## THE PRODUCTION OF CORN FOR GRAIN IN NEW YORK STATE

December, 1945

Corn for grain in New York State is an important crop on a large number of farms, especially in the western part of the State, but as a source of total feed requirements it is only of minor importance. In 1939, approximately 45,000 farms reported corn harvested for grain. Estimates of the sources of feed other than pasture in 1942 indicate corn for grain contributed 3 per cent, as compared with 11 per cent from corn for silage, 44 per cent from hay, 7 per cent from oats and barley and 32 per cent from shipped-in concentrates.

In recent years, about 700,000 acres of corn for all purposes have been produced in the State. About one acre in five has been used as corn for grain, except that in the thirties more of the corn crop was harvested as grain.

The long-time trend in the acreage of corn for grain has been downward. However, after reaching a low point in 1929 of about 100,000 acres, the acreage rose to nearly 200,000 acres in 1938. Since then an irregular decline has occurred. In 1944, 152,000 acres were harvested as grain.

The leading counties of the State in the production of corn for grain in 1943 were Wayne, Cayuga, Niagara, Ontario, Monroe, and Onondaga.

In 1939, the acreage of corn for grain was equal to about one-quarter of that for oats, and two-thirds of that for wheat.

On many farms, the production of corn for grain represents the excess of corn left over after filling the silo. Dairy men generally plant enough corn to fill their silos even in years of lower-than-average yields. In the years of favorable yields, some corn is left over to be harvested as grain.

SOURCES OF LIVESTOCK FEED OTHER THAN PASTURE  
In New York State - 1942.  
(in per cent of total T.D.N.)

Hay 44%	
Corn Silage 11%	
Oats and Barley 7%	
Corn for grain 3%	
Other 3%	
Purchased concentrates	
medium & low	20%
high	12%
	32%

Hay. 6 million tons produced on about 3.8 million acres; 125,000 farms - about 30 acres per farm.

Corn for silage. About 4.5 million tons produced on 440 thousand acres; 50,000 farms - about 9 acres per farm.

Oats and Barley. Some 37 million bushels produced on 1.0 million acres; 70,000 farms - about 15 acres per farm.

Corn for grain. About 7 million bushels produced on 170 thousand acres; 50,000 farms - about 3 acres per farm.

Other. Includes wheat, buckwheat, rye, and soybeans used for feed.

Purchased concentrates. About 2.2 million tons, of which 0.8 million consist of high proteins; 120,000 farms - about 18 tons per farm.

(Pasture. Six million acres, the T.D.N. from which is approximately equal to from one-fourth to one-third of the total from all other sources.)

## Corn For Grain: New York acreage and production, by counties, 1943
