DAIRY FARM BUSINESS SUMMARY

INTRODUCTION

Dairyfarmers throughout New York State submit business records for summarization and analysis through Cooperative Extension's Farm Business Management Program. Each participating farmer receives an individual farm report containing all the management information found in this publication. Averages from a compilation of the individual farm reports are published in ten regional summaries like this one and in one statewide summary. These publications are used by extension personnel, dairy farmers, and agribusiness people working in many segments of the dairy industry.

Primary objectives of the dairy farm business management program are to (1) assist farmers in developing and maintaining more complete farm business data for use in management decisions and (2) help farmers improve their management skills through appropriate use of farm record data and application of modern decision-making techniques. This report is prepared in workbook form for use in the systematic study of individual farm business operations.

The increasing size of New York Dairy farms and the dynamic nature of the economic environment within which they operate make farm incomes increasingly dependent upon the accuracy of management decisions. An assessment of past business performance combined with careful analysis of future economic conditions and goals of the farm business will greatly enhance the operator's profit potential.

The year ahead will not provide improved economic conditions for the dairy farming industry. Milk prices are expected to be down one-half to one percent while production costs may increase six to eight percent. To prevent a serious cost/price squeeze, dairyfarmers must place renewed emhasis on cost control and operating efficiency. The analysis section of this publication, beginning on page 10, is designed to help one determine the strength of productivity, efficiency and cost control on any individual dairy farm business. With careful determination of the business strengths and weaknesses and careful planning of next year's business operations, a dairyfarmer will be in a better position to manage through the challenges of the 1980's.

Business records for 55 farms in the Oneida-Mohawk region are summarized in this publication. This year the region contains five counties: Herkimer, Montgomery, Oneida, Schoharie, and Fulton.

This summary was prepared by Eddy L. Ladue, Department of Agricultural Economics, New York State College of Agriculture and Life Sciences, Cornell University, in cooperation with the following Cooperative Extension agents and specialists: John S. Adams, Teddy J. Aber, and David L. Roy.

SUMMARY OF THE FARM BUSINESS

Business Characteristics

The combination of resources and management techniques used to put resources to work is an important part of planning. The tables below show important farm business characteristics, the number of farms reporting these characteristics, and the average level of resources used in production.

MANAGEMENT SYSTEMS, PRODUCTION TECHNOLOGY AND FARM SIZE 55 Oneida-Mohawk Dairy Farms, 1981

Type of Business	Number	Business F	Records	Number	Dairy Records

Capital Investment-Farm Inventory represents the market value of resources committed to the farm business at the beginning and end of the year. Increases in inventory occurs with herd expansion, new machinery, and building additions and appreciation of land, buildings and livestock.

CAPITAL INVESTMENT - FARM INVENTORY 55 Oneida-Mohawk Dairy Farms, 1981

	My	Farm	Average		
I tem	1/1/81	1/1/82	1/1/81	1/1/82	
Livestock Feed & supplies Machinery & equipment	\$	\$	\$ 88,103 18,954 61,794	\$ 88,953 18,437 68,356	
Land & buildings TOTAL	\$	\$	158,650 \$327,501	165,489	

Machinery and Real Estate Inventory Calculations

Capital outlays for machinery, buildings, land and land improvements usually occur in large uneven amounts, but depreciate gradually over a period of time. Machinery depreciation is a charge for use of the machinery complement in production. Appreciation in the value of the machinery complement results from inflation in the value of used machinery; it is calculated as a residual.

MACHINERY & EQUIPMENT INVENTORY 55 Oneida-Mohawk Dairy Farms, 1981

I tem		My Farm	Average	
End of year market value		(1)\$		\$68,356
Beginning market value	\$		\$ 61,794	
Plus machinery purchased	+		+ 13,324	
Less machinery sold	-		- 501	
Less depreciation			- 8,728	
Net end investment		(2)\$		\$65,889
APPRECIATION (1 minus 2)		\$		\$ 2,467

The end of year market value of real estate can be verified by starting with the beginning of year value, making adjustments for purchases and sales, depreciation of buildings and any appreciation in land. Lost capital is the difference between the cost of new buildings or land improvements and the amount these improvements added to the value of the farm. It is not included in farm expenses, since building depreciation is based on the full cost of new buildings and will account for lost capital over the life of the investments. Building depreciation is included as a farm expense. Real estate appreciation is the increase in value of real estate caused by demand and inflation.

REAL ESTATE INVENTORY CALCULATIONS 55 Oneida-Mohawk Dairy Farms, 1981

Item	My Farm	Ave	erage
Beginning market value	\$		\$158,650

Less real estate sold	**		- 211
Total without appreciation	\$		\$161,722
Appreciation of beginning			
real estate	+		+ 3,767
End of year market value	\$		\$ <u>165</u> ,489

Receipts

Receipts from the business should be large enough to cover all expenses and leave a reasonable return for the operator's labor and management. Cash receipts occur when farm products and livestock are sold or services are performed and payment is received during the year. Noncash receipts do not result from sales, but are due to appreciation in value or increases in physical quantities of inventories that could be readily transformed into a cash receipt.

FARM RECEIPTS 55 Oneida-Mohawk Dairy Farms, 1981

Farm Business Profitability

The results of management are reflected in the net return from the business. Four common ways to measure the returns from a farm business are reported here.

Net cash farm income reflects the cash available from the year's operation of the business. Family living has first claim on cash income followed by fixed payments on debts. A family may have additional cash available if they have nonfarm income. Cash flow is not a good measure of farm business profits, but it is useful when planning debt repayment programs. Guidelines for annual cash flow planning are presented on page 9. Monthly cash flow planning is also recommended and may be required in order to identify cash flow problems in the year ahead. This is particularly true when major changes in the business are planned or when the price of important factors such as milk or purchased concentrate are expected to change significantly.

NET CASH FARM INCOME Oneida-Mohawk Dairy Farms, 1981 & 1980

		A	verage
Item_	My Farm	1981	1980
Cash Farm Receipts	\$	\$122,470	\$124,758
Cash Farm Expenses		91,996	93,525
NET CASH FARM INCOME	\$	\$ 30,474	\$ 31,233

Labor and management income is the return to the operator for his or her labor and management input into the business. A nine percent charge for the use of the operator's equity capital in the business has been included as a farm expense. This interest charge reflects what the operator could have earned from this capital had it been invested elsewhere, such as in bank certificates of deposit. Labor and management income is the measure used most commonly when comparing farm businesses. Appreciation in livestock, machinery and real estate inventories is included as ownership income.

LABOR AND MANAGEMENT INCOME Oneida-Mohawk Dairy Farms, 1981 & 1980

		Average			
I tem	My Farm	1981	1980		
Total farm receipts excluding appreciation	\$	\$125,365	\$133,058		
Total farm expenses		128,044	129,424		
LABOR & MANAGEMENT INCOME	\$	\$- 2,679	\$ 3,634		
Full-time operator-manager equivalents		1.22	1.2		
LABOR & MGT. INCOME/OPERATOR-MANAGER	\$	\$- 2,196	\$ 3,106		

Labor, management and ownership income per operator reflects the combined return to the farmer for his/her triple role of worker-manager, financier and owner. Again, this is not a measure of the cash flow situation of the farm business. A satisfactory labor, management and ownership income does not eliminate cash flow problems if liabilities are large and repayment is rapid.

LABOR, MANAGEMENT AND OWNERSHIP INCOME Oneida-Mohawk Dairy Farms, 1981 & 1980

		Av	erage
I tem	My Farm	1981	1980
Total farm receipts	\$	\$129,554	\$151,678

^{*}Value of operator's labor and management estimated by operators.

Farm Family Financial Situation

The financial situation is an important part of the farm business summary. It has a direct affect on current cash outflow and future capital investment decisions. A farmer may have a good labor and management income, but high debt payments may restrict management flexibility. Farm Net Worth is Total Farm Assets less Total Farm Liabilities. Family Net Worth is Total Assets less all Liabilities reported.

FARM FAMILY FINANCIAL SITUATION
55 Oneida-Mohawk Dairy Farms, January 1, 1982

I tem	My Farm	Average Per Farm

TOTAL LIABILITIES	\$	\$127,331
FARM NET WORTH (EQUITY CAPITAL)	\$	\$227,794
FAMILY NET WORTH	\$	\$247,861

Payment ability is the most important consideration in determining if and how proposed investments should be financed. The farm business must produce sufficient cash income to meet operating expenses, to cover family or personal living expenses, to make payments on debts and to cover cash purchases of capital items that occur during the year.

Payment ability is estimated in the following table. Interest paid and income from off-farm work are added to net cash farm income because planned or budgeted debt payments will include interest as well as principal. Estimate family living expenses for your farm to calculate cash available for debt payment and capital purchases made in cash.

Debt payments planned are the scheduled debt payments as of January. Some farms in the group had scheduled debt payments exceeding 50 percent of the milk receipts. Committing this much cash inflow to debt payments can put a "big squeeze" on cash available for operating the business and family living.

FINANCIAL MEASURES & DEBT COMMITMENT 55 Oneida-Mohawk Dairy Farms, January 1, 1982

I tem	My Farm	Average
Payment Ability		
Net cash farm income	\$	\$30,474
Plus interest paid		12,064
Plus off-farm income		645

Farm debt per cow	\$	\$ 2,151
Percent equity (total)	%	66%
Cash flow coverage ratio		1.00

^{*}Estimated as \$9,600 per family plus four percent of cash farm receipts.

ANALYSIS OF THE FARM BUSINESS

In analyzing a farm business, a manager must consider measures or factors that reflect the performance of specified parts of the farm business. One method of doing this is to look at factors of size, production, labor efficiency, capital efficiency and cost control. These factors are considered on the following pages.

Size of Business

Studies have shown that, in general, larger farms are more profitable than smaller farms. Two basic reasons are that larger businesses make possible more efficient use of overhead inputs such as labor and machinery and there are more units of production on which to make a profit. Another reason is that profitable farm businesses with good management have the ability and incentive to become larger. Large farms are not necessarily more profitable and size increases are only profitable with good management.

MEASURES OF SIZE OF BUSINESS Oneida-Mohawk Dairy Farms, 1981 & 1980

		Average		
I tem	My Farm	1981	1980	
Number of cows		57	61	
Number of heifers		39	44	
Pounds of milk sold		826,000	871,500	
Worker equivalent		2.3	2.3	
Total work units		623	671	
Total tillable acres		195	208	

In the table below, the 600 New York farms for 1980 are sorted by number of cows and the labor income is shown for each size group. In general, the large farms paid better, but, variability of income was significant.

COWS PER FARM AND LABOR AND MANAGEMENT INCOME 600 New York Dairy Farms, 1980

Number	Number	Percent	Labor & Managem	nent Income
of Cows_	of Farms	of Farms	Per Operator	Per Cow
Under 40	94	16	-\$ 2,404	-\$ 82
40 - 54	147	25	- 1,111	- 26
55 - 69	128	21	1,282	27
70 - 84	77	13	- 1,532	- 25
85 - 99	38	6	923	14
100 - 114	26	4	7,434	97
115 - 129	24	4	5,420	62
130 - 149	19	3	- 1,484	- 16
150 - 179	24	4	6,361	58
180 - 199	9	2	17,897	129
200 & over	14	2	24,291	149

Rates of Production

Crop yields and rates of animal production are factors that affect farm incomes. In the table below, we examine the crops grown and yields along with the pounds of milk sold per cow.

CROP YIELDS & MILK SOLD PER COW 55 Oneida-Mohawk Dairy Farms, 1981

	My F	arm	Aver	age of Fari	ms Reporting
Стор	Acres	Yield	Farms	Acres	Yield/Acre
Baled hay			50	75	
Hay crop silage			35	70	2.3 tons DM
Corn silage			49	35	14.3 tons
Other forage			10	15	1.3 tons DM
Grain corn			29	44	89 bushels
0ats			13	22	65 bushels
Other crops			7	41	
Tillable pasture			15	36	
Idle tillable land			15	16	
Dry matter:					
All hay crops			55	112	2.3 tons DM
All forage crops			55	146	3.0 tons DM
Milk sold per cow			14	,491	

Tons of dry matter of all hay and silage is a good measure of the overall rate of forage production.

The importance of strong milk output per cow is shown in the table below.

MILK SOLD PER COW AND LABOR AND MANAGEMENT INCOME 600 New York Dairy Farms, 1980

Pounds of Milk Sold Per Cow	Number of Farms	Number of Cows	Feed Bought Per Cow	Labor <u>Management</u> Per Operator	Income
Under 10,000	24	50	\$319	-\$8,433	-\$211
10,000 - 10,999	20	53	393	- 5,816	- 148
11,000 - 11,999	40	60	467	- 3,926	- 75
12,000 - 12,999	68	63	465	- 8,140	- 150
13,000 - 13,999	91	78	477	1,789	30
14,000 - 14,999	137	85	483	5,527	83
15,000 - 15,999	102	77	541	3,561	56
16,000 & over	118	77	572	4,584	76

Labor Efficiency

Labor input is an important factor in farm production. Several measures of accomplishment per worker (labor efficiency) are shown below.

MEASURES OF LABOR EFFICIENCY Oneida-Mohawk Dairy Farms, 1981 & 1980

4		Average		
Item	My Farm	1981	1980	
Worker equivalent		2.3	2.3	
Cows per worker		24	27	
Lbs. milk sold per worker		355,000	387,000	
Work units per worker		267	298	

Number of cows per worker is calculated by dividing the average number of cows by the worker equivalent which represents the total farm labor force. Pounds of milk sold per worker is an important measure of labor efficiency on the dairy farm. It measures the ability of the labor force to handle a large number of cows without sacrificing milk output per cow.

It is important to look at other measures of labor efficiency, such as work units per worker because all dairy farms do not have the same relationship between cows, heifers, and crops grown.

Labor efficiency depends on a number of things. Among these are the amount of mechanization, the field and building layout, the work methods, and the abilities of the workers. All of these are management items under the control of the operator.

Another factor which may influence the productivity of labor is the wage paid to employees. A productive employee will require a reasonable and competitive wage.

MILK SOLD PER WORKER AND LABOR AND MANAGEMENT INCOME 600 New York Dairy Farms, 1980

Pounds of Milk Sold Per Worker	Number of Farms	Number of Cows	Lbs. Milk Per Cow	Labor <u>Management</u> Per Operator	Income
Under 250,000	76	41	11,800	-\$ 5,551	-\$171
250,000 - 299,999	66	51	12,900	- 4,514	- 108
300,000 - 349,999	86	59	14,000	- 132	- 3
350,000 - 399,999	108	67	14,300	- 790	- 15
400,000 - 449,999	87	76	14,800	2,645	41
450,000 - 499,999	57	86	14,800	1,936	26
500,000 - 599,999	79	103	15,100	8,868	112
600,000 & over	41	154	15,100	13,947	119

Capital Efficiency

Capital is a key resource and a manager must continually analyze its use in the business. The measures of capital efficiency shown in the following table include owned as well as borrowed capital. It is possible for the business to be undercapitalized, but investing too much capital per productive unit is a more common problem.

MEASURES OF CAPITAL EFFICIENCY Oneida-Mohawk Dairy Farms, 1981 & 1980

		Average		
Item	My Farm	1981	1980	
Farm capital per worker	\$	\$146,500	\$154,600	
Farm capital per cow	\$	\$5,784	\$5,522	
Land & buildings per cow	\$	\$2,805	\$2,598	
Land & buildings/tillable acre owned Machinery investment per cow	\$ \$	\$1,118 \$1,159	\$1,202 \$1,044	
Machinery per tillable acre	\$	\$351	\$316	
Capital turnover	yrs	. 2.6 yrs.	2.3 yrs.	

Land and building investment per crop acre owned shows the relationship between investments in land and buildings. The farmer who owns little cropland but builds many farm buildings will have a relatively large land and building investment per crop acre owned. This could be an indication that capital use is out of balance.

Capital turnover is calculated by dividing the total farm capital (total year end farm inventory) by the total farm receipts for the year The factor is called capital turnover because it measures the number of years of receipts needed to equal or "turnover" farm capital. A fast rate of turnover is more desirable than a slow rate because it means capital purchases can be paid off at a faster rate. This figure also depends upon the enterprise selection of the business.

CAPITAL TURNOVER AND LABOR AND MANAGEMENT INCOME 600 New York Dairy Farms, 1980

Capital Turnover Rate - Years	Number of Farms	Number of Cows	Capital Per Cow	Investment Per Worker	Labor & Mgmt. Income Per Operator
Less than 1.5	15	112	\$3,280	\$113,230	\$14,481
1.5 to 1.99	122	95	4,550	139,340	6,163
2.0 to 2.49	246	75	5,530	161,630	5,129
2.5 to 2.99	146	63	6,270	177,660	- 4,572
3.0 to 3.49	42	58	7,440	187,630	- 8,598
3.5 and over	29	44	7,880	198,150	- 15,521

Cost Control

The control of costs is a big factor in the success of modern commercial dairy operations. Feed, machinery and labor costs are major items and are examined in detail. However, it is important to check all cost items both large and small. Expenses should be incurred only when the returns from the expense are expected to be greater than the cost incurred.

Feed Costs

Purchased feed is the largest single expenditure on most dairy farms. Two considerations are important in keeping the feed bill down: (1) Be careful that only nutrients required by the cow are being fed. A dairy farmer cannot afford to buy a feed mix that overfeeds energy or protein. (2) Be certain that the required nutrients are being obtained from their cheapest source. For example, what is the cheapest source of protein? urea? soybean meal? a commercial protein? Help in answering these questions can come from budgeting, from agribusiness people selling feeds, and from dairy and management extension agents. Extension is supporting two computerized decision aids to assist in answering these questions: a NEWPLAN program of Least-Cost Balanced Dairy Rations, and the NYDHIC forage balancing program.

The size and productivity of the crop program has an important influence on the size of the purchased feed bill. Increased production of either roughages or grains should reduce the purchased feed expense unless cow numbers are increased. Also, heifer raising practices affect feed costs. The overall feed situation must be examined and evaluated as a "system".

FEED COSTS AND RELATED MEASURES Oneida-Mohawk Dairy Farms, 1981 & 1980

		Averag e		
I tem	My Farm	1981	1980	
Dairy concentrate purchased per cow	\$	\$500	\$495	
Dairy concentrate purchased per cwt. of milk sold	\$	\$ 3.45	\$3.47	
Percent dairy concentrate is of milk receipts Crop expense per cow	\$	26% \$135	27% \$ 125	
Feed & crop expense/cwt. milk	\$	\$4.38	\$4.35	
Forage dry matter harvested/cow (tons)		7.6	8.5	
Acres of forage per cow		2.6	2.8	
Total tillable acres per cow		3.4	3.4	
Fertilizer and lime/tillable acre	\$	\$24	\$22	
Heifers as % of cow numbers	9	68%	72%	

Machinery, Labor and Miscellaneous Costs

Labor and machinery operate as a team on a modern farm. The challenge is to obtain an efficient combination that will result in a reasonable cost per unit of output.

MACHINERY & LABOR COSTS Oneida-Mohawk Dairy Farms, 1981 & 1980

		Ave	rage
Item	My Farm	1981	1980
Machinery: Depreciation ¹	\$	\$ 8,728	\$ 9,217
Interest ²		5,857	5,499
Operating expense ³		11,146	10,401
Total machinery	\$	\$25,731	\$25,117
Per cow		\$451	\$412
Per tillable acre		\$3.12	\$2.88
Labor: Value of operators ⁴	\$	\$10,936	\$10,500
Unpaid family ⁵		2,091	2,000
Hired		6,201	6,418
Total labor	\$	\$19,228	\$18,918
Per cow		\$337	\$310
Per cwt. milk		\$2.33	\$2.17
Labor & machinery costs/cwt. milk	\$	\$5.45	\$5.05

¹Regular depreciation from last year's tax plus 10 percent of new purchases.

MISCELLANEOUS COST CONTROL MEASURES Oneida-Mohawk Dairy Farms, 1981 & 1980

		Ave	rage
<u>I tem</u>	My Farm	1981	1980
Livestock expense per cow	\$	\$185	\$161
Real estate expense per cow	\$	\$159	\$144
Total farm expense per cow	\$	\$2,246	\$2,122

Livestock expense per cow includes breeding fees, veterinary and medicine, milk marketing, dairy supplies, bedding and DHIC fees. Real estate expenses include repairs, taxes, insurance and rent.

²Nine percent of average machinery investment.

³Machine hire, repairs, farm share auto expense, and gas and oil.

 $[\]frac{4}{5}$ \$750 per month.

^{5\$500} per month.

YEARLY CASH FLOW PLANNING & ANALYSIS

The worksheet below is a valuable tool in planning expansions and for setting goals for improving the farm business. The average is from 55 Oneida-Mohawk dairy farms.

PROGRESS OF THE FARM BUSINESS

Comparing your business with that of other farmers is one part of a business checkup. It is equally important to compare your current year's business with that of earlier years to show the progress you are making, and to plan ahead, by setting business targets or goals.

Item	1979	1980	1981	1982 Goal

MEASURE YOUR PERFORMANCE

After you have entered your farm business data on the pages of this workbook, categorize your farm business performance into three groups. List the strong points, those which indicate average performance and those areas which need improvement. Your business factors that exceed the regional average should be listed as strong points, factors that are close to the regional average should be identified as average, and factors that are below average should be listed under need improvement.

The Farm Business Chart on the next page can also be used to identify strengths and weaknesses by comparing your business with a large number of New York dairy farms summarized for the previous year. It is recommended that you use more than one standard for comparison when analyzing the farm business.

STRONG POINTS:	AVERAGE:
NEED IMPROVEMENT:	

After identifying opportunities for improvement, consider alternative ways of solving each problem. List each alternative and analyze the consequences in detail. Extension conducts many schools, meetings, and provides many printed materials that should be of assistance. Local agribusinesses often provide helpful information and assistance. Seek out information related to the problem under consideration.

Another way to measure your management performance is to compare your current business factors with those from previous years. Page 17 is provided for this purpose. Answering the following questions may also help evaluate your farm business progress.

- 1) Do livestock numbers, labor force, and crop acres make up a well balanced unit of resources?
- 2) Have rates of production shown a steady increase?
- 3) When will milk output per worker reach 600,000 pounds?
- 4) Have increases in costs been limited to the effects of inflation?
- 5) Is growth in net worth keeping up with increased capital investment?
- 6) Is net cash farm income increasing fast enough to meet your needs?
- 7) Have you reached the business goals set for 1981 and have you set new goals for 1982?

MANAGEMENT PERFORMANCE OF STATEWIDE COOPERATORS

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top ten percent of the 600 farms for that factor. The other figures in each column are the average for the second ten percent, third ten percent, etc. Each column of the chart is independent of the others. The farms which are in the top ten percent for one factor would not necessarily be the same farms which make up the top ten percent for any other factor.

FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS 600 New York Dairy Farms, 1980

Size	of Bu	siness	Rates	of Prod	luction	Labor	Efficiency
Worker	No.	Pounds	Pounds	Tons	Tons Corn	Cows	Pounds

5.3	185	2,773,200	17,600	4.5	21	44	641,600
3.7	113	1,642,100	16,400	3.5	18	36	529,500
3.2	86	1,261,400	15,600	3.1	16	32	472,700
2.8	73	1,073,300	15,100	2.8	15	29	428,000
2.5	64	942,500	14,600	2.6	15	27	396,300
2.3	58	831,800	14,200	2.3	14	26	368,400
2.0	52	736,300	13,600	2.0	13	24	338,500
1.9	45	629,100	13,000	1.8	11	22	303,900
1.6	39	512,300	12,100	1.5	9	20	262,100
1.3	30	358,700	10,000	1.2	5	16	194,300

Feed	% Feed is	Machinery	Labor and	Feed and Crop
Bought	of Milk	Cost	Machinery	Expense Per
Per Cow	Receipts	Per Cow	Cost Per Cow	Cwt. Milk
\$223	13	\$242	\$ 524	\$2.77
333	19	308	611	3.48
395	23	344	659	3.87
443	25	374	703	4.17
485	27	403	740	4.42
528	29	438	777	4.64
570	31	468	814	4.93
611	33	503	870	5.20
671	36	560	943	5.50
792	41	686	1,112	6.26

The cost control factors are ranked from low to high, but the <u>lowest</u> cost is not necessarily the most profitable. Many things affect the <u>level</u> of costs, and these items must be taken into account when analyzing the factors.

ARRAY OF FINANCIAL ANALYSIS MEASURES

The Financial Analysis Chart can be used to determine a farm's relative financial management position compared to other dairy farms throughout New York State. The figure at the top of each column is the average of the "top" ten percent of the 600 farms for that factor. Each column in the chart is independent of all others.

¹Amount available for debt service per dollar of annual scheduled debt payment, computed by dividing the available dollars by the annual payments planned. A high, positive ratio indicates a strong capacity to repay debt.

²Amount of milk income committed to debt repayment. Commonly referred to as debt payments planned as percent of milk sales.

³Percentage of annual milk sales required to reduce current debt to zero.

⁴All farm liabilities on less than ten year repayment divided by all farm assets excluding real estate.

⁵Farm liabilities on ten years or more repayment, including all real estate mortgages, divided by farm real estate value.

⁶Return on equity capital, including appreciation, divided by farm net worth.

⁷Return on all farm capital (no deduction for interest paid) divided by total farm assets.
