QUARTERLY 1986 NORTHEAST FARMLAND VALUES

Loren W. Tauer
and
Alfons Weersink

L.W. Tauer is an associate professor and A. Weersink is a graduate student, Department of Agricultural Economics, Cornell University. Darlene Jennings assisted in the survey. Professor B.F. Stanton helped to organize the project. The project was funded with a cooperative agreement with the NRED, ERS, USDA (#58-319V-4-00233). The NRED researcher was William Heneberry. University contacts at other states who assisted in their respective states were: Dr. Edward S. Micka, University of Maine; Dr. Verle R. Houghaboom, University of Vermont; Dr. N. E. Engel, University of Massachusetts; Dr. Boris E. Bravo-Ureta, The University of Connecticut.

Quarterly 1986 Northeast Farmland Values

Introduction

Farmland values in the U.S. increased steadily with only minor regional variations from 1933 to the early 1970's. Beginning in 1972 the prices for most farm commodities increased substantially ushering in the start of a major farm boom. Given that farm income had risen continually since the mid-50's, higher earnings appeared to be more than a temporary phenomena. This new level of income, and strong expectations of continued gains, was subsequently translated into rapidly rising asset values, especially real estate. Farmers saw their equity grow as a result, but maintenance of this new wealth demanded earnings to continue rising in accordance with growth in expectations.

The present decade has changed these relationships as income has fallen and prospects for future growth dimmed. As a result, increasing land values were brought to a halt in 1981 along with the associated generation of farm wealth. Dramatic decreases from 30 to 50 percent in farmland values have occurred in some Midwestern regions heavily dependent on agriculture, while in other areas, land prices have actually increased reflecting the income potential available in non-agricultural uses. The Northeast states represent a continuum of these alternative scenarios.

Further changes in farmland values will occur as income prospects and interest rates move toward equilibrium in the market with the direction of change reflecting the future use of the land. To monitor changing farmland values for the Northeast, the Department of Agricultural Economics, Cornell University, in cooperation with the USDA, established a quarterly farmland survey in 1985. Similar projects were established elsewhere.¹ This report contains the summarized results of the four quarterly surveys that were completed on the Northeast states during 1986.²

Procedure

The present survey project began in late 1984 with the contact of prospective survey participants. Individuals such as realtors, appraisers and agricultural credit personnel were contacted through a variety of techniques but the primary method was and continues to be by mail. When the first survey was sent in early January 1985, sixty-four people had agreed to participate in a quarterly survey of farmland values. They represent the states of Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York and Vermont. No participant has been located in Rhode Island.

Though the number of individual respondents has fluctuated slightly (see Table 1.4), the survey itself and its implementation have remained unchanged for 1986.

¹ A Cornbelt survey was conducted by John T. Scott, University of Illinois, a Northwest survey by Mike Wirth, Washington State University and a Southeast survey by John Reynolds, University of Florida.

² The project will continue in 1987 but the survey instrument will undergo some revisions.

The survey instrument was initially designed in cooperation with the ERS and other participating universities. A copy of the survey is contained in Appendix A. Additional questions regarding farmland transfers were inserted into the first survey. A copy of this longer version also appears in Appendix A.

The quarterly surveys were mailed the first of January, April, July and October to elicit farmland values for the first of each of those months. Participants were asked to return their response by mail. If no reply had been received in two weeks, a followup survey was sent. The resulting information obtained was then summarized into reports that are contained in Appendix B. Each respondent was mailed a copy of these reports.

Table A. Quarterly Response Rates for 1986

	January 1	April 1	July 1	October 1
Surveys sent	61	61	61	61
Surveys returned	56	56	57	57
Response Rate	92%	92%	93%	93%

Results

The primary purpose of this project was to monitor farmland value changes during the year. Less emphasis was placed on the absolute accuracy of the values obtained. Thus, effort was exerted to construct a panel of individuals quite knowledgeable on current values who would be willing to reply each quarter. This was done using personal contacts and professional organization lists. Unfortunately, this procedure resulted in a relatively small panel size which cannot be considered a random sample. Thus the absolute land values obtained may be biased but represents information from a group of people actively associated with the land market.

Copies of the four quarterly reports are provided in Appendix B. Unfortunately, each participant did not respond each quarter so making quarter by quarter comparisons are open to question because the panel members were not drawn randomly. However, of the 64 panel members, 52 completed each of the four quarterly surveys. These consistent responders were grouped together and a summary of their responses are given in Tables 1.1 through 4.E. The identical reporting format is used in these Tables as was used in the Tables in Appendix B, except that New Hampshire and Vermont are now grouped together.

Separate tables exist for cropland, pasture, woodland, and land used primarily for vegetables. The fruit table involves apples and grapes in New York, apples and cranberries in Connecticut and Massachusetts, and apples in New Hampshire and Vermont. Also included are tables for four regions of New York.

Included in each table are the number of respondents and then the average value from their responses concerning the market values of average land per acre. The next columns list the lowest value provided by any respondent that quarter and

then the highest. Next is listed the average value reported by the same respondents the previous quarter (except for the January 1 results). Also listed in the table is the average percent change in value expected the next 12 months. Finally, the respondent's average value for low quality land and then high quality land is listed. The survey does not define average, low nor high quality land for the respondents but allows them to use their own definition. Since the same participants are reported each quarter the composition of average, low and high quality land should be constant unless a respondent altered his or her image of these classes.

The table below summarizes the average response by state for average cropland during each quarter. Changes in other land types were comparable. As expected, the absolute value of cropland varies by state with higher values being attached to more populous areas. Development pressures caused significant regional variations in land values during the first 9 months of 1985. The changes ranged from increases of 40.3 percent in New Jersey and 52.2 percent in the southeastern portion of New York state to a decline of 8.78 percent in the western part of New York. The latter result is explainable in part by that areas dependence on agriculture and the general economy in that area. Yet, before inferences can be made, it must be noted that values may not be truly representative of actual market values. The respondents were not randomly drawn and there were a small number of respondents in some areas.

Average Cropland Values for 1985 Collected by Survey

	Jan. 1, 1986	April 1, 1986	July 1, 1986	Oct. 1, 1986	Percentage change between Jan. 1 and Oct. 1
Connecticut and Massachusetts	\$1,200	\$1,200	\$1,275	\$1,500	25.0
Maine	583	656	635	661	13.4
New Hampshire and Vermont	1,347	1,359	1,337	1,342	- 0.1
New Jersey	2,380	2,760	2,990	3,340	40.3
New York	706	788	777	793	12.3
Northern	471	492	488	488	0.4
Western	689	661	650	629	- 8.7
Southwest	480	494	506	500	4.2
Southeast	1,466	2,147	2,026	2,231	52.2

FIRST QUARTER SURVEY
SECOND QUARTER SURVEY

NEW YORK STATE COLLEGE OF AGRICULTURE AND LIFE SCIENCES
A STATUTORY COLLEGE OF THE STATE UNIVERSITY
CORNELL UNIVERSITY
ITHACA, NEW YORK 14853

DEPARTMENT OF
AGRICULTURAL ECONOMICS
WARREN HALL

January 2, 1986

Dear Land Value Panel Member:

Enclosed is the first quarterly land value survey for 1986. Please take a few minutes of your time this week to answer the questions. When you are finished, return the completed questionnaire to me in the enclosed envelope. You will be sent summarized results.

The survey includes an additional four questions this quarter. For the remaining three quarters of 1986 only question 1 will be asked.

Again, thank you for your participation in the survey. I would also like to welcome the new survey participants that are completing their first survey questionnaire.

Sincerely,

Loren Tauer

ESTIMATES ON FARMLAND VALUES
 NORTHEAST REGION, UNITED STATES

(Cooperative Project between Department of Agricultural Economics,
 Cornell University and Economic Research Service, USDA)

Respondent (name): _____
 Identification number: _____
 Telephone number: _____
 Date: _____
 State: _____
 Counties covered: _____

1. Please estimate the following values for an acre of farmland to be used for farming in your locality. Your estimates for the last quarter are noted for your reference in making current and expected estimates.

Land Use	Your Estimate last quarter	Current average value	Current Range		Percent change expected during next 12 months
			Low Value	High Value	
Cropland	_____	_____	_____	_____	_____
Pasture and Other	_____	_____	_____	_____	_____
Woodland	_____	_____	_____	_____	_____

The following values if applicable for your area:

Vegetables (inorganic soils)	_____	_____	_____	_____	_____
Fruit: (specify)	_____	_____	_____	_____	_____

2. Land Prices may change because of many combinations of changes in supply and demand. During the past year (1985) indicate what you think has occurred in terms of supply (listings) and demand. (Circle the appropriate word)

Land Use	Supply			Demand		
	decreased	same	increased	decreased	same	increased
Cropland	decreased	same	increased	decreased	same	increased

-2-

3. For land sales in your area during the last year (1985) please indicate the change in acreage sold. If no change, enter zeros.

Land Use	Percentage change in <u>acreage</u> sold relative to previous year	Percentage change in sales (<u>acreage</u>) expected next 12 months relative to previous 12 months
Cropland	up ____% or down ____%	up ____% or down ____%
Pasture and other	up ____% or down ____%	up ____% or down ____%
Woodland	up ____% or down ____%	up ____% or down ____%
The following if applicable for your area:		
Vegetables	up ____% or down ____%	up ____% or down ____%
Fruit:	up ____% or down ____%	up ____% or down ____%

4. What percentage of the farmland sales in your area last year (1985) were due to each of the following reasons?

Retirement or poor health	_____
Estate settlement	_____
Financial problems of seller	_____
Low returns from farming	_____
Sell at a profit	_____
Landlord selling to existing renter	_____
Seller moving	_____
Other _____	_____
	100 %

5. What percentage of the farmland purchases in your area last year (1985) were for each of the following purposes?

Expansion of farm	_____
Beginning farmer	_____
Farmer relocating	_____
Residential (hobby) farm	_____
Investment (Agriculture)	_____
Non-agriculture use	_____
Other _____	_____
	100 %

January 31, 1986

Dear Land Value Survey Participant:

Attached is the summarized results of your responses to our land value survey in early January of 1986. We thank you for your participation. Participants in this survey were primarily farm real estate appraisers, brokers, or farm credit representatives from banks, FCA or FmHA. The tables should be self-explanatory and there is no discussion of the results.

Again, thank you for your participation. We will contact you again during early April for the next quarterly survey.

Vermont	0		225	425

Table 4. Vegetable Land Value Estimates for January 1, 1986

State	Number of Respondents	Average Value	Range	
			Minimum	Maximum
Connecticut and Massachusetts	1	1,400	1,400	1,400
Maine	2	850	500	1,200
New Hampshire	2	2,000	2,000	2,000
New Jersey	2	1,800	1,800	1,800
New York	8	918	250	1,597
Vermont	0	NA	NA	NA

	<u>Average Percent change in value expected next 12 months</u>	<u>Average Low Value Land</u>	<u>Average High Value Land</u>
Connecticut and Massachusetts	6	1,000	1,800
Maine	2	550	1,200
New Hampshire	0	1,500	2,500
New Jersey	-3	1,550	2,100
New York	-3	691	1,089
Vermont	NA	NA	NA

Table 5. Fruit Land Value Estimates for January 1, 1986

State	Number of Respondents	Average Value	Range	
			Minimum	Maximum
Connecticut and Massachusetts	3	8,913	1,500	25,000
Maine	4	1,369	540	2,500
New Hampshire	3	1,987	1,500	2,260
New Jersey	2	2,050	1,500	2,600
New York	6	919	500	1,200
Vermont	0	NA	NA	NA

State	Average Percent change in value expected next 12 months	Average Low Value Land	Average High Value Land
Maine	2	980	1,700
New Hampshire	5	1,600	2,150
New Jersey	0	1,700	2,300
New York	-1	544	1,096
Vermont	NA	NA	NA

New York fruit is apples and grapes. Connecticut and Massachusetts fruit is apples and cranberries.

Table 6. Changes in Supply and Demand of Cropland During 1985

	Supply			Demand		
	Decrease	Constant	Increase	Decrease	Constant	Increase
	----- number of response -----					
Connecticut and Massachusetts	2	1	0	1	1	1
Maine	2	1	5	3	3	2
New Hampshire	1	3	0	0	2	2
New Jersey	1	0	1	1	0	1
New York	0	6	15	12	7	2
Vermont	0	0	2	2	0	0

Table 7. Percent Change in Cropland Acreage Sold in 1985 and Expected Change during 1986

	Percent Change in acreage sold in 1985 relative to 1984	Percent change in sales (acreage) expected in 1986 relative to 1985
Connecticut and Massachusetts	18	22
Maine	-3	-1
New Hampshire	4	8
New Jersey	3	0
New York	-4 (-13 for fruit)	0 (-8 for fruit)
Vermont	3	5

Replies for Pature and Woodland were similar.

Table 8. Percent of Farmland Purchases in 1985 for the Following Purposes

	Conn. and Mass.	Maine	New Hamp.	New Jersey	New York	Vermont
Expansion of farm	20	25	10	21	40	30
Beginning farmer	0	9	6	3	10	25
Farmer relocating	0	6	6	29	8	3
Residential farm	20	21	6	15	15	17
Investment (Ag)	0	9	13	18	7	25
Non-Ag Use	60	21	59	13	19	0
Other	0	8	0	4	1	0

Percentages may not sum to 100 due to rounding.

Table 9. Percentage of Farmland Sales in 1985 for the Following Reasons

	Conn. and Mass.	Maine	New Hamp.	New Jersey	New York	Vermont
Retirement or poor health	23	15	31	16	24	20
Estate settlement	17	5	11	14	5	0
Financial problems of the seller	17	37	8	16	41	70
Low returns from farming	12	26	15	10	11	0
Sell at a profit	25	16	24	29	11	6
Landlord selling to existing rentor	6	0	0	5	2	0
Seller moving	0	1	1	5	3	0
Other	0	1	10	5	3	3

Percentages may not sum to 100 due to rounding.

Dear Land Value Survey Participant:

Attached is the summarized results of your responses to our land value survey in early July of 1986. We thank you for your participation. Participants in this survey were primarily farm real estate appraisers, brokers, or farm credit representatives from banks, FCA or FmHA. The tables should be self-explanatory and there is no discussion of the results.

Again, thank you for your participation. We will contact you again during early October for the next quarterly survey.
