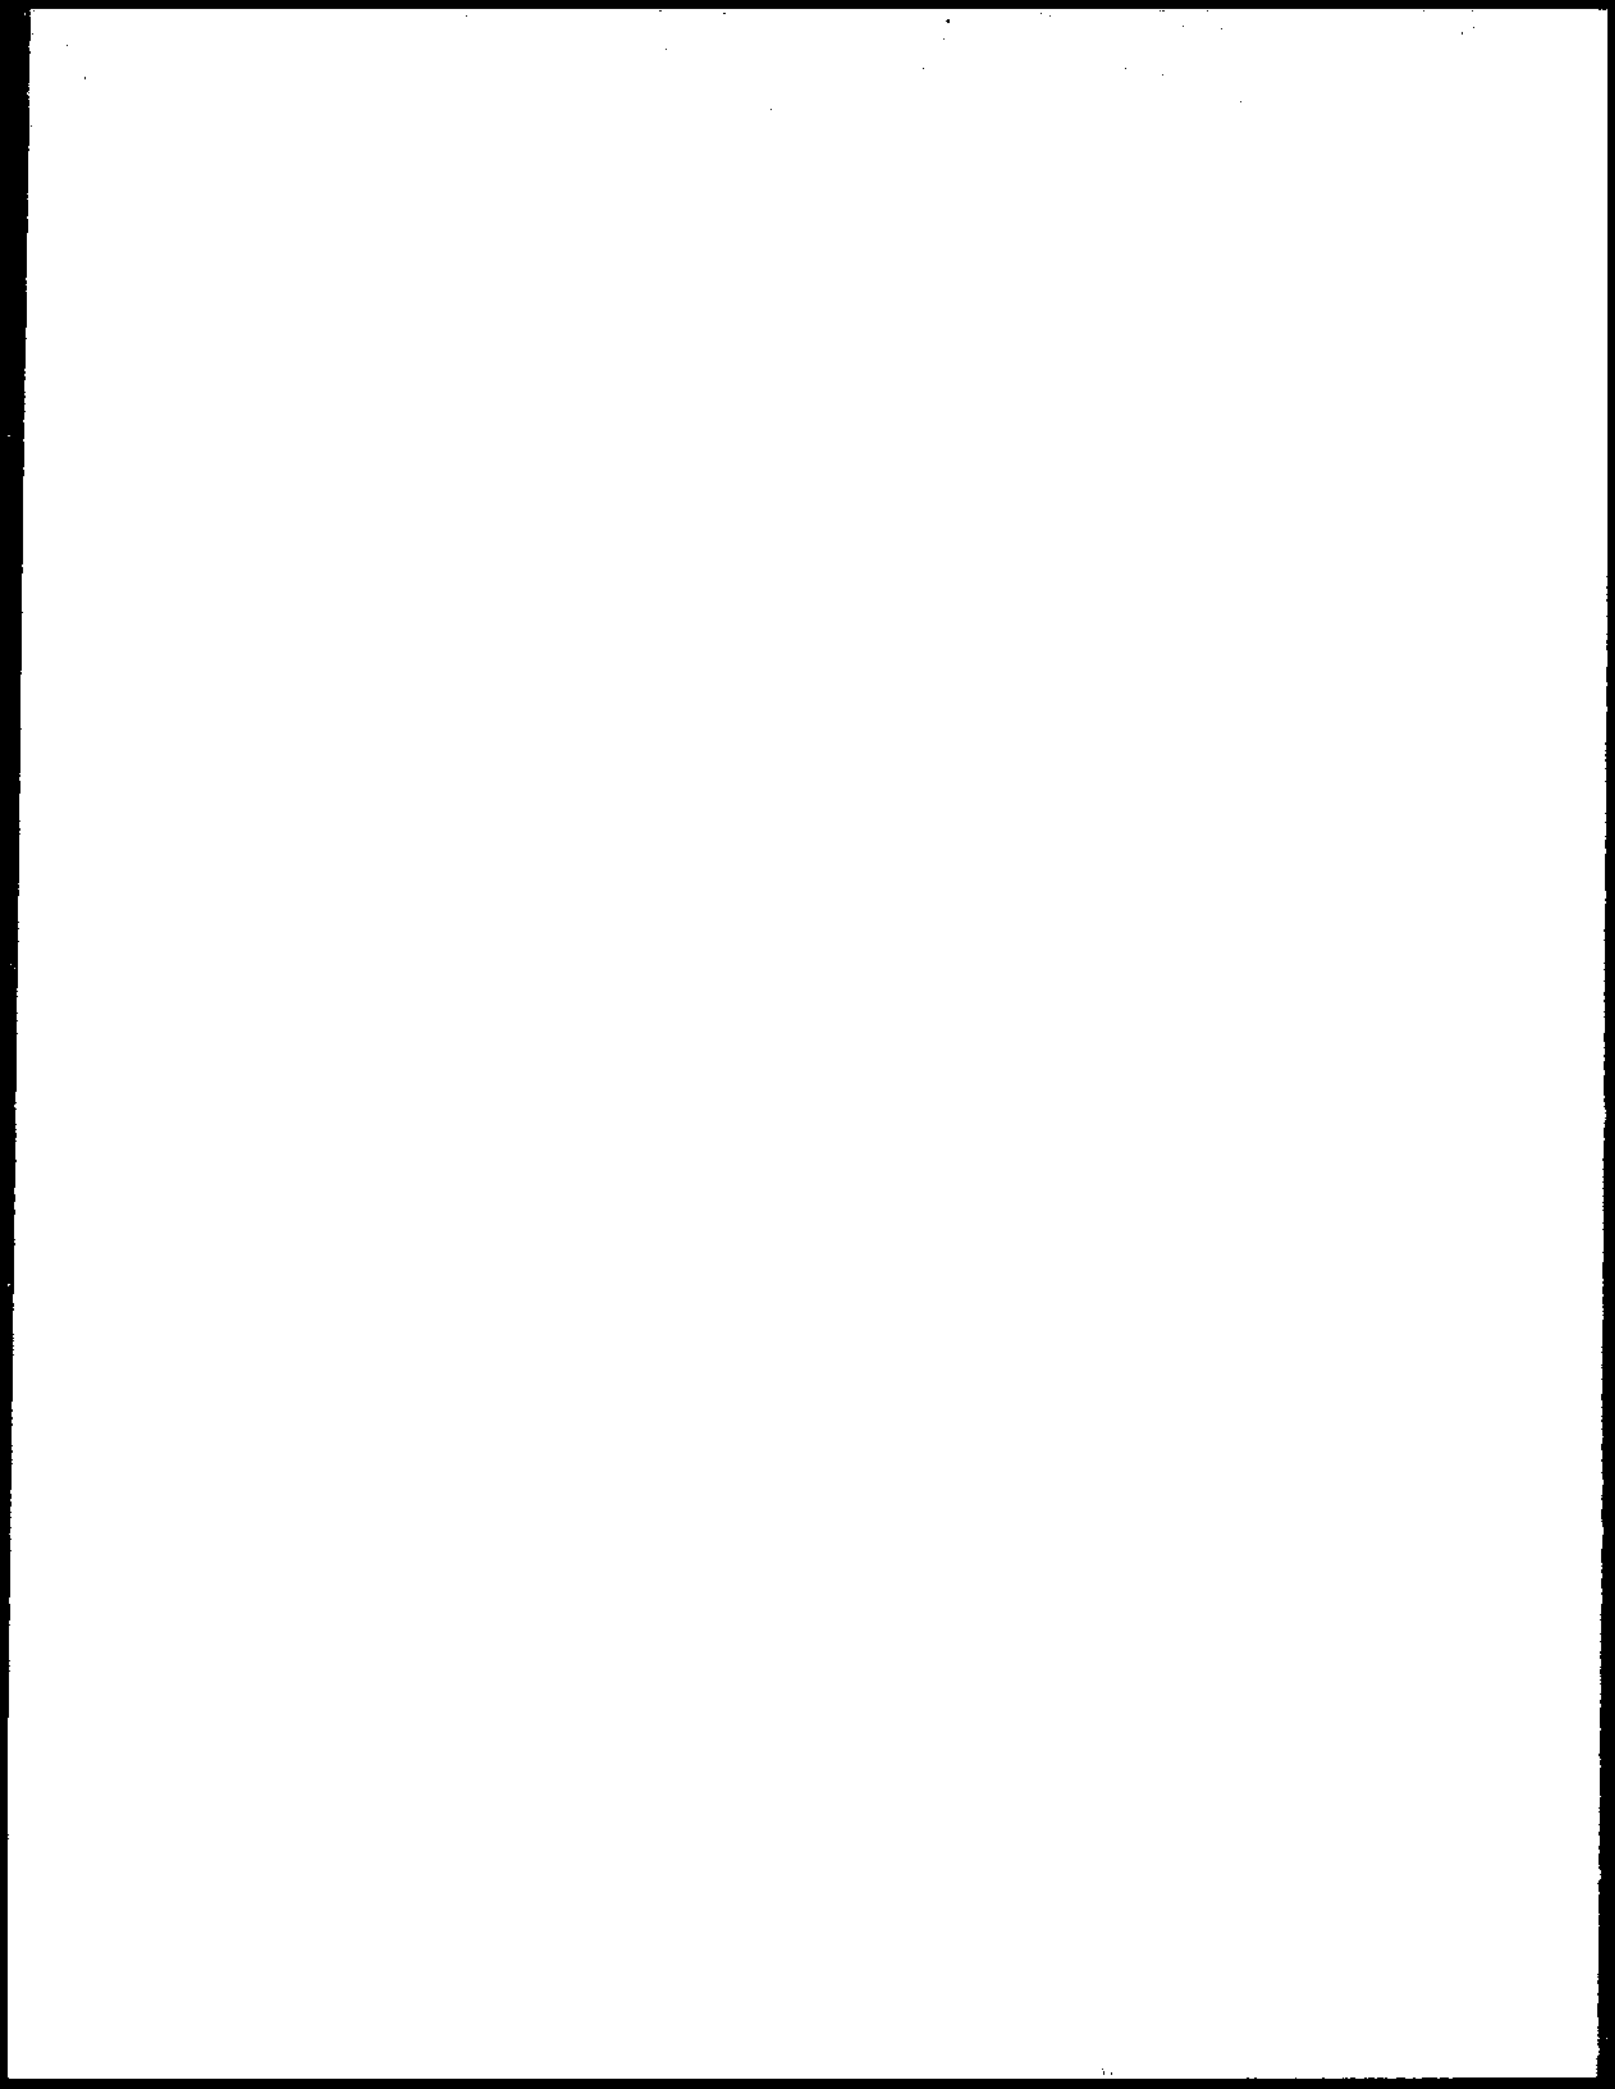

**For hotel reservations:**

Call (202) 234-0700

Ask for the Outlook Forum rate

General information, program updates, and forms for registration and hotel reservations are also available on the home page:  
<http://www.usda.gov/oce/waob/agforum.htm>

**Those who attended the 1996 Forum will receive a registration brochure in November.**
