AVERAGE ENTERPRISE COSTS AND RETURNS
FOR FARM COST ACCOUNTS, 1952

For the Cost Account year 1952, there were 46 New York State farmers who kept detailed records on their businesses in cooperation with the Department of Agricultural Economics, Cornell University.

The Cost Accounts were kept on an enterprise basis and provide information as to the quantities of seed, labor, fertilizer, etc. that are used. They also show the amount and relative importance of the items of cost which make up the total. This report includes information on costs, returns, and profits for principal enterprises on the farms studied.

The field work on these accounts was performed by Arne Nissen and C. DelMar Kearl. The closing of the books and the preparation of this report on results of the operation of the farms was done by the Cost Account staff consisting of: Marjorie Evans, Oneta Shipe, Edith Slights, Gloria Howell, and Bonnie Harris. Assistance was also given by Grace Bush and Dolores Schubert.

THE ECONOMIC SITUATION IN 1952*

The 1952 crop year turned out to be a good farming year. Farm prices, which had been declining since the peak 1948 year, turned upward during the latter part of 1950, and were high throughout 1952. Cost also increased, but the situation was generally favorable for farming.

Farmers, however, were not in nearly so favorable a position as non-farm workers. Earnings of factory workers showed little tendency for a post-war decline, were high throughout the period and increased during 1952 while farm prices tended to level off.

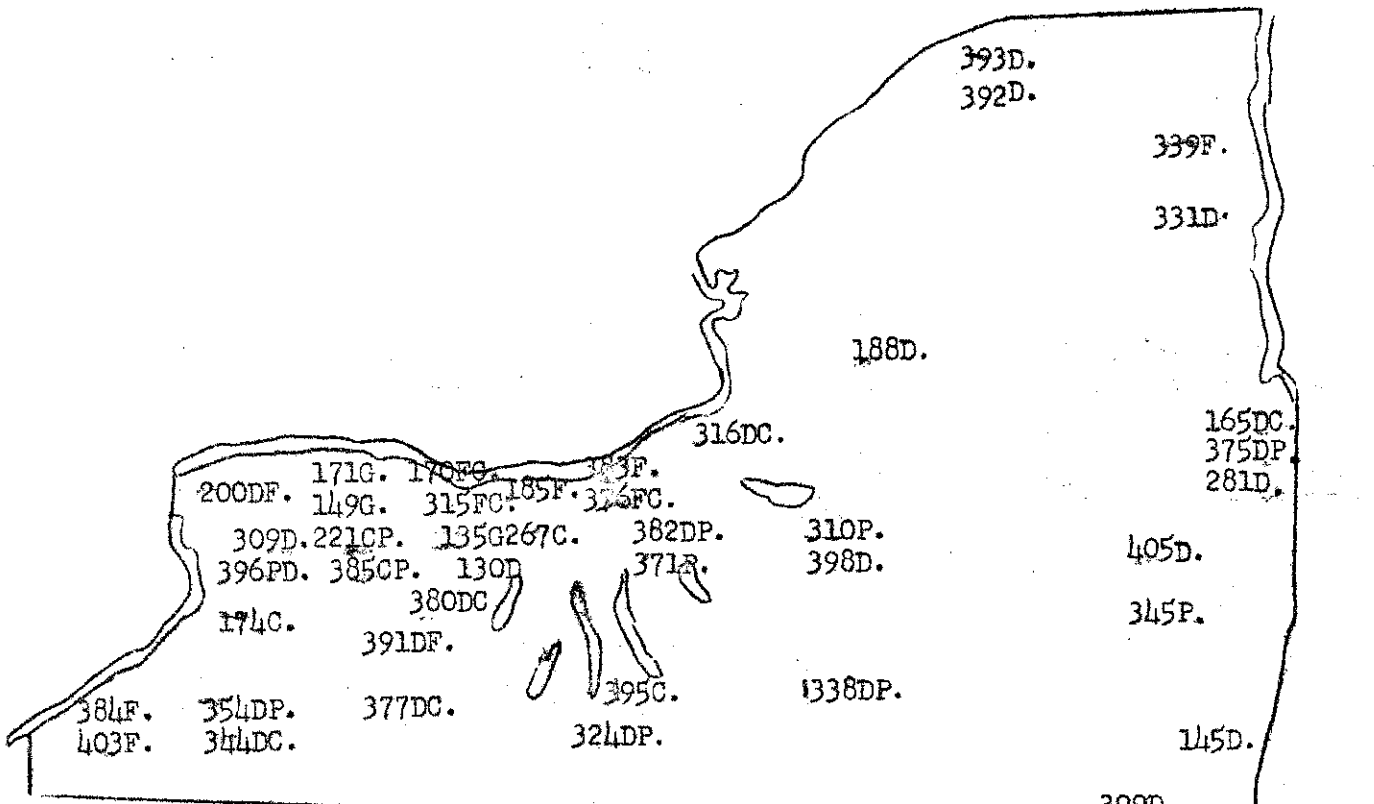

* The indexes for New York farm prices, prices of articles farmers buy and earnings of factory workers are on a pre-World War I base.

LOCATION OF FARMS

Legend

- D - Dairy
- P - Poultry
- C - Cash crops
- F - Fruit
- G - General

Cost Account farms are located in most of the farming areas of the State. They tend to be larger than average farms and are generally better managed and more productive.

Although space on the map does not allow the numbers to be put exactly in the location of the farm, they do indicate the general area in which the farm is situated.

The type of farm is indicated by the letters which follow the farm number. The combinations of letters indicate that there were two major types of enterprises on the farm. General type farms include those with a number of different types of enterprises, none of which are important enough to warrant classifying the farm by a type of enterprise.

YIELDS FOR CROPS AND LIVESTOCK

Better farming methods, more fertilizer, better feeding, new varieties, more intensive operation, and favorable weather have caused yields for crops and livestock to be high in recent years. The Cost Account

* BAE Reports.

Farm yields for most crops were about the same as the average for New York State for 1952. Most grain crops yielded well. Corn yields were 11 bushels over the previous year. Wheat and barley yields were up. Oats was an exception. Yields fell by 13 bushels.

Milk production per cow on Cost Account Farms is considerably above the average for the State. Production rates for hens are slightly above the State average.

* Weather Bureau, U. S. Department of commerce, Annual Summary, 1952.

** Number of days between first and last frost.

The total annual precipitation for New York State was only .7 inches below normal for the State. Although wet soil delayed the planting season, dry and favorable weather in May helped farmers to get their work caught up, and they were about on schedule in June.
