FARM COST ACCOUNTS IN NEW YORK

---

This report has been prepared from farm cost-account records kept by New York farmers in cooperation with the New York State College of Agriculture. Seventy-nine farms were included in the cost-accounting project in 1940, and seventy farms in 1942. Factors from the individual farm accounts and annual averages were published in AE 390 for 1940, and in AE 460 for 1942.

Of the seventy farms that were in the project in 1942, sixty-six were businesses that were also included in 1940, and four were new. The type of farming and size of business on farms which were added was similar to that on farms on which accounts were discontinued.

The accounts were kept during the year by the cooperating farmers on standard forms furnished by the college. At the end of the fiscal year, a field man from the college spent from one to three days at each farm checking the records for completeness and accuracy. The books were then closed and summarized at the college. Since the farm cost-accounting project was started at the New York State College of Agriculture in 1913, the cooperating farmers have been selected on the basis of their willingness and ability to keep complete and accurate records, the type of farm they operate, and their location. Their farms are widely scattered over New York State.

As a group the cost-account farms are not typical of the state, being in general larger, more productive, and more skillfully managed than the average of New York farms. They are, for the most part, highly commercialized businesses. The operating results reported in this summary should not be considered as representative of all New York agriculture, but rather of approximately the one-fifth of New York farms that are the largest and most productive. Results on these farms provide good standards of comparison against which other farmers may measure their operating results.

Another important use of the cost-account data is the comparisons which they provide of the costs and returns among important New York farm enterprises. The relative differences in costs and returns among enterprises on these farms is considered to be fairly typical of the differences on other farms of the state. For such comparisons, it is best to use figures covering a period of several years. A summary of 25 years of farm cost accounts, 1914 to 1938, is available in Cornell Extension Bulletin 439. Summaries for recent years are available in mimeographed form from the Cost Account Office, Warren Hall.

The Crop Years, 1940 and 1942

From a production point of view, 1940 was a relatively favorable year on the cost-account farms. The yield per acre of all crops was 6 per cent above the 1935-39 average. Alfalfa, other hay, wheat, spring grains, canning-factory peas, potatoes, cabbage, and peaches yielded better than the average of the preceding five years; corn, beans, canning-factory tomatoes, apples, pears, and cherries yielded less than the five-year average. Livestock production per head was

one per cent above the average of 1935-39.

Crop production in 1942 was phenomenal. Not a single crop produced less than the average yield of 1935-39, and only canning-factory peas, alfalfa, oats, and wheat produced less per acre than in 1940. All crop yields averaged 24 per cent above 1940 and 31 per cent above the average of 1935-39. Livestock production per head was 3 per cent higher than in 1940.

Not only was production on the cost account farms exceptionally high in 1942, but the relationship between farm prices and farming costs was the most favorable that had been experienced since before the Great Depression. New York farm costs in 1942 were 26 per cent above the 1935-39 average, but New York farm prices had risen 43 per cent in the same period. Prices and costs were both rising throughout 1942. Much of the cost of 1942 production was incurred during the early part of the year when the price level was lower than it was when the crops were sold. The combination of relatively favorable price-cost relationships and exceptionally high production made 1942 an unusually profitable year for the cost-account co-operators.
