INTRODUCTION

Farm business management projects are a basic part of the agricultural extension program in New York State. The New York State College of Agriculture and Life Sciences at Cornell University, and the County Extension staffs, cooperate in sponsoring these projects. In 1981, about 700 dairyfarmers participated in these management projects. The records submitted by dairyfarmers from 49 counties provide the basis for extension educational programs and data for applied research studies.

Extension agents and specialists enrolled the cooperators and collected the records. Regional summary reports were prepared by the college staff for use by the agents. Each cooperator received a summary and analysis of his or her business, and a regional report for making comparisons. These extension activities aim to help the operators develop their managerial skills and solve business management problems.

The records from all regions of the state have been combined for use in an applied research study of the effects of changes in price, technology, and management on dairy farm incomes. This research also provides current farm business information for use by dairyfarmers, extension staff, teachers, and others concerned with the New York dairy industry.

A total of 553 farm business records have been included in the general dairy summary for 1981. These farms do NOT represent the "average" for all dairy farms in the state. Participation was on a voluntary basis so not all areas or types of operations were represented (see map on opposite page). The 553 farms represent a cross section of better than average commercial dairy farm owner-operators in the state. Dairy farm renters, dairy-cash crop farmers, and part-time dairy operators have been excluded from the main body of this report and summarized separately in the back of the publication.

Acknowledgement

The preparation of this report and the processing and organization of the data it contains has been successfully completed by the dedicated staff of The Farm Decision Network.

Inflation, appreciation, supply and demand all have a direct affect on the inventory values on New York dairy farms. Machinery and real estate prices have risen steadily during the past six years with machinery prices increasing more rapidly. Dairy cow prices have changed most dramatically since 1975 as the demand for replacements jumped in 1978 and 1979 and weakened in 1981.

^{*}Annual average for U.S.

Table 1 shows New York year end (December) price received for dairy cows (replacements), an index of the same cow prices, an index of U.S. machinery prices, and the average per acre value of New York farmland and buildings reported in February. Chart 1 illustrates the annual changes in cow, machinery, and real estate values that have occurred over the last six years.

Chart 1. ANNUAL CHANGES IN DAIRY COW, FARM MACHINERY, & FARM REAL ESTATE VALUES
% change
New York Dairy Farms, 1975-1981

The prices dairyfarmers receive for milk, cattle, and other commodities they sell have a major effect on dairy farm profits. Chart 2 shows what has happened to average milk and slaughter cow prices paid to New York farmers since 1970. Milk prices have increased at a more constant rate showing only one year of decline since 1970. Slaughter cow prices have shown wide fluctuations over the period but have not moved in the same direction for more than three consecutive years.

SOURCE: USDA Agricultural Prices

The prices dairyfarmers pay for a given quantity of goods and services has a major influence on farm production costs. The astute manager will keep close taps on unit costs and substitute the most economical goods and services for those that are too expensive.

Table 3 shows the unit cost indexes of selected goods and services used on New York dairy farms. The changes in feed prices, fuels and energy costs, and wage rates between years are illustrated in Chart 3.

Chart 3. ANNUAL CHANGES IN PRICES OF THREE MAJOR PRODUCTION ITEMS U.S. Dairy Farms, 1975-1981 % change 45 45 Feed 40 40 Fuels & Energy 35 35 Wage Rates 30 30 25 25 20 20 15 15 10 10 5 5 0 0 -5 -5 -10-10

Although all three major cost items have increased since 1975. Feed prices have been through a cycle, fuel and energy costs show the greatest increases, and wage rates have increased at a relatively slow but constant rate.

SUMMARY OF THE FARM BUSINESS

Business Characteristics and Resources Used

Recognition of important business characteristics and a knowledge of the farm resources used helps in evaluating management performance. The combining of resources and management practices is known as farm organization. Important farm business characteristics, the number of farms reporting these characteristics, and the average use of labor and land resources, are presented in Table 4.

Table 4. BUSINESS CHARACTERISTICS AND RESOURCES USED 553 New York Dairy Farms, 1981

Estimated value		,	End of year		81
labor & mgmt.	\$	\$15,100	Ave. for year		79

The most typical dairy farm business was a sole proprietorship with a stanchion barn, milk transfer system, farm account book, and DHIC records. There were 712 operators on the 553 dairy farms for an average of 1.28 operators per farm. The operators averaged 40 years of age and 12 years of formal education. Their estimated value of labor and management averaged \$15,100 per operator.

All the 553 farm businesses summarized in the main body of this report own land and buildings. The dairy farm renters are summarized separately. However, 440 of the dairy farm owners rented an average of 104 acres of tillable land in 1981. The 553 farms averaged 257 total tillable acres per farm of which 82 acres were rented.

Farm Inventory Values

Table 5. CAPITAL INVESTMENT - FARM INVENTORY VALUES 553 New York Dairy Farms, 1981

	My Farm		Average 553 Farms	
Item	1/1/81	1/1/82	1/1/81	1/1/82
Livestock Feed and supplies Machinery and equipment Land and buildings	\$	\$	\$118,805 31,521 78,172 204,181	\$121,534 32,831 87,290 218,106
TOTAL	\$	\$	\$432,679	\$459,761

The value of total farm inventories increased an average of \$27,082 per farm or six percent during 1981. This is the smallest rate of growth that has occurred since 1975. From 1976 through 1980, farm inventory values increased at an annual rate of 12 percent.

The market value of livestock increased an average of \$2,729 per farm in 1981 even though dairy cattle prices declined during the year. The change in inventory caused by the decline in cattle prices averaged \$-1,565 per farm. If there had been no herd growth during the year, livestock inventory would have dropped an average of \$1,565 per farm. Herd growth did occur however.

Table 6. CHANGES IN LIVESTOCK INVENTORY 553 New York Dairy Farms, 1981

Item	Average 5	53 Farms
End of year market value inventory	\$121,534	
Beginning of year market value inventory	-118,805	
Total Increase in Inventory		\$2,729
End of year market value inventory	\$121,534	
End of year inventory at beginning prices	-123,099	
Change Due To Price Decline (Appreciation)		(1,565)
Change Due To Physical Growth in Inventory		\$4,294

The increase in livestock inventory caused by growth and maturity of the herd averaged \$4,294 per farm. Most of this increase can be attributed to the change in dairy cow numbers from 78 to 81 head per farm. The youngstock herd grew at the same rate as the cow herd in 1981.

Feed and supply inventories increased only four percent during 1981 after jumping at an annual rate of 19 percent over the three previous years. Lower quality and quantity of hay crops in storage at the end of the year was a major factor contributing to little inventory growth in 1981. Machinery and equipment and land and building inventory changes are examined on the following pages.

Machinery and Real Estate Inventory Calculations

Capital outlays for machinery and buildings usually occur in large uneven amounts, but depreciate gradually over a period of time. Machinery depreciation is a charge for using the machinery complement in production and is based on the farmer's income tax depreciation. Appreciation is the change in machinery inventory caused by inflation. It is calculated as a residual in Table 7.

Table 7. CHANGES IN MACHINERY AND EQUIPMENT INVENTORY 553 New York Dairy Farms, 1981

Item ·	Average 553 Farms
End of year market value	\$87,290
Beginning of year market value	\$78,172
Plus machinery purchased	+17,180
Less machinery sold	- 359
Less depreciation	-12,508
Net End Investment	\$82,485
Appreciation	\$ 4,805

The end of year market value of real estate is verified in Table 8 by starting with the beginning of year value, adjusting for purchases, sales, depreciation of buildings, and appreciation of land. Lost capital is the difference between the cost of new buildings and the amount these improvements added to the value of the farm. Lost capital is not included in farm expenses. Building depreciation is based on the full cost of new buildings and will account for lost capital over the life of the investments. Building depreciation is based on tax depreciation and is included as a farm expense. Real estate appreciation was estimated by each farm operator. It is the increase in value of real estate caused by demand and inflation.

Table 8. CHANGES IN REAL ESTATE INVENTORY 553 New York Dairy Farms, 1981

Item		Average 553 Farm	ıs
End of year market value			\$218,106
Beginning of year market value		\$204,181	
Plus cost of new real estate	\$+16,290		
Less lost capital	-2,575		
Value Added		+ 13,715	
Less depreciation	- 5,319		
Less real estate sold	<u>- 346</u>		
Value Deducted		<u>- 5,665</u>	
Net End Investment			212,231
Appreciation			\$ 5,875

Receipts

All the cash received for products sold plus the increases in livestock and feed and supply inventories are included in total farm receipts. Farm receipts have also been computed by excluding inventory appreciation.

Table 9. FARM RECEIPTS
553 New York Dairy Farms, 1981

Item	My Farm	Average 5 Per Farm	53 Farms Per Cow	Percent
Milk sales	\$	\$156,043	\$1,975	90
Crop sales	Y	1,823	23	1
Dairy cattle sold		11,008	139	6
Other livestock sales		2,757	35	2
Gas tax refunds	,	254	3	_
Government payments		348	5	•••
Custom machine work		218	3	****
Miscellaneous		1,659	21	1
Total Cash Receipts	\$	\$174,110	\$2,204	100
Increase in livestock inventory*		4,294	54	
Increase in feed & supply inventory		1,310	17	
Total Farm Receipts Excluding				
Appreciation	\$	\$180,336	\$2,283	
Livestock appreciation		- 1,565	- 20	
Machinery appreciation		4,805	61	
Real estate appreciation		5,875	74	
Total Farm Receipts	\$	\$188,829	\$2,390	

^{*}Increase attributed to growth and maturity of herd (page 6).

The dairy herd generated 96 percent of the cash receipts on these dairy farms in 1981. Nearly 90 percent of all farm receipts can be attributed to the production, growth, and increase in value of the dairy herd.

Table 10. INCOME ANALYSIS
553 New York Dairy Farms, 1981

Item	My Farm	Average 553 Farms	Top 10%*
Average price per cwt. milk sold	\$	\$13.66	\$13.76
Milk sales per cow	\$	\$1,975	\$2,117
Milk and cattle sales per cow	\$	\$2,149	\$2,306
Total cash receipts per worker	\$	\$63,313	\$80,130

^{*}Fifty-five farms with the highest labor and management income per operator.

The average price received for milk sold on all the farms was \$13.66 per hundredweight in 1981, \$.85 above the 1980 average. The average price received for milk increased \$.91 per hundredweight in 1980, \$1.39 in 1979, and \$.75 in 1978. Milk sales averaged \$1,975 per cow in 1981 compared to \$1,838 in 1980.

The average or mean price per hundredweight of milk sold is calculated by dividing the gross milk receipts for the year by the total pounds of milk sold. The average price for the 553 farms was \$13.66 but there was considerable variation among the individual farms. The variation in average price received and the distribution of farms around the mean is shown below.

VARIATION IN AVERAGE MILK PRICE

Average Price Received For Milk	Number of Farms	Percent of Farms
Below \$12.50	14	3
\$12.50 to 12.99	28	5
13.00 to 13.49	180	32
13.50 to 13.99	218	40
14.00 to 14.49	73	13
14.50 to 14.99	22	4
15.00 and over	17	3
Tota1	553	100

Seventy-two percent of the farms received from \$13.00 to \$13.99 per hundredweight of milk sold. Twelve percent of the farms received \$14.00 or more per hundredweight while only eight percent got less than \$12.50 per hundredweight. Location and organization of markets are factors contributing to the variability of milk prices on these dairy farms. Management practices on farms as well as in milk companies also affect farm milk prices. Seasonality of production and butterfat test are two variables under the direct control of the farm manager.

Total farm receipts are sometimes used as a measure of size of business. The Census of Agriculture uses this measure in classifying farms. The distribution of total farm receipts of the 553 farms in 1981 is shown below.

DISTRIBUTION OF FARMS BY TOTAL FARM RECEIPTS

		Farms
Total Farm Receip	Numbe	r Percent
Under \$ 50,	000 10	2
\$ 50,000 to 99,	999 116	21
100,000 to 149,	999 151	27
150,000 to 199,	999 100	18
200,000 to 249,	999 53	10
250,000 to 299,	999 40	7
300,000 to 349,	999 19	3
350,000 to 399,	999 25	5
400,000 and over		
Tota	al 553	100

One-half of the 553 farms had total farm receipts of less than \$150,000 but only two percent fell below \$50,000. The remaining 276 farms had total receipts ranging from \$150,000 to over \$400,000 in 1981.

Expenses

Total cash farm expenses for the 553 farms averaged \$375 per day or \$4.75 per cow per day. Total farm expenses averaged more than \$500 per day. The average expenses per farm and per cow for each item are shown below.

Table 11. FARM EXPENSES

TOTAL FARM EXPENSES	\$	\$185,693	\$2,351	

The cash expense classifications used on page 10 have been used to summarize New York dairy farms for many years. Total cash expenses increased 14 percent per farm in 1981 when data from these 553 farms is compared to 1980 data collected from 600 dairy farms.

Replacement livestock purchased are included as cash operating expenses which is consistent with including the costs of raising replacement cattle as cash operating expenses. The purchase of cattle and livestock that increase herd size are classified as expansion livestock and are excluded from cash expenses.

Interest paid on farm indebtedness is included as a cash expense in these summaries. Debt payments usually include both interest and principal but only the interest portion is included in the expenses. Principal payments are an investment not an operating expense of the business.

Machinery and real estate depreciation charges are shown on page 7. Expenditures for machinery and buildings are usually made in large amounts. To include all the expenses in the year of purchase would inflate the farm expenses for that year.

Unpaid family labor refers to work done by members of the family who are not paid cash wages. The operator's labor is not included. Unpaid family labor is charged to the business at \$500 per month.

Interest on equity capital at nine percent has been included as a noncash expense item. This represents what the operator might have earned on his equity capital had he not had it invested in the farm business. This is often called an "opportunity cost". The end-of-year farm net worth (see page 15) is used as the equity capital for computing this interest charge.

Classifying farm expenses as <u>fixed and variable costs</u> is helpful in forward planning or budgeting. Fixed or overhead costs do not vary directly with changes in production and include some cash expenses, capital maintenance costs, and opportunity costs. Variable costs change with variations in units of input and are all cash operating expenses.

Fixed (overhead) Costs		Variable Costs	
Land & building repairs	\$ 2,461	Labor	\$ 13,639
Real estate taxes	3,937	Feed Machinery repairs	41,326 7,863

Rent	2,708	Machine hire Auto	1,383 445
Interest paid	16,304	Livestock purchased	4,727
Fixed Cash Expenses	\$28,027	Livestock expenses Fertilizer & lime	15,409 8,245
Depreciation	17,827	Other crop expenses	4,957
Unpaid labor	1,606	Electricity Telephone	3,118 561
Interest on equity capital	27,178	Miscellaneous	2,309
Total Fixed Costs	\$74,638	Total Variable Costs	\$111,063

Several costs classified as fixed, including interest, repairs, rent, and utilities, may be partly variable depending upon the size and nature of the business.

Financial Summary of Year's Business

The financial summary of the year's business reflects the quality of management. Researchers have developed a number of ways to measure the returns from a farm business. Four common measures are reported here. The measure selected an any one time will depend on the purpose for which it is used.

Table 12. NET CASH FARM INCOME 553 New York Dairy Farms, 1981

		Average 553 Farms	
Item	My Farm	Per Farm	Per Cow
Cash Farm Receipts	\$	\$174,110	\$2,204
Cash Farm Expenses		136,974	1,734
NET CASH FARM INCOME	\$	\$ 37,136	\$ 470

Net cash farm income is a measure of the cash available from the year's farm operations for family living, principal payments, and other uses. A family may have additional cash available if they have nonfarm income. Net cash income is not a good measure of farm business profits but it shows the cash flow situation and is useful in planning debt repayment programs and family budgets.

Table 13.

LABOR AND MANAGEMENT INCOME
553 New York Dairy Farms, 1981

Item_	My Farm	Average 5. Per Farm	53 Farms Per Cow
Total Farm Receipts Excluding Appreciation Total Farm Expenses	\$	\$180,367 185,693	\$2,283 2,351
LABOR & MANGEMENT INCOME Number of operators per farm LABOR & MANAGEMENT INCOME	\$	\$- 5,326 1.25	\$- 68 1.25
PER OPERATOR	\$	\$- 4,261	\$ - 54

Labor and management income measures the return to the operator for his or her efforts in operating the business. A nine percent charge for the use of equity capital (see explanation on page 11) is included as a farm expense. Labor and management income per operator is the measure generally used for comparing farm businesses. There were 691 operators on the 553 farms in 1981, for an average of 1.25 operators per farm.

Total farm receipts used to compute labor and management income in Table 13 exclude the appreciation of livestock, machinery, and real estate inventories that occurred during the year. The appreciation of these assets was caused by inflation which management had little control over. Therefore appreciation is not considered part of the return to labor and management. Appreciation is included as a return to ownership on page 13.

The increase, (or decrease), in livestock inventory is divided into two parts by first determining how much of the increase was caused by change in price (page 6). The increase in livestock inventory attributed to herd growth and increase in feed and supply inventories is included in farm receipts when computing labor and management income.

Labor and management income per operator averaged -\$4,261 on these 553 dairy farms in 1981 but the range was from less than -\$50,000 to more than \$40,000. Returns to labor and management were negative on more than one-half of the farms. Labor and management income per operator ranged from \$0 to \$19,999 on 34 percent of the farms while only seven percent showed labor and management incomes of \$20,000 or more per operator.

DISTRIBUTION OF LABOR INCOMES PER OPERATOR

	Far	cms
Labor Income Per Operator	Number	Percent
Less than -\$50,000	15	3
-\$50,000 to - 40,001	14	2
-40,000 to $-30,001$	30	5
- 30,000 to - 20,001	43	8
- 20,000 to - 10,001	83	15
- 10,000 to - 1	142	26
0 to 9,999	123	22
10,000 to 19,999	65	12
20,000 to 29,999	18	3
30,000 to 39,999	9	2
40,000 or more	11	2

Labor, management, and ownership income per operator reflects the combined return to the farmer for his triple role of worker-manager, financier, and owner. This measure includes appreciation and interest on equity capital, as returns to ownership. This measure of farm profit includes the operator's gain in net worth as well as net farm income. The average labor, management, and ownership income per operator was \$24,251 in 1981.

Table 14. LABOR, MANAGEMENT, AND OWNERSHIP INCOME 553 New York Dairy Farms, 1981

		Average 5	53 Farms
Item	My Farm	Per Farm	Per Cow
Total Farm Receipts	\$	\$188,829	\$2,390
Total Farm Expenses Excluding Interest on Equity Capital		158,515	2,007
LABOR, MANAGEMENT & OWNERSHIP INCOME	\$	\$ 30,314	\$ 383
Number of Operators		1.25	1.25
LABOR, MANAGEMENT & OWNERSHIP INCOME PER OPERATOR	\$	\$ 24,251	\$ 306

Total farm receipts used to compute labor, management, and ownership income includes all appreciation in inventories as well as the increases caused by physical growth in the business. Total farm expenses shown in Table 14 do not include the nine percent charge for using equity capital in the business.

Return on equity capital can be computed with or without real estate appreciation. To calculate return on equity capital (including real estate appreciation), the estimated value of operator's labor and management is deducted from labor, management, and ownership income. This return to equity capital is divided by the farm net worth to get the rate of return on equity capital. To compute return on equity capital excluding appreciation, appreciation must be deducted from ownership income.

Table 15. RETURN ON EQUITY CAPITAL 553 New York Dairy Farms, 1981

Item	My Farm	Average 553 Farms
<u>_ I</u>	ncluding Rea	al Estate Appreciation
Labor, Management, & Ownership Income (pg. 13)	\$	\$ 30,314
Value of Operator's Labor & Management (pg. 5)		(1.25)
RETURN ON EQUITY CAPITAL Amount of Equity Capital RATE OF RETURN ON EQUITY CAPITAL*	\$	\$ 10,873 \$301,975 3.6%
E	xcluding Re	al Estate Appreciation
Return on Equity Capital (from above)	\$	\$ 10,873
Appreciation		14,783
RETURN ON EQUITY CAPITAL Amount of Equity Capital RATE OF RETURN ON EQUITY CAPITAL	\$%	\$ 18,074 \$288,022 0.8%

^{*}The rate of return on all capital was 5.6 percent.

The operators were asked to estimate the value of their labor and management on the basis of what they might be able to earn if they were to work for someone else in a similar position. The average estimated by the 691 operators was \$15,500. This is somewhat less than the value determined by using \$750 per month for the labor plus a management charge based on five percent of the cash receipts per operator (\$9,000 + \$8,705 = \$17,706). The value estimated by the farm operators is the one used in Table 15.

Returns Per Unit of Input

Income from a business can also be calculated in relation to various input units. For example, the labor and management return can be allocated to the entire labor force and figured on a per worker basis.

Returns To All Labor and Management

Labor & management income per farm	-\$ 5,326
Cost of hired labor	13,639
Value of unpaid labor	1,606
Total Returns to Labor & Management	\$ 9,919
Average worker equivalent	2.75
Returns per worker equivalent	\$ 3,607
Returns per hour (3,000 hours/worker/year)	\$ 1.20

Farm and Farm Family Financial Situation

The financial situation is an important part of the farm business summary. It has a direct affect on current cash outflow and future capital investment decisions. A farmer may have a good labor income but a high debt payment schedule may seriously restrict management flexibility.

Table 16. FARM AND FARM FAMILY FINANCIAL SITUATION 553 New York Dairy Farms, January 1, 1982

		Average 553	Farms
Item	My Farm	Amount	Percent
Assets			
Livestock \$ Feed & supplies Machinery & equipment Land & buildings Co-op investment		\$121,534 32,831 87,290 218,106 5,777	24 7 17 43 1
Accounts receivable Cash & checking accounts		13,272 2,328	2 1
Total Farm Assets	\$	\$481,138	95
Savings accounts \$		\$ 3,354 2,861 2,682 5,282 1,528 5,555	1 1 1 1
Total Nonfarm Assets	\$	\$ 21,263	<u>2</u> 100
TOTAL ASSETS	\$	\$502,400	0
Liabilities Real estate mortgage \$	-	\$ 95,397	53
Liens on cattle & equipment Installment contracts Loans: More than 10 years 1 to 10 years Less than 1 year Other		56,765 6,616 7,751 4,602 3,299 4,733	32 4 4 2 2 2
Total Farm Liabilities	\$	\$179,16	3
Nonfarm Liabilities		87	6
TOTAL LIABILITIES	\$	\$180,03	9
Farm Net Worth (equity capital)	\$	\$301,97	5
Family Net Worth	\$	 \$322,36	1

Total farm assets accounted for 95 percent of the total assets. Real estate mortgages and other long term loans were the largest liability and accounted for 57 percent of all debts. Intermediate debt, including secured liens, installment contracts, and one to 10 year loans, accounted for 38 percent of all liabilities. Equity capital for the 553 farms averaged \$301,975 and the total family net worth exceeded \$322,000.

The ability to service debt is the most important consideration in determining if and how proposed investments can be financed. Debt payment capacity based on 1981 income is compared with debt service planned for 1982 in Table 17.

Table 17. DEBT PAYMENT CAPACITY AND SCHEDULED COMMITMENTS 553 New York Dairy Farms, January 1, 1982

		Average 5	53 Farms
Item	My Farm	Per Farm	Per Cow ¹
Net cash farm income	\$	\$37,136	\$458
Interest paid		16,302	201
Off-farm income		1,227	15
CASH AVAIL. FOR DEBT PYMT. & LIVING	\$	\$54,665	\$675
Estimated family living expense ²	*	18,964	234
CASH AVAIL. FOR DEBT PYMT. & CAP. PURCH.	\$	\$35,701	\$441
Debt payments planned	\$	\$38,649	\$472
Debt pymts. planned as % of milk sales	7/2	25%	,
Cash flow coverage ratio		0.92	

¹Based on 81 end of year cows per farm.

Cash available for debt service and living is the net cash farm income plus interest paid, plus off-farm income contributed to family living. Average family living expenses have been estimated as indicated. Subtracting family living expenses from total cash available leaves cash available for debt payments and capital purchases made with cash.

Debt payments planned represent the outstanding commitments as of January 1, 1982. The reasonableness of the debt commitment can be more easily appraised by computing debt payments per cow and payments as a percent of milk sales.

The cash flow coverage ratio shows how well cash available for debt service covers the debt payment commitments. A ratio of less than 1.0 indicates that on the average these farmers will not be able to meet their 1982 repayment schedules.

Table 18. MEASURES OF DEBT STRUCTURE
553 New York Dairy Farms, January 1, 1982

Measure	My Farm	Average 553 Farms
Percent equity Debt/asset ratio - long term Debt/asset ratio - intermediate		64% 0.47
and short term Debt per cow		0.28 \$2,212

Percent equity is family net worth divided by total assets and indicates the general equity position of the family for credit purposes.

Debt asset ratios are computed by dividing debt by assets. The long term debt asset ratio shows the percentage of real estate assets covered by real estate debt. The intermediate and short term ratio is the percentage of all other farm assets covered with intermediate and short term debt excluding open accounts.

 $^{^{2}}$ Calculated at \$9,600 per family plus four percent of cash receipts.

The Farm Finance checklist is designed to help focus on financial management practices in use by all 553 New York dairyfarmers as compared to those used on the most profitable farms in 1981.

		'	4-1,000	=

¹Fifty-five farms with highest returns to labor and management per operator.
2Long or intermediate debt divided by long or intermediate assets.

 $3 {\tt Estimated}$ amount available for debt service divided by planned debt payments.

The most profitable farms carried \$336 less debt per cow and a greater ability to make 1982 debt payments although their equity in their business was not significantly above average.

Farm debt grew faster than farm assets between 1980 and 1981 and net worth increased less than our annual rate of inflation.

ANALYSIS OF THE FARM BUSINESS

A systematic analysis of the operation helps to determine strengths and weaknesses in the business. In this section, five business factors are examined: size of business, rates of production, labor efficiency, capital efficiency, and cost control. The 1981 averages of selected measures for these factors for the 553 farms, and the average for the 10 percent with the highest labor and management incomes per operator, are reported along with general relationships of factors to labor income. Since the measures examined are interrelated, all factors should be studied before arriving at major conclusions.

Size of Business

Size has an affect on other factors such as labor efficiency, cost control, and capital efficiency. The prices received and paid are often affected by volume which is a function of size. Farm management studies show that in general larger farm businesses (when well managed) make larger labor incomes. Two basic reasons for this are that larger businesses make possible more efficient use of overhead inputs, such as labor and machinery, and there are more units on which to make a profit.

Table 20. MEASURES OF SIZE OF BUSINESS 553 New York Dairy Farms, 1981

Measure	My Farm	Average 553 Farms	Average Top 10% Farms
Number of cows		79	128
Number of heifers		59	99
Worker equivalent		2.75	3.75
Total tillable acres	***************************************	257	350
Pounds of milk sold Total work units	4	1,142,000 869	1,970,400 1,376
Total cash receipts Total investment (end	\$	\$174,110	\$300,489
inventory)	\$	\$459,761	\$646,124

Number of cows is the average number in the herd for the year. Where available, the DHI annual average is used.

Total tillable acres includes all acres on which crops could have been grown during the 1981 year. It includes cropland pasture and idle cropland.

Worker equivalent is all of the labor used on the farm during the year in terms of full-time worker years. Work of part-time employees and family members is converted to full-time worker equivalent.

Total work units represents the number of productive worker days that would be required under average conditions to care for the acreage of crops grown and the number of livestock handled. One worker unit is the average amount of productive work accomplished in 10 hours of work.

The relationship of business size to farm business profits can be observed in Tables 21 and 22. Farm size is measured by number of cows. In general, the larger the businesses, the higher the level of farm incomes. This relationship is consistent with that of earlier studies. A well managed large farm will provide the operator a higher income than a well managed small farm, but a large, poorly managed farm can lose more than a small one.

Table 21. COWS PER FARM AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Number of Cows	Ave. Number of Cows	Number of Farms	Percent of Farms	Labor & Mgmt. Income Per Operator
Under 40	34	82	16	-\$ 4,300
40 to 54	47	130	25	- 6,077
55 to 69	61	110	21	- 1,204
70 to 84	77	74	13	- 5,284
85 to 99	90	38	6	- 3,648
100 to 114	106	26	4	- 5,677
115 to 129	121	25	4	- 15,635
130 to 149	139	16	3	- 11,780
150 to 179	163	23	4	- 4,577
180 to 199	187	8	2	3,497
200 & over	267	21	2	11,178

Number of cows is a good measure of size on the dairy farm because it measures the variability in the key source of production, the dairy herd. As size of herd varied from less than 40 cows to 200 and more in 1981, labor and management income increased from -\$4,300 per operator to more than \$11,178.

There is a stronger relationship between size and farm income when net cash farm income and labor, management, and ownership income are compared with cows per farm. Net cash farm income increased 630 percent while labor, management, and ownership income per operator jumped 850 percent as herd size increased from less than 40 to over 200 cows per farm.

Table 22. FAPM SIZE AND FARM INCOME MEASURES 553 New York Dairy Farms, 1981

Number of Cows	Number of Farms	Worker Equivalent	Net Cash Farm Income	Labor, Management & Owner- ship Income Per Operator
Under 40	82	1.6	\$16,333	\$ 9,125
40 to 54	130	2.1	22,287	14,718
55 to 69	110	2.3	32,662	22,121
70 to 84	74	2.8	36,932	22,525
85 to 99	38	3.3	47,296	27,166
100 to 114	26	3.4	49,670	24,688
115 to 129	25	3.9	38,306	24,612
130 to 149	16	4.2	64,819	35,614
150 to 179	23	4.3	68,648	37,439
180 to 199	8	5.5	99,644	65,474
200 & over	21	6.9	119,642	86,659

Rates of Production

Production per animal and per acre are major factors affecting farm profits. Milk sold per cow is the most reliable production measure used in dairy farm analysis.

Table 23. MEASURES OF RATES OF PRODUCTION 553 New York Dairy Farms, 1981

			55	Ave. Yield		
	My 1	Farm	Farms	Aver	age*	Top 10%
Item	Acres	Yield	Reporting	Acres	Yield	Farms
Milk sold per cow (lbs.)			553		14,456	15,394
All hay crops (tons dry matter/acre) Corn silage (tons/acre) All forage crops			552 506	131 59	2.5 14.9	2.7 16.1
(tons dry matter/acre)			553	188	3.3	3.6
Grain corn (bu./acre) Oats (bu. per acre)			324 148	71 26	91 51	100 66

^{*}Average for farms reporting the crop.

Pounds of milk sold per cow is calculated by dividing the total pounds of milk sold for the year by the average number of cows. No adjustment is made for differences in the butterfat test of the milk.

Tons of hay crops per acre is calculated by adding the tons of dry matter from hay crop silage and green chop to dry hay and dividing by the total acres of cropland used for hay crops. Tons of dry matter per acre of all forages is determined by adding tons of dry matter of corn silage and hay crops, and dividing by total acres used for growing forages.

Studies have shown repeatedly that farms with higher rates of production tend to have higher profits. In 1981, the farms that sold more than 15,000 pounds of milk per cow had substantially higher profit margins with slightly higher than average herd sizes.

Table 24. MILK SOLD PER COW AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Pounds of Milk Sold Per Cow	Number of Farms	Number of Cows	Labor & Mgmt. Income/Oper.	Labor, Mgmt., & Owner- ship Income/Operator
Under 11,000	50	50	-\$ 8,642	\$ 5,165
11,000 to 11,999	30	67	- 5,687	13,593
12,000 to 12,999	48	76	- 17,052	9,159
13,000 to 13,999	96	78	- 5,925	20,818
14,000 to 14,999	117	83	- 6,178	26,893
15,000 to 15,999	109	89	302	32,468
16,000 to 16,999	5 2	82	2,142	30,451
17,000 to 17,999	28	78	1,716	27,606
18,000 & over	23	89	1,861	45,290

Labor Efficiency

Labor inputs account for about one-sixth of the costs in producing milk. Therefore, it is important that labor be used efficiently. Output or productivity per worker is used to measure labor efficiency. This is an important factor affecting labor and management incomes.

Table 25. MEASURES OF LABOR EFFICIENCY 553 New York Dairy Farms, 1981

Measure	My Farm	Average 553 Farms	Average Top 10% Farms
Number of cows per worker		29	34
Pounds of milk sold per worker		415,273	525,440
Work units per worker		316	367
Tillable acres per worker		94	91

 $\frac{\text{Pounds of milk sold per worker}}{\text{of milk sold by the worker equivalent.}} \text{ is determined by dividing the total pounds of milk sold by the worker equivalent.}$ This is the best measure of labor efficiency for dairy farms.}

Labor productivity (efficiency) depends on a number of things. Among these are the amount of mechanization, the field and building layout, the work methods used, and the abilities of the workers. All of these are management items under the control of the operator.

The 10 percent of the farms with the highest labor and management incomes per operator were considerably above the average of all 553 farms in the four measures of labor efficiency. The top 10 percent sold 27 percent more milk per worker than the average of all farms.

The relationship of labor efficiency to labor, management, and ownership income was very positive on the $553~{\rm farms}$. The higher output per worker was achieved by more and better cows.

Table 26. MILK SOLD PER WORKER AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Pounds of Milk Sold Per Worker	Number of Farms	Number of Cows	Lbs. Milk Per Cow	Labor & Mgmt. Income Per Operator	Labor, Mgmt., & Ownership Income Per Operator
Under 250,000	68	44	11,609	-\$9,348	\$ 5,325
250,000 to 299,999	58	53	13,185	- 7,361	12,436
300,000 to 349,999	77	62	14,060	-6,337	19,102
350,000 to 399,999	91	67	14,178	- 3,738	19,365
400,000 to 449,000	81	77	14,849	- 1,350	24,137
450,000 to 499,999	60	93	14,799	- 5,635	30,006
500,000 to 599,999	79	108	15,500	1,741	39,315
600,000 & over	39	158	15,461	- 3,751	54,391

Capital Efficiency

Capital is a major farm resource and it is important to analyze how efficiently it is used in the business. The measure of total capital examined here is the end-of-year total farm inventory which averaged \$459,761 per farm on the 553 farms. This includes both owned and borrowed capital for all farms. The use of borrowed capital or credit is part of capital management.

Table 27. MEASURES OF CAPITAL EFFICIENCY 553 New York Dairy Farms, 1981

Measure	My Farm	Average 553 Farms	Average Top 10% Farms
Total capital per worker	\$	\$167,186	\$172,300
Total capital per cow	Ś	\$5,676	\$4,895
Total capital per cwt. milk sold	\$	\$39	\$31
Machinery & equipment per cow	\$	\$1,078	\$809
Land & building inventory per cow Land & building inventory per	\$	\$2,693	\$2,164
tillable acre owned	\$	\$1,246	\$1,366
Capital turnover (capital : receipts)	White Billion and the same and	2.4	1.9

The comparisons in Table 27 suggests that efficiency in the use of capital can be obtained by keeping more cows without increasing the capital investment. A high investment per worker equivalent does not necessarily mean strong capital efficiency. High investment per worker must be accompanied by high labor productivity to result in good farm profits.

Capital turnover is a good measure of capital efficiency as it shows the number of years of farm receipts required to equal or "turnover" capital investment. It is computed by dividing the year-end farm inventory by the year's total farm receipts. The relationship capital turnover has to labor and management income and other factors is shown in Table 28. As a general rule, dairyfarmers should aim for a capital turnover of 2.5 years or less.

Table 28. CAPITAL TURNOVER AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Capital Turnover	Number of	Number of	Capital	Investment	Labor & Mgmt
Rate - Years	Farms	Cows	Per Cow	Per Worker	Operator
less than 1.5	9	111	\$3,369	\$104,662	\$ 22,725
1.5 to 1.99	87	114	4,565	151,288	8,817
2.0 to 2.49	183	82	5,406	167,094	-2,990
2.5 to 2.99	143	67	6,262	172,843	-6,860
3.0 to 3.49	73	69	7,014	190,300	-11,341
3.5 & over	58	52	7,344	182,757	-18,611

Cost Control

Successful dairy farm mangers are able to keep costs under control. Feed, machinery, labor, and capital are major cost items and are examined in detail in this section. Profitable businesses usually maintain a "tight" control on all costs, both large and small. But, cost control should not be so tight that the efficient and economical use of important farm inputs is restricted.

Feed Costs

Feed is the largest single expense item on New York dairy farms. Purchased dairy concentrates accounted for 29 percent of all cash operating expenses on the 553 dairy farms in 1981.

Dairy feed costs must be analyzed by examining the entire feed and forage situation. The make-up of the dairy herd will also affect feed costs so several measures must be studied and compared to make the analysis complete.

Table 29. ITEMS RELATED TO FEED COSTS 553 New York Dairy Farms, 1981

Item	My Farm	Average 553 Farms	Average Top 10% Farms
Feed bought per cow	\$	\$508	\$527
Crop expense per cow	\$	\$167	\$162
Feed bought per cwt. milk	\$	\$3.51	\$3.42
Feed & crop expense per cwt. milk	\$	\$4.67	\$4.47
Percent feed is of milk sales	%	26%	25%
Forage dry matter harvested per cow	т	7.8T	7.5T
Tillable acres per cow		3.3	2.1
Fertilizer & lime per crop acre	\$	\$32	\$38
Heifers as percent of cow numbers	7/8	75%	76%

The average cost of feed bought per cow in 1981 was \$508 while in 1980 it was \$497. The percent that feed bought is of milk sales was 26 percent in 1981, down one percent from 1980.

The 1981 forage crop supply was down four percent from 1980. Dry matter produced per cow was 7.8 tons from 2.4 acres in 1981. In 1980, 8.1 tons of forage dry matter were produced from 2.5 acres.

Feed costs include all feed for cows and heifers. Per cow costs are influenced markedly by the number of replacements on hand. Heifers as percent of cow numbers must be considered when evaluating most of the per cow factors. There were 75 percent as many heifers as cows in 1981 and in 1980.

The 55 farms with highest labor and management incomes spent more on purchased feed per cow, but combined feed and crop expense were 20¢ less per hundredweight of milk sold than the average of all farms.

Feed cost is influenced by a number of factors. On the production side, it is affected by the amount of homegrown grains fed, quality and quantity of the roughage, and the number of youngstock. On the purchasing side, it is influenced by the farmer's ability to purchase concentrates at reasonable prices and to balance nutrients fed with energy and protein requirements.

Feed bought per cow is calculated by dividing the total expenses for dairy concentrate by the average number of cows. Because this also includes the amount spent for calf and heifer feed, it actually represents the feed cost per cow and the replacements being raised.

<u>Crop expense per cow</u> is the total spent for fertilizer and lime, seeds and plants, spray, and other crop expense divided by the average number of cows. It does not include a charge for land or machinery and fuel expenses.

Feed and crop expense per hundredweight of milk is one of the most useful feed cost measures because it accounts for variations in milk production between herds and it includes crop expenses that are associated with feed production.

Feed purchased as percent of milk receipts is calculated by dividing feed purchased by milk receipts. This is another useful measure of feed efficiency although variations in homegrown grains fed and milk prices can have an adverse affect.

Dry matter per cow is calculated by converting all hay crops and corn silage harvested to tons of dry matter, and dividing by the average number of cows.

Heifers as percent of cow numbers is figured by dividing the number of heifers by the number of cows and multiplying by 100.

Table 30. PERCENT PURCHASED FEED IS OF MILK RECEIPTS
AND LABOR AND MANAGEMENT INCOME
553 New York Dairy Farms, 1981

% Feed is of Milk	Number of Farms	Number of Cows	Dry Matter Per Cow	Lbs. Milk Per Cow	Labor & Management Income Per Operator
Over 40%	32	61	7.0	14,300	\$-11,563
35 to 39	75	67	7.6	14,400	-8,798
30 to 34	108	79	7.7	14,600	-501
25 to 29	113	80	8.0	14,500	-4,169
20 to 24	99	88	7.9	14,800	- 766
Under 20%	126	82	7.9	14,100	-6,155

Generally, the lower the percent of the milk check going for purchased feed, the higher the income. The 1981 data shows that it is possible to spend too little as well as too much on purchased dairy feed. Farmers spending between 20 and 35 percent of their milk receipts for purchased feed in 1981 appear to be practicing effective feed cost control.

Machinery Costs

Machinery accounted for 19 percent of the year-end farm inventory on these 553 farms and the new purchases averaged \$17,180 per farm in 1981. The cost of owning and operating machinery accounted for one-fifth of the total farm expenses.

Table 31. MACHINERY COSTS
553 New York Dairy Farms, 1981

Item	My Farm	Average 55	3 Farms Percent	Average Top 10% Farms
Depreciation (from page 7)	\$	\$12,508	34	\$16,406
Interest @ 9% on average inventor	у	7,446	20	8,999
Machine hire		1,383	4	2,395
Machinery repairs	<u> </u>	7,863	22	11,711
Auto expense (farm share)		445	1	440
Gas & oil		7,081	_19	10,938
Total Machinery Costs	\$	\$36,726	100	\$50,889
Machinery cost:		MD नकी पार्ट पार्ट आठ अंकि नकर नकर नकर नक नकी नक्ष की की की स्थाप कार न		
per cow	\$	\$465		\$398
per hundredweight of milk sold	\$	\$3.22		\$2.58

Depreciation accounted for 34 percent of the total machinery costs and interest 20 percent. These two fixed cost items are often overlooked in a casual examination of machine operating costs. Repairs were the second largest cost item and one which must be kept in line if costs are to be kept under control. The cost of gasoline and oil increased 15 percent per cow in 1981 following increases of 28 percent in 1980 and 33 percent in 1979. Machinery costs averaged \$465 per cow, compared to \$425 in 1980 and \$344 in 1979.

There is a strong relationship between machinery costs per cow and returns to labor and management. As machinery cost per cow increased, labor costs per cow also increased. This indicates that if substitution of machinery for labor is occurring on these farms, major cost savings are not apparent.

Table 32. MACHINERY COST PER COW AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Machinery Cost Per Cow	Number of Farms	Number of Cows	Labor Cost Per Cow	Labor & Management Income Per Operator
Under \$300	44	80	\$298	\$ 7,668
\$300 to 349	62	82	314	1,273
350 to 399	71	77	320	-684
400 to 449	90	88	347	-914
450 to 499	71	75	324	-4,576
500 & over	215	76	354	-10,618

Labor Costs

Labor costs should not be overlooked in a farm business analysis even though the farm family provides a large part of the labor supply. On these 553 farms, the family (including paid family labor) provided 66 percent of the months of labor inputs, while hired nonfamily labor provided 33 percent (page 5). The operator's and other unpaid family labor are assigned values and included in Tables 33 and 34.

Table 33. LABOR COSTS
553 New York Dairy Farms, 1981

Item	My Farm	Average 553 Farms	Average Top 10% Farms
Value operator's labor (@\$750/month) Hired labor expense (from page 10;	\$	\$11,258	\$11,700
includes paid family labor)		13,639	29,382
Unpaid family labor (@ \$500/month)		1,606	1,245
Total Labor Costs	\$	\$26,503	\$42,327
Labor cost per cow	\$	\$335	\$331
Labor cost per cwt. milk	\$	\$2.32	\$2.15
Cost per month hired labor	\$	\$909	\$1,088
Cost per month all labor	\$	\$803	\$941

Although the top 10 percent farms paid \$179 per month more for hired labor and \$138 per month more for all labor than the average of the 553 farms, superior labor efficiency kept labor costs per cow and per hundredweight of milk sold well below average.

Labor and machinery operate as a "team" so the challenge is to get a combination that will give a reasonable cost per unit of milk sold. On these 553 farms the machinery costs were higher than labor costs. The labor and machinery costs for the top 10 percent farms were 81¢ per hundredweight of milk, less than the average for all farms.

Table 34.

LABOR AND MACHINERY COSTS
553 New York Dairy Farms, 1981

Item	My Farm	Average 553 Farms	Average Top 10% Farms
Total labor costs	\$	\$26,503	\$42,327
Total machinery costs		36,726	50,889
Total Labor & Machinery Costs	\$	\$63,229	\$93,216
Labor & machinery costs per cow	\$	\$800	\$729
Labor & machinery costs per cwt. milk	\$	\$5.54	\$4.73

Miscellaneous Costs

Costs in addition to feed, machinery, and labor make up a sizeable amount on a dairy farm. The "cost conscious" manager checks on all cost items both large and small. Good cost management requires careful planning and priority spending on farm inputs that will pay dividends when the checkbook is balanced at the end of the month. A number of miscellaneous cost items are reported in Table 35 to help in a detailed checkup on all farm costs.

Table 35. MISCELLANEOUS COST CONTROL MEASURES 553 New York Dairy Farms, 1981

Item	My Farm	Average 553 Farms	Average Top 10% Farms
Livestock			
Breeding fees per cow	\$	\$26	\$29
Veterinary & medicine per cow	\$	\$41	\$47
Other livestock expense per cow	\$	\$70	\$66
Milk marketing per cow	\$	\$59	\$69
Milk marketing per cwt. milk	¢	40¢	45¢
Real Estate			
Taxes per cow	S	\$50	\$42
Taxes per \$1,000 year-end real		*	•
estate value	\$	\$18	\$19
Insurance paid per cow	Ś	\$33	\$28
Cash rent paid per cow	s	\$34	\$42
Cash rent paid per acre rented	\$	\$27	\$30
Real estate expense per cow	\$	\$146	\$138
Capital Cost			
Interest paid per cow	\$	\$206	\$181
Interest on equity per cow	\$	\$344	\$305
Interest paid as percent of	·	•	,
year-end debt	%	9.0%	9.3%
Depreciation per cow	\$	\$226	\$190
Fixed & Variable Costs			
Total fixed costs per cow	\$	\$945	\$824
Total variable costs per cow	ŝ	\$1,406	\$1,444
Variable costs per cwt. of milk sold	Ś	\$9.73	\$9.38

Nearly all capital and overhead costs on the top 10 percent farms were below the 553 farm average. Most of the livestock costs and rent paid were higher on the most profitable farms. This is related to more intensive use of cows and cropland on the top farms. Fixed costs per cow were 13 percent lower on the top farms indicating some efficiency in size and scale. Variable costs were four percent lower per hundredweight of milk sold on the top farms.

Combination of Factors

Individual factors representing size of business, rates of production, labor and capital efficiency, and cost control, have been examined in the analysis up to this point. It has been suggested that these factors are interrelated. On this page, the combination of four important factors is studied. The factors combined are the number of cows per farm, pounds of milk sold per cow, pounds of milk sold per worker, and percent purchased feed was of milk receipts.

For each factor, the farms were divided on the basis of whether they were above or below the average for the 553 farms. They were then grouped on the basis of the number of factors better than average. The combination of factors above or below average within the three middle groups varied.

The relationship between the number of factors better than average and labor and management income is shown in Table 36. As the number of factors better than average decreased, labor and management income decreased at a rapid rate.

Table 36. COMBINATION OF FACTORS ABOVE AVERAGE*
AND LABOR AND MANAGEMENT INCOME
553 New York Dairy Farms, 1981

Number of Factors Above Average	Number of Farms	Percent of Farms	Labor Income Per Operator
4 factors better than average	59	11	\$3,600
3 factors better than average	97	18	- 4,400
2 factors better than average	160	29	- 7,200
l factor better than average	161	29	- 6,500
O factors better than average	76	14	- 8,000

^{*}Factors were:

Size - number of cows - average 79.

Rates of production - pounds of milk sold per cow - average 14,456.

Labor efficiency - pounds of milk sold per worker - average 415,273.

Cost control - percent purchased feed was of milk receipts - average 26%.

Other business factors excluded from this combination have a strong affect on business profits. These include labor, machinery and crop expenses, capital efficiency, crop yields, and the receipts from milk and cattle sales.

It is important in managing a farm business to give attention to all major factors affecting the business. Concentrating on only one or two factors and neglecting the others will not give the kind of net return most farmers want.

Farm Business Chart

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 553 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS
553 New York Dairy Farms, 1981

valent	Cows	Sold	Per Cow	Acre	Per Acre	Worker	Per Worker
5.8	204	3,081,100	18,100	4.6	21	45	662,000
3.9	121	1,795,500	16,400	3.6	19	36	538,000
3.3	91	1,364,500	15,700	3.1	17	33	482,000
3.0	77	1,111,800	15,200	2.8	16	30	442,000
2.6	67	960,800	14,600	2.6	15	28	408,000
2.3 2.0 1.9 1.6 1.3	58 52 47 40 32	850,000 747,000 641,000 530,000 381,000	14,200 13,700 13,100 12,100 9,800	2.3 2.1 1.9 1.7	15 13 12 11 7	26 24 22 20 16	377,000 346,000 310,000 267,000 194,000

Feed Bought Per Cow	% Feed is of Milk Receipts	Machinery Cost Per Cow	Labor and Machinery Cost Per Cow	Feed and Crop Expense Per Cwt. Milk
\$197	11%	\$251	\$ 520	\$2.66
313	17	334	632	3.54
387	20	373	688	3.94
440	23	408	739	4.24
485	25	437	775	4.50
533	28	469	815	4.79
583	30	513	859	5.06
635	33	552	924	5.35
699	3 5	611	1,002	5.75
834	40	762	1,199	6.59

The cost control factors are ranked from low to high, but the $\frac{lowest\ cost}{ls\ not\ necessarily}$ the most profitable. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

SUPPLEMENTAL INFORMATION

The farm business records include information in addition to that used in the summary and analysis sections. These data are useful in studies of dairy farming. Selected items are reported in the "supplemental information" section.

Age of Operators on Single Proprietorship Farms

Age of operator is a factor that affects management. Data on age of farm operators on 431 individually operated farms and related business factors are on page 31. Partnerships and corporate farms are excluded in this comparison.

Education of Operators

The 1981 records included data on years of formal education of the operators on 516 of the 553 farms. This data and related business factors are on pages 32 and 33.

Financial Situation

Information on percent equity and debt per cow and its relation to business factors is reported on pages 34 and 35.

Cost of Producing Milk

The average cost of producing milk in 1981, calculated from the farm business summaries for the 553 farms, and comparisons by herd size and rates of production, are on pages 36 and 37.

Comparison by Herd Size

The business summary, business factors, and financial situation for nine herd size groups, are shown on pages 38 to 43.

Farms With Freestall Barns

The 1981 summary reported 171 farms with freestall barns. Comparisons of the farms with freestall and stanchion barn facilities are on page 44.

Milking Systems

Cooperators report the kind of milking system they use. The 553 farms were sorted by type of milking system and factors are reported on page 45.

Type of Business Organization

Summaries for the three business types; individual operators (single proprietorships), partnerships, and corporations, are on pages 46 and 47.

Same Farms For 1980 and 1981

Of the 553 farms in the 1981 summary, 416 were in the 1980 summary. A 1980 and 1981 comparison of these farms is on pages 48 and 49.

Trends

One way to observe trends is to compare similar business studies that have been made. On page 50, selected farm business summary factors are given for 1961, 1971, 1976, and 1981.

Operating Statements

Operating statements for several groups of farms are on pages 51 to 56. These include: farms with over 200 cows, dairy-cash-crop farms, dairy renters, top 10 percent farms based on labor incomes, and the average of the 553 farms.

Age of Operators on Single Proprietorship Farms

Table 37. AGE OF OPERATORS AND LABOR AND MANAGEMENT INCOME 431 New York Dairy Farms, 1981

Age of	Numbe	Number of		c Sold Per	Labor and Management Income	
Operator	Farms	Cows	Cow	Worker	Per Operator	
Under 30	53	54	13,900	346,600	-\$ 5,447	
30 to 34	55	66	14,400	406,900	- 2,092

60 & over	434,880	89	700	12	35,100

Education of Operators

The years of operator's education was requested again for 1981. Operators on 516 of the 553 farms reported years of formal education. The average education of all operators reporting was 13 years. In the tables below, the years of education of the senior operator on farms with partnerships or corporations was used for sorting the farms.

Table 40. EDUCATION OF OPERATOR AND LABOR AND MANAGEMENT INCOME 516 New York Dairy Farms, 1981

Years Education	Fa	rms	Estimated Value of Operator's	Labor and Management
of Operator	Number	Percent	Labor & Management*	Income/Operator
Less than 12	50	10	\$12,800	- \$1, 9 38
12	244	47	14,700	- 4,092
13 to 14	112	22	15,400	- 5,796
15 to 16	95	18	17,000	- 3,691
over 16	15	3	19,200	- 1,144

^{*}Estimates by farm operator.

Table 41. EDUCATION OF OPERATOR AND RELATED BUSINESS FACTORS 516 New York Dairy Farms, 1981

Years Education	Average Age of	Average N	umber	Pounds	Milk Sold
of Opeator	Operator*	Operators	Cows	Per Cow	Per Worker
Less than 12	49	1.33	77	14,300	399,000
12	43	1.25	69	14,300	381,600
13 to 14	41	1.25	86	14,300	445,700
15 to 16	41	1.25	97	15,100	462,900
over 16	37	1.17	55	15,100	399,200

^{*}Senior partner if more than one operator.

Table 42. EDUCATION OF OPERATOR AND FINANCIAL SITUATION 516 New York Dairy Farms, 1981

Years Education of Operator	Total Farm Inventory 1/82	Percent Equity	Farm Debt Per Cow	Debt Payment As Percent of Milk Receipts
Less than 12	\$467,440	68%	\$2,000	25%
12	406,110	66	2,100	24
13 to 14	479,480	61	2,300	27
15 to 16	569,380	63	2,300	24
over 16	362,290	63	2,648	25

There is no strong correlation between years of education and labor and management income, farm productivity or financial management on these farms. However, operators with 13 or more years of education had more cows, more capital invested, and higher debt loads.

Table 43. OPERATOR'S AGE AND EDUCATION AND RELATED FACTORS 516 New York Dairy Farms, 1981

Operator's	0	ata==	Cows Per	Iba l	Milk Sold	Labor & Mgt. Income Per
Age & Years of Education	Number	Percent	Farm	Per Cow	Per Worker	Operator
or Education	Number	rercent	ratu	TEL COM	TEL WOLKEL	Operator
Under 40						
Less than 12	8	2%	59	13,800	374,500	-\$9,778
12	91	18	59	14,200	372,100	- 3,100
13 or more	121	23	84	14,400	453,600	- 2,817
40 to 49						
Less than 12	19	4	71	14,600	388,300	- 5,316
12	81	16	74	14,600	405,200	- 3,246
13 or more	59	11	93	15,200	435,100	- 4,821
50 & over						
Less than 12	23	4	87	14,300	404,600	2,179
12	72	14	74	14,300	363,200	- 5,944
13 or more	42	8	98	14,400	444,400	- 8,619

The amount of formal education has increased over the years, therefore, the younger farmers have more years of education. Fifty-five percent of the 220 operators under 40 years of age have some college education, but, only 31 percent of the 37 farmers 50 years of age and older have had some college training. In the 40 to 49 year age group, 37 percent of the operators reported 13 or more years of formal education.

Farms owned by operators under age 40 showed a dramatic increase in herd size as years of education moved from 12 to 13 or more. This group of 121 young farmers also excels in labor efficiency, has the greatest capital investment, highest debt load, and lowest equity position.

Table 44. OPERATOR'S AGE AND EDUCATION AND FINANCIAL SITUATION 516 New York Dairy Farms, 1981

Operator's Age & Years of Education	Total Farm Inventory	Percent Equity	Farm Debt Per Cow	Percent Debt Payment is of Milk	Available For Debt & Living
Under 40

Financial Situation

Each cooperator submits a financial statement as a part of the business record. A general summary is on pages 15 and 16. A simple comparison of the relationship debt per cow has to other business factors is reported here.

Table 45. FARM DEBT PER COW AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Farm Debt	Numbe	r of	Lbs. 1	Milk Sold	Labor & Management
Per Cow	Farms	Cows	Per Cow	Per Worker	Income Per Operator
None	23	53	15,000	340,100	- \$ 45
\$ 1 to \$ 599	49	66	14,800	391,100	- 38 5
600 to 1,199	73	95	14,800	444,800	- 833
1,200 to 1,799	75	84	14,500	405,300	- 3,725
1,800 to 2,399	92	80	14,500	421,100	- 4,619
2,400 to 2,999	76	87	14,400	429,100	- 1,991
3,000 to 3,599	72	77	14,200	408,400	- 10,786
3,600 to 4,199	38	7 5	14,100	408,700	- 7,239
4,200 to 4,799	32	69	14,600	401,900	- 3,955
4,800 & over	23	57	14,300	350,600	- 13,118

Four percent of the farms reported no debt, and four percent reported debt per cow of \$4,800 or more. There appears to be little relationship between debt per cow and farm size, production, labor efficiency, or labor and management income. Farms with less than \$1,200 debt per cow had the best returns to labor and management and the best levels of milk output per cow.

Table 46. FARM DEBT PER COW AND RELATED BUSINESS FACTORS
553 New York Dairy Farms, 1981

Farm Debt	Age of	Percent	Debt P	ayment	Available For
Per Cow	Operator	Equity	Per Cow	% Milk	Debts & Living
None	47	100%	\$ O	0%	\$42,900
\$ 1 to \$ 599	45	95	156	8	48,200
600 to 1,199	41	83	304	15	65,300
1,200 to 1,799	44	75	364	19	57,500
1,800 to 2,399	39	64	460	24	53,800
2,400 to 2,999	36	53	532	28	60,300
3,000 to 3,599	37	50	648	34	50,600
3,600 to 4,199	35	41	740	39	50,000
4,200 to 4,799	36	37	789	43	53,200
4,800 & over	33	34	1,029	50	44,700

Debt per cow has a close relationship to percent equity, debt payment, and cash available for family living and investment. The farms with the highest debt loads are owned by young operators with relatively low equities and high debt payment commitments.

On the average, the 165 dairyfarmers with \$3,000 or more debt per cow cannot meet their 1982 planned payment schedules.

The relationship of farm family equity (percent equity) to production, farm income, debt payments, and cash available for family living, is shown in Tables 47 and 48. Percent equity is determined by dividing the family net worth by total farm family assets.

Table 47. PERCENT EQUITY AND LABOR AND MANAGEMENT INCOME 553 New York Dairy Farms, 1981

Percent	Numbe	Number of		111k Sold	Labor & Management
Equity*	Farms	Cows	Per Cow	Per Worker	Income Per Operator
Less than 40%	76	80	14,000	418,100	-\$1,448
40 to 49	68	69	14,000	397,800	- 5,508
50 to 59	100	86	14,400	423,200	- 4,107
60 to 69	87	80	14,500	398,400	- 6,522
70 to 79	79	85	14,700	415,700	- 6,550
80 to 89	66	86	14,900	440,100	- 3,483
90 to 99	54	68	15,200	413,600	- 2,686
100	23	53	15,000	340,100	- 45

^{*}Based on family net worth.

Seventy-six or 14 percent of the 553 farms had less than 40 percent equity and 26 percent reported less than 50 percent equity. The variation in milk output per cow and per worker was much greater within equity groups than it was between the average of each group. Equity appears to have little direct affect on labor and management income. One reason is the opportunity cost (nine percent) charged for using equity capital in the business.

Table 48. PERCENT EQUITY AND RELATED BUSINESS FACTORS 553 New York Dairy Farms, 1981

Percent	Age of	Debt	Debt Pa	Available For	
Equity*	Operator	Per Cow	Per Cow	% Milk	Debt & Living
Less than 40%	36	\$3,930	\$740	41%	\$52,265
40 to 49	36	3,360	660	37	48,517
50 to 59	37	2,760	560	29	60,235
60 to 69	41	2,120	460	24	52,992
70 to 79	45	1,530	370	19	54,721
80 to 89	45	1,020	310	15	63,425
90 to 99	49	420	180	9	53,327
100	47	0	0	0	42,900

^{*}Based on family net worth.

Percent equity has a strong relationship with debt payments and cash available for family living.

Farm operators with less than 60 percent equity have heavy debt commitments and on the average, will not be able to meet their 1982 debt commitments. The farmers with 70 percent or more equity appear to be in a relatively strong cash flow position.

Cost of Producing Milk

The "farm unit" method is used here to compute cost of producing milk. Farm expenses include all costs except the operator's labor and management. Nonmilk receipts are deducted on the assumption they were produced at cost.

Table 49. FARM COST OF PRODUCING MILK 553 New York Dairy Farms, 1981

Item	Average	553 Farms	My Farm
Total cash farm expenses (p.10)	\$136,974		\$
Expansion livestock*	2,108		
Machinery depreciation	12,508		
Building depreciation	5,319		
Unpaid labor	1,606		
Interest on equity capital @ 9%	27,178		
TOTAL FARM EXPENSES	\$185,693		\$
Value operator's labor @ \$750/mo.	11,250		
TOTAL COST OF PRODUCTION (1)		\$196,943	\$
Total cash farm receipts (p.8)	\$174,110		\$
Less: Milk sales	156,043		
Nonmilk cash receipts	\$ 18,067		\$
Increase in feed & supplies	1,310		
Increase due to herd growth	4,947		
TOTAL OTHER INCOME (2)		<u>24,324</u>	
COST OF PRODUCING MILK (1 minus 2)		\$172,619	\$
Hundredweights of milk sold (p.18)	\$ 11,420		
COST OF PRODUCING CWT. MILK		\$15.12	\$
Management charge @ 5% cash receipts	\$8,706		\$
Management charge cwt. milk	76¢	:	·
COST OF PRODUCING MILK WITH			Appropriate Committee Comm
MANAGEMENT CHARGE		\$15.88	\$

^{*}The change in dairy cattle inventory attributed to herd expansion and improved quality (page 6) is classified as a nonmilk receipt.

The cost of producing milk is shown in Table 49 with and without a charge for management included. The rational for including a management charge is presented at the top of page 37. The cost of producing milk, including the management fee, exceeded the price received by \$2.22 or 16 percent in 1981.

Table 50. COST OF PRODUCING MILK AND PRICES RECEIVED, 1976-1981

New York State Dairy Farms

	Value	Operator's	Cost/Cwt. Wit	th Management	Average Price
Year	Labor	Management*	Excluded	Included	Received
1976	\$6,000	\$5,162	\$ 9.87	\$10.42	\$ 9.90
1977	7,200	5,212	10.55	11.09	9.76
1978	7,800	5,862	10.74	11.34	10.51
1979	7,800	7,317	12.10	12.78	11.90
1980	9,000	7,787	13.67	14.39	12.81
1981	9,000	8,706	15.12	15.88	13.66

^{*}Estimated at five percent of cash receipts.

Farm expenses do not include any charge for management. The farm operator's labor is valued at hired worker rates. The management input is an important part of any business operation and is traditionally a part of the costs in business accounting. In this analysis, a management charge was computed on the basis of five percent of the cash receipts. In some areas, management services are provided for absentee owners on the basis of five to eight percent of the receipts. The management charge amounted to an average of 76 cents per hundredweight of milk.

Table 51. FARM COST OF PRODUCING MILK BY HERD SIZE 553 New York Dairy Farms, 1981

	Cost/Cwt. Wit	th Management	Average
Number of Cows	Excluded	Included	Price Received
Under 40	\$16.67	\$17.42	\$13.57
40 to 54	16.17	16.92	13.50
55 to 69	15.05	15.81	13.66
70 to 84	15.30	16.06	13.66
85 to 99	15.29	16.08	13.87
100 to 114	15.10	15.87	13.77
115 to 129	15.52	16.29	13.76
130 to 149	14.90	15.65	13.49
150 & over	14.04	14.81	13.70

Size is an important factor in the analysis of farm businesses. The costs of producing milk were computed for nine herd size groups (Table 51). In general, the larger herds had lower costs. The average cost excluding management was \$16.67 for herds with under 40 cows, while it was \$14.04 for those with 150 and more cows, or a difference of \$2.63 per hundredweight.

The level of milk production is closely related to the cost of producing milk as indicated by the data in Table 52. Farms selling less than 10,000 pounds of milk per cow had an average cost of production (excluding management) of \$18.50, while those selling 15,000 pounds and over averaged approximately \$14.30 for a difference of \$4.20 per hundredweight.

Table 52. FARM COST OF PRODUCING MILK BY MILK SOLD PER COW 553 New York Dairy Farms, 1981
