## EASTERN NEW YORK RENTER SUMMARY 1987

Linda D. Putnam Stuart F. Smith

Department of Agricultural Economics
New York State College of Agriculture and Life Sciences
A Statutory College of the State University
Cornell University, Ithaca, New York 14853

#### INTRODUCTION

Dairy farmers throughout New York State submit business records for summarization and analysis through Cornell Cooperative Extension's Farm Business Management Program. Averages from a compilation of the individual farm reports are published in eight regional summaries and in one statewide summary. 1

Accrual procedures have been used to provide the most accurate accounting of farm receipts and farm expenses for measuring farm profits. An explanation of these procedures is found on pages 3-5. Four measures of farm profits are calculated on pages 6 and 7. The balance sheet and cash flow statement are featured on pages 8-13. The dairy program analysis includes data on the costs of producing milk (pages 16 and 17).

This special Eastern New York Dairy Summary is an average of 25 businesses that are renting substantially all of the farm real estate. The farm income, financial summary, and business analysis sections of this report include comparisons with average data on 129 owned dairy farms in the region. This report is prepared in workbook form for farm renters to use in the systematic study of their farm business operations.

Business records for 25 farms in Albany, Columbia, Delaware, Rensselaer, Schoharie, Sullivan, and Washington Counties are summarized in this publication. The Eastern New York region consists of these counties plus Greene, Herkimer, Montgomery, Otsego, Schenectady, and Ulster Counties which do not have farms that classify as renters. The 129 owned dairy farms summarized in this publication include farms from the entire region.

#### Use Comparative Profitability Data With Caution

The profitability analysis on pages 6 and 7 implies that renting a dairy farm is more profitable than owning one. Concessionary rental rates set by some land owners is a major factor. The farm owners are often father and mother and other landlords who are willing to accept a very low return for their investment. Total real estate costs including depreciation and interest on equity capital averaged \$150 per tillable acre on the owned dairy farms compared to only \$104 on the rented farms. This accounts for a \$13,700 difference in costs between owned and rented farms.

<sup>&</sup>lt;sup>1</sup>Smith, Stuart F., Wayne A. Knoblauch, and Linda D. Putnam, <u>Dairy Farm</u>
<u>Management Business Summary, New York, 1987</u>, A.E. Res. 88-8, July 1988.

#### SUMMARY AND ANALYSIS OF THE FARM BUSINESS

#### Business Characteristics and Resources Used

Recognition of important business characteristics and identification of the farm resources used is necessary for evaluating management performance. The combination of resources and management practices is known as farm organization. Important farm business characteristics, the number of farms reporting these characteristics, and a listing of the average labor, land, and dairy cattle resources used are presented in the following table.

BUSINESS CHARACTERISTICS AND RESOURCES USED 25 Eastern New York Dairy Farm Renters, 1987

Type of Business	Number	<u>Labor Force</u>	<u>My Farm</u>	
Single proprietorship	17	Operator 1.	mo.	11.60
Partnership	8	Operator 2.	mo.	3.36
Corporation	0	Operator 3.	mo.	0.48
		Family paid	mo.	2.08
Milking System	Number	Family unpaid	mo.	1.04
Bucket & carry	1	Hired	mo.	<u>11.04</u>
Dumping station	1	Total	mo.	29.60
Pipeline	18			
Herringbone parlor	3	Worker equivalent		
Other parlor	2	(total + 12)		2.47
-		Operator/Manager		
Type of Barn	Number	Equivalent		
Stanchion	21	(Oper. mo. + 12)		1.28
Freestall	4	· •		
Dairy Records Service	Number	<u>Land Use</u>	My Farm	<u>Average</u>
DHIC	20	Total acres rented		400
None	5	Tillable acres rented		230
Business Record System	Number	Number of Cows	My Farm	<u>Average</u>
Account Book	8	Beg. year (owned)		66
Agrifax (mail-in only)	7	End year (owned &		
ELFAC	2	leased)		70
Other	7	Average for year		
On-farm computer	1	(owned & leased)		70

Predominate business characteristics of the 25 rented farms include the single proprietorship, pipeline milking system, stanchion or conventional stall barn, DHIC herd records and an account book business record system. They are very similar to owned dairy farms in this respect.

The average size of the labor force on the rented farms was 10 percent less than the 2.75 worker equivalent on owned farms. The rented farms averaged 230 tillable acres and 70 cows compared to 251 tillable acres and 85 cows on the 129 owned dairy farms in the same region. Land and labor resources were being used more effeciently by dairy farm owners.

#### Income Statement

The accrual income statement begins with an accounting of all farm business expenses.

CASH AND ACCRUAL FARM EXPENSES

Building depreciation				1,236			
TOTAL ACCRUAL EXPENSES				\$128,173			

<u>Cash paid</u> is the actual amount of money paid out during the year and does not necessarily represent the cost of goods and services actually used.

Change in inventory: An increase in inventory is subtracted in computing accrual expenses because it represents purchased inputs not actually used during the year. A decrease in inventory is added to expenses because it represents the cost of inputs purchased in a prior year and used this year.

<u>Changes in prepaid expenses</u> apply to non-inventory categories. Include any expenses that have been paid for in advance of their use, for example, 1988 rent paid in 1987. A positive change is the amount the prepayment account declined from beginning to end year, a negative change indicates an increase in the account.

<u>Change in accounts payable</u>: An increase in payables is added and a decrease is subtracted when calculating accrual expenses.

Accrual expenses are the costs of inputs actually used in this year's production.

Worksheets are provided to enable any dairy farmer to compute his or her accrual farm expenses and compare them with the averages on the previous page.

Total Accrual Receipts	\$156,497		\$-121		\$272		\$156,649

<sup>\*</sup>Change in advanced government receipts.

<u>Cash receipts</u> include the gross value of milk checks received during the year plus all other payments received from the sale of farm products, services, and government programs. Nonfarm income is not included in calculating farm profitability.

Changes in inventory are calculated by subtracting beginning of year values from end of year values excluding appreciation. Increases in livestock inventory caused by herd growth and/or quality are added and decreases caused by herd reduction and for quality are subtracted. Changes in inventories of crops grown are also calculated. Changes in advanced government receipts are calculated by subtracting the end year balance from the beginning year balance (balances are listed with the current liabilities on the Balance Sheet).

<u>Changes in accounts receivable</u> are calculated by subtracting beginning year balances from end year balances. The January milk check for this December's marketings compared with the previous January's check is included as a change in accounts receivable.

<u>Accrual receipts</u> represent the value of all farm commodities produced and services actually generated by the farmer during the year.

#### CASH AND ACCRUAL FARM RECEIPT WORKSHEET

<sup>\*\*</sup>Gifts or inheritances of cattle or crops included in inventory.

#### Profitability Analysis

Farm owners/operators contribute labor, management, and capital to their businesses and the best combination of these resources maximizes income. Farm profitability can be measured as the return to all family resources or as the return to one or more individual resources such as labor and management.

Net farm income is the total combined return to the farm operator(s) and other unpaid family members for their labor, management, and equity capital. It is the farm family's net annual return from working, managing, financing, and owning the farm business. This is not a measure of cash available from the year's business operation. Cash flow is evaluated later in this report.

Net farm income is computed with and without appreciation. Appreciation represents the change in values caused by annual changes in prices of livestock, machinery, real estate inventory, and stocks and certificates (other than FLB and PCA). Appreciation is a major factor contributing to changes in farm net worth and must be included for a complete profitability analysis.

NET FARM INCOME
Eastern New York Dairy Farm Renters and Owners, 1987

Item	25 Dairy Farm Renters	129 Dairy Farm Owners	My Farm
Total accrual receipts	\$156,649	\$200,105	\$
+ Appreciation: Livestock	4,638	5,886	
Machinery	540	1,847	
Real Estate	948	16,779	,
Other Stock/Cert.	179	297	
- Total Including Appreciation	\$162,954	\$224,914	\$
- Total accrual expenses	128,173	172,296	
- Net Farm Income (with appreciation)	\$ 34,781	\$ 52,618	\$ <u></u>
Net Farm Income (without appreciation)	\$ 28,476	\$ 27,809	\$

Return to operators' labor, management, and equity capital measures the total business profits for the farm operator(s). It is calculated by deducting a charge for unpaid family labor from net farm income. Operators' labor is not included in unpaid family labor. Return to operators' labor, management, and equity capital has been calculated with and without appreciation. Appreciation is considered an important part of the return to ownership of farm assets.

RETURN TO OPERATOR(S') LABOR, MANAGEMENT, AND EQUITY Eastern New York Dairy Farm Renters and Owners, 1987

Item	25 Dairy Farm Renters	129 Dairy Farm Owners	My Farm
Net farm income (with appreciation)	\$34,781	\$52,618	\$
- Family labor unpaid @ \$650 per month	<u>676</u>	<u>1,350</u>	
- Return to operators' labor, management	<b>;</b> ,		
& equity (with appreciation)	\$34,105	\$51,268	\$
- Appreciation	<u>6,305</u>	<u>24,809</u>	
- Return to operators' labor, management & equity (without appreciation)	\$27,800	\$26,459	\$

Labor and management income is the return which farm operators receive for their labor and management used in operating the farm business. Appreciation is not included as part of the return to labor and management because it results from ownership of assets rather than management of the farm business. Labor and management income is calculated by deducting the opportunity cost of using equity capital at a real interest rate of five percent, from the return to operators' labor, management, and equity capital excluding appreciation. The interest charge of five percent reflects the long-term average rate of return that a farmer might expect to earn in comparable risk investments in a low inflation economy.

LABOR AND MANAGEMENT INCOME
Eastern New York Dairy Farm Renters and Owners, 1987

<u>Item</u>	25 Dairy Farm Renters	129 Dairy Farm Owners	My Farm
Return to operators' labor, mgmt.,			
& equity without appreciation	\$27,800	\$26,459	\$

- Labor & Management Income	\$19,873	\$ 8,232	\$
Labor & Management Income per			
Operator/Manager	\$15,526	\$ 6,236	\$

Return on equity capital measures the net return remaining for the farmer's equity or owned capital after a charge has been made for the owner-operator's labor and management. The earnings or amount of net farm income allocated to labor and management is the opportunity cost of operators' labor and management estimated by the cooperators. Return on equity capital is calculated with and without appreciation. The rate of return on equity capital is determined by dividing the amount returned by the average farm net worth or equity capital. Return on total capital is calculated by adding interest paid to the return on equity capital and then dividing by average farm assets to calculate the rate of return on total capital.

#### Farm and Family Financial Status

The first step in evaluating the financial status of the farm is to construct a balance sheet which identifies all the assets and liabilities of the business. The second step is to evaluate the relationship between assets, liabilities, and net worth and changes that occurred during the year.

1987 FARM BUSINESS & NONFARM BALANCE SHEET 25 Eastern New York Dairy Farm Renters, 1987

	<del></del>		Farm Liabilities		
Farm Assets	Jan. 1	Dec. 31	& Net Worth	Jan. 1	Dec. 31

<sup>\*</sup>Assumes that average nonfarm assets and liabilities for the nonreporting farms were the same as for those reporting.

Financial lease obligations are included in the balance sheet. The present value of all future payments is listed as a liability since the farmer is committed to make the payments by signing the lease. The present value is also listed as an asset, representing the future value the item has to the business.

Advanced government receipts are included as current liabilities. Government payments received in 1987 that are for participation in the 1988 program are the end year balance and payments received in 1986 for participation in the 1987 program are the beginning year balance.

<u>Balance sheet analysis</u> requires an examination of financial and debt ratios measuring levels of debt. Percent equity is calculated by dividing end of year net worth by end of year assets. The debt to asset ratio is compiled by dividing liabilities by assets. Low debt to asset ratios reflect strength in solvency and the potential capacity to borrow. Debt levels per unit of production include some old standards that are still useful if used with measures of cash flow and repayment ability. The change in farm net worth without appreciation is an excellent indicator of financial progress.

BALANCE SHEET ANALYSIS
Eastern New York Dairy Farm Renters and Owners, 1987

Intermediate & current debt	806	852	

Farm inventory balance is an accounting of the value of machinery and equipment used on the balance sheet and the changes that occur from the beginning to end of year. Changes in the livestock inventory are included in the dairy analysis. Net investment indicates whether the capital stock is being expanded (positive) or depleted (negative).

FARM MACHINERY AND EQUIPMENT INVENTORY BALANCE Eastern New York Dairy Farm Renters and Owners, 1987

#### Cash Flow Statement

Completing an annual cash flow statement is an important step in understanding the sources and uses of funds for the business. Understanding last year's cash flow is the first step toward planning and managing cash flow for the current and future years.

The <u>annual cash flow statement</u> is structured to compare all the cash inflows with all the cash outflows for the year. A complete list of cash inflows and cash outflows are identified in the following table. By definition, total cash inflows must equal total cash outflows when beginning and ending balances are included. Any imbalance is, therefore, the error from incorrect accounting of cash inflows and cash outflows.

ANNUAL CASH FLOW STATEMENT
Eastern New York Dairy Farm Renters and Owners, 1987

Item	25 Dairy Farm Renters	129 Dairy Farm Owners	My Farm
Cash Inflows			
Beg. farm cash, checking & savings	\$ 4,839	\$ 4,219	\$

Total	\$177,799	\$239,461	\$
Imbalance (error)	\$ 3,630	\$ 1,180	\$

#### Repayment Analysis

The second step in cash flow analysis is to compare the debt payments planned for the last year with the amount actually paid. The measures listed below provide a number of different perspectives on the repayment performance of the business. However, the critical question to many farmers and lenders is whether planned payments can be made in 1988. The cash flow projection worksheet on the next page can be used to estimate repayment ability, which can then be compared to planned 1988 debt payments shown below.

FARM DEBT PAYMENTS PLANNED

<sup>\*</sup>Farms that completed Dairy Farm Business Summaries for both 1986 and 1987.

The <u>cash flow coverage ratio</u> measures the ability of the farm business to meet its planned debt payment schedule. The ratio shows the percentage of planned payments that could have been made with last year's available cash flow. Farmers that did not participate in DFBS last year will find in their report a cash flow coverage ratio based on planned debt payments for 1988.

CASH FLOW COVERAGE RATIO
Eastern New York Dairy Farm Renters and Owners, 1987

Item	Same 15 Farm Renters	Same 100 Farm Owners	My Farm
Cash farm receipts - Cash farm expenses + Interest paid - Net personal withdrawals from farm (A) - Amount Available for Debt Service (B) - Debt Payments Planned for 1987		\$206,528 159,037 13,346 18,776 \$ 42,061	\$\$
(as of December 31, 1986) (A + B) - Cash Flow Coverage Ratio for	\$13,767 1987 1.62	\$31,473 1.34	\$

<sup>\*</sup>Personal withdrawals and family expenditures less nonfarm income and nonfarm money borrowed. If family withdrawals are excluded the cash flow coverage ratio will be incorrect.

#### Cropping Program Analysis

The cropping program is an important part of the dairy farm business and sometimes it is overlooked and neglected. A complete evaluation of available land resources, how they are being used, how well crops are producing and what it costs to produce them, is required to evaluate alternative cropping and feed purchasing choices.

LAND RESOURCES AND CROP PRODUCTION
25 Eastern New York Dairy Farm Renters, 1987

Other crops	0	0				
Tillable pasture	6	50				
Idle	8	39				
Total Tillable Acres	25	230				

<sup>\*1987</sup> average yields for 129 dairy farm owners in Eastern New York included: all hay crops, 2.6 tons dry matter per acre; corn silage, 14.2 tons per acre.

Average crop acres and yields compiled for the region are for the number of farms reporting each crop. Yields of forage crops have been converted to tons of dry matter using dry matter coefficients reported by the farmers. Grain production has been converted to bushels of dry grain equivalent based on dry matter information provided.

The following measures of crop management indicate how efficiently the land resource is being used and how well total forage requirements are being met.

CROP MANAGEMENT FACTORS
Eastern New York Dairy Farm Renters and Owners, 1987

Item	Dairy Renters	129 Dairy Farm Owners	My Farm
Total tillable acres per cow Total forage acres per cow Harvested forage dry matter, tons per c	3.30 2.61 7.77	2.96 2.34 7.53	

A substantial number of cooperators have allocated crop expenses to hay crop, corn, and other crop production. Fertilizer and lime, seeds and plants, and spray and other crop expenses have been computed per acre and per production unit for hay and corn. Additional expense items such as fuels, labor, and machinery repairs are not included.

Most machinery costs are associated with crop production and should be analyzed with the crop enterprise. Total machinery expenses include the major fixed costs (interest and depreciation), as well as the accrual operating costs. Although machinery costs have not been allocated to individual crops, they are shown below per total tillable acre.

#### Dairy Program Analysis

Analysis of the dairy enterprise can tell a great deal about the strengths and weaknesses of the dairy farm business. Information on this page should be used in conjunction with DHI and other dairy production information. Changes in dairy herd size and market values that occur during the year are identified in the table below. The change in inventory value without appreciation is attributed to physical changes in herd size and quality. This increase in inventory is included as an accrual farm receipt when calculating profitability without appreciation impacts.

Total milk sold and milk sold per cow are extremely valuable measures of productivity on the dairy farm. These measures of milk output are based on pounds of milk marketed during the year. Farm managers on DHI should compare milk sold per cow with rolling herd average on the test date nearest December 31.

MILK PRODUCTION

Eastern New York Dairy Farm Renters and Owners, 1987

<u>Item</u>	25 Dairy Farm Renters	129 Dairy Farm Owners	My Farm
Total milk sold, lbs. Milk sold per cow, lbs. Average milk plant test, % butterfat	1,067,677 15,314 3.40	1,325,579 15,654 3.52	

The cost of producing milk has been compiled using the whole farm method, and is featured in the following table. Accrual receipts from milk sales are compared with the accrual costs of producing milk per hundredweight of milk. Using the whole farm method, operating costs of producing milk are estimated by deducting nonmilk accrual receipts from total accrual operating expenses plus expansion livestock purchased. Total costs of producing milk include the operating costs plus depreciation on machinery and buildings, the value of operator(s') labor and management, and an interest charge for using equity capital. Note that the cost of labor, management, and equity capital has been excluded in the intermediate compilation.

ACCRUAL RECEIPTS FROM DAIRY AND COST OF PRODUCING MILK Eastern New York Dairy Farm Renters and Owners, 1987

,	25 R	enters	129 (	129 Owners		Farm
Item	Total	Per Cwt.	Total	Per Cwt.	Total	Per Cwt.

### Capital and Labor Efficiency Analysis

Capital efficiency factors measure how intensively the capital is being used in the farm business. Measures of labor efficiency are key indicators of management's success in generating products per unit of labor input.

#### PROGRESS OF THE FARM BUSINESS

Comparing your business with average data from regional DFBS cooperators that participated in both of the last two years is one part of a business checkup. It is equally important for you to determine the progress your business has made over the past two or three years and to set targets or goals for the future.
