# Improvements in marine spatial planning: the benefits of incorporating enforcement costs

Katrina Davis\*

David Pannell, Marit Kragt, Steven Schilizzi, & Stefan Gelcich

# Restricted-use management zones

- No-take
- User rights

## Spatial optimisation

- Terrestrial
  - National parks
- Marine
  - Minimize losses to fishers
- Limited economic analysis

# Aim

- Incorporate more comprehensive economic analysis into a spatial optimisation model
- Determine impact of including direct and opportunity costs on optimal marine zoning

Direct costs = management or transaction costs

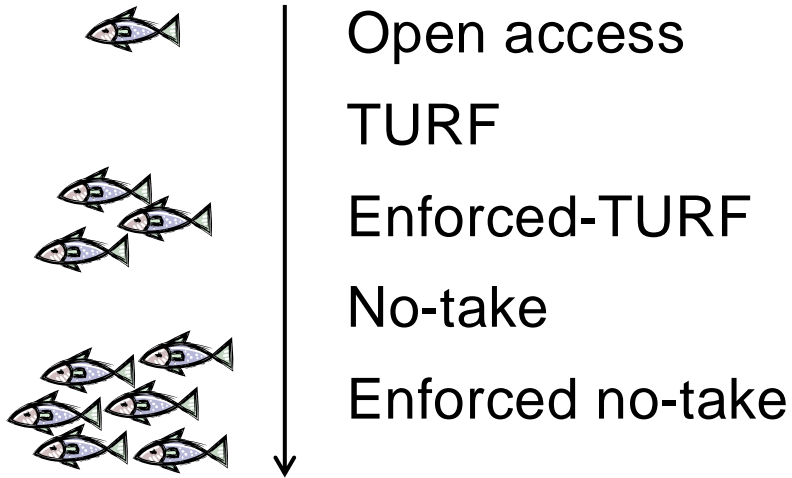

→ Enforcement

# Chile

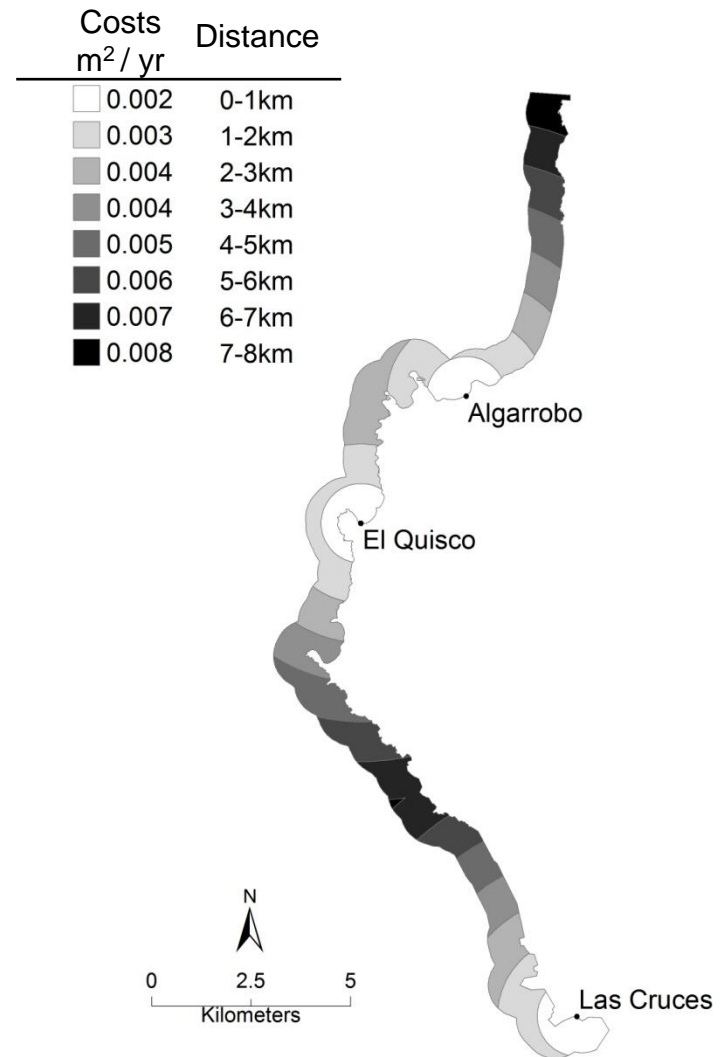

- 4,200 km of coastline
- Rich marine resources
- Top 10 in world fisheries landings
- 1989-1991 Fisheries law
  - Territorial user rights for fishing

# Central marine region of Chile

# Enforcement costs

Deterring poachers and enforcing catch restrictions:  
– Costs vary spatially

# Spatial optimisation model

- Allocate cells ( $C_{i=1,\dots,96}$ ) to management zones

Open access, TURF, Enforced-TURF, No-take, Enforced-no-take

- Objective: Maximize revenue from fish caught

$$\text{Revenue}_{C_i} = (\text{Price} \times \text{Number of fish which can be caught}) - \text{Enforcement costs}$$

- Subject to minimum abundance targets
  - *Targets based on maximum abundance*

# Spatial optimisation model

- Multiple scenarios – impact of enforcement

- No enforcement:  $a \rightarrow O, T, N$

- Enforcement, no cost:  $b \rightarrow O, T, ET, N, EN$

- Enforcement, cost:  $c \rightarrow O, T, ET, N, EN \rightarrow \text{\$}$

# Fisher revenue

Benefits of enforcement

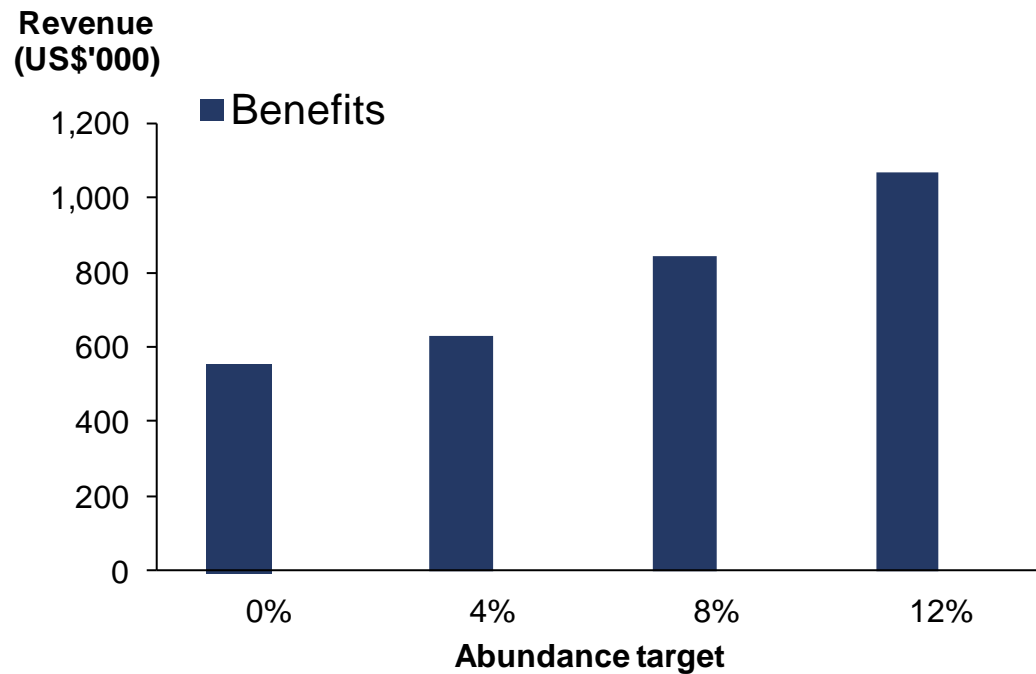

$$= \text{Revenue scenario } b \text{ (Enforcement, no cost)} - \text{Revenue scenario } a \text{ (No enforcement)}$$

# Fisher revenue

Costs of enforcement

$$= \text{Revenue scenario } b \text{ (Enforcement, no cost)} - \text{Revenue scenario } c \text{ (Enforcement and cost)}$$

# Fisher revenue

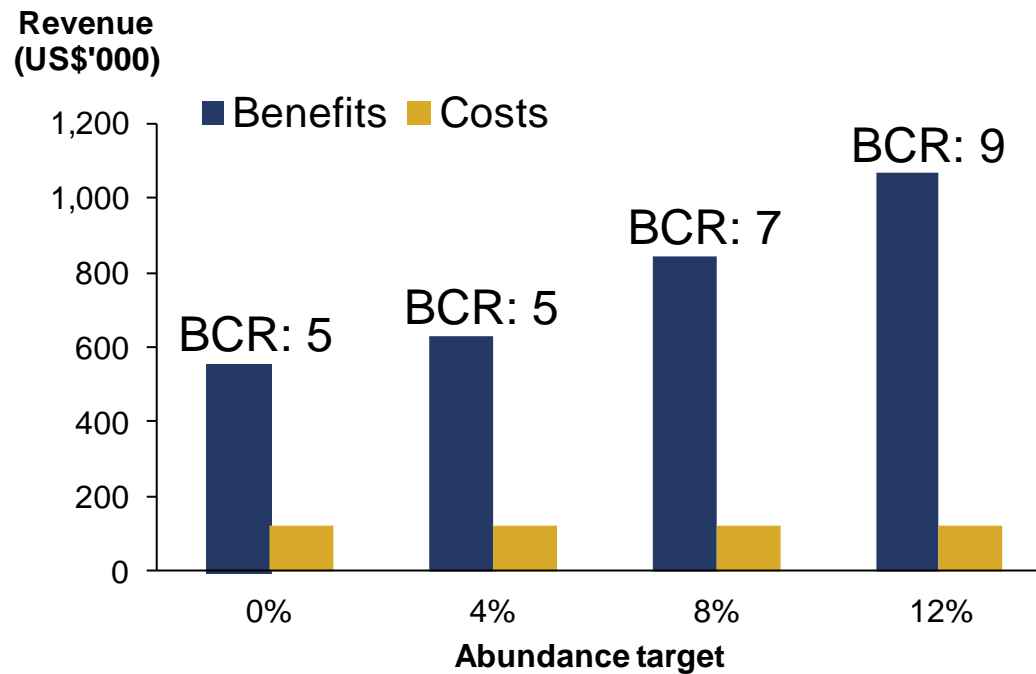

Costs of enforcement

$$= \text{Revenue scenario } b \text{ (Enforcement, no cost)} - \text{Revenue scenario } c \text{ (Enforcement and cost)}$$

# Fisher revenue

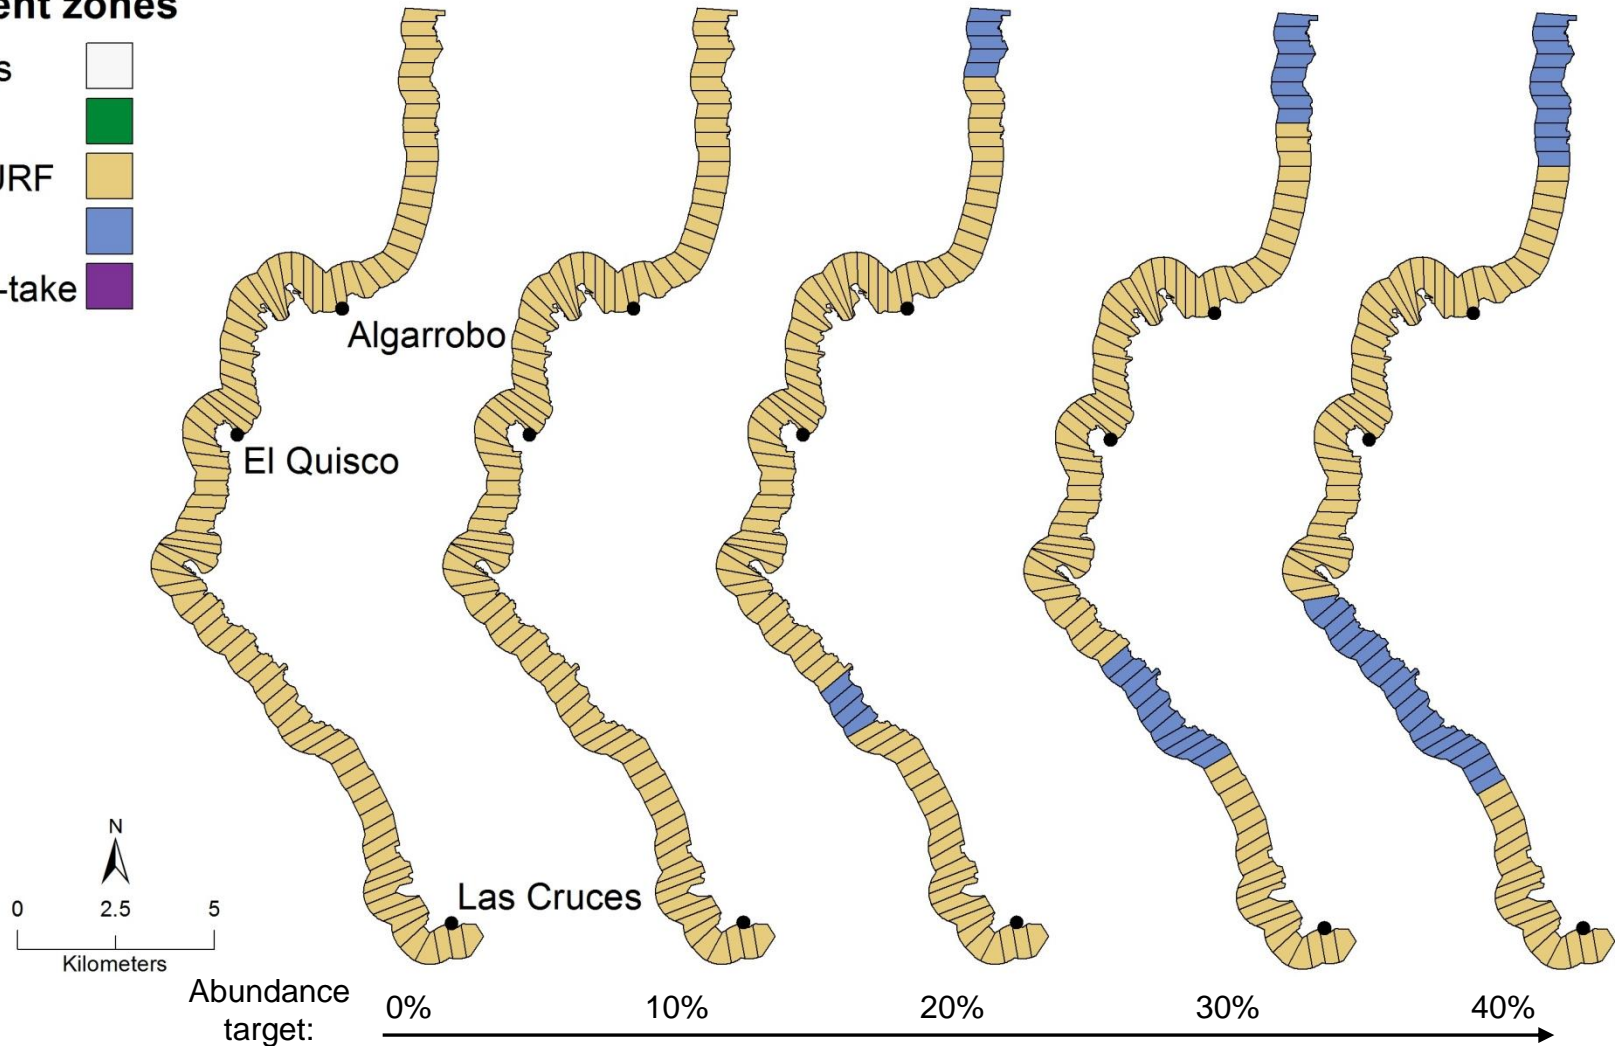

1. Enforcement costs negligible compared to benefits
2. Benefit Cost Ratios (BCRs) > 1

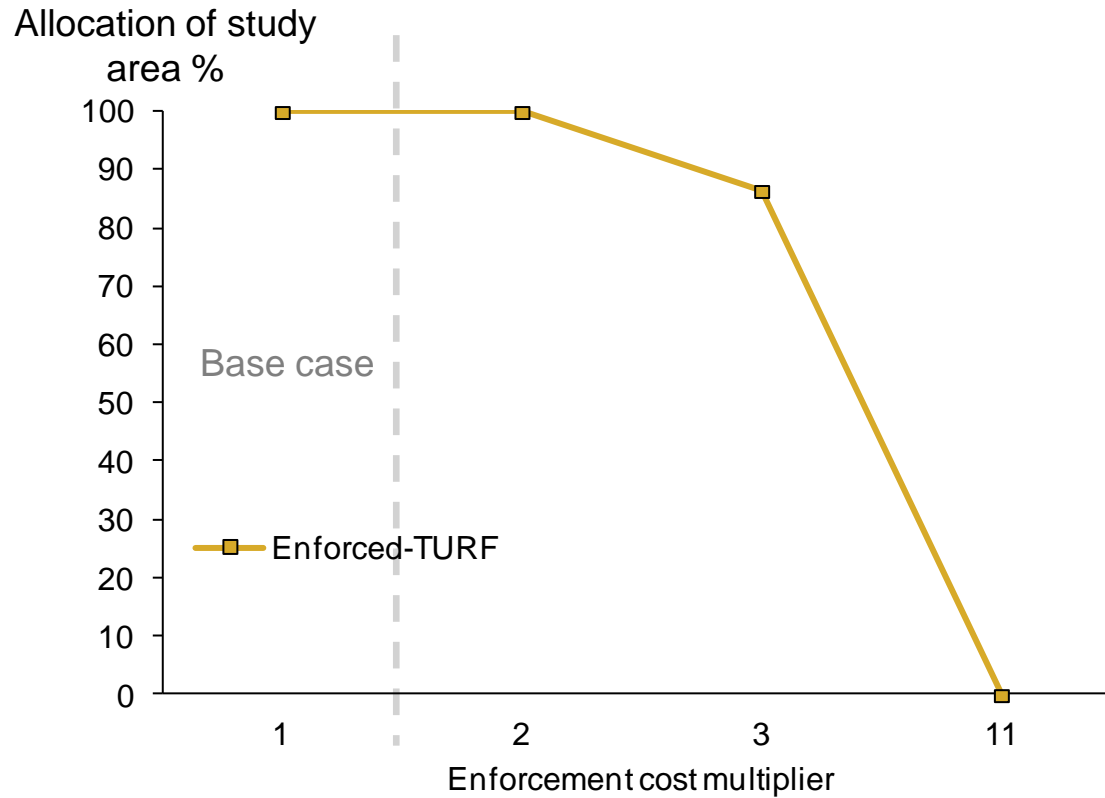

# Optimal spatial allocation

## Management zones

- Open access 
- TURF 
- Enforced-TURF 
- No-take 
- Enforced no-take 

# Sensitivity analysis - Enforcement costs

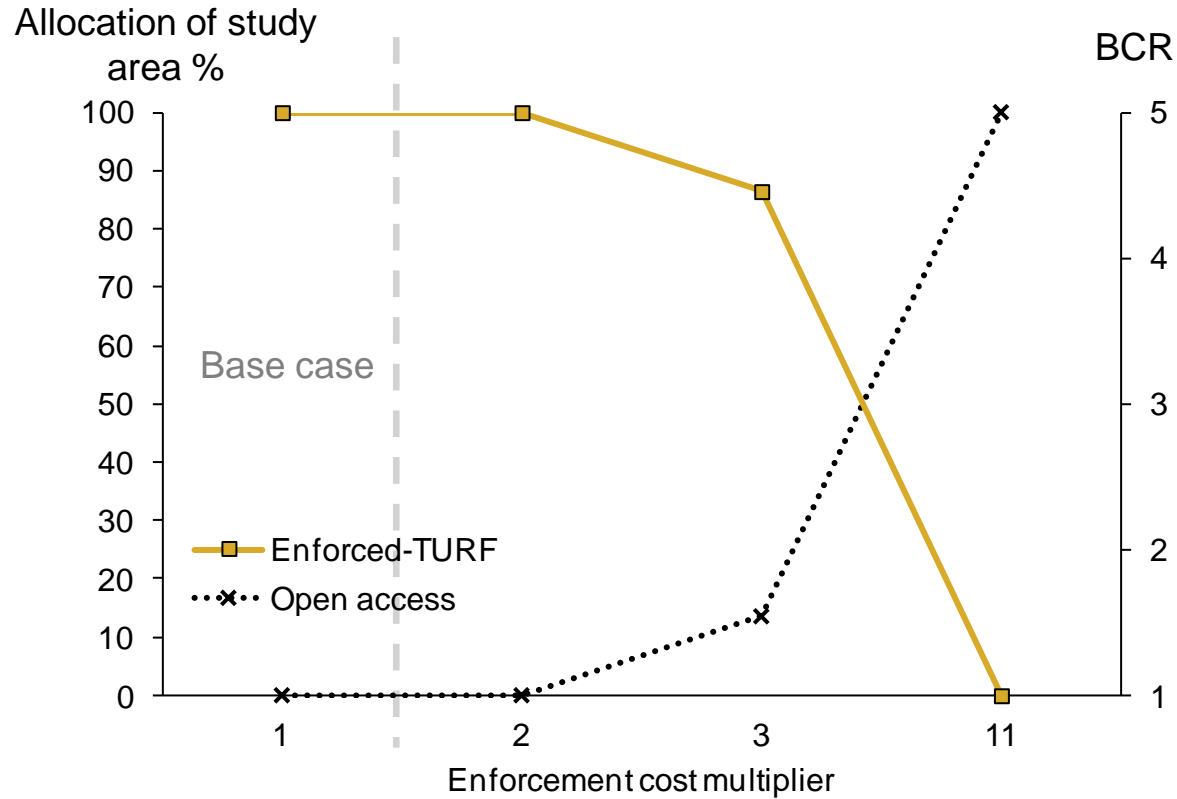

# Sensitivity analysis - Enforcement costs

# Sensitivity analysis - Enforcement costs

# Sensitivity analysis - Enforcement costs

# Why don't fishers enforce?

- Fishers don't enforce TURFs that are far away
- But – there are net benefits from enforcement??
- Potential explanations
  - Fishers may under-estimate the benefits of enforcement
  - Fisher associations may lack capacity or authority
  - Other biological forces at work
  - Transaction costs of enforcement may be higher than we have modelled

# Accounting for enforcement can improve marine management

1. Large benefits from enforcement, negligible costs
2. Costs have a spatial component and can be minimized
