INTRODUCTION

Farm business management projects are an integral part of the agricultural extension program in New York State. The New York State College of Agriculture and Life Sciences at Cornell University, and the County Extension staffs, cooperate in sponsoring these projects. In 1984, more than 500 dairy farmers participated. The business records submitted by dairy farmers from 47 counties provide the basis for continued extension educational programs, data for applied research studies, and for use by students in the classroom.

Cooperative Extension agents and specialists enrolled the cooperators and collected the records. Regional summary reports were prepared by the college staff. Each cooperator received a summary and analysis of his or her business, and a regional report for making comparisons. These extension activities enable farmers to develop managerial skills and solve business management problems.

The records from all regions of the state have been combined and the results presented in this publication as an applied research study of the effects of changes in price, technology, and management on dairy farm incomes. This research provides current farm business information for use by dairy farmers, Cooperative Extension staff, teachers, and others concerned with the New York dairy industry.

A total of 458 farm business records are included in the main body of this report. These farms do NOT represent the "average" for all dairy farms in the State. Participation was on a voluntary basis, therefore, not all areas or types of operations were represented (see map on opposite page). The 458 farms represent a cross section of better than average commercial dairy farm owner-operators in the State. Fifty-six or 12 percent of the 458 farms were dairy diversion program participants in 1984. Dairy farm renters, dairy-cash crop farmers, and part-time dairy operators have been excluded from the main body of this report and summarized separately in the back of the publication. A three year comparison of dairy diversion program participants with nonparticipants is also included.

The preparation of this report and the processing and organization of the data it contains has been successfully completed by our dedicated support staff, Bev Carcelli, Mary Chaffee, and Cindy Farrell.

Chart 1. PRICES RECEIVED BY NEW YORK DAIRY FARMERS, 1972-1984

Source: NYCGRS, New York Crop and Livestock Report.

The prices dairy farmers receive for milk and slaughter cows have a major impact on dairy farm profits. Milk prices increased steadily from 1972 to 1981. Small declines occurred in 1977, 1982, 1983, and 1984. Slaughter cow prices exhibited wide fluctuations over the period prior to 1979 not moving in the same direction for more than four consecutive years. Since 1979, prices for slaughter cows have been declining.

Table 1. PRICES RECEIVED BY NEW YORK DAIRY FARMERS, 1972-1984

The prices dairy farmers pay for a given quantity of goods and services has a major influence on farm production costs. The astute manager will keep close tabs on unit costs and utilize the most economical goods and services.

Table 2 shows average prices of selected goods and services used on New York dairy farms. Chart 2 shows the ratio of prices received for milk and prices paid by New York dairy farmers as a percent change from 1977. The ratio has been on a downward trend since 1978, indicating a less favorable economic environment for dairy farmers.

Chart 2. RATIO OF PRICES RECEIVED FOR MILK AND PRICES PAID BY NEW YORK DAIRY FARMERS, 1977-1984

Source: NYCRS, New York Agricultural Statistics.

Inflation, appreciation, supply and demand all have a direct impact on the inventory values on New York dairy farms. Machinery prices have risen steadily during the past seven years. Dairy cow prices have changed most dramatically as the demand for replacements jumped in 1978 and 1979 but has declined rapidly since 1980. Real estate values increased three percent in 1984.

Table 3. UNIT VALUES OF NEW YORK DAIRY FARM INVENTORY ITEMS, 1977-1984

Year	Dairy Cows		Machinery 1977=100	Farm Real Estate	
	Value/Head	1977=100		Value/Acre	1977=100

SUMMARY OF THE FARM BUSINESS

Business Characteristics and Resources Used

Recognition of important business characteristics and a knowledge of the farm resources is necessary for evaluating management performance. The combination of resources and management practices employed by a manager is known as farm organization. Important farm business characteristics, the number of farms reporting these characteristics, and the average labor and land resources used are presented in Table 4.

Table 4. BUSINESS CHARACTERISTICS AND RESOURCES USED

Estimated value			End of year		92
labor & mgmt. \$		\$15,992	Avg. for year		89

The most typical dairy farm business was a sole proprietorship with stanchion barn, pipeline milking system, and DHIC records. There were 608 full-time operator equivalents on the 458 dairy farms for an average of 1.33 operators per farm. The operators averaged 43 years of age and 13 years of formal education.

All the 458 farm businesses included in the regular dairy summary own farm real estate. Dairy farm renters are summarized separately later in this publication. However, 374 of the dairy farm owners rented an average of 115 acres of tillable land in 1984. The 458 farms averaged 280 total tillable acres per farm of which 93 acres were rented.

Farm Inventory Values

Table 5. CAPITAL INVESTMENT - FARM INVENTORY VALUES
458 New York Dairy Farms, 1984

Item	My Farm		Average 458 Farms	
	1/1/84	1/1/85	1/1/84	1/1/85
Livestock	\$ _____	\$ _____	\$118,212	\$118,266
Feed and supplies	_____	_____	38,625	41,053
Machinery and equipment	_____	_____	94,431	97,284
Land and buildings	_____	_____	244,416	251,272
TOTAL	\$ _____	\$ _____	\$495,684	\$507,875

The value of total farm inventories increased an average of \$12,191 per farm or 2.5 percent during 1984. This compares to an increase of one percent in 1983. From 1963 through 1982, farm inventory values increased at an average rate of nine percent.

The market value of livestock increased an average of only \$54 per farm in 1984. The change in inventory caused by the decline in cattle prices averaged \$-3,767 per farm. If there had been no herd growth during the year, the livestock inventory would have dropped an average of \$3,767 per farm. Herd growth is calculated in Table 6.

Table 6. CHANGES IN LIVESTOCK INVENTORY
458 New York Dairy Farms, 1984

Item	Average 458 Farms
End of year market value inventory	\$118,266
Beginning of year market value inventory	<u>-118,212</u>
Total Increase in Inventory	\$ 54
End of year market value inventory	\$118,266
End of year inventory at beginning prices	<u>-122,033</u>
Change Due To Price (negative appreciation)	<u>-(-)3,767</u>
Change Due To Physical Growth in Inventory	\$ 3,821

The increase in livestock inventory caused by growth and maturity of the herd averaged \$3,821 per farm. Approximately 20 percent of this amount can be attributed to the increase in dairy cow numbers owned from 90 to 91 head per farm. A six percent increase in the size of the youngstock herd accounts for the majority of the inventory change.

Feed and supply inventories increased six percent during 1984 after jumping at an annual rate of 12 percent over the period 1978-83.

Machinery and equipment and land and building inventory changes are examined on the following pages.

Machinery and Real Estate Inventory Calculations

Capital outlays for machinery and buildings usually occur in large uneven amounts, but depreciate gradually over a period of time. Machinery depreciation is a charge for using the machinery complement in production and is based on the farmer's income tax depreciation. Appreciation is the change in machinery inventory caused by inflation. It is calculated as a residual in Table 7.

Table 7. CHANGES IN MACHINERY AND EQUIPMENT INVENTORY
458 New York Dairy Farms, 1984

Item	Average 458 Farms	
End of year market value		\$97,284
Beginning of year market value	\$94,431	
Plus machinery purchased	+14,101	
Less machinery sold	- 484	
Less depreciation	<u>-15,345</u>	
Net End Investment		<u>92,703</u>
Appreciation		\$ 4,581

The end of year market value of real estate is verified in Table 8 by starting with the beginning of year value, adjusting for purchases, sales, depreciation of buildings, and appreciation of land. Lost capital is the difference between the cost of new buildings and the amount these improvements added to the value of the farm. Lost capital is not included in farm expenses. Building depreciation is based on the full cost of new buildings and will account for lost capital over the life of the investments. Building depreciation is based on tax depreciation and is included as a farm expense. Real estate appreciation was estimated by each farm operator. It is the increase in value of real estate caused by demand and inflation.

Table 8. CHANGES IN REAL ESTATE INVENTORY
458 New York Dairy Farms, 1984

Item	Average 458 Farms	
End of year market value		\$251,272
Beginning of year market value	\$244,416	
Plus cost of new real estate	\$+11,113	
Less lost capital	<u>- 1,686</u>	
Value Added	+ 9,427	
Less depreciation	- 7,308	
Less real estate sold	<u>- 829</u>	
Value Deducted	- 8,137	
Net End Investment		<u>245,706</u>
Appreciation		\$ 5,566

Receipts

All the cash received for products sold plus the increases in livestock and feed and supply inventories are included in total farm receipts. Farm receipts have also been summed excluding inventory appreciation.

Table 9. FARM RECEIPTS
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms		Percent
		Per Farm	Per Cow	
Milk sales	\$ _____	\$185,226	\$2,081	89

Total Farm Receipts	\$ _____	\$221,784	\$2,492	

*Increase attributed to growth and maturity of herd (page 6).

Participation by 56 of the 458 dairy farmers in the 1984 dairy diversion program had an impact on average farm receipts. Government payments are up \$1,813 per farm compared with the 1983 all dairy farm average. Diversion payments earned in 1984 but received in 1985 were not included in 1984 cash receipts, but are reflected in the balance sheet as an account receivable.

Table 10. INCOME ANALYSIS
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms	Top 10%*
Average price per cwt. milk sold	\$ _____	\$13.49	\$13.40
Milk sales per cow	\$ _____	\$2,081	\$2,292
Milk and cattle sales per cow	\$ _____	\$2,249	\$2,467
Total cash receipts per worker	\$ _____	\$67,907	\$94,059

*Forty-six farms with the highest labor and management income per operator.

The average price received for milk sold (based on gross milk receipts) was \$13.49 per hundredweight in 1984, \$.15 above the 1983 average. Increases in dairy diversion assessments, hauling charges, and other milk marketing costs are reflected in higher milk marketing expenses on page 10.

The average or mean price per hundredweight of milk sold is calculated by dividing the gross milk receipts for the year by the total pounds of milk sold. The average price for the 458 farms was \$13.49 but there was considerable variation among the individual farms. The variation in average price received and the distribution of farms around the mean is shown below.

VARIATION IN AVERAGE MILK PRICE

<u>Average Price Received For Milk</u>	<u>Number of Farms</u>	<u>Percent of Farms</u>
Below \$12.50	11	2
\$12.50 to 12.99	70	15
13.00 to 13.49	223	49
13.50 to 13.99	68	15
14.00 to 14.49	54	12
14.50 to 14.99	23	5
15.00 and over	<u>9</u>	<u>2</u>
Total	458	100

Sixty-four percent of the farms received from \$13.00 to \$13.99 per hundredweight of milk sold. Nineteen percent of the farms received \$14.00 or more per hundredweight while 17 percent received less than \$13.00 per hundredweight. Location and organization of markets are factors contributing to the variability of milk prices on these dairy farms. Management practices on farms as well as in milk companies also affect farm milk prices. Seasonality of production and butterfat test are two variables under the direct control of the farm manager.

Total farm receipts are sometimes used as a measure of size of business. The Census of Agriculture uses this measure in classifying farms. The distribution of total farm receipts of the 458 farms in 1984 is shown below.

DISTRIBUTION OF FARMS BY TOTAL FARM RECEIPTS

<u>Total Farm Receipts</u>	<u>Farms</u>	
	<u>Number</u>	<u>Percent</u>
Under \$ 50,000	8	2
\$ 50,000 to 99,999	69	15
100,000 to 149,999	110	24
150,000 to 199,999	100	22
200,000 to 249,999	54	12
250,000 to 299,999	29	6
300,000 to 349,999	19	4
350,000 to 399,999	18	4
400,000 and over	<u>51</u>	<u>11</u>
Total	458	100

Almost one-half of the 458 farms had total farm receipts of less than \$150,000 but only two percent fell below \$50,000. The remaining 271 farms had total receipts ranging from \$150,000 to over \$400,000 in 1984.

Expenses

Total cash farm expenses for the 458 farms averaged \$465 per day or \$5.22 per cow per day. Total farm expenses averaged more than \$580 per day. The average expenses per farm and per cow for each item are shown below.

Table 11. FARM EXPENSES

TOTAL FARM EXPENSES	\$ _____	\$212,441	\$2,387	

The farm expense categories used in Table 11 on page 10 are nearly identical to those used to summarize New York dairy farms for many years. The following additions and revisions were implemented within the last two years.

The lease and rental fees dairy farms pay for machinery, dairy cattle, and farm structures are included as cash operating expenses. Farm machinery lease and rental fees are included in Machinery hire, rent and lease. Cattle lease, has been added under livestock expenses. Lease payments for farm buildings and structures fall under real estate Rent/lease.

Milk marketing costs include the federal milk assessment as well as coop dues, hauling, and advertising. They averaged \$14,148 per farm in 1984, up \$1,683 from the 1983 average on 510 dairy farms.

Interest on equity capital was changed to five percent in 1982. This real rate of interest represents the long term average rate of return that a farmer could expect to earn on investments with comparable risks to farming, in an economy with little or no inflation. Since labor and management income is now computed by excluding the effects of inflation on farm assets, the real rate of interest is used to determine the opportunity cost of using equity capital.

Following are explanations of other expense classifications.

Replacement livestock purchased are included as cash operating expenses which is consistent with including the costs of raising replacement cattle as cash operating expenses. The purchase of cattle that increase herd size are classified as expansion livestock and are included as capital expenses. The value added to the herd as a result of adding expansion livestock is included under increase in livestock inventory, Table 9, page 8.

Other livestock expenses include DHIA fees, bedding, milkhouse and stable supplies, registration and classification expenses.

Interest paid on farm indebtedness including open accounts is included as a cash expense in these summaries. Debt payments usually include both interest and principal but only the interest portion is included in the expenses. Principal payments are an investment not an operating expense of the business.

Machinery and real estate depreciation charges are shown on page 7. Expenditures for machinery and buildings are usually made in large amounts. To include all the expenses in the year of purchase would inappropriately increase the farm expenses for that year.

Unpaid family labor refers to work done by members of the family who are not paid cash wages. The operator's labor is not included. Unpaid family labor is charged to the business at \$500 per month of full-time equivalent.

Changes in farm inventory values caused by fluctuations in market prices are categorized as livestock appreciation, machinery appreciation, and real estate appreciation in Table 9 on page 8. A substantial drop in price will cause depreciation and is accounted for as a negative appreciation value in Table 9. Therefore, both inflationary and deflationary price changes that affect the value of farm inventories are reflected in farm receipts.

Financial Summary of Year's Business

The financial summary of the year's business reflects the quality of management. Researchers have developed a number of ways to measure the returns from a farm business. Four common measures are reported here. The measure selected at any one time will depend on the purpose for which it is used.

Table 12. NET CASH FARM INCOME
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms	
		Per Farm	Per Cow
Cash Farm Receipts	\$ _____	\$209,155	\$2,350
Cash Farm Expenses	_____	<u>169,674</u>	<u>1,906</u>
NET CASH FARM INCOME	\$ _____	\$ 39,481	\$ 444

Net cash farm income is a measure of the cash available from the year's farm operations for family living, principal payments, and other uses. A family may have additional cash available if they have nonfarm income. Net cash income is not a good measure of farm business profits but it addresses the cash flow situation and is useful in planning debt repayment programs and family budgets.

Table 13. LABOR, MANAGEMENT, AND OWNERSHIP INCOME
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms	
		Per Farm	Per Cow
Total Farm Receipts	\$ _____	\$221,784	\$2,492
Total Farm Expenses Excluding Interest on Equity Capital	_____	<u>195,630</u>	<u>2,198</u>
LABOR, MANAGEMENT & OWNERSHIP INCOME			
PER FARM	\$ _____	\$ 26,154	\$ 294
Number of Operators	_____	1.31	1.31
LABOR, MANAGEMENT & OWNERSHIP INCOME			
PER OPERATOR	\$ _____	\$ 19,965	\$ 224

Labor, management, and ownership income per operator reflects the combined return to the farmer for his triple role of worker-manager, financier, and owner. This measure includes appreciation and interest on equity capital as returns to ownership. This measure of farm profit includes the operator's gain in net worth as well as net farm income. The average labor, management, and ownership income per operator was \$19,965 in 1984.

Labor and management income measures the return the operator earns for his or her efforts in operating and managing the business. Return to ownership has been excluded by including a five percent charge for the use of equity capital in farm expenses, and excluding appreciation of farm inventories from farm receipts. Appreciation is included as a return to ownership in Table 13 on page 12.

Table 14. LABOR AND MANAGEMENT INCOME
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms	
		Per Farm	Per Cow
Total Farm Receipts Excluding Appreciation	\$ _____	\$215,404	\$2,420
Total Farm Expenses	_____	212,441	2,387
LABOR & MANGEMENT INCOME	\$ _____	\$ 2,963	\$ 33
Number of operators per farm	_____	1.31	1.31
LABOR & MANAGEMENT INCOME PER OPERATOR	\$ _____	\$ 2,262	\$ 25

Labor and management income per operator averaged \$2,262 on these 458 dairy farms in 1984. There were 608 full-time operators on the 458 farms for an average of 1.31 operators per farm.

The range in labor and management income per operator was from less than -\$50,000 to more than \$40,000. Returns to labor and management were negative on more than 45 percent of the farms. Labor and management income per operator ranged from \$0 to \$19,999 on 42 percent of the farms while only 10 percent showed labor and management incomes of \$20,000 or more per operator.

DISTRIBUTION OF LABOR INCOMES PER OPERATOR

<u>Labor Income Per Operator</u>	<u>Farms</u>	
	<u>Number</u>	<u>Percent</u>
Less than -\$50,000	7	2
-\$50,000 to - 40,001	5	1
- 40,000 to - 30,001	16	3
- 30,000 to - 20,001	26	6
- 20,000 to - 10,001	52	11
- 10,000 to - 1	113	25
0 to 9,999	129	28
10,000 to 19,999	63	14
20,000 to 29,999	21	4
30,000 to 39,999	13	3
40,000 or more	13	3

Return on equity capital can be computed with or without appreciation. To calculate return on equity capital the estimated value of operator's labor and management is deducted from labor, management, and ownership income. The average estimate made by the 608 operators was \$16,633 per operator. This is somewhat less than the value determined by using \$750 per month for the labor plus a management fee based on five percent of the cash receipts per operator (\$9,000 + \$7,983 = \$16,983). The value used in Table 15 is the operators' estimates times the number of operators per farm (\$16,633 x 1.31 = \$21,789).

Table 15.

RETURN ON EQUITY CAPITAL
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms
	<u>Including Appreciation</u>	
Labor, Management, & Ownership Income (pg. 12)	\$ _____	\$ 26,154
Value of Operator's Labor & Management (pg. 5)	_____	<u>21,789</u>
RETURN ON EQUITY CAPITAL	\$ _____	\$ 4,365
Amount of Equity Capital	\$ _____	\$336,210
RATE OF RETURN ON EQUITY CAPITAL	_____%	1.3%
	<u>Excluding Appreciation</u>	
Return on Equity Capital (from above)	\$ _____	\$ 4,365
Less Appreciation	_____	<u>6,380</u>
RETURN ON EQUITY CAPITAL	\$ _____	\$ -2,015
Amount of Equity Capital	\$ _____	\$336,210
RATE OF RETURN ON EQUITY CAPITAL	_____%	-0.6%

The return to equity capital is divided by the farm net worth to determine the rate of return on equity capital. To compute return on equity capital without appreciation, appreciation is excluded from ownership income. The rate of return on all capital can be computed by adding interest paid to the return and dividing by total farm assets. It averaged 3.2 percent on these farms in 1984.

Returns Per Unit of Input

Income from a business can also be calculated in relation to various input units. For example, the labor and management return can be allocated to the entire labor force and figured on a per worker basis.

Returns To All Labor and Management

Labor & management income per farm	\$ 2,963
Cost of hired labor	19,114
Value of unpaid labor	<u>+ 1,635</u>
Total Returns to Labor & Management	\$23,712
Average worker equivalent	3.08
Returns per worker equivalent	\$ 7,699
Returns per hour (3,000 hours/worker/year)	\$ 2.57

Farm and Farm Family Financial Situation

The financial situation is an important part of the farm business summary. It has a direct effect on current cash outflow and future capital investment decisions. A farmer may have a good labor income, but a high debt repayment schedule may seriously restrict management flexibility.

Table 16. FARM AND FARM FAMILY FINANCIAL SITUATION
458 New York Dairy Farms, January 1, 1985

Item	My Farm	Average 458 Farms	
		Amount	Percent
<u>Assets</u>			
Livestock	\$ _____	\$118,274	21
(includes discounted lease payments)		(8)

Machinery & equipment	_____	98,345	17
(includes discounted lease payments)		(1,061)	
Land & buildings	_____	252,913	45
(includes discounted lease payments)		(1,641)	
Co-op investment	_____	8,721	2
Accounts receivable	_____	17,087	3
Cash & checking accounts	_____	3,038	<1
Total Farm Assets	\$ _____	\$539,431	95
Savings accounts	\$ _____	\$ 3,909	1
Cash value life insurance	_____	2,800	<1
Stocks & bonds	_____	3,084	1
Nonfarm real estate	_____	5,884	1
Auto (personal share)	_____	1,863	<1
All other	_____	7,317	1
Total Nonfarm Assets	\$ _____	24,857	
TOTAL ASSETS	\$ _____	\$564,288	100
<u>Liabilities</u>			
Long term	\$ _____	\$115,051	57
Intermediate	_____	74,975	37
Financial lease	_____	2,710	1
Short term	_____	3,992	2
Other farm accounts	_____	6,493	3
Total Farm Liabilities	\$ _____	\$203,221	100
Nonfarm Liabilities	_____	882	
TOTAL LIABILITIES	\$ _____	\$204,103	
Farm Net Worth (equity capital)	\$ _____	\$336,210	
Family Net Worth	\$ _____	\$360,185	

Total farm assets accounted for 95 percent of the total assets. Long term loans were the largest liability and accounted for 57 percent of all debts. Intermediate debt accounted for 37 percent of all liabilities.

The ability to service debt is the most important consideration in determining if and how proposed investments can be financed. Debt payment capacity based on 1984 income is compared with 1985 scheduled debt payments in Table 17.

Table 17. DEBT PAYMENT CAPACITY AND SCHEDULED COMMITMENTS
458 New York Dairy Farms, January 1, 1985

Item	My Farm	Average 458 Farms	
		Per Farm	Per Cow ¹
Net cash farm income	\$ _____	\$39,481	\$429
Interest paid	_____	19,170	208
Off-farm income	_____	2,033	22
CASH AVAILABLE FOR DEBT PAYMENTS AND LIVING		\$60,684	\$659
Estimated family living expense ²	_____	22,645	246
CASH AVAILABLE FOR DEBT PAYMENTS AND CAPITAL PURCHASES	\$ _____	\$38,039	\$413
Debt payments planned	\$ _____	\$45,047	\$490
Debt payments planned as percent of milk sales	_____ %	24%	
Cash flow coverage ratio	_____	0.84	

¹Based on 92 end of year cows per farm.

²Calculated at \$10,900 per family plus four percent of cash receipts.

Cash available for debt service and living is the net cash farm income plus interest paid, plus off-farm income contributed to family living. Average family living expenses have been estimated as indicated. Individual farmers should base their estimates of family living expenses on information from their records. Subtracting family living expenses from total cash available leaves cash available for debt payments and capital purchases made with cash.

Debt payments planned represent the outstanding commitments as of January 1, 1985. The reasonableness of the debt commitment can be more easily appraised by computing debt payments per cow and payments as a percent of milk sales.

The cash flow coverage ratio shows how well cash available for debt service covers the debt payment commitments. A ratio of less than 1.0 indicates that on the average these farmers will not be able to meet their 1985 repayment schedules unless net cash farm income increases and/or family living expenses are less than estimated. An additional \$7,008 is needed to meet 1985 scheduled debt commitments on the average of these 458 dairy farms.

ANALYSIS OF THE FARM BUSINESS

A systematic analysis of the operation helps to locate strengths and weaknesses in the business. In this section, five business factors are examined: size of business, rates of production, labor efficiency, capital efficiency, and cost control. The 1984 averages of selected measures for these factors for the 458 farms, and the average for the 10 percent with the highest labor and management incomes per operator, are reported along with general relationships of factors to labor income. Since the measures examined are interrelated, all factors should be studied before arriving at major conclusions.

Size of Business

Size has an effect on other factors such as labor efficiency, cost control, and capital efficiency. The prices received and paid are often affected by volume which is a function of size. Farm management studies show that, in general, larger farm businesses (when well managed) earn larger labor and management incomes. Two basic reasons for this are that larger businesses make possible more efficient use of overhead inputs, such as labor and machinery, and there are more units on which to make a profit.

Table 18. MEASURES OF SIZE OF BUSINESS
458 New York Dairy Farms, 1984

Measure	My Farm	Average 458 Farms	Average Top 10% Farms
Number of cows	_____	89	180
Number of heifers	_____	76	150
Worker equivalent	_____	3.08	4.92
Total tillable acres	_____	280	475
Pounds of milk sold	_____	1,373,500	3,077,800
Total work units	_____	1,000	1,966
Total cash receipts	\$ _____	\$209,155	\$462,771
Total investment (end inventory)	\$ _____	\$507,875	\$931,149

Number of cows is the average number in the herd for the year. Where available, the DHI annual average is used.

Total tillable acres includes all acres on which crops could have been grown during the 1984 year. It includes cropland pasture and idle cropland.

Worker equivalent is all of the labor used on the farm during the year in terms of full-time worker years. Work of part-time employees and family members is converted to full-time worker equivalent.

Total work units represents the number of productive worker days that would be required under average conditions to care for the acreage of crops grown and the number of livestock handled. One worker unit is the average amount of productive work accomplished in 10 hours of work.

The relationship of business size to farm business profits can be observed in Tables 19 and 20. Farm size is measured by number of cows. In general, the larger the businesses, the higher the level of farm incomes. This relationship is consistent with that of earlier studies. A well managed large farm will provide the operator a higher income than a well managed small farm, but a large, poorly managed farm can lose more than a small one.

Table 19. COWS PER FARM AND LABOR AND MANAGEMENT INCOME
458 New York Dairy Farms, 1984

Number of Cows	Number of Farms	Ave. Number of Cows	Percent of Farms	Labor & Mgmt. Income Per Operator
Under 40	45	33	10	\$-3,778
40 to 54	100	47	22	560
55 to 69	94	61	21	-1,395
70 to 84	64	77	14	-874
85 to 99	43	91	9	-389
100 to 149	56	124	12	2,429
150 to 199	25	170	6	912
200 to 249	16	229	3	4,663
250 & over	15	359	3	52,247

Number of cows is a good measure of size on the dairy farm because it measures the variability in the key source of production, the dairy herd. As size of herd varied from less than 40 cows to 250 and more in 1984, labor and management income increased from \$-3,778 per operator to more than \$52,200.

There is a strong relationship between farm size and farm income when net cash farm income and labor, management, and ownership income are compared with cows per farm. Net cash farm income increased 1,269 percent while labor, management, and ownership income per operator jumped \$87,793 as herd size increased from less than 40 to over 250 cows per farm.

Table 20. FARM SIZE AND FARM INCOME MEASURES
458 New York Dairy Farms, 1984

Number of Cows	Number of Farms	Worker Equivalent	Net Cash Farm Income	Labor, Management & Ownership Income Per Operator
Under 40	45	1.75	\$ 13,859	\$ 4,673
40 to 54	100	2.08	21,903	11,181
55 to 69	94	2.50	27,521	12,939
70 to 84	64	2.92	35,043	14,767
85 to 99	43	3.08	37,761	13,939
100 to 149	56	3.92	50,540	26,016
150 to 199	25	4.67	61,888	28,035
200 to 249	16	6.17	99,443	48,799
250 & over	15	8.58	189,734	92,466

Rates of Production

Production per animal and per acre are major factors affecting farm profits. Milk sold per cow is the most reliable production measure used in dairy farm analysis.

Table 21. MEASURES OF RATES OF PRODUCTION
458 New York Dairy Farms, 1984

Item	My Farm		458 Farms		Ave. Yield Top 10% Farms
	Acres	Yield	Farms Reporting	Average* Acres Yield	
Milk sold per cow (lbs.)			458	15,433	17,099
All hay crops (tons dry matter/acre)			456	143 2.7	3.3
Corn silage (tons/acre)			422	76 14.0	16.0
All forage crops (tons dry matter/acre)			458	215 3.3	4.3
Grain corn (bu./acre)			236	72 90.6	94.2
Oats (bu. per acre)			86	27 51.9	60.7
Wheat (bu. per acre)			29	38 47.4	49.0

*Average for farms reporting the crop.

Pounds of milk sold per cow is calculated by dividing the total pounds of milk sold for the year by the average number of cows. No adjustment is made for differences in the butterfat test of the milk.

Tons of hay crops dry matter per acre is calculated by adding the tons of dry matter from hay crop silage and green chop to dry hay and dividing by the total acres of cropland used for hay crops. Tons of dry matter per acre of all forages is determined by adding tons of dry matter of corn silage, hay crops, and other forage and dividing by total forage crop acres.

Farms with higher rates of production tend to have higher profits. In 1984, the farms that sold more than 16,000 pounds of milk per cow had substantially higher profit margins and higher than average herd sizes.

Table 22. MILK SOLD PER COW AND LABOR AND MANAGEMENT INCOME
458 New York Dairy Farms, 1984

Pounds of Milk Sold Per Cow	Number of Farms	Number of Cows	Labor & Mgmt. Income/Oper.	Labor, Mgmt., & Owner- ship Income/Operator
Under 11,000	32	56	\$-5,189	\$ 5,094
11,000 to 11,999	28	59	-1,873	8,333
12,000 to 12,999	30	70	-5,086	4,424
13,000 to 13,999	55	80	-1,570	14,425
14,000 to 14,999	81	95	1,749	20,203
15,000 to 15,999	83	88	-354	18,540
16,000 to 16,999	69	105	5,105	29,698
17,000 to 17,999	41	97	5,178	25,480
18,000 & over	39	123	17,053	33,981

Labor Efficiency

Labor inputs account for about one-sixth of the costs in producing milk. Therefore, it is important that labor be used efficiently. Output or productivity per worker is used to measure labor efficiency. This is an important factor affecting labor and management incomes.

Table 23. MEASURES OF LABOR EFFICIENCY
458 New York Dairy Farms, 1984

Measure	My Farm	Average 458 Farms	Average Top 10% Farms
Number of cows per worker	_____	29	37
Pounds of milk sold per worker	_____	445,942	625,569
Work units per worker	_____	325	400
Tillable acres per worker	_____	91	97

Pounds of milk sold per worker is determined by dividing the total pounds of milk sold by the worker equivalent. This is the best measure of labor efficiency for dairy farms.

Labor productivity (efficiency) depends on a number of factors. Among these are the amount of mechanization, the field and building layout, the work methods used, and the abilities of the workers. All of these are management items under the control of the operator.

The decile of farms with the highest labor and management income per operator were considerably above the average of all 458 farms in the four measures of labor efficiency. The top 10 percent sold 40 percent more milk per worker than the average of all farms.

The relationship of labor efficiency to labor, management, and ownership income was very positive on the 458 farms. The higher output per worker was achieved by more and better cows.

Table 24. MILK SOLD PER WORKER AND LABOR AND MANAGEMENT INCOME
458 New York Dairy Farms, 1984

Pounds of Milk Sold Per Worker	Number of Farms	Number of Cows	Lbs. Milk Per Cow	Labor & Mgmt. Income Per Operator	Labor, Mgmt., & Ownership Income Per Operator
Under 250,000	50	46	11,476	\$-5,332	\$ 2,129
250,000 to 299,999	36	50	12,894	-6,278	6,802
300,000 to 349,999	56	61	14,639	-788	12,045
350,000 to 399,999	71	67	14,590	2,541	16,852
400,000 to 449,000	75	85	15,222	-1,927	14,227
450,000 to 499,999	54	83	15,567	-3,061	13,127
500,000 to 599,999	70	119	15,861	5,933	33,758
600,000 & over	46	208	16,838	25,295	55,829

Capital Efficiency

Capital is a major farm resource and it is important to analyze how efficiently it is used in the business. The measure of total capital invested examined here is the end-of-year total farm inventory which averaged \$507,875 per farm on the 458 farms. This includes both owned and borrowed capital for all farms. The use of borrowed capital or credit is part of capital management.

Table 25. MEASURES OF CAPITAL EFFICIENCY
458 New York Dairy Farms, 1984

Measure	My Farm	Average 458 Farms	Average Top 10% Farms
Total capital per worker	\$ _____	\$164,894	\$189,258
Total capital per cow	\$ _____	\$5,520	\$4,850
Total capital per cwt. milk sold	\$ _____	\$37	\$30
Machinery & equipment per cow	\$ _____	\$1,057	\$767
Land & building inventory per cow	\$ _____	\$2,731	\$2,285
Land & building inventory per tillable acre owned	\$ _____	\$1,344	\$1,375
Capital turnover, years	_____	2.3	1.8

The comparisons in Table 25 suggest that efficiency in the use of capital can be obtained by keeping more cows without a corresponding increase in capital investment. A high investment per worker equivalent does not necessarily mean strong capital efficiency. High investment per worker must be accompanied by high labor productivity to result in "good" farm profits.

Capital turnover is a measure of capital efficiency as it shows the number of years of farm receipts required to equal or "turnover" capital investment. It is computed by dividing the year-end farm inventory by the year's total farm receipts. The relationship capital turnover has to labor and management income and other factors is shown in Table 26. As a general rule, dairy farmers should aim for a capital turnover of 2.5 years or less.

Table 26. CAPITAL TURNOVER AND LABOR AND MANAGEMENT INCOME
458 New York Dairy Farms, 1984

Capital Turnover Rate - Years	Number of Farms	Number of Cows	Capital Investment		Labor & Mgmt. Income Per Operator
			Per Cow	Per Worker	
less than 1.5	11	154	\$3,179	\$116,699	\$20,425
1.5 to 1.99	91	125	4,455	152,377	13,477
2.0 to 2.49	169	93	5,452	163,401	3,330
2.5 to 2.99	96	70	6,402	165,276	-3,503
3.0 to 3.49	55	65	7,105	181,747	-5,821
3.5 & over	36	55	8,627	203,644	-12,854

Cost Control

Successful dairy farm managers are able to keep costs under control. Feed, machinery, labor, and capital are major cost items and are examined in detail in this section. Profitable businesses usually maintain a "tight" control on all costs, both large and small. But, cost control should not be so tight that the efficient and economical use of important farm inputs is restricted.

Feed Costs

Feed is the largest single expense item on New York dairy farms. Purchased dairy grain and concentrates accounted for 27 percent of all cash operating expenses on the 458 dairy farms in 1984.

Dairy feed costs must be analyzed by examining the entire purchased feed and farm produced forage and grain program. The characteristics of the dairy herd including number of heifers and production, will also affect feed costs so several measures must be studied and compared to make the analysis complete.

Table 27. ITEMS RELATED TO FEED COSTS
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms	Average Top 10% Farms
Dairy grain & conc. bought per cow	\$ _____	\$507	\$560
Crop expense per cow	\$ _____	\$166	\$177
Grain & conc. bought per cwt. milk	\$ _____	\$3.28	\$3.27
Feed & crop expense per cwt. milk	\$ _____	\$4.53	\$4.42
Grain & concentrate purchased as percent of milk sales	_____ %	24%	24%
Forage dry matter harvested per cow	_____ T	8.1T	8.5T
Tillable acres per cow	_____	3.1	2.0
Fertilizer & lime per crop acre	\$ _____	\$32	\$39
Heifers as percent of cow numbers	_____ %	85%	83%

The average cost of grain and concentrate bought per cow in 1984 was \$507 while in 1983 it was \$526. As grain and concentrate purchase prices averaged almost the same in both years, a lower rate of feeding or more economical source of protein was likely used on these farms.

Feed and crop expenses per hundredweight of milk sold include grains and concentrates purchased, hay, silage, and all other feeds purchased; fertilizer, lime, seeds, and all other crop supplies.

The 1984 forage crop supply was up eight percent per cow from 1983. On the average, 8.1 tons of dry matter were produced per cow in 1984 compared to 7.5 tons per cow in 1983. The ratio of heifers to cows increased three percent in 1984. The variability of this ratio between years and farms has an important effect on feed cost analysis.

The 46 farms with highest labor and management incomes spent more on dairy feed per cow, but combined feed and crop expense were 11¢ less per hundredweight of milk sold than the average of all farms.

Feed costs are influenced by a number of factors. Feed production costs are affected by the amount of homegrown grains fed, quality and quantity of the roughage, and the number of youngstock. Purchasing costs are influenced by the farmer's ability to purchase grains and concentrates at reasonable prices and to balance nutrients fed with energy and protein requirements.

Dairy grain and concentrate bought per cow is calculated by dividing the total expenses for dairy grains and concentrates purchased by the average number of cows. Because this also includes the amount spent for calf and heifer feed, it actually represents the feed cost per cow and the replacements being raised.

Crop expense per cow is the total spent for fertilizer and lime, seeds and plants, spray, and other crop expense divided by the average number of cows. It does not include a charge for land or machinery and fuel expenses.

Feed and crop expense per hundredweight of milk is one of the most useful feed cost measures because it accounts for variations in milk production between herds, it includes all feeds purchased on the farm, and it includes crop expenses that are associated with feed production.

Grain and concentrate purchased as percent of milk sales is calculated by dividing feed purchased by milk receipts. This is another useful measure of feed efficiency although variations in homegrown grains fed and milk prices can have an adverse effect.

Forage dry matter harvested per cow is calculated by converting all hay crops and corn silage harvested to tons of dry matter, and dividing by the average number of cows. It is a measure of the forage supply available for a 12 month feeding season.

Heifers as percent of cow numbers is figured by dividing the number of heifers by the number of cows and multiplying by 100.

Table 28. PERCENT PURCHASED FEED IS OF MILK RECEIPTS
AND LABOR AND MANAGEMENT INCOME
458 New York Dairy Farms, 1984

Percent Feed is of Milk	Number of Farms	Number of Cows	Forage Dry Matter Harvested Per Cow	Pounds Milk Per Cow	Labor & Management Income Per Operator
Over 40%	16	62	5.6	13,731	\$-2,322
35 to 39	33	80	7.3	14,691	-964
30 to 34	90	78	7.6	15,155	-4,827
25 to 29	117	89	7.7	15,400	6,198
20 to 24	81	100	8.4	15,729	6,693
15 to 19	70	103	8.8	15,250	404
Under 15%	51	92	8.7	15,465	3,601

Generally, the lower the percent of the milk check going for purchased feed, the higher the income. If purchased feed is restricted enough, to cause substantial declines in production, profits will fall. Farmers spending less than 30 percent but more than 19 percent of their milk receipts for purchased feed in 1984 appear to be practicing the most effective feed cost control.

Machinery Costs

Machinery accounted for 19 percent of the year-end farm inventory on these 458 farms. New purchases averaged 14.9% of beginning machinery inventory in 1984, a substantial decrease from the period 1976-83 where new purchases averaged 22% of beginning machinery inventory. The cost of owning and operating machinery accounted for 18 percent of the total farm expenses.

Table 29.

MACHINERY COSTS
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms		Average Top 10% Farms
		Amount	Percent	
Depreciation (from page 7)	\$ _____	\$15,345	40	\$25,257
Interest @ 5% on average inventory	_____	4,793	12	7,138
Machine hire	_____	1,514	4	3,370
Machinery repairs	_____	9,519	25	19,234
Auto expense (farm share)	_____	464	1	423
Gas & oil	_____	6,903	18	12,739
Total Machinery Costs	\$ _____	\$38,538	100	\$68,161

Machinery cost:				
per cow	\$ _____	\$433		\$379
per hundredweight of milk sold	\$ _____	\$2.81		\$2.21

Depreciation accounted for 40 percent of the total machinery costs and interest 12 percent. These two fixed cost items are often overlooked in a casual examination of machine operating costs. Repairs were the second largest cost item and one which must be kept in line if costs are to be kept under control. The cost of gasoline and oil increased four percent per cow in 1984 following decreases of seven percent in 1983 and four percent in 1982. In 1984 machinery costs averaged \$433 per cow, compared to \$413 in 1983 and \$432 in 1982.

There is a relationship between machinery costs and returns to labor and management. Machinery costs exceeding \$500 per cow on specialized dairy farms are too high. As machinery cost per cow increased labor costs per cow showed an upward trend. This indicates that if substitution of machinery for labor is occurring, major cost savings are not apparent.

Table 30. **MACHINERY COST PER COW AND LABOR AND MANAGEMENT INCOME**
458 New York Dairy Farms, 1984

Machinery Cost Per Cow	Number of Farms	Number of Cows	Labor Cost Per Cow	Labor & Management Income Per Operator
Under \$300	79	94	344	\$11,931
\$300 to 349	48	90	322	1,846
350 to 399	68	94	348	8,069
400 to 449	66	97	398	2,350
450 to 499	63	89	384	1,042
500 & over	134	80	379	-5,376

Labor costs should not be overlooked in a farm business analysis even though the farm family provides a large part of the labor supply. On these 458 farms, the family (including paid family labor) provided 65 percent of the labor input, while hired nonfamily labor provided 35 percent (page 5). The operator's and other unpaid family labor are assigned values and included in Tables 31 and 32.

Table 31. LABOR COSTS
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms	Average Top 10% Farms
Value operator's labor (@\$750/month)	\$ _____	\$11,841	\$12,016
Hired labor expense (from page 10; includes paid family labor)	_____	19,114	53,576
Unpaid family labor (@ \$500/month)	_____	<u>1,635</u>	<u>1,250</u>
Total Labor Costs	\$ _____	\$32,590	\$66,842
Labor cost per cow	\$ _____	\$366	\$371
Labor cost per cwt. milk	\$ _____	\$2.37	\$2.17
Cost per month hired labor	\$ _____	\$1,062	\$1,339
Cost per month all labor	\$ _____	\$910	\$1,246

Although the top decile farms paid \$277 per month more for hired labor and \$336 per month more for all labor than the average of the 458 farms, superior labor efficiency kept labor costs per hundredweight of milk sold well below average.

Labor and machinery should operate as a "team". The challenge is to find a combination of labor and machinery that will result in low cost per unit of milk sold. On these 458 farms the machinery costs were higher than labor costs. The labor and machinery costs per hundredweight of milk for the top 46 farms were 80¢ less than the average for all farms.

Table 32. LABOR AND MACHINERY COSTS
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms	Average Top 10% Farms
Total labor costs	\$ _____	\$32,590	\$ 66,842
Total machinery costs	_____	<u>38,538</u>	<u>68,161</u>
Total Labor & Machinery Costs	\$ _____	\$71,128	\$135,003
Labor & machinery costs per cow	\$ _____	\$799	\$750
Labor & machinery costs per cwt. milk	\$ _____	\$5.18	\$4.38

Miscellaneous Costs

Costs in addition to feed, machinery, and labor make up a sizable amount on a dairy farm. The "cost conscious" manager checks on all cost items both large and small. Good cost management requires careful planning and priority spending on farm inputs that will pay dividends when the checkbook is balanced at the end of the month. A number of miscellaneous cost items are reported in Table 33 to help in a detailed checkup on all farm costs.

Table 33. MISCELLANEOUS COST CONTROL MEASURES
458 New York Dairy Farms, 1984

Item	My Farm	Average 458 Farms	Average Top 10% Farms
<u>Livestock</u>			
Breeding fees per cow	\$ _____	\$32	\$36
Veterinary & medicine per cow	\$ _____	\$44	\$56
Other livestock expense per cow	\$ _____	\$84	\$82
Milk marketing per cow	\$ _____	\$159	\$152
Milk marketing per cwt. milk	\$ _____	\$1.03	\$0.89
Cattle lease per cow	\$ _____	\$1	\$0
<u>Real Estate</u>			
Taxes per cow	\$ _____	\$51	\$40
Taxes per \$1,000 year-end real estate value	\$ _____	\$18	\$17
Insurance paid per cow	\$ _____	\$31	\$24
Cash rent paid per cow	\$ _____	\$40	\$44
Cash rent paid per acre rented	\$ _____	\$26	\$41
Real estate expense per cow	\$ _____	\$151	\$134
<u>Capital Cost</u>			
Interest paid per cow	\$ _____	\$215	\$214
Interest on equity per cow	\$ _____	\$189	\$166
Interest paid as percent of year-end debt	_____ %	9.4%	9.7%
Depreciation per cow	\$ _____	\$255	\$220
<u>Fixed & Variable Costs*</u>			
Total fixed costs per cow	\$ _____	\$828	\$741
Total variable costs per cow	\$ _____	\$1,559	\$1,719
Variable costs per cwt. of milk sold	\$ _____	\$10.10	\$10.05

*Fixed costs include real estate repairs, taxes, insurance, rent, interest paid, depreciation, unpaid family labor, and interest on equity capital. All other costs were classified as variable.

Milk marketing costs increased 12 percent per cow and 11 percent per hundredweight on these farms in 1984. Nearly all of the increase can be attributed to the 50 cent federal milk assessment and increased promotion deduction.

Fixed costs on the top decile farms were 12 percent below the 458 farm average. This is related to more intensive use of cows and cropland through better management. Variable costs were five cents lower per hundredweight of milk sold on the top farms.

Combination of Factors

Individual factors representing size of business, rates of production, labor and capital efficiency, and cost control, have been examined in the analysis up to this point. It has been suggested that these factors are interrelated. On this page, the combination of four important factors is studied. The factors combined are the number of cows per farm, pounds of milk sold per cow, pounds of milk sold per worker, and percent purchased feed was of milk receipts.

For each factor, the farms were divided on the basis of whether they were above or below the average for the 458 farms. They were then grouped on the basis of the number of factors better than average. The combination of factors above or below average within the three middle groups varied.

The relationship between the number of factors better than average and labor and management income is shown in Table 34. As the number of factors better than average decreased, labor and management income decreased at a rapid rate.

Table 34. COMBINATION OF FACTORS ABOVE AVERAGE*
AND LABOR AND MANAGEMENT INCOME
458 New York Dairy Farms, 1984

Number of Factors Above Average	Number of Farms	Percent of Farms	Labor & Management Income Per Operator
4 factors better than average	42	9	\$ 9,900
3 factors better than average	100	22	5,800
2 factors better than average	115	25	500
1 factor better than average	121	26	-3,100
0 factors better than average	80	17	-4,100

*Factors were:

Size - number of cows - average 89.

Rates of production - pounds of milk sold per cow - average 15,433.

Labor efficiency - pounds of milk sold per worker - average 445,942.

Cost control - percent purchased feed was of milk receipts - average 24%.

The top decile farms averaged 180 cows, 17,099 pounds of milk sold per cow, 625,569 pounds of milk sold per worker, and purchased feed was 24 percent of milk sales. Labor and management income averaged \$44,039 per operator on these farms. Obviously, other business factors excluded from the combination in Table 34 have a strong affect on business profits. These include labor, machinery and crop expenses, capital efficiency, financial management, crop yields, and the receipts from milk and cattle sales.

It is important in managing a farm business to give attention to all major factors affecting the business. Concentrating on only one or two factors and neglecting the others will not give the kind of net return most farmers want.

Farm Business Chart

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 458 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

Table 35. FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS
458 New York Dairy Farms, 1984

Size of Business			Rates of Production			Labor Efficiency	
Worker Equiv- alent	No. of Cows	Pounds Milk Sold	Tons Hay			Cows Per Worker	Pounds Milk Sold Per Worker
			Pounds Milk Sold Per Cow	Crop D.M./ Acre	Tons Corn Silage Per Acre		
6.8	255	4,211,900	18,800	4.7	20	45	697,300
4.3	138	2,118,100	17,300	3.7	18	36	560,900
3.6	100	1,551,500	16,500	3.3	16	33	503,900
3.1	83	1,287,200	15,900	2.9	15	30	456,100
2.8	72	1,090,400	15,300	2.7	14	28	423,300
2.5	63	950,300	14,800	2.5	13	26	392,200
2.2	56	818,600	14,200	2.3	12	25	361,400
2.0	49	691,500	13,400	2.0	12	23	328,000
1.7	43	577,800	12,200	1.7	10	20	275,500
1.4	33	395,200	10,000	1.3	8	16	191,300
Feed Bought Per Cow	% Feed is of Milk Receipts	Machinery Costs Per Cow	Labor and Machinery Costs Per Cow	Feed and Crop Expenses Per Cwt. Milk			
\$214	11%	\$205	\$ 511	\$2.75			
306	16	286	610	3.47			
369	19	337	662	3.87			
432	22	379	713	4.21			
474	25	408	771	4.45			
523	27	445	818	4.68			
574	28	481	873	4.97			
624	31	519	928	5.31			
685	33	580	1,004	5.72			
809	40	765	1,201	6.73			

The cost control factors are ranked from low to high, but the lowest cost is not necessarily the most profitable. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

FINANCIAL ANALYSIS AND MANAGEMENT

Analysis and astute management of farm financial affairs must receive high priority if the farm business is to be successful and if the farm family is to achieve a reasonable living standard.

The Farm Finance Checklist, Table 36, and the Financial Analysis Chart, Table 37, are provided to serve as guidelines. Dairy farmers can determine how their financial management measures up by comparing with average data from other farms.

Table 36. A FARM FINANCE CHECKLIST
458 New York Dairy Farms, 1984

	My Farm	Ave. 458 New York Farms	Ave. Top 10% Farms ¹
<u>How farm assets are being used:</u>			
Total inventory (capital) per cow	\$ _____	\$5,520	\$4,850
Farm assets in livestock	_____ %	22%	25%
Farm assets in farm real estate	_____ %	47%	44%
Farm assets in machinery	_____ %	18%	15%
<u>Measures of debt capacity and debt structure:</u>			
Equity in the business	_____ %	64%	61%
Farm debt per cow	\$ _____	\$2,209	\$2,070
Long term debt/asset ratio ²	_____	0.45	0.47
Inter. & short term debt/asset ratio ²	_____	0.29	0.32
Inter. & short term debt as % of total	_____ %	43%	48%
<u>Debt repayment ability:</u>			
Cash flow coverage ratio	\$ _____	0.84	1.15
Scheduled debt payments per cow	\$ _____	\$487	\$484
Scheduled debt pymts. as % of milk check	_____ %	24%	23%
Average of same 343 Farms 1983 and 1984			
<u>Indicators of annual financial progress:</u>			
		Amount	Percent
Annual change in farm assets	\$ _____	+\$15,728	+ 3.0%
Annual change in farm debts	\$ _____	+ \$6,844	+ 3.5%
Annual change in farm net worth	\$ _____	+ \$8,884	+ 2.7%

¹Forty-six farms with highest returns to labor and management per operator.

²Long or intermediate and short term debt divided by long or intermediate and short term assets.

The most profitable farms carried \$139 less debt per cow and had a greater ability to make 1985 debt payments although equity in their business was three percent less than that of the average.

Farm debts grew faster than farm assets between 1983 and 1984 and net worth increased less than the annual rate of inflation.

Financial Analysis Chart

The farm financial analysis chart is designed just like the Farm Business Chart in Table 35 on page 28 and may be used to measure the financial health of the farm business. Most of the financial measures used are defined on pages 14 through 16 and 21 in this publication.

Table 37.

FINANCIAL ANALYSIS CHART
458 New York Dairy Farms, 1984

Liquidity (Repayment)				
Debt Payments Per Cow	Available for Debt Service Per Cow	Cash Flow Coverage Ratio	Debt Payments as Percent of Milk Sales	Debt Per Cow
\$ 36	\$909	7.67	2	\$ 104

.94	53	.37	.62	2.66	-3	1
1.22	46	.45	.73	2.95	-6	0
1.72	38	.55	.85	3.25	-11	-3
5.04	20	.80	1.27	4.54	-37	-8

¹Dollars of debt per dollar of equity, computed by dividing total liabilities by total equity.

²Return on all farm capital (no deduction for interest paid) divided by total farm assets.

SUPPLEMENTAL INFORMATION

Dairy Diversion Program

The 458 dairy farms summarized in the main body of this report include 56 dairy diversion program cooperators that contracted to reduce milk marketings and thereby received diversion payments. Table 38 compares average business and financial data from the 56 dairy diversion participants with the average of 402 nonparticipating dairy farmers.

Total capital invested in the farm business increased 2.7 percent on the nondiversion dairy farms but only 0.6 percent on the diversion farms. Even though cow numbers dropped 10 percent on the diversion farms, the total market value of the inventory items increased primarily as a result of new real estate investments and appreciation. Diversion cooperators bought new machinery and equipment at approximately the same rate as nonparticipants. Total farm investment per cow owned increased 12 percent during 1984 to \$6,316 on the diversion farms but dropped one percent to \$5,455 per cow owned on the nondiversion farms.

Total cash expenses averaged \$1,950 per cow on the diversion farms and \$1,880 on the nondiversion farms during 1984. Feed and livestock expenses were lower while machinery costs and overhead expenses per cow were higher on the diversion farms. Total cash receipts averaged \$2,440 per cow on the diversion farms and \$2,312 on the nondiversion dairy farms. Diversion participants received approximately \$20,000 in milk diversion payments per farm in 1984. Payments earned for the last quarter of 1984 are not included as 1984 income. If last quarter diversion payments were \$7,000 per farm and credited to 1984 receipts, labor and management income would have averaged \$3,500 per farm on the dairy diversion farms, only \$400 less than nondiversion farms. Net cash farm income on diversion farms was within \$1,000 of nondiversion farms and with the accounting for diversion payments earned but not received, would have been greater by approximately \$6,000 on diversion farms.

Three Year Comparisons

Table 39 is a three-year comparison of selected business factors from 43 dairy diversion farms. Included are dairy-cash crop, and part-time dairy farms as well as specialized dairy farms. Table 40 is a comparison of business factors from 300 nondiversion dairy farms that have participated in the Cooperative Extension Farm Business Summary Program for the last three consecutive years.

Cow numbers decreased by 13 to 76 from 1982 to 1984 on diversion farms while cow numbers increased by 7 to 94 on nondiversion farms. Heifers as a percent of cow numbers is higher on diversion farms indicating the likely prospect for increased herd size in 1985. Crop acreage was constant on diversion farms while increasing 20 acres from 1982 to 1984 on nondiversion farms.

Milk sales per cow declined 600 pounds on diversion farms while increasing almost 800 pounds on nondiversion farms.

Over the three years, these same farms show very similar profitability patterns when adjusted for 1984 earned diversion payments. Net worth is down slightly on diversion farms, while increasing over \$11,000 on nondiversion farms.

Table 38. COMPARISON OF 56 DAIRY DIVERSION PARTICIPANTS

Cost of Producing Milk

The "whole farm data" method is used here to compute the cost of producing milk. Costs of production are divided into ten categories and presented for the 458 New York dairy farms and the 402 nondairy diversion farms in Table 42 on the following page. Nonmilk receipts are deducted on the assumption they were produced at cost. Total costs of production are eight cents per hundredweight lower when dairy diversion farms are excluded from the sample. Machinery and overhead costs per hundredweight of milk were significantly higher on the diversion farms. Dairy diversion income is included as a credit or negative cost of production under miscellaneous expenses. Total costs of production are computed with and without a management charge set at five percent of cash receipts. Operators' labor, excluding management, is included under labor costs at \$750 per month.

The total cost of producing milk on all 458 dairy farms averaged \$14.89 per hundredweight, \$1.39 more than the average price received for milk sold from these farms during 1984. In 1983 the total cost of producing milk averaged \$14.75 on 510 New York dairy farms, \$1.11 per hundredweight more than the average price received. This implies dairy farmers are willing to receive less than the stated returns on their labor and equity capital to remain in farming.

Size of herd and level of milk production are important factors related to the cost of producing milk. The cost of production for nine herd size categories and nine production levels is shown in Table 41. The average cost excluding management was \$14.98 for herds with less than 100 cows, and \$13.53 for those with 100 cows or more, for a difference of \$1.45 per hundredweight. Farms selling less than 11,000 pounds of milk per cow had an average cost of production (excluding management) of \$16.83, while those selling 16,000 pounds and over averaged approximately \$13.42 for a difference of \$3.41 per hundredweight.
