1986 NEW YORK DAIRY-CASH CROP BUSINESS SUMMARY

INTRODUCTION

Dairy farm business summary (DFBS) projects are an integral part of Cornell Cooperative Extension's agriculture program in New York State. The Department of Agricultural Economics of the New York State College of Agriculture and Life Sciences, and County Extension staff, cooperate in sponsoring DFBS projects. In 1986, more than 500 dairy farmers participated. Business records submitted by dairy farmers from 45 counties in the State provide the basis for continued Extension educational programs, data for applied research studies, and for use in the classroom. Regardless of the use of the data, confidentiality of individual farm data is maintained.

Cooperative Extension agents and specialists enroll the cooperators and collect the records. Each cooperator receives a detailed summary and analysis of his or her business. More than 70 percent of the agents and specialists are using a micro computer in their offices and/or on the farm to process and return the individual farm business reports for immediate use. Regional reports are prepared by Cornell faculty and used by DFBS cooperators and other farmers to compare their farm with regional averages. The DFBS program helps farmers develop managerial skills and solve business management problems.

Accrual procedures have been used to provide the most accurate accounting of farm receipts and farm expenses for measuring farm profits. An explanation of these procedures is found on pages 3-5. Four measures of farm profits are calculated on pages 6 and 7. The balance sheet and cash flow statement are featured on pages 8 through 13. The dairy program analysis includes data on the cost of producing milk (page 17).

This special Dairy-Cash Crop Summary is an average of 22 dairy farm businesses that have crop sales totaling more than 10 percent of their accrual milk receipts. The farm income, financial summary, and business analysis sections of this report include comparisons with average data of 414 owned dairy farms in the State. A more detailed analysis of the 414 dairy farms is contained in Smith, Stuart F., Wayne A. Knoblauch, Linda D. Putnam, Dairy Farm Management Business Summary, New York, 1986, A.E. Res. 87-20, July 1987. This report is prepared in workbook form for farmers to use in the systematic study of their farm business operations.

Business records for 22 farms in Albany, Cayuga, Chautauqua, Columbia, Genesee, Lewis, Niagara, Oneida, Ontario, Orleans, Seneca, Wayne, and Yates Counties are summarized in this publication. These farms do NOT represent the "average" for all dairy-cash crop farms in the State. Participation was on a voluntary basis, therefore, not all areas or types of operations were represented.

Acknowledgement

The preparation of this report and the processing and organization of the data it contains has been successfully completed by our dedicated support staff, Beverly Carcelli and Cindy Farrell.

Income Statement

The accrual income statement begins with an accounting of all farm business expenses.

CASH AND ACCRUAL FARM EXPENSES
22 New York Dairy-Cash Crop Farms, 1986

Expense Item	Cash Paid +	Change in Inventory +	Change in Accounts Payable	= Accrual Expenses
<u>Hired Labor</u>	\$18,295		\$ 16	\$18,311

Machinery depreciation				21,437
Building depreciation				<u>5,933</u>
TOTAL ACCRUAL EXPENSES				\$181,196

Cash paid is the actual amount of money paid out during the year and does not necessarily represent the cost of goods and services actually used.

Accrual expenses are the costs of inputs actually used in this year's production. The value of feed and supplies used out of inventory are included as are the costs of inputs purchased but not paid for (net increases in accounts payable). Items paid for and not used (net additions to inventory) are excluded from accrual expenses as are payments made on inputs used in a prior year (net decreases in accounts payable).

Worksheets are provided to enable any dairy farmer to compute his or her accrual farm income and compare it with the averages on the previous page.

TOTAL ACCRUAL EXPENSES				\$ _____

Cash paid is the actual amount of money paid out during the year and does not necessarily represent the cost of goods and services actually used.

Accrual expenses are the costs of inputs actually used in this year's production. Purchased feed and supplies used out of inventory must be included. Beginning of year less end of year purchased feed and supply inventory equals the change in inventory to include in accrual expenses. Feed, supplies, and services used but not paid for must be included by adding the net increase in operating accounts payable. Increases in operating accounts payable are determined by subtracting the balance at the beginning of the year from the end of year balance.

CASH AND ACCRUAL FARM RECEIPTS
22 New York Dairy-Cash Crop Farms, 1986

Receipt Item	Cash Receipts	Change in + Inventory	Change in + Accts. Rec.	= Accrual Receipts
Milk sales	\$163,189		\$1,063	\$164,252
Dairy cattle	11,652	\$1,358	0	13,009
Dairy calves	2,283		0	2,283
Other livestock	488	-112	0	376
Crops	28,838	-3,594	307	25,551
Government receipts	5,040		0	5,040
Custom machine work	1,071		127	1,198
Gas tax refund	199		0	199
Other	3,911		-368	3,543
- Nonfarm noncash capital		775		775
Total Accrual Receipts	\$216,671	\$-3,123	\$1,129	\$214,676

Cash receipts includes the gross value of milk checks received during the year plus all other payments received for the sale of farm products, services, and government programs.

Accrual receipts represent the value of all farm commodities produced and services actually provided by the farmer during the year. Increases in livestock inventory caused by herd growth and/or quality, are included as accrual receipts. Decreases in inventory caused by herd reduction are deducted. Changes in inventories of crops grown are accounted for in accrual receipts. Changes in accounts receivable include the difference between the January milk check for this December's marketings and the previous January's check, and other delayed payments.

Nonfarm noncash capital are gifts and inheritances of cattle and crops received by the farm owner/operator, and included in inventory or used in the business during the year. They are deducted from growth in inventory and reduce accrual receipts because they came from outside the farm business. Gift and inheritances of machinery and real estate are accounted for on page 10.

- Nonfarm noncash capital	_____	_____	_____	_____
Total Accrual Receipts	\$ _____	\$ _____	\$ _____	\$ _____

To calculate the change in inventory to be included in the above worksheet, subtract the beginning of year values from the end of year values. Appreciation is included in crop inventory change, but excluded from livestock categories. The changes in inventories caused by declining prices must be excluded from the calculation of accrual receipts. Changes in accounts receivable are also determined by subtracting beginning of year balances from end of year balances.

Profitability Analysis

Farm owners/operators contribute labor, management, and capital to their businesses. The best combination of these resources produces optimum profits. Farm profits can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

Net farm income is the total combined return to the farm operator(s) and other unpaid family members for their labor, management, and equity capital. It is the farm family's net annual return from working, managing, financing, and owning the farm business. This is not a measure of cash available from the year's business operation. Cash flow is evaluated later in this report.

Net farm income is computed with and without appreciation. Appreciation represents the change in inventory values caused by changes in prices during the year. Appreciation is a major factor contributing to changes in farm net worth and must be included in the profitability analysis.

NET FARM INCOME 22 New York Dairy-Cash Crop Farms and 414 New York Dairy Farms, 1986

Item	22 Dairy-Cash Crop Farms	414 Dairy Farms	My Farm
Total accrual receipts	\$214,676	\$221,201	\$ _____
+ Appreciation: Livestock	1,696	1,689	_____
Machinery	2,141	4,165	_____
Real Estate	2,485	10,979	_____
Other Stock/Cert.	19	70	_____
- Total Including Appreciation	\$221,017	\$238,104	\$ _____
- Total accrual expenses	181,196	197,348	_____
- Net Farm Income (with appreciation)	\$ 39,821	\$ 40,756	\$ _____
Net Farm Income (without appreciation)	\$ 33,480	\$ 23,853	\$ _____

Return to operator(s') labor, management, and equity capital measures the total business profits for the farm operators. It is calculated by deducting a charge for unpaid family labor from net farm income. Operator(s') labor is not included in unpaid family labor. Return to operator(s') labor, management, and equity capital has been compiled with and without appreciation. Appreciation is considered an important part of the return to ownership of farm assets.

RETURN TO OPERATOR(S') LABOR, MANAGEMENT, AND EQUITY 22 New York Dairy-Cash Crop Farms and 414 New York Dairy Farms, 1986

Item	22 Dairy-Cash Crop Farms	414 Dairy Farms	My Farm
Net farm income (with appreciation)	\$39,821	\$40,756	\$ _____
- Family labor unpaid @ \$600 per month	930	1,926	_____
Return to operator(s') labor, management, & equity (with appreciation)	\$38,891	\$38,830	\$ _____
- Appreciation	6,341	16,903	_____
Return to operator(s') labor, management, & equity (without appreciation)	\$32,550	\$21,927	\$ _____

Labor and management income is the share of net farm income without appreciation returned to the operator(s') labor and management. Appreciation is not included as part of the return to labor and management. Labor and management income is determined by deducting the cost of using equity capital at a real interest rate of five percent, from the return to operator(s') labor, management, and equity capital excluding appreciation. The interest charge reflects the long-term average rate of return that a farmer might expect to earn in comparable risk investments in a low inflation economy.

Labor and management income per operator measures the return to one full-time operator's labor and management. A full-time operator provides 12 months of labor and management.

LABOR AND MANAGEMENT INCOME

22 New York Dairy-Cash Crop Farms and 414 New York Dairy Farms, 1986

Item	22 Dairy-Cash Crop Farms	414 Dairy Farms	My Farm
Return to operator(s') labor, management, & equity without appreciation	\$32,550	\$21,927	\$ _____

Labor & Management Income	\$13,371	\$ 4,988	\$ _____
Labor & Management Income per Operator	\$ 8,153	.\$ 3,837	\$ _____

Return on equity capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the owner-operator's labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost or value of operator(s') labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the end of year farm net worth or equity capital.

RETURN ON EQUITY CAPITAL

Rate of return without appreciation	0.9%	-0.6%	_____ %

Farm and Family Financial Status

Evaluating the financial status of the farm business and the farm family is an important part of business analysis. The first step is to inventory all the assets, determine all the liabilities, and fill out the balance sheet. The second step is to analyze the completed balance sheet by evaluating the relationships between assets and liabilities and changes made during the year.

Balance sheet analysis continues by examining financial and debt ratios and factors measuring levels of debt. Percent equity is calculated by dividing net worth by assets. Equity increases as the value of assets increase more than liabilities. The debt to asset ratio is compiled by dividing liabilities by assets. Low debt to asset ratios reflect strength in solvency and the potential capacity to borrow. The debt analysis ratios show how well the debt is structured and managed. Debt levels per unit of production include some old standards that are still useful if used with measures of cash flow and repayment ability.

Balance sheet analysis concludes with a summary of the inventory balancing procedure for farm real estate and machinery and equipment. It is important to account for the value of these assets used on the balance sheet and the changes that occur from the beginning to end of year. Changes in the livestock inventory are included in the dairy analysis.

Cash Flow Summary and Analysis

Completing an annual cash flow summary and analysis is important to determine how well the cash generated by the business, plus that brought in from outside, met the annual cash needs of the business and the farm family. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The Annual Cash Flow Statement in the following table is structured to compare all the cash inflows with all the cash outflows for the year. Cash inflows include all the cash farm receipts, receipts from the sale of farm assets, additional funds borrowed, cash used in the business from the sale of nonfarm capital, as well as the amount of cash available at the beginning of the year. Cash outflows include all the cash farm expenses, capital purchases, principal payments, money taken out of the business, and the cash balance left at year's end. When all the cash inflows and outflows are correct, the statement will balance. The positive imbalance of \$100 indicates that on average, the dairy-cash crop farms had more inflows than were accounted for by outflows.

Imbalance (error)	\$100	\$5,739	\$ _____

Repayment Analysis

The second step in cash flow planning is to compare and evaluate debt payments planned and made last year, and estimate the payments required in the current year. It is helpful to compare and evaluate a farm's repayment position by using debt payments per unit of production and receipt/debt payment ratios.

FARM DEBT PAYMENTS PLANNED
Same 17 New York Dairy-Cash Crop Farms, 1986*

Debt Payments	Average		Planned 1987	My Farm		
	1986 Payments Planned	Made		1986 Payments Planned	Made	Planned 1987
Long-term	\$10,348	\$13,358	\$ 7,655	\$ _____	\$ _____	\$ _____

*Farms that completed Dairy Farm Business Summaries for both 1985 and 1986.

The Cash Flow Coverage Ratio measures the ability of the farm business to meet its planned debt payment schedule. The ratio shows the percentage of last year's planned payments that could have been made with last year's available cash flow. Farmers that did not participate in DFBS last year will find in their report a cash flow coverage ratio based on this year's planned debt payments.

CASH FLOW COVERAGE RATIO
New York Dairy-Cash Crop Farms and New York Dairy Farms, 1986

Item	Same 17 Dairy- Cash Crop Farms	Same 293 Dairy Farms	My Farm
Cash farm receipts	\$198,775	\$234,850	\$ _____
- Cash farm expenses	139,198	187,145	_____
+ Interest paid	9,999	19,054	_____
- Net personal withdrawals from farm*	<u>26,319</u>	<u>15,973</u>	_____
(A) = Amount Available for Debt Service	\$43,257	\$50,786	\$ _____
(B) = Debt Payments Planned for 1986	\$31,231	\$43,484	\$ _____
(A + B) = Cash Flow Coverage Ratio for 1986	1.39	1.17	_____

*Personal withdrawals and family expenditures less nonfarm income and nonfarm money borrowed. If family withdrawals are excluded the cash flow coverage ratio will be incorrect.

Cropping Program Analysis

The cropping program is an important part of the dairy farm business and sometimes it is overlooked and neglected. A complete evaluation of available land resources, how they are being used, how well crops are producing and what it costs to produce them, is required to evaluate alternative cropping and feed purchasing choices.

LAND RESOURCES AND CROP PRODUCTION						
Hay crop	22	147	3.2 tn DM	_____	_____	tn DM
Corn silage	18	39	15.1 tn	_____	_____	tn
			5.4 tn DM	_____	_____	tn DM
Other forage	2	7	1.6 tn DM	_____	_____	tn DM
Total forage	22	179	3.6 tn DM	_____	_____	tn DM
Corn grain	18	160	107.5 bu	_____	_____	bu
Oats	9	47	72.1 bu	_____	_____	bu
Wheat	11	34	52.3 bu	_____	_____	bu
Other crops	9	35		_____	_____	
Tillable pasture	10	34		_____	_____	
Idle	11	42		_____	_____	
Total Tillable Acres	22	397		_____	_____	

*1986 average yields for 414 dairy farms in New York included: all hay crops, 2.8 tons dry matter per acre; corn silage, 14.3 tons per acre; corn grain, 99.8 bushels per acre.

Crop acres and yields compiled for the average represent only the number of farms reporting each crop. Yields of forage crops have been converted to tons of dry matter using dry matter coefficients reported by the farmers. Grain production has been converted to bushels of dry grain equivalent.

The following measures of crop management indicate how efficiently the land resource is being used and how well total forage requirements are being met.

CROP MANAGEMENT FACTORS
22 New York Dairy Cash-Crop Farms and 414 New York Dairy Farms, 1986

Item	22 Dairy-Cash Crop Farms	414 Dairy Farms	My Farm
Total tillable acres per cow	5.0	3.0	_____
Total forage acres per cow	2.3	2.3	_____
Harvested forage dry matter, tons per cow	8.0	7.7	_____

A number of cooperators have allocated crop expenses to hay crop, corn, and other crop production. This data has been compiled to show crop expenses per acre and per production unit for these crops. Corn production has been converted to corn silage equivalent using 5.88 bushels of dry shell equivalent to equal one ton of corn silage as fed.

CROP RELATED ACCRUAL EXPENSES

Most machinery costs are associated with crop production and should be analyzed with the crop enterprise. Total machinery expenses include the major fixed costs (interest and depreciation), as well as the accrual operating costs.

Dairy Program Analysis

An analysis of the dairy enterprise can identify and explain the strengths and weaknesses of the dairy farm business. Changes in dairy herd size and market values that occurred during the year are identified in the table below. The change in inventory value without appreciation is attributed to physical changes in herd size and quality. This "real" increase in inventory has been included as an accrual farm receipt for the profitability calculations shown on page 6.

DAIRY HERD INVENTORY
22 New York Dairy-Cash Crop Farms and 414 New York Dairy Farms, 1986

Item	Dairy Cows		Heifers	
	Number	Value	Number	Value
<u>22 Dairy-Cash Crop Farms:</u>				
Beginning of year (owned)	80	\$65,227	59	\$23,777

Average number	_____		_____	

Total milk sold and milk sold per cow are extremely valuable measures of productivity on the dairy farm. These measures of milk output are based on pounds of milk marketed during the year.

MILK PRODUCTION
22 New York Dairy-Cash Crop Farms and 414 New York Dairy Farms, 1986

Item	22 Dairy-Cash Crop Farms	414 Dairy Farms	My Farm
Total milk sold, lbs.	1,305,286	1,537,444	_____
Milk sold per cow, lbs.	16,447	16,237	_____
Average milk plant test, percent butterfat	3.58	3.61	_____

The cost of producing milk has been compiled using the whole farm method, and is featured in the following table. Accrual receipts from milk sales are compared with the accrual costs of producing milk per hundredweight of milk. Using the whole farm method, operating costs of producing milk are estimated by deducting nonmilk accrual receipts from total accrual operating expenses. Total costs of producing milk include the operating costs plus expansion livestock purchased, depreciation on machinery and buildings, the value of operator(s') labor and management, and an interest charge for using equity capital. Note that the cost of labor, management, and equity capital has been excluded in the intermediate compilation.

ACCRUAL RECEIPTS FROM DAIRY AND COST OF PRODUCING MILK
22 New York Dairy-Cash Crop Farms and 414 New York Dairy Farms, 1986

Item	22 Dairy-Cash Crop		414 Dairy		My Farm

Capital and Labor Efficiency Analysis

Capital efficiency factors measure how intensively the capital is being used in the farm business. Measures of labor efficiency are key indicators of the amount of work each worker has accomplished.

CAPITAL EFFICIENCY

22 New York Dairy-Cash Crop Farms and 414 New York Dairy Farms, 1986

Item	Per Worker	Per Cow	Per Tillable Acre
<u>22 Dairy-Cash Crop Farms:</u>			
Farm capital	\$164,403	\$6,463	\$1,292

PROGRESS OF THE FARM BUSINESS

Comparing your business with average data from regional DFBS cooperators that participated in both of the last two years is one part of a business checkup. It is equally important for you to determine the progress your business has made over the past two or three years and to set targets or goals for the future.

Size of Business

Average number of cows	72	74	_____	_____	_____
