1986 DAIRY FARM BUSINESS SUMMARY
Central New York and Central Plain Regions*

Introduction

Dairy farmers throughout the State have been participating in New York Cooperative Extension's farm business summary and analysis program since the early 1950's. Each participating farmer receives a complete business and financial summary and analysis of his or her farm business. The information in this report represents an average of all the data submitted from farms in the region described at the bottom of this page.

Program Objective

The primary objective of the dairy farm business summary, DFBS, is to help farmers improve their management skills through appropriate analysis and use of record data. Application of modern farm business management decision-making techniques is more easily accomplished with complete and accurate information. In short, DFBS identifies the business and financial information farmers need and demonstrates how to use it in identifying and evaluating the strengths and weaknesses of the farm business.

Format Features

This regional report follows the same general format as the individual farm DFBS output received by all participating dairy farmers. Worksheets have been included in this report to give non-DFBS participants an opportunity to summarize and compare their businesses to the average data. The analysis tables include an open column or section labeled My Farm. It may be used by any dairy farmer who wants to compare his or her business with the average data of this region.

The summary section of this report features accrual accounting for farm business expenses and receipts, measures of profitability with and without appreciation, a complete balance sheet including analysis, and a cash flow summary and analysis. The farm resources are examined and evaluated in the analysis section which features crop production costs, cost of producing milk, and capital and labor efficiency.

Micro DFBS, which allows Cooperative Extension agents and specialists to calculate and print individual farm business reports in their offices, is now being used by more than 70 percent of our dairy farm management field staff. This innovative program provides faster and more accurate processing of farm record data and increased use of DFBS in farm management extension programs.

*This summary was prepared by Wayne A. Knoblauch, Robert A. Milligan, and Linda D. Putnam, Department of Agricultural Economics, Cornell University in cooperation with Cooperative Extension agents or temporary agents Craig Yunker and Larry Davis from the Central Plain Region, and Howard Bateman, Jim Hilson, Dayton Allen, Glenn O'Hara, and Keith Severson in the Central New York Region. The two regions are similar in many respects and were combined this year to increase the number of summaries which comprise a region. The counties included are Seneca, Wayne, Yates, and Ontario in the Central Plain Region and Cortland, Cayuga, Madison, Onondaga, and Oswego in the Central New York Region.

SUMMARY OF THE FARM BUSINESS

Business Characteristics

Finding the right management strategies is an important part of farming. Various combinations of farm resources, enterprises, business arrangements, and management techniques are used by the dairy farmers in this region. The following table shows important farm business characteristics and the number of farmers reporting these characteristics.

BUSINESS CHARACTERISTICS
56 Central New York & Central Plain Region Dairy Farms, 1986

<u>Type of Farm</u>	<u>Number</u>	<u>Type of Business</u>	<u>Number</u>
Dairy	50	Single proprietorship	35
Part-time dairy	1	Partnership	18
Dairy cash-crop	5	Corporation	3
Part-time cash-crop dairy	0	Other	0
<u>Type of Ownership</u>	<u>Number</u>	<u>Type of Barn</u>	<u>Number</u>
Owner	49	Stanchion	31
Renter	7	Freestall	23
		Other	2
<u>Milking System</u>	<u>Number</u>	<u>Business Record System</u>	<u>Number</u>
Bucket & carry	0	ELFAC	11
Dumping station	1	Account Book	26
Pipeline	32	Agrifax (mail-in only)	7
Herringbone parlor	23	On-Farm Computer	8
Other parlor	0	Other	4
<u>Production Records</u>	<u>Number</u>		<u>Number</u>
DHIC	46	Other	3
O.S.	5	None	2

The averages used in this report were compiled using data from all the participating dairy farms in this region with complete and accurate data, unless noted otherwise. There may be regular dairy farms, part-time farms, dairy cash-crop farms, farm renters, partnerships, and corporations included in the average. These specific classifications are used to separate farms in the State Business Summary.

A part-time farm has less than six months of labor from all operators and total labor is less than 12 months.

A dairy cash-crop farm has income from crop sales that exceed 10 percent of milk sales.

A farm renter owns no farm real estate at the end of the year or owns no tillable land.

Dairy Termination Program participants that sold their cows in 1986 are not included in the report.

Income Statement

The accrual income statement begins with an accounting of all farm business expenses.

CASH AND ACCRUAL FARM EXPENSES
56 Central New York & Central Plain Region Dairy Farms, 1986

<u>Expense Item</u>	Cash Paid +	Change in Inventory* +	Change in Accounts Payable	Accrual Expenses
<u>Hired Labor</u>	\$ 34,200		\$ 265	\$ 34,465

Seeds & plants	4,933	17	2	4,952
Spray, other crop exp.	4,531	259	65	4,855
<u>Real Estate</u>				
Land/bldg./fence repair	3,545	-6	6	3,545
Taxes	6,179		0	6,179
Insurance	4,175		-2	4,173
Rent & lease	7,082		28	7,110
<u>Other</u>				
Telephone (farm share)	1,045		-2	1,043
Electricity (farm share)	6,530		22	6,552
Interest paid	28,352		15	28,367
Miscellaneous	<u>3,551</u>	<u>9</u>	<u>-189</u>	<u>3,371</u>
Total Operating	\$243,291	\$ -853	\$ 1,901	\$244,339
Expansion livestock	2,754		0	2,754
Machinery depreciation				19,487
Building depreciation				<u>11,855</u>
TOTAL ACCRUAL EXPENSES				\$278,435

*An increase in inventory is a negative number since it represents purchased inputs not used and must be subtracted in arriving at accrual expenses.

Cash paid is the actual amount of money paid out during the year and does not necessarily represent the cost of goods and services actually used.

Accrual expenses are the costs of inputs actually used in this year's production. The value of feed and supplies used out of inventory are included as are the costs of inputs purchased but not paid for (net increases in accounts payable). Items paid for and not used (net additions to inventory) are excluded from accrual expenses as are payments made on inputs used in a prior year (net decreases in accounts payable).

Worksheets are provided to enable any dairy farmer to compute his or her accrual farm expenses and compare it with the averages on the previous page.

CASH AND ACCRUAL FARM EXPENSES WORKSHEET

Expense Item	Cash Paid +	Change in Inventory +	Change in Accounts Payable +	Accrual Expenses -
<u>Hired Labor</u>	\$ _____		\$ _____	\$ _____
<u>Feed</u>

Expansion livestock	_____	_____	_____	_____
Machinery depreciation	_____	_____	_____	_____
Building depreciation	_____	_____	_____	_____
TOTAL ACCRUAL EXPENSES				\$ _____

Cash Paid is the actual amount of money paid out during the year and does not necessarily represent the cost of goods and services actually used.

Change in Inventory: An increase in inventory must be subtracted in computing accrual expenses because it represents purchased inputs not actually used during the year. A decrease in inventory is added to expenses because it represents the cost of inputs purchased in a prior year and used this year.

Change in Accounts Payable: An increase in payables is added and a decrease is subtracted when calculating accrual expenses.

Accrual Expenses are the costs of inputs actually used in this year's production.

CASH AND ACCRUAL FARM RECEIPTS
56 Central New York & Central Plain Region Dairy Farms, 1986

Receipt Item	Cash Receipts	+ Change in Inventory	+ Change in Accounts Receivable	+ Accrual Receipts
Milk sales	\$265,417		\$ 629	\$266,046
Dairy cattle	16,408	\$ 5,030	1,250	22,688
Dairy calves	3,159		0	3,159
Other livestock	15	40	27	82
Crops	8,007	-3,048	1,271	6,230
Government receipts	6,084		516	6,600
Custom machine work	246		0	246
Gas tax refund	181		32	213
Other	<u>5,216</u>		<u>892</u>	6,108
Less nonfarm noncash cap.*		<u>308</u>		<u>308</u>
Total Accrual Receipts	\$304,733	\$ 1,714	\$ 4,617	\$311,064

*Gifts or inheritances of cattle or crops included in inventory or used in the business.

Cash receipts include the gross value of milk checks received during the year plus all other payments received from the sale of farm products, services, and government programs.

Accrual receipts represent the value of all farm commodities produced and services actually provided by the farmer during the year. Increases in livestock inventory caused by herd growth and/or quality, are added and decreases caused by herd reduction are subtracted. Changes in inventories of crops grown are accounted for in accrual receipts. Changes in accounts receivable include the January milk check for this December's marketings compared with the previous January's check, and other delayed payments.

CASH AND ACCRUAL FARM RECEIPT WORKSHEET

Receipt Item	Cash Receipts	+ Change in Inventory	+ Change in Accounts Receivable	+ Accrual Receipts
Milk sales	\$ _____		\$ _____	\$ _____
Dairy cattle	_____	\$ _____	_____	_____
Dairy calves	_____	_____	_____	_____
Other livestock	_____	_____	_____	_____
Crops	_____	_____	_____	_____
Government receipts	_____		_____	_____
Custom machine work	_____		_____	_____
Gas tax refund	_____		_____	_____
Other	_____		_____	_____
Less gifts of cattle & crops		_____		_____
Total Accrual Receipts	\$ _____	\$ _____	\$ _____	\$ _____

To calculate the change in inventory to be included in the above worksheet, subtract the beginning of year values from the end of year values excluding appreciation. The changes in inventories caused by changing prices must be excluded from the calculation of accrual receipts. Changes in accounts receivable are also determined by subtracting beginning of year balances from end of year balances.

Profitability Analysis

Farm owners/operators contribute labor, management, and capital to their businesses and the best combination of these resources produces optimum profits. Farm profits can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

Net farm income is the total combined return to the farm operators and other unpaid family members for their labor, management, and equity capital. It is the farm family's net annual return from working, managing, financing, and owning the farm business. This is not a measure of cash available from the year's business operation. Cash flow is evaluated later in this report.

Net farm income is computed with and without appreciation. Appreciation represents the change in values caused by changes in prices during the year of livestock, machinery, real estate inventory, and stocks and certificates (other than FLB and PCA). Appreciation is a major factor contributing to changes in farm net worth and must be included in the profitability analysis.

NET FARM INCOME 56 Central New York & Central Plain Region Dairy Farms, 1986

Item	Average	My Farm
Total accrual receipts	\$311,065	\$ _____
Appreciation: Livestock	615	_____
Machinery	6,169	_____
Real Estate	8,236	_____
Other Stocks/Certificates	-695	_____
Total Including Appreciation	\$325,390	\$ _____
Total accrual expenses	278,435	- _____
Net Farm Income (with appreciation)	46,955	\$ _____
Net Farm Income (without appreciation)	32,630	\$ _____

Return to operators' labor, management, and equity capital measures the total business profits for the farm operators. It is calculated by deducting a charge for unpaid family labor from net farm income. Operators' labor is not included in unpaid family labor. Return to operators' labor, management, and equity capital has been compiled with and without appreciation. Appreciation is considered an important part of the return to ownership of farm assets.

RETURN TO OPERATORS' LABOR, MANAGEMENT, AND EQUITY 56 Central New York & Central Plain Region Dairy Farms, 1986

Item	Average		My Farm	
	With Apprec.	Without Apprec.	With Apprec.	Without Apprec.
Net farm income	\$ 46,955	\$ 32,630	\$ _____	\$ _____
Family labor unpaid @ \$600 per month	- 1,200	- 1,200	- _____	- _____
Return to operators' labor, management, & equity	\$ 45,755	\$ 31,430	\$ _____	\$ _____

Labor and management income is the share of net farm income without appreciation returned to the operators' labor and management. Appreciation is not included as part of the return to labor and management. Labor and management income is determined by deducting the cost of using equity capital, at a real interest rate of five percent, from the return to operators' labor, management, and equity capital excluding appreciation. The interest charge reflects the long-term average rate of return that a farmer might expect to earn in comparable risk investments in a low inflation economy.

Labor and management income per operator measures the return to each operator's labor and management.

LABOR AND MANAGEMENT INCOME
56 Central New York & Central Plain Region Dairy Farms, 1986

Item	Average	My Farm
Return to operators' labor, management, & equity without appreciation	\$ 31,430	\$ _____
Real interest @ 5% on \$393,566 average equity capital	- 19,678	- _____
Labor & Management Income	\$ 11,752	\$ _____
Labor & Management Income per 1.33 Operator/Managers	\$ 8,814	\$ _____

Return on equity capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the owner-operator's labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost or value of operators' labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the average farm net worth or equity capital.

RETURN ON EQUITY CAPITAL
56 Central New York & Central Plain Region Dairy Farms, 1986

Item	Average	My Farm
Return to operators' labor, management, & equity capital with appreciation	\$ 45,755	\$ _____
Value of operators' labor & management	- 27,873	- _____
Return on equity capital with appreciation	\$ 17,882	\$ _____
Rate of return on equity capital with appreciation	4.5%	_____ %
Return on equity capital without appreciation	\$ 3,557	\$ _____
Rate of return without appreciation	0.9%	_____ %

Farm and Family Financial Status

Evaluating the financial status of the farm business and the farm family is an important part of business analysis. The first step is to recognize all the assets and liabilities that make up the balance sheet. The second step is to analyze your completed balance sheet by evaluating changes that occurred during the year.

Balance sheet analysis requires an examination of financial and debt ratios and other factors measuring levels of debt. Percent equity is calculated by dividing end of year net worth by end of year assets. The debt to asset ratio is compiled by dividing liabilities by assets. Low debt to asset ratios reflect strength in solvency and the potential capacity to borrow. Debt levels per unit of production include some old standards that are still useful if used with measures of cash flow and repayment ability. The change in farm net worth without appreciation is an excellent indicator of financial progress.

The Farm Inventory Balance is an accounting of the value of assets used on the balance sheet and the changes that occur from the beginning to end of year. Changes in the livestock inventory are included in the dairy analysis. Net investment indicates whether the capital stock is being expanded (positive) or depleted (negative).

FARM INVENTORY BALANCE

Cash Flow Summary and Analysis

Completing an annual cash flow summary and analysis is an important step in understanding the sources and uses of funds for the business. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The Annual Cash Flow Statement is structured to compare all the cash inflows with all the cash outflows for the year. A complete list of cash inflows and cash outflows are identified in the following table. By definition, the cash inflows and cash outflows when beginning and ending balances are included should be identical. The imbalance is, therefore, the error from incorrect accounting of cash inflows and cash outflows.

ANNUAL CASH FLOW STATEMENT
56 Central New York & Central Plain Region Dairy Farms, 1986

<u>Item</u>	<u>Average</u>	<u>My Farm</u>
<u>Cash Inflows</u>		
Beginning farm cash, checking & savings	\$ 2,808	\$ _____

Repayment Analysis

The second step of cash flow planning is to compare and evaluate debt payments planned and made last year, and estimate the payments required in the current year. It is helpful to compare and evaluate by using debt payments per unit of production and receipt/debt payment ratios.

FARM DEBT PAYMENTS PLANNED

Same 44 Central New York & Central Plain Region Dairy Farms, 1986 & 1987

Debt Payments	Average			My Farm		
	1986 Payments Planned	Made	Planned 1987	1986 Payments Planned	Made	Planned 1987
Long-term	\$ 25,831	\$ 32,913	\$ 26,500	\$ _____	\$ _____	\$ _____
Intermediate-term	35,013	59,198	40,037	_____	_____	_____
Short-term	2,232	2,609	4,028	_____	_____	_____
Operating (net reduction)	1,295	0	1,300	_____	_____	_____
Accounts payable (net reduction)	<u>1,148</u>	<u>1,212</u>	<u>1,421</u>	_____	_____	_____
Total	\$ 65,519	\$ 95,932	\$ 73,286	\$ _____	\$ _____	\$ _____
Per cow	\$ 454	\$ 664		\$ _____	\$ _____	
Per cwt. 1986 milk	\$ 2.74	\$ 4.01		\$ _____	\$ _____	
Percent of total 1986 receipts	19%	28%		_____	_____	
Percent of 1986 milk receipts	22%	32%		_____	_____	

The Cash Flow Coverage Ratio measures the ability of the farm business to meet its planned debt payment schedule. The ratio shows the percentage of 1986 planned payments that could have been made with last year's available cash flow. Farmers that did not participate in DFBS last year will find in their report a cash flow coverage ratio based on planned debt payments for 1987.

CASH FLOW COVERAGE RATIO

Same 44 Central New York & Central Plain Region Dairy Farms, 1986

Item	Average	My Farm
Cash farm receipts	\$339,714	\$ _____
- Cash farm expenses	272,772	_____
+ Interest paid	32,026	_____
- Net personal withdrawals from farm*	<u>21,676</u>	_____
(A) = Amount Available for Debt Service	\$ 77,292	\$ _____
(B) = Debt Payments Planned for 1986	\$ 65,519	\$ _____
(A + B) = Cash Flow Coverage Ratio for 1986	1.18	_____

*Personal withdrawals and family expenditures less nonfarm income and nonfarm money borrowed. If family withdrawals are excluded the cash flow coverage ratio will be incorrect.

ANALYSIS OF THE FARM BUSINESS

The farm business has been divided into three parts to allow a more indepth analysis of the cropping program, the dairy program, and the factors affecting capital and labor efficiency.

Cropping Program Analysis

The cropping program is an important part of the dairy farm business and sometimes it is overlooked and neglected. A complete evaluation of available land resources, how they are being used, how well crops are producing and what it costs to produce them, is required to evaluate alternative cropping and feed purchasing choices.

LAND RESOURCES AND CROP PRODUCTION
56 Central New York & Central Plain Region Dairy Farms, 1986

Item	Average			My Farm		
	Owned	Rented	Total	Owned	Rented	Total
<u>Land</u>

Total Tillable Acres	53	379		_____	_____	

Average crop acres and yields compiled for the region are for the number of farms reporting each crop. Yields of forage crops have been converted to tons of dry matter using dry matter coefficients reported by the farmers. Grain production has been converted to bushels of dry grain equivalent based on dry matter information provided.

The following measures of crop management measure how efficiently the land resource is being used and how well total forage requirements are being met.

CROP MANAGEMENT FACTORS
56 Central New York & Central Plain Region Dairy Farms, 1986

Item	Average	My Farm
Total tillable acres per cow	2.87	_____
Total forage acres per cow	1.81	_____
Harvested forage dry matter, tons per cow	7.21	_____

Cropping Program Analysis (continued)

A substantial number of cooperators have allocated crop expenses to hay crop, corn and other crop production. Fertilizer and lime, seeds and plants, and spray and other crop expenses have been computed per acre and per production unit for these crops. Additional expense items such as fuels, labor, and machinery repairs are not included.

CROP RELATED ACCRUAL EXPENSES
Central New York & Central Plain Region Dairy Farms, 1986

Item	Total	Hay Crop		Corn		Other Crops Per Acre
	Per Till. Acre	Per Acre	Per Ton DM	Per Acre	Per Ton Silage Equiv.*

*Corn grain converted to silage equivalent using 5.88 bushels of dry shell equivalent to equal one ton of corn silage as fed.

Most machinery costs are associated with crop production and should be analyzed with the crop enterprise. Total machinery expenses include the major fixed costs (interest and depreciation), as well as the accrual operating costs. Although machinery costs have not been allocated to individual crops, they are shown per total tillable acre.

ACCRUAL MACHINERY EXPENSES

Dairy Program Analysis

Analysis of the dairy enterprise can tell a great deal about the strengths and weaknesses of the dairy farm business. Information on this page should be used in conjunction with DHI and other dairy production information. Changes in dairy herd size and market values that occur during the year are identified in the table below. The change in inventory value without appreciation is attributed to physical changes in herd size and changes in quality. This "real" increase in inventory has been included as an accrual farm receipt on page 5.

DAIRY HERD INVENTORY
56 Central New York & Central Plain Region Dairy Farms, 1986

Item	Dairy Cows		Heifers	
	Number	Value	Number	Value
Beginning of year (owned)	129	\$105,921	97	\$ 38,171
+ Change without appreciation		2,369		2,662
+ Appreciation		<u>331</u>		<u>278</u>
End of year (owned)	132	\$108,621	100	\$ 41,111
End including leased	133			
Average number	132		100	

My Farm:

Beginning of year (owned)	_____	\$ _____	_____	\$ _____
+ Change without appreciation		_____		_____
+ Appreciation		_____		_____
End of year (owned)	_____	\$ _____	_____	\$ _____
End including leased	_____		_____	
Average number	_____		_____	

Total milk sold and milk sold per cow are extremely valuable measures of productivity on the dairy farm. These measures of milk output are based on pounds of milk marketed during the year. Farm managers on DHI should compare milk sold per cow with rolling herd average on the test date nearest December 31.

MILK PRODUCTION
56 Central New York & Central Plain Region Dairy Farms, 1986

Item	Average	My Farm
Total milk sold, lbs.	2,149,524	_____
Milk sold per cow, lbs.	16,280	_____
Average milk plant test, percent butterfat	3.53	_____

The cost of producing milk has been compiled using the whole farm method, and is featured in the following table. Accrual receipts from milk sales can be compared with the accrual costs of producing milk per cow and per hundredweight of milk. Using the whole farm method, operating costs of producing milk are estimated by deducting nonmilk accrual receipts from total accrual operating expenses. Total costs of producing milk include the operating costs plus expansion livestock purchased, depreciation on machinery and buildings, the value of operators' labor and management, and the interest charge for using equity capital. Note that the cost of labor, management, and equity capital has been excluded in the intermediate calculation.

ACCRUAL RECEIPTS FROM DAIRY AND COST OF PRODUCING MILK

PROGRESS OF THE FARM BUSINESS

Comparing your business with average data from regional DFBS cooperators that participated in both of the last two years is one part of a business checkup. It is equally important for you to determine the progress your business has made over the past two or three years and to set targets or goals for the future.

PROGRESS OF THE FARM BUSINESS

Farm Business Chart

The Farm Business Chart is a tool which can be used in analyzing a business by drawing a line through the figure in each column which represents the current level of management performance. The figure at the top of each column is the average of the top 10 percent of the 404 farms for that factor. The other figures in each column are the average for the second 10 percent, third 10 percent, etc. Each column of the chart is independent of the others. The farms which are in the top 10 percent for one factor would not necessarily be the same farms which make up the top 10 percent for any other factor.

The cost control factors are ranked from low to high, but the lowest cost is not necessarily the most profitable. In some cases, the "best" management position is somewhere near the middle or average. Many things affect the level of costs, and must be taken into account when analyzing the factors.

FARM BUSINESS CHART FOR FARM MANAGEMENT COOPERATORS 404 New York Dairy Farms, 1985

Size of Business			Rates of Production			Labor Efficiency

721	36	759	1,251	913	5.85

The next section of the Farm Business Chart provides for comparative analysis of the value of production as measured by milk receipts per cow and dairy receipts per hundredweight of milk sold and the costs of production. The final or profitability section shows the variation in farm income by decile and enables a dairy farmer to determine where he or she ranks by using several measures of farm profitability. Remember that each column is independently established and the farms making up the top decile in the first column will not necessarily be on the top of any other column. The dairy farmer who ranks at or near the top of most of these columns is in a very enviable position.

Financial Analysis Chart

The farm financial analysis chart is designed just like the Farm Business Chart and may be used to measure the financial health of the farm business. Most of the financial measures used in the chart are presented on pages 7, 10, 12, and 17 of this publication. References to DFBS output page numbers for participating dairy farmers are provided in the table headings.

IDENTIFY AND SET GOALS

provides the target towards which the manager will aim the business. Knowing your goals when managing a farm business is similar to a road map in the hands of a traveler. You need to know where you are going before you can determine how best to get to your destination.

Written goals help provide businesses with an identifiable direction over both the long and the short term. Written goals that are agreed upon by all involved are a tool which farm operators can use to guide the business in the desired direction. Goals should be formulated with the following four points in mind:

1. Goals should be specific.
2. Goals should be realistic and achievable.
3. The achievement of the goal should be verifiable.
4. You should designate a time when each goal will be achieved.

Goal setting on a dairy farm is not a complex process. In many cases it is simply a process of writing down and agreeing upon goals that you may already have discussed verbally. It is also important to remember that once you write out your goals they are not written in stone. If a change takes place which has a major impact on the farm business, the goals should be re-evaluated. Refer to your goals as often as necessary to keep the farm business progressing.

It is important to identify both long and short range goals when looking at the future of your farm business.

A suggested format for writing out your goals is as follows:

- a. Begin with a general philosophy statement which incorporates both business and family goals.
- b. Identify 4-6 long range goals.
- c. Identify specific short range goals for a given time period (i.e., one year).
